The American farmer has not only suffered in losses of domestic markets and in higher industrial prices as a result of these policies. No one has been a greater victim than he of bureaucratic red tape, restriction, and conflicting policies. We reduce our production of cotton, corn, and wheat. Brazil increases her production of cotton, Argentina her production of corn, and Canada her production of wheat to take over foreign markets formerly supplied by the American farmer. Meanwhile, the importation of competitive agricultural products has been encouraged under the reciprocal-trade program.

All that is necessary to see the result of the combination of these policies is to take a look at the figures of farm imports and exports under 7 years of the New Deal. Agricultural exports amounted to only $5,000,000,000, while agricultural imports—most of them competitive—amounted to nearly seven and a half billion dollars. This has meant an unfavorable balance of more than 47 percent for the farmer. By contrast, industry had a favorable balance of trade of 70 percent during the same period. The index of prices for grain fell from 103 in 1935 to 87 in 1939. For cotton and cottonseed it fell from 181 in 1935 to 82 in 1939. Other prices tell the same story. New Deal subsidies to the farmer have averaged less than $500,000,000 a year, cannot begin to repay such losses.

Texas is the largest cattle-raising State in the country, with some 7,000,000 head. In 1939 we imported more than 750,000 head of cattle or well over 10 percent of all the cattle in Texas.

Not only is such competition harmful to the American farmer and worker, but it is a detriment to the development of new industries in this country. Indeed, Mr. Grady, of the State Department, has expressed himself as opposed to the development of new American industries that will compete with our imports from other countries. Who, one might ask, is to receive first consideration?

No one wants to do away with trade treaties. No one wants to raise tariffs so high that they assure complete monopoly and permit exorbitant prices at home, at the same time setting up barriers to world trade. No one wants the approval of these treaties by Congress to be turned into logrolling contests. But that is not the alternative. A tariff which prevents the importation of cheap foreign-made goods below the American cost of production is merely giving the American farmer or worker or a new American industry a 50–50 chance. It is merely a protection against cheap foreign products against which our people cannot compete if they are to maintain their standard of living. It is merely protection against displacing American labor and American land with those of other lands. Such treaties can and should be used to stimulate our agricultural exports which have fallen so disastrously in recent years. But we cannot do so as long as we continue to make concessions to all the world but receive concessions from no one. To place these treaties on a basis of true reciprocity, whereby we gain as much as we give, is merely to give the American farmer and worker an even break with those of other nations. To assure adequate hearings before these treaties are negotiated, and the right of the citizen to appeal, to provide that the people shall have an opportunity to approve them through their representatives, is only to assure the democratic method of procedure.

To awaken the American people to these fundamental truths about the New Deal, its fallacies and its failures, is enough to assure the defeat of the New Deal at the polls this November. But it is not enough to assure the election of the Republican Party. It is not enough to show that the New Deal has failed, but that the Republican Party can and will succeed. Our criticism of the New Deal is not partisan but is rather based on principle. It is on principle that we must wage our campaign. Our program is nonpartisan, it is American; and it is to the great body of Americans who are independent of any political party that we must make a nonpartisan appeal.

We must not forget that just as it is the people who never come to church who are generally most in need of salvation, so the people who never attend political rallies are the ones we need most to reach. Here the administration in power has a tremendous advantage. The party out of power can do so only by tireless and endless work, by enlisting thousands who will go from door to door, day in and day out, throughout the year. Political rallies are simply the starting point.

The Republican Party must be the means of restoring the American Government to the American people, of returning to them the powers which can and should be administered locally, of returning to Congress the powers which are the people's to exercise through their representatives.

The Republican Party must be the party of liberation—of freedom from stifling taxation and oppressive restriction, from the tinkering of bureaucrats with their lives, from the competition of their Government with the way in which they earn their living.

The Republican Party can and will bring about the recovery of our system of free economy, not by restricting it, but by freeing it from the chains that bind it today. The legislation we write will not be designed at making the system over, but at correcting evils and preserving the freedom and opportunity of men to rise according to their abilities.

We can and will bring about the more abundant life; but we know that prosperity must be achieved not through scarcity, but through plenty and that abundance must be created not by idleness but by work. The security we will offer those who are underprivileged today is not dependence upon Government subsidy, but the security of a job in an expanding economy with the opportunity to rise through their industry and their initiative. We will lend particular encouragement to new industries employing agricultural products as an ever-widening field of untold possibilities for farmer and worker alike.

The New Deal has assumed that work and wealth must be divided; we Republicans are going to multiply them. They have gone on the theory that freedom and opportunity, like national income, must be taken away from some if they are to be increased for others. We know that freedom and opportunity, as well as national income, can be increased for the underprivileged without depriving any citizen of his civil liberties or of the fruits of his labor. The new dealers have attempted to equalize by leveling down. We Republicans are going to assure greater justice and equality by raising up.

That is a large order. It is a challenge that must be met. And yet, it is a program based on simple truths and plain, ordinary common sense.

It is in terms of these fundamental truths which should be obvious that we can best present the Republican program to the American people, for they are the basis of progress itself.

Dedicated to such a program, the Republican Party will not fail to achieve victory through service.

The Farm Credit Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

Mr. MURRAY. Mr. Speaker, I made the following statement before the Agricultural Committee in regard to the farm-credit situation:

I wish to say that for many years I have felt that we should have a uniform and a fair rate of interest on long-term farm mortgages. I have a keen interest in the purposes of the bill which we now have under consideration, whether it is the Jones bill, the Wheeler bill, Farmers Union bill, or whatever the name of it may be, and regardless of the individual, group, or party sponsoring it.

I have lived in a territory that really has been in an agricultural turmoil for 10 years; a drought, of which no one had ever seen its equal, and low prices that have made this territory far from a normal producing area.

Farm prices were low and a general hymn of hate, partly political, had resulted in a situation in which family was arraigned against family, neighbor against neighbor, and in which right thinking, equity, and fairness were difficult to follow.

Your figures will show that in 1933 and 1934 Wisconsin had a very large number of loans. Mr. Morgenthau personally came out to Wisconsin and helped start the program.

THE LOANS

The F. C. A., in my district alone, loaned over $20,000,000. Many abundant-life advocates, who are always very liberal in giving other people's money away, inferred that the Commissioner loans, when they were second mortgages, would never have to be paid. Many borrowers thought that when they had secured a rearrangement of their debts, and had them consolidated in a Government loan, their debts were nearly paid because these were the days of the forgotten man.

I have known too many men like Fred Darling, Rufus Runke, Willard Spaulding, Milt Button, John Jones, Arthur Collentine, and Charles Simmons for too many years to have anyone make me believe that these men are not as sincere and capable public servants as could be found in any private or Federal organization that ever existed. Many of these men went out with the spirit of crusaders and felt as if they were solving the problem of agriculture in a way it had never been solved before.

HOW THE LOANS WERE MADE

The loans were made up to 75 percent of the normal agricultural value of the farm. The normal agricultural value was based on the earning power of the farm. Everyone was supposed to look through rose-colored glasses. Prices under the previous Republican administration were ridiculed, for the day of the more abundant life was at hand, and the inference was that higher prices for farm products would prevail in the future.

WHAT HAPPENED

After the loans were made—and we had 8,089 loans on January 1, 1940, in the district—prices did not rise as they should. Milk is the lifeblood of the district and with 493,000 head of dairy cattle, the price of milk and dairy products largely determines the loan that a farm can carry. During the 7 pre-New Deal years cheese averaged 17.5 cents per pound, butter averaged 35 cents per pound, and milk averaged $2.12 per hundredweight in the United States. During the last 4 Republican years, when there was a world-wide depression and a political hymn of hate never before equaled in this country and with a hired smearer of the opposition party and with the House of Representatives under the control of this opposition party for 2 years, we had an average of 14.7 cents per pound for cheese and 32 cents per pound for butter.

Since the New Deal, we have had to discard our rose-colored glasses as we find that milk has averaged $1.68 per hundredweight, cheese has averaged only 13.2 cents per pound, and butter has averaged 26 cents per pound, and in 1939, after 6 years of the more abundant life butter has averaged only 25.8 cents per pound. Cheese, in 1938 and 1939, averaged only 12.7 cents per pound.

THE QUESTION

Now, if the farmers could not carry their load with the prices they received in pre-New Deal days how, in time, can anyone expect them to pay their interest and payments with the prices that have prevailed during the past 7 years? We all realize that the products the farmer buys have advanced very materially in price during this time, many items up to 25 percent of their former value.

The result

Number of loans in Seventh Congressional District of Wisconsin	8,089
Total face value of loans	$19,515,200
Percentage of delinquent loans	50.2
Number of farms now owned by F. C. A.	711
Percentage of recovery when farms were sold	61.9

In Wisconsin there is a 34 percent increase in the percentage of Federal land-bank delinquencies and an increase of 70 percent in the percentage of Commissioner-loan delinquencies.

One thought immediately presents itself and that is, if the F. C. A. would foreclose the 4,000 loans in my district which are delinquent, wouldn't we be about back to where we were in 1933? And hasn't the farmer lost his farm just the same whether the F. C. A. forecloses, or some individual forecloses? This is especially so if we realize that the farm prices, in relation to parity, have made little headway.

THE PRESENT BILL

The bill under consideration will reduce this interest one-half or 1 percent. If our average loan is $2,500, this makes an average difference of $12.50 or $25 per loan per year. This is desirable, but I maintain that the big problem is to get the farmer a decent price for what he raises, or a parity price, if these farmers are ever going to pay their interest on their loans.

When the members of this committe and other Members of the House see the situation which prevails in my district, they will have a little more sympathy with my attitude toward the trade treaties, which reduced the tariff on cheese 42 percent. They would be especially tolerant when they realize that many of their States have had agricultural subsidies from the United States Treasury during the past 7 years which represents over 30 percent of the value of their farms, while Wisconsin has had agricultural subsidies which represent only 3 percent of the value of her farms. This tariff was reduced 20 percent in 1938, when cheese was 12.6 cents per pound, or about two-thirds of parity, and no one in the Agricultural or State Department, nor any Member of Congress, ever tried to justify this reduction. Who the so-called experts were that recommended this reduction I am unable to find out.

WHAT DO YOU PROPOSE TO DO AS ADMINISTRATOR OF THE F. C. A.

To put it frankly, I see the political potency of this particular bill, but that is no reason why I will not support it, because I support all legislation which is for the general welfare regardless of the origin of the measure. What I want to obtain from you is a statement or a suggestion of just what your policy or the policy of the Farm Credit Administration is going to be in regard to the 4,060 delinquent

loans in my district, and how you are going to reappraise them and get them back to a normal loan. I also want the assurance of the same program after election as we have before election.

Again, frankly, up to this time it appears to me that the present administration has:

First. Loaded these farmers with loans at rates of 4 percent to 5 percent.

Second. Given their market away by reducing agricultural tariffs out of line with what the farmer buys.

Third. Subsidized hundreds of new farmers and set them up in business at lower rates of interest in direct competition to the farmers already on their farms with their large obligations.

Fourth. And now proposing in a big way to take the farmer's product as cheaply as it can buy it and give it away to its customers to sit down and eat it and then tell the farmer it is subsidizing him. We imported over $90,000,000 worth of farm products and at the same time we appropriated $30,000,000 from the United States Treasury to buy the same products, through the Surplus Commodity Corporation.

Though some administration spokesmen may take the credit for feeding the poor, the facts are that the farmers have contributed 25 to 35 percent of the cost of feeding the poor all these years and, incidentally, the rich, too, for that matter, and the time has come when they should receive parity prices for what is taken from them and given away.

It seems to me that we must have a correlation and a coordination of these agricultural governmental agencies, which are really fundamental, in order to put the agricultural house in order.

Let us support such a bill as is before the committee, but let us realize that the farmer cannot pay the 3-percent interest if he does not get parity prices. If we are going to subsidize farmers let us subsidize the farmers who live on, own, and operate their own farms; let us insist on a tariff that does not allow imports to reduce the price of farm products that are below parity and let us consolidate these agricultural agencies so that they will mesh and not be constantly working at cross purposes.

Why should we set up a new farm-buying agency when the Government has already thousands of farms on its hands that are being carried at a loss and when sold bring 61.9 cents on the dollar? Let us work for a program which will give all farmers parity and start by consolidating the agencies of agriculture we now have.

Unfairness of Inland Water Carriers

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

EDITORIAL FROM THE INDIANAPOLIS STAR

Mr. VAN ZANDT. Mr. Speaker, in view of the program of propaganda against the Wheeler-Lea railroad bill that has resulted in the dissemination of misleading information by the Inland Water Carriers, the following editorial appearing in the Indianapolis (Ind.) Star, July 25, 1939, reveals the true picture as observed by the editor of one of the leading newspapers of the Nation.

[From the Indianapolis (Ind.) Star of July 25, 1939]

UNFAIRNESS OF WATER CARRIERS

Seldom has such unfairness been exhibited by selfish business interests as in the current opposition of water carriers to regulation by the Interstate Commerce Commission. A bill to subject them to supervision by the body that governs other forms of transportation is now under debate in the House. The barge lines are protesting vehemently that the proposed legislation is sponsored by the railroads to crush competition.

It is true that the railways desire enactment of the bill, which should tend to eliminate injustice of the current situation. The public will recognize the dog-in-the-manger attitude of the waterways. They raise a tearful cry of oppression when they are asked to accept the same type of regulation applying to competitors. Justice, in the eyes of the waterways, appears to mean freedom from the supervision maintained over railways and truck lines and continued subsidies of taxpayers' money that alone has kept them in business.

The public and Members of Congress in the long run are usually fair. They should concede that the waterways are not entitled to preferential treatment that permits evasion of just rules. It would be manifestly unfair in any contest if one team were permitted to make its own rules and indulge in any tactics it saw fit, while an opponent is penalized promptly by the referee for any infraction of the code.

The waterways not only benefit from direct subsidies but they use a right-of-way equipped and maintained by the taxpayers. Millions are spent in dredging channels and operating an expensive series of locks and dams. The railroads purchase and maintain right-of-way and pay huge sums in taxes on which many Government units depend. The industry supports many families directly, besides the large number engaged in production of railway supplies. There should be a fair basis for all forms of transportation but it will not be established until the waterways are subjected to adequate regulation by the same body that makes the rules for their competitors.

Rubber

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

LETTER FROM SALINAS CHAMBER OF COMMERCE

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following letter from Fred S. McCargar, secretary, Salinas Chamber of Commerce. The subject matter, which deals with the growing and processing of rubber in the United States, should be of interest to every Representative who is concerned with overproduction of certain crops and is desirous of finding new use for idle land.

The letter follows.

CHAMBER OF COMMERCE,
Salinas, Calif., March 5, 1940.

DEAR CONGRESSMAN ANDERSON: If it is good business for the Italian Government to grow rubber as an insurance against war, why isn't it good business for the United States to grow rubber, especially with the possibility of a war in the Pacific shutting off the supply from the East Indies, whether we are in the war ourselves or not, thereby skyrocketing rubber prices?

Guayule rubber can be successfully grown on hundreds of thousands of acres in the Western and Southern States, which are not now producing crops or producing surpluses that are one of our greatest problems. This would put thousands upon thousands of people to work in these States, planting, harvesting, and milling this rubber and more thousands in other States manufacturing the planting, harvesting, and milling machinery which would have to be specially built.

Guayule rubber is grown from seed. The seeds are planted in a nursery for 1 year, then set out in rows like corn. The plants immediately become a source of rubber, but the most efficient time for harvesting them is at the end of 4 years. They will continue to grow for 30 years or more, thereby paying more than their own storage costs and being available when most needed, and that part produced by the Government only used in an emergency. Guayule is a bush about 2½ feet at 4 years, and is harvested by plowing it up. The rubber is extracted by grinding in a pebble mill under water; the rubber, being lighter, floats off. Tree rubber in the Orient is harvested by tapping each day by hand, or 1,400 hand processes against 1 with guayule, and that with machinery. An acre of guayule produces about the same amount of rubber as an acre of tree rubber in about the same period. There have been 6,000 acres planted in the Salinas Valley, and in all there has been manufactured over 200,000,000 pounds of guayule rubber in the factories at Salinas and those in Mexico. Bush rubber is the same as tree rubber, except that it usually is fresher, therefore brings a premium. Bush rubber can be produced in this country in competition with tree rubber, and at a profit at the present prices, but the American farmer hates to take a chance on the price 4 years hence.

The nursery is located at Salinas and is equipped to raise seedlings for thousands of acres. Why not spend a few of the billions being

spent for defense this way, thereby helping the farmer, the unemployed, the factory worker, and protecting the automobile owner from an enormous tire price? Remember, it takes 4 years. Why wait until we are in a jam?

Yours very truly,

FRED S. MCCARGAR,
Secretary, Salinas Chamber of Commerce.

Interstate Chain Stores a Menace to the Economic and Social Welfare of the People, and Will Destroy Newspapers

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

Mr. PATMAN. Mr. Speaker, one of the most popular magazines in America has carried several articles favoring the interstate chain stores and particularly a great boost in a long special article for the Hartford Bros., owners of the Great Atlantic & Pacific Tea Co. This publication is now preparing another great boost for another large interstate chain-store concern. Recently a representative of individually owned stores—independent merchants—asked a representative of this popular magazine why the independents could never get anything published that was favorable to them when they had often requested it and had furnished information in which the public would be interested. This representative frankly confessed that the independents did not advertise with them and the interstate chains did; therefore, they felt obligated to help the chains because they were good customers and felt under no obligations to help the independents.

If a few large concerns can get control of retail distribution, they can carry their weekly advertisements, even including prices in the Saturday Evening Post, Collier's, and other popular magazines instead of the local papers. They will not have to sell below cost then to squeeze out competitors and their prices can be the same. They will certainly carry plenty of advertising in the large magazines to build up goodwill, but will they patronize the local newspapers? Any system that causes foreign ownership of local business will eventually destroy the local newspaper.

THE 1937 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor at Denver, Colo., October 4 to 15, inclusive, 1937, asked for a Senate investigation of chains and unanimously endorsed the following statement in a resolution:

It is an intolerable situation when highly organized chain systems can hammer down prices all over the Nation and then force manufacturers to make shoes at these prices or go out of business. This condition leads to steady demands upon the workers for wage cuts, and, with living costs steadily rising, wage cuts are impossible. Wage earner and manufacturer alike are dictated to by highly organized selling groups who deliberately fix prices for the whole country. The Boot and Shoe Workers' Union appeals to the organized trade-union movement for support. The very existence of entire communities is at stake, and the shoe industry is rapidly becoming a mere appendage to a few small groups who control prices throughout the United States and who manipulate these prices for their own profit and with absolute disregard for human welfare or social justice.

THE 1932 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor, at its annual convention at Cincinnati, Ohio, November 21 to December 2, inclusive, 1932, unanimously endorsed a resolution, which contained the following:

Whereas the growth of these chain-store companies, both financially and in number of units operated, have shown remarkable growth at the expense of the people of the United States; and

Whereas it is our thought that the present economic depression is due in part to consolidations, amalgamations, and the creation of some mammoth organizations of chain-store companies now operating in this country; and

Whereas the laboring classes of the United States derive no benefit whatsoever from some mammoth combinations: Therefore be it

* * * * * * *

A. F. OF L. DID NOT CONDEMN OUR BILL

In October 1938 the American Federation of Labor had a convention at Houston, Tex. One morning a headline article appeared on the front page of practically all of the newspapers in this country to the effect that this great organization had condemned the so-called Patman anti-chain-store bill. This article purported to give several paragraphs of a resolution that was supposed to have been passed at this convention condemning this proposed legislation.

This purported resolution was presented to different labor organizations all over the country in order to induce them to pass similar resolutions, and in many cases they did, the efforts of the interstate chains being successful.

The truth is no such resolution was passed by the American Federation of Labor at Houston, Tex., in 1938, nor any resolution condemning this bill. This false claim has been exposed, yet I have never seen the correction carried in one newspaper in America, although it has been fully carried in the CONGRESSIONAL RECORD at different times. This is exhibit No. 1 of the influence of fourteen and one-half billion dollars. The truth is the interstate chain representatives went so far in their efforts to use money to influence this great organization that a real scandal will probably be exposed before many moons. It is a compliment to the loyal, alert representatives of the A. F. of L. that they did not permit their organization to be so used.

DECEITFUL PROPAGANDA

The owners of large interstate chain stores caused to be organized the National Consumers' Tax Commission, of Chicago, Ill. It is supported by the large fortunes of a few very wealthy men, who made their money destroying community life. The object is to hire prominent women over the country to be a "front" for the interstate, absentee-owned chain stores, and carry on a deceitful and misleading fight in their behalf. Many prominent women have become victims of this treacherous and sordid conspiracy. Information is now in my possession which indicates enormous sums of money have been spent in organizing these associations locally. I was astounded to learn that many prominent women, who have held responsible positions with different women's organizations, have accepted huge sums from the owners of giant monopolies in return for the use of their names, which carries with it their prestige and standing, in behalf of those who are working against the interest of the plain people of this country and who would deny to the very children of these misled mothers a fair and equal opportunity in life. I am receiving information from all over the Nation about the activities of this association, and I hope people continue to send me this information.

Deceitful propaganda is very damaging to the interest of the general welfare of the people of this Nation and should be exposed at every opportunity. As further evidence of deceitful and misleading propaganda that is being published by the interstate chains through their 100-percent-owned institute of distribution should be mentioned the stand of the American Federation of Labor on this bill.

Chain-store propagandists are still making the false claim that the American Federation of Labor condemned our bill, H. R. 1.

MODERN LOBBY

Do any of you recall the power lobby? Well, the power lobby was amateurish compared to this modern, streamlined, absentee-ownership lobby. It is backed by tens of millions of dollars. It is spending huge sums of money each month in the effort to influence Members of Congress.

Money can hire brains and this lobby, having plenty of money, has obtained the best brains and the services of the most influential people money can buy. Today Washington is flooded with all kinds of "legislative consultants" * * * and others, who claim to know how to get things printed in the newspapers and how, through artful methods, to influence

the Members of Congress. These lobbyists profess vast personal influence and I might add that with my introduction of the Federal chain store tax bill, many lobbyist slaves of the money masters have enjoyed steady employment.

Here is another illustration of chain-store pressure methods:

Away from Washington, and throughout the interior of our land, the interstate chains have compelled store managers to deliver sets of eight form letters to customers. They try to persuade customers, through the use of incorrect data, to write letters to Congressmen, urging them to oppose the Federal chain store tax bill.

These letters are written on stationery supplied gratis by the interstate chains. When written they are turned in, unsealed, to local chain-store offices. After examination by chain officials, the letters are sealed, stamped, and mailed to Washington.

I admit that this is attention-getting propaganda. But I believe that the average Member of Congress gives more serious consideration to one uninspired letter from a good mother or father, with the vision to see local opportunities and local privileges slipping away from their children and into the hands of a few rich money masters of Wall Street, than he gives to a hundred chain-inspired letters.

They are also commencing a pressure campaign by telegraph.

WHAT ATTORNEY GENERAL MURPHY SAID ABOUT INDEPENDENT BUSINESS

Attorney General Frank Murphy, who was recently sworn in as a member of the United States Supreme Court, and who is one of the best and ablest men in this Nation, made this statement about the necessity of preserving independent business:

Trusts and monopolies in America have been fostered and promoted in the past by the Federal Government to such an extent that they virtually have wiped out the small independent business man. We must restore this independent business man or we will be a nation of corporation peons in another decade.

The day is already here when a boy graduating from college can seek a career only in some monopolistic enterprise if he has any hope whatever of achieving comparative success.

We have come to the point of making jokes about the disappearance of the corner grocer.

HEARINGS

H. R. 1, a bill to regulate selfishness and restrain greed by distributing privileges and opportunities will be considered by the committee commencing March 27, 1940.

The 1940 Census

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

LETTER FROM A CONSTITUENT

Mr. TREADWAY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter received by me recently from a distinguished constituent:

MARCH 7, 1940.

DEAR ALLEN: This is a little of what I consider good advice, although I do not believe you need it.

Nothing that has happened during a number of bewildering New Deal years has aroused so much hostility among the people around here as the "prying questions" that are proposed in the 1940 census. Senator TOBEY has made many a friend for himself, in my humble opinion (and among them people who never heard of him, both Republicans and Democrats) simply by keeping after this foolishness that they propose, and apparently there is a good chance that this may be removed by Congress. If this comes up in the House, or if you get a chance to "spout" about it I believe this represents an excellent soundingboard, and the surprising thing to me is that most of the "squawking" comes from people in the middle income brackets and lower, and who may have a mortgage on their homes (or possibly share their privies), even as you and I, and who consider that it's nobody's d—— business.

The factor that I think is particularly bad is that information gathered like this in a town like ———, or in fact any of them in your district, by strictly political employees working under a short appointment, is pretty sure to become public knowledge in almost no time. And the fact that there has been so much said about it is proof that the "keyhole peepers" and street-corner gossips are just waiting for a chance to get at this information tooth and nail. Even if you lose, I believe this deserves a few rapier-like thrusts from you, although you are a much better judge of what you should or should not do than any rank outsider like myself. I do know that more people have crabbed to me about this than anything that has happened for years and I believe probably the New Dealers already know this and have perhaps already put her in reverse just as they always do when they stumble into a hornet's nest.

The Proposed St. Lawrence-Great Lakes Waterway Treaty

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

ARTICLE FROM THE NEW YORK TIMES OF JANUARY 22, 1940

Mr. MARTIN J. KENNEDY. Mr. Speaker, almost daily there are articles appearing in the leading newspapers of the country in opposition to the proposed St. Lawrence-Great Lakes waterway treaty. The following statement was taken from the New York Times of January 22, 1940:

CANADIANS ARRIVE FOR SEAWAY TALKS—HULL, IN WELCOME, CONTRASTS "CONSTRUCTIVE" PROJECT WITH OTHER WORLD ACTIVITIES—PROSPECTS OF PACT GAIN—DOMINION MORE RECEPTIVE, BUT THE ATTITUDE OF CONGRESS REMAINS IN DOUBT

WASHINGTON, January 21.—"In a world in which so much of international relations arise out of unhappiness it is gratifying to be able to take up a project which is constructive," Secretary of State Hull declared tonight in a statement welcoming a Canadian delegation here to continue negotiations for a new St. Lawrence seaway treaty.

The Canadian delegation is composed of Dr. O. D. Skelton, Under Secretary of State for External Affairs; T. H. Hogg, chairman of the Ontario Hydro-Electric Commission, who will represent Ontario's interest in the power feature of the seaway; and J. E. Read, Guy A. Lindsay, and Olivier Lefebvre from the Departments of External Affairs and Resources.

The group conferred in Ottawa 2 weeks ago with a United States delegation headed by Adolph A. Berle, Jr., Assistant Secretary of State.

In the conversations to be resumed here tomorrow the financing of the project may be the main subject.

CANADIAN CHANCES BRIGHTER

The arrival of the Canadian delegation for formal discussions means that both governments believe that, after lying dormant for 7 years, the St. Lawrence project is politically ripe for revival. The chances of approval in Canada are now brighter than they have been for a decade.

Ontario needs, or will soon need, a large part of the 1,000,000 additional horsepower that would become available to her under the power feature of the plan and, consequently, Premier Mitchell Hepburn, of Ontario, has dropped his vigorous opposition.

Quebec shipping men still dislike the prospect of displacement of Quebec City and Montreal as inland ocean ports by Great Lakes cities such as Fort William and Port Arthur, and Quebec power magnates would prefer to continue selling their surplus current to the Ontario Hydro-Electric Commission.

But Premier Duplessis, of Quebec, who was a political enemy of Prime Minister Mackenzie King, has been succeeded in office by Adelard Godbout, who owes his victory largely to the intervention of the Federal Government in the Quebec elections. If Mr. Mackenzie King really wants the St. Lawrence seaway there is little doubt that he can have it.

The desire of American waterway engineers for a one-stage rather than two-stage development of the seaway has been met by the Canadians, partly because it will reduce the cost of the project to Ontario, which would contribute toward it in return for the power to be received.

CONGRESS ATTITUDE IN DOUBT

What will happen to the project in Congress remains problematical. An attempt is being made in the present negotiations to propitiate Chicago in the matter of diversion of Great Lakes water into the Mississippi through the Chicago drainage canal.

Since the present negotiations began they have aroused the hostility of the Atlantic States Shippers Advisory Board and a dozen other organizations. These groups have discussed plans to block the project, while deferment of the negotiations was requested by Representative MARTIN J. KENNEDY, of New York, pending an investigation by the House Interstate and Foreign Commerce Committee.

Mr. Hull's statement tonight was as follows:

"We are glad to welcome Dr. Skelton, the Under Secretary of State for External Affairs of Canada, and his colleagues, who have come to Washington for the purpose of continuing negotiations for a new treaty providing for the development of the St. Lawrence River and the Great Lakes Basin.

"Both Canada and the United States have been interested in this development for many years. The treaty which was negotiated covering this subject in 1932 met with certain objections; and as a result, both the Canadian Government and ourselves decided to reopen the negotiations on a new basis, looking toward the conclusion of a new treaty dealing with the Great Lakes-St. Lawrence Basin as a whole.

"In a world in which so much of international relations arise out of unhappiness, it is gratifying to be able to take up a project which is constructive, and whose object is to improve the economic well-being of the peoples of both countries."

In my opinion, I think it would be most unfortunate to enter into a treaty at this time with a country now in a state of war.

American Fishermen Fight Customs Ruling Allowing Entry of "Duty-Free" Newfoundland Fish

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

BRIEF OF THE ATLANTIC FISHERMEN'S UNION

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following brief submitted by Patrick McHugh, of Boston, Mass., on behalf of the Atlantic Fishermen's Union, Local No. 21455, before the Commissioner of Customs, Washington, D. C., relative to Treasury Decision No. 49682:

HOW AMERICAN LABOR IS AFFECTED

Much has been said about provisions in the General Seafoods Corporation Agreement No. 49 relating to employment of Newfoundlanders in preference to American labor.

We introduce into the records herewith the exact wording of the employment clauses, as follows:

"3. With respect to the employment of Newfoundland citizens at the shore stations and in the boats and vessels of the company:

"(a) That, to the extent that the same are reasonably available, only Newfoundland citizens resident at the time in Newfoundland shall be employed in the company's shore stations, with the exception of the managerial and supervisory staffs thereof;

"(b) That, to the extent that the same are reasonably available, only Newfoundland citizens resident at the time in Newfoundland shall be employed by the company in its boats or vessels engaged in fishing out of Newfoundland or in carrying merchandise from Newfoundland to the United States of America or elsewhere, with the exception of such officers or members of the crews as may be required by the laws of the country of registry to be citizens thereof."

Thus we have an American fishery project in which Newfoundland resident citizens are employed, and, of course, in which no United States fishermen need apply. The whole affair is so absurd, so ridiculous that it would be comic were it not for the fact that (if carried through) it certainly might mean in time the wiping out of thousands of American jobs.

Before this "self-enacted law" known as the Treasury Decision No. 49682 went into effect in August of 1938, foreigners could merely be employed in the crew of an American vessel. Under the decision, these foreigners may now be employed in the shore station because it is part of an American fishery, although it may simply be leased by the shipowner or master. And, worse still, the foreigners in this case have elbowed the Americans right out of the picture.

IS THERE A MONOPOLY?

Advocates of the Newfoundland deal indignantly object to our assertions and those of men like Congressman BREWSTER that this act, No. 49, in effect conveys a virtual monopoly upon General Seafoods due to selection of the site of La Poile.

First of all, of course, there is the agreement that there will be no financial help from the Government of Newfoundland to any other possible American competitor for 3 years.

Secondly, the Government agrees for 22 years that "it will not, for the purpose of inducing or aiding the erection or operation of any shore station comparable in kind with the company's shore station within a radius of 15 miles therefrom, * * * give to any person, firm, or corporation any financial assistance, or any concession of any kind * * *."

This clause has a neat little joker buried deeply. Only those who know something of the treaty coast of Newfoundland realize what this trick promise really means, * * * and our American fishermen know that coast.

In his extensive analysis of the Newfoundland deal, Congressman BREWSTER sized up La Poile as "the only decent ice-free harbor on the coast."

As to La Poile, the Hydrographic Office declares that this harbor rarely has ice fields, and in fact navigation has not been impeded more than half a dozen spring seasons during the past 50 years.

Are the other bays equally fine? In the case of Cinq Cerf Bay, "the only anchorage is available for small vessels."

In the case of Couteau Bay, "the entrance to the bay is almost blocked by islets and rocks."

As for Barasway Bay, "foul ground makes the bay useless as an anchorage."

This leaves only one possible available competing bay, that of Connoire Bay, the second best harbor along the coast. This is around 15 or 18 miles from the La Poile area, and perhaps may just come within that prescribed Government "no aid" limit of 15 miles. In any event, this bay is in no way to be compared to the fine ice-free harbor of La Poile.

However, the physical aspect of the various harbors is only one factor pointing to this alleged monopoly for one American company. Recently J. H. Gorvin, the new Commissioner for Natural Resources, said that "anyone who wants to operate without Government assistance within these areas is quite free to do so."

This seemingly plausible statement was exploded last December 8, 1939, by H. A. Winter, writing in the Evening Telegram in St. Johns, Newfoundland, as follows:

"He does not say 'under the 1818 treaty' but that term is necessarily implied. Obviously, also, it refers to Americans. Read in this way the statement is quite false. No other American concern is free to do so. If it is meant as an invitation, anyone accepting it might operate without Government financial assistance, but he could not operate without Newfoundland legislation enabling him to own land and do other things. And no one would be insane enough to attempt it."

OTHER FORMS OF MONOPOLY

No amount of argument that there is technically no monopoly for General Seafoods in Newfoundland can explain away the fact that this company has several advantages which no other concern can obtain, at least not for years. Some of these might be listed briefly as:

1. They start off with a cash advance of $200,000; if this had to be raised by another American concern there would be a bond issue, costing at least 6 percent interest, and also an annual depreciation of 5 percent to be charged off. General Seafoods has the money and repays gradually, and free of interest.
2. Piers and wharves are to be constructed for them, according to former Commissioner Ewbank.
3. Nominal rental of only $100 will be paid yearly for first 2 years.
4. If lease runs for full 22 years, General Seafoods will then own outright the big plant.
5. Many customs concessions are to be granted.
6. Exemptions are promised on immigration laws to permit company experts to enter country.

We submit that H. A. Winter was right when he declared that "no one would be insane enough to attempt" to compete with General Seafoods on the treaty coast.

UNITED STATES TRAWLERS TO NEWFOUNDLAND

From the words of Clarence Francis, president of the General Foods Co., parent concern of General Seafoods Corporation, we have the definite statement that the company "will transfer several of our trawlers to that coast (Newfoundland), where the fish live in great abundance."

EIGHT MONTHS AHEAD OF TIME

In May of last year President Clarence Francis, of the General Foods Co., informed his supervisory force that "we have just closed a fishing contract with the Government of Newfoundland. A building will be constructed for cleaning and freezing fish."

This reveals that the deal was closed secretly for at least 8 months before it was made public, or rather before it was publicly signed. Not until the following December 6 did the General Seafoods Corporation Act No. 49 become a law as "enacted by the Governor, by and with the advice of the commission of government."

We want this in the record to prove conclusively that Treasury Decision No. 49682 was written, to a large extent, because the General Seafoods had wanted it written, to make legal their as yet unrevealed deal with the Newfoundland Government.

REGARDING POSSIBLE UNITED STATES MONOPOLY

Both the Massachusetts State Federation of Labor and the Atlantic Fishermen's Union which I here represent, have adopted resolutions calling for investigation of the fishing industry of New England for alleged improper practices, including possible violation of antitrust laws. The Customs Department might well obtain from the Department of Justice some information upon the question. This move of the company to Newfoundland may perhaps be aimed at evading possible prosecution under the Sherman and Clayton

laws. General Seafoods is said to do some 100,000,000 pounds of fish business at the Boston fish pier annually, or at least 25 to 33 percent, which is claimed by the union to be a proportion in excess of possible legal limits.

NO SUBSIDIES FOR UNITED STATES FISHERMEN

We fishermen are eternally grateful to Congressman BREWSTER for one special section of his speech, that in which he told how large-scale financial help is given to Canadian fishermen in contrast to practically none for Americans by our Government.

We agree with Mr. BREWSTER that it is no wonder that American fish companies move to Canada and Newfoundland. We want to introduce into this record his thought-provoking analysis of the widespread type of financial help which Canada gives to its fishermen, in contrast to nothing by the United States for us American fishermen. All we seem to get is "help" like this Treasury Decision No. 49682.

Here are the details of the Canadian financial aid to fishermen, as taken directly from the Brewster speech:

"The Dominion of Canada aids its fishermen by direct subsidies. From the ninth annual report of their department of fisheries for 1938–39, page 12, it is stated that in that year total cash payments of $471,106.20 were made to eastern Canadian fishermen to replace gear which had been destroyed by storms. The Dominion paid $369,443.57, the Provinces of Nova Scotia, New Brunswick, Prince Edward Island, and Quebec paid the rest.

NOT FOR NEW ENGLAND FISHERMEN

"No one has heard of payments to New England fishermen for gear damaged in the hurricane of 1938. In the same year—report, pages 15–16—cash bounties paid to fishermen in the Maritime Provinces by the Dominion Government were $159,952.70. The sum of these direct cash subsidies in Canada is $631,088.90, or one-eighth cent per pound for all fish caught in eastern Canada, including bait, herring, and everything. This is equivalent to three-tenths cent per pound of fillets. Add this to the total benefits of duty concessions, currency depreciation, direct subsidy for building the plant; we get the grand total of 1.39 cents per pound direct advantage Canadian fishermen now have over New England fishermen, workers, and employers. Fishermen in the Maritime Provinces also received loans from the Dominion and Provinces of $386,424.38."

GENERAL SEAFOOD'S PRINCIPAL PURPOSE

We wish to place upon the record one paragraph from the 140-page printed brief which was filed with the Customs Department 2 years ago prior to the time of the issuance of Treasury Decision No. 49682. The paragraph, on page 34 of their brief, reads as follows:

"The principal purpose of the operation is, of course, the production for the United States market of certain fish products, primarily packaged quick-frozen fish fillets. The enterprise will be of doubtful practicability unless the products, to the extent they consist of fish taken by the applicant's fishing fleet above described, are entitled to entry into the United States free of duty."

These frank admissions in the above paragraph refutes those persons who have been claiming that the fish would go to England and thus not in any way injure our American fisheries.

PROBLEM OF THE UNEMPLOYED

We now have upon our hands a growing problem of unemployed fishermen, in Boston and Gloucester, where at least 200 such veterans of fishing fleets cannot get work. Many have left to seek work on the west coast—so much so that we have received official communications from unions out there advising us to tell our out-of-work members that the west coast cannot absorb any more. If the Newfoundland deal pulls several of President Francis' trawlers out of Boston, then there will be many more unemployed among our members.

SIX MONTHS' STUDY MADE

Because of the fact that no public hearings were held, no information sent to possible competitors among the industry, and no attempt made to obtain the viewpoint of the fishermen, it seems to us that there should be entered on this record certain information relating to the background of the application of General Seafoods Corporation.

The project was in the early stages of discussion and negotiation in the fall of 1937, according to Newfoundland officials. On December 3, 1937, the United States Consul General at St. John's, Newfoundland, made a report to the Secretary of State to the effect that this project was being negotiated.

According to Secretary of State Cordell Hull,

"Copies of the consul general's report were referred to the interested agencies of this Government, namely, the Treasury Department, the Department of Commerce (in which the Bureau of Fisheries was then located), and the Tariff Commission."

Not one of the three departments corresponded with any American fish concerns which obviously would be keenly disturbed by developments.

Secretary Hull, in the CONGRESSIONAL RECORD of February 9, continues with:

"The Treasury Department stated in subsequent communications that pending the receipt of further information from the representatives of the General Seafoods Corporation and from this (State) Department, a decision regarding the tariff status of products resulting from the operations of the corporation was being held in abeyance."

Note that the Treasury Department says that the decision on making this fish duty free was to be held in abeyance, until they had more information from the State Department and from the applicant, General Seafoods. The desired information came from the two most interested parties * * * the party of the first part (General Seafoods) and the party of the second part (the Newfoundland Government). The last-named party gave the "added information" to the State Department consul general in Newfoundland.

Meantime, events were steadily working toward their logical conclusion in Newfoundland. Commissioner Ewbank tells what happened after the consul general reported in December of 1937. Early in 1938 and until the famous Treasury Decision 49682 was issued for General Seafoods, there was much "running back and forth" to the United States customs department.

A vivid account of the negotiations, lasting 6 months, is given by Commissioner Ewbank, as follows:

"Before the end of the period within which the company was to inform the Government whether they accepted the draft agreement as a basis for a formal agreement, they informed us that they considered it advisable to arrange for a conference in Washington in order to discuss with the customs authorities certain questions arising out of the United States customs regulations in connection with this scheme and asked for an extension of 60 days.

"We acceded to this request on the understanding that both parties remained uncommitted to the agreement. At the end of May, as no ruling had been given on the questions raised, we agreed to a further extension of 60 days, and thereafter no further extension was arranged.

"It was not till August 27 that we were officially informed that the Treasury Department at Washington ruled that the products resulting from the processes of preservation and preparation as described by the company at the shore station proposed to be established and operated by it in Newfoundland in conjunction with its vessels would be entitled to free entry as the products of an American fishery."

Note that Mr. Ewbanks remarks "not until August 27" was he officially notified that the United States Treasury Department had ruled that the products to be processed by General Seafoods in Newfoundland "would be entitled to free entry as the products of an American fishery."

This notification came, not before, but after the Treasury decision of August 12, 1938, had been promulgated. Naturally enough, the Treasury could notify the Newfoundland Government that everything was all right to go ahead, as the decision was on the books.

We now glance back at the CONGRESSIONAL RECORD of February 9 to read how Secretary Hull says that on August 22, 1938, the Department of State was advised by the Treasury Department as follows:

"This Department (Treasury) has reached the conclusion that fish taken by American vessels owned by the General Seafoods Co. and processed in Newfoundland under the proposed procedure described by representatives of that company will be entitled to free entry as products of an American fishery under the provisions of paragraph 1730 (a) of the Tariff Act of 1930. * * * Article 489 of the Customs Regulations of 1937, which relates to products of American fisheries, has been amended to accord with this conclusion, and the General Seafoods Co. has been advised of the action taken."

DISCUSSION AND AGREEMENT

On page 127 of the May 25, 1938, brief of General Seafoods "orally requested" by Chief Counsel William R. Johnson, of the Bureau of Customs, is found the revealing paragraph:

"The matter of modifying those paragraphs and revising Customs Form 3295 could probably best be accomplished after discussion and agreement between the Bureau of Customs and the applicant, with respect to the records to be kept by the applicant's treaty coast fishing vessels and shore station. Upon the basis of such an agreement the necessary entry forms could be worked out."

This brief, it will be noted, was filed May 25, 1938, which is slightly more than 9 or 10 weeks before Treasury Decision 49682 was promulgated. It is reasonable to assume that the above-requested discussions were held. Thus the American fishermen's affidavit Form No. 3295, about bringing in catches of fish that were American in all respects, was talked about and found to be neither "appropriate or workable in connection with the entry at American ports of the products of an operation such as the applicant's proposed operation on the treaty coast."

Neither "appropriate or workable" from the viewpoint of General Seafoods; that is, the frank attitude of the applicant. Nowhere do we find in that brief the faintest suggestion that the parties most vitally concerned—the fishermen and the boat owners or dealers—should have anything to say about their affidavits being "workable."

But to continue the examination of this brief.

On page 126 of the General Seafoods brief requested by Chief Counsel Johnson, of the United States Customs Bureau, is this frankly stated request:

"The substance of what (the) applicant seeks is a ruling that the quick-frozen fish and the salted and cured fish produced by its proposed treaty-coast operation will be admitted free of duty."

Strangely enough, farther down on this page 126 is a remark that certain suggested amendments to the article 489 of the 1937 customs regulations (amendments suggested by General Seafoods) would—"from the standpoint of the Department * * * prescribe certain conditions designed to insure that the enterprise shall be a bona fide American enterprise."

We shall now discuss the proposed amendments recommended by General Seafoods, as shown by their exhibit No. 3 on page 132. The old form of (c) was to be kept as follows:

"(c) American fishery, within the meaning of said paragraph, is defined as a fishery operated under the American flag by American vessels in foreign waters, in which such vessels have the right, by treaty or otherwise, to take fish and other marine products."

Then the exhibit goes on to say that General Seafoods would like to have added to that (c) the following language:

"Wherever, by treaty or otherwise, an American fishery has the right to prepare and preserve its products on shore, said vessels or their owners may establish shore stations for the storing, preparing, preserving (including freezing), and packaging of marine products taken by said vessels, but every such shore station shall be established by the master or owner of said vessels and shall be owned by or leased to said owner or master and operated and managed by them, either in person or by a shore agent."

Following in section (d) as it was before Treasury Decision 49682 changed the meanings:

"(d) The employment of foreign fishermen either as members of the crew or under the supervision of the master or crew of an American vessel is allowed."

General Seafoods asked that the word "fishermen" be eliminated and that the words "citizens and inhabitants" be inserted in place. They also ask at the end of the original (d) paragraph, just before the expression "is allowed" is used to wind up the sentence, that these words be inserted: "or of the manager of a shore station."

The second sentence of (d) remains as it was originally, except that the words "or by a shore station" are asked to be inserted:

The purchase by the owner, agent, master, or crew of an American vessel (or by a shore station) of fish or other marine products taken by the citizens of another country in foreign waters will subject such fish or other marine products to treatment as foreign merchandise.

Returning to page 127 of this printed brief, we discover this comment about (c) and (d):

"So far as is concerned the relation of (c) and (d) of article 489 to the applicant's treaty coast operation, applicant undoubtedly would be adequately protected by an interpretative ruling by the Department, preferably published as a Treasury decision, stating that packaged quick-frozen fish and salted or cured fish, the products of an operation such as applicant's treaty coast operation outlined above, would be entitled to free entry under paragraph 1730 (a) of the Tariff Act of 1930 * * *."

We are asking that these excerpts be made a part of our brief as submitted herewith, although we realize that these facts are well known to the Customs Department because of the brief filed by the applicant General Seafoods prior to the T. D. 49682. We quote these excerpts by themselves to stress that the Customs Department hardly would have changed the existing customs regulations to the extent of lining up a shore station, unless some interested party had been making a definite and sustained effort to secure such a shore station.

The whole picture is clearer, now that the brief orally requested by Chief Counsel Johnson, of the Customs Bureau, is available to those of us who did not have an opportunity of a public hearing 2 years ago. All the facts now prove our earlier contention that the Newfoundland deal was engineered, then delayed, until the necessary changes in American fishery rulings and definitions could be coaxed out of the Treasury Department. It is to be remembered that President Clarence Francis, of General Foods, wrote in May of 1939 that they had reached an agreement with the Newfoundland Government. It was in the preceding August that the Treasury Decision blossomed out in its 49682 form, making everything legal and permitting the agreed-upon Newfoundland fish to come in duty free.

EFFECTS UPON AMERICAN LABOR

On page 29 we come to the part of the brief which most concerns American labor. Here we find the sections which indeed are the very core of our extended protest against the Newfoundland deal and against the Treasury Decision 49682, which made all this involved threat to American fisheries possible and formidable.

Says the brief, which Counsel Johnson verbally requested:

"It is proposed to use in the operation three or four power vessels and one auxiliary powered Gloucester schooner."

As for that Gloucester type of schooner, here are her duties:

"The schooner will be engaged in the inshore fishery. Her captain and mate will be citizens and inhabitants of the United States, and her crew probably will consist, in part at least, of citizens and inhabitants of Newfoundland."

We interrupt our quoting of the paragraph to remark that this business of gracefully edging up to the disagreeable news about using Newfoundlanders as the crew in place of Americans, is tactfully done by saying "in part, at least." That is not the way the official Newfoundland Agreement Act No. 49 puts it, for in that act it is expressly stated that—

"Newfoundland citizens resident at the time in Newfoundland shall be employed by the company in its boats or vessels * * *"

Of course, the observation is made "to the extent that the same are reasonably available" but in view of the many on the dole there, there always will be Newfoundlanders ready to take the jobs of the Americans. In addition, the act requires such officers and members of the crew as required by United States registry laws, which require an American captain, and perhaps mate.

We now return to our quoting of the duties of the Gloucester schooner, and find that she will be "the center of a boat fishery, and her captain will hire Newfoundland fishermen to fish for him, using their own boats and gear. Their catches may be landed on board the schooner and taken to shore by her * * *." There is the crux of the whole matter * * * local fishermen hired to fish for this "American fishery" and to use their own boats and gear.

American Forum of the Air—Social Security and the Townsend Plan

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

RADIO ADDRESSES OF HON. ROBERT F. WAGNER, OF NEW YORK, AND HON. SHERIDAN DOWNEY, OF CALIFORNIA, AND OTHERS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following program of the American Forum of the Air held Sunday, February 25, 1940:

Announcer MCCORMICK. This is the American Forum of the Air. Listeners from coast to coast once more are invited to hear the American Forum of the Air. Tonight another forum broadcast emanates from the broadcasting studios of the Department of the Interior Building in Washington, D. C., presented by WOL in cooperation with WOR. The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational radio programs which present both sides of national problems temporately discussed by leaders of various schools of thought. Information as to how you may receive a printed copy of tonight's proceedings will be given at the conclusion of the program.

Tonight's American Forum of the Air will be presented in two parts. Under the direction of the chairman, Theodore Granik, pioneer in educational radio discussion and newspaper columnist, you first will hear the formal presentation of opinion, followed by an extemporaneous panel discussion. And now your chairman, Mr. Theodore Granik:

Chairman GRANICK. Thank you, Mr. McCormick.

In Congress, in State and congressional elections from Maine to California, the aged are in the news—the problem of their security vital to every American.

As amended last year, the Social Security Act embraces a twofold attack on the problem of insecurity among our aged. For those too old to work, it establishes a Federal-State cooperative plan of public assistance, based on need, the Federal contribution matching that of the State on a 50–50 basis up to a total of $40. For the great mass of wage earners the act establishes a system of old-age and survivor's insurance, financed by equal contributions by workers and employers.

Opponents of the Social Security Act are advocates of the Townsend and other plans, who would substitute for the present machinery a flat pension plan to all who reach a certain age.

Senator SHERIDAN DOWNEY, of California, recently filed in the Senate of the United States a new bill revising the Townsend plan. It would levy a 2-percent tax on the gross income of persons and corporations, and pay out the proceeds in monthly pensions to all persons over 60, but not to exceed $200 per month.

This proposal has been severely attacked by those who claim that $200 per month is an excessive burden, and in any event that the uniform pension payments have no relation to number of dependents, prior income, or prior standard of living. On the other hand, its supporters contend that the $200 per month is merely a ceiling beyond which the pension payment cannot go, and that at the beginning they will amount to $50 or $60 a month, thereafter increasing with the national income.

How are we to meet this vital issue? Which of the many suggested plans are sound? Would the Townsend plan bring prosperity or depression? Proponents of the present Social Security Act maintain that it is soundly conceived and adequately financed. They stress that the act will continue to be extended and perfected as time goes on. The Townsendites and others, however, contend that the present benefits are too low to maintain the aged according to proper standards, and that its terms often work hardships. They also argue that adequate pensions for the aged would create a vast pool of new purchasing power which would bring about a sustained and increasing economic prosperity.

The Downey bill is now before the Finance Committee of the Senate, and the American Forum of the Air has thought it timely to present a discussion on various phases of the problem by leading spokesmen. We will hear first from Senator ROBERT F. WAGNER, of New York, sponsor of the Social Security Act, the Railroad Retirement Act, and the pending national health program. He will be followed by Senator DOWNEY, leading spokesman for the

Townsend plan and sponsor of the new bill to which I have referred.

Immediately following there will be an informal panel discussion. Our panel members are:

Kenneth Crawford, Washington correspondent of the New York Post, and new president of the American Newspaper Guild;

Senator D. WORTH CLARK, of Idaho:

Rt. Rev. John A. Ryan, director of the social action department of the National Catholic Welfare Conference; and

Congressman MARTIN F. SMITH, of the State of Washington.

And now Senator WAGNER.

ADDRESS BY SENATOR ROBERT F. WAGNER

My friends, about 6 weeks ago, disaster stalked a little community in West Virginia. Ninety-one men, many of them heads of families, lost their lives in an explosion in a coal mine.

Prior to 1935, a hopeless and impoverished future faced the families and dependents of the deceased in such a tragic situation. Today, the survivor's insurance benefits payable under the Social Security Act provide a steady income for the bereaved widows and orphans in most of these cases. This very week, they will receive their first monthly benefit checks, averaging $32 a month for a widow with one child and $50 a month for the larger families. These benefits will be paid every month until the children are old enough to work. Lump-sum burial benefits averaging $150 will be paid where the deceased left no children.

This is a measure of our progress in 5 short years, in protecting the families of the Nation when the breadwinner is stricken by accident or illness in the prime of life.

Prior to 1935, this, the richest Nation on earth, had no general retirement plan worthy of the name, for the men and women worn out in a lifetime of service at the industrial machine. Today, under the Social Security Act, we have established old-age insurance accounts for more than 47,000,000 persons—the largest insurance system in the world. Regular monthly benefits are being paid now to retired workers 65 years of age or over; averaging $25 a month for single men and $37.50 a month for married men with wives who have also reached the retirement age. These benefits, steadily increasing over the years, in number and total amount, represent a minimum of old-age security guaranteed by the United States Government—a regular monthly income, up to $85 a month, geared to family needs—financed by the contributions of the worker and his employer—paid not as a hand-out, but as a matter of earned right.

In addition, for those now over 65, whose own generation established no insurance protection, the Federal and State Governments paid more than $400,000,000 in pensions last year to about 2,000,000 needy recipients.

That combined system of insurance and pensions is a measure of our progress in providing for the security of our aged citizens, their families, and dependents.

The humanitarian ideals and economic forces which motivated our Nation-wide movement for social security, have not spent themselves on these specific provisions for the aged. We will continue to make progress as finances permit and experience dictates. The protection of old-age insurance must be extended to farm laborers, domestic servants, and employees of nonprofit institutions. The old-age pensions should be increased by varying Federal grants according to the varying economic resources of the States. The old-age insurance benefits should be increased by a Federal contribution, financed by general taxes levied according to ability to pay.

In our continuing efforts at improvement, there are at least two important steps which can and should be taken now. The first is in the field of voluntary annuities for appropriate groups. As a beginning, I plan to introduce a measure extending such insurance protection, on a voluntary basis, to small-business men, and to the large number of employees who leave covered employment and desire to continue their insurance benefits. The voluntary coverage of these groups will be geared into the present old-age insurance plan, in the interest of simplicity and savings in administrative expense.

The second important step which should be taken now is the payment of benefits to those who become permanently and totally disabled before they reach the retirement age, for causes not arising out of their employment. These men cannot keep or even seek a job. They are not eligible for unemployment insurance, workmen's compensation, or, in most cases, for old-age insurance. These "unemployables" are the truly "forgotten men" of social security.

The Advisory Council on Old Age, and the Social Security Board, have both recommended that this gap be promptly closed. For at least 10 years, the cost of this added protection would be comparatively small; it could be met out of the existing old-age insurance fund without change in tax schedules. Payment of these benefits will bring substantial savings in the cost of relief and institutional care. No single improvement in our retirement system is more important or could be as readily accomplished.

Since the passage of the Social Security Act, discussion of amendments in public and political forums has been concerned almost entirely with old-age security. Important as that issue may be, the problem underlying all human needs is income security for the family breadwinner. Last year, although industrial production rose to 1929 levels, an average of 9,000,000 able-bodied workers searched in vain for employment in private industry. The present State-Federal system was called upon to meet unemployment benefits in excess of $400,000,000 to 4,500,000 of the unemployed.

The unemployment insurance benefits now payable are wholly inadequate to meet any sizable portion of the unemployment problem. No reduction in the Federal 3-percent pay-roll tax rate should be made or even considered until the present low level of benefit payments has been substantially raised. Apart from such immediate measures as may be taken by the States, I have introduced a resolution calling for a National Advisory Council on Employment Security, to weigh our past experience and guide our future progress in this all-important field. The value of various proposals for "merit rating," the better coordination of unemployment insurance with relief and work relief, the promotion of job opportunities among the unemployed, the retraining of workers who are displaced by mechanical improvements or depletion of natural resources—these are among the problems which would be thoroughly explored by experts, in a nonpartisan atmosphere. We should begin now on this study, so essential to constructive advances toward a long-sought goal—full employment security.

No rounded program would be complete without conquering the last remaining frontier of social security, adequate health protection for the aged, for mothers and babies, for our industrial workers, and our farm people. While congressional study continues on a long-range national health program, we can make a substantial beginning now by enacting the President's experimental proposal to construct small hospitals and health centers in needy areas. This, and every other proposal I have put forward tonight for adoption at this session of Congress, can definitely be achieved within the limitations established by the President's Budget message.

As a life-long advocate of social security, I participated actively in the up-hill fight to overcome the opposition of selfish interests and the apathy of public authorities. I found no attractive slogan, no financial cure-all, no royal road to the satisfaction of these basic human needs. I experienced the legislative struggles, the heartaches, the compromises that go with the very practical job of framing legislation that will pass and work in a practical world.

Speaking as I do from that experience, I cannot give my support to any proposal like the Townsend plan, however well intentioned or sincerely advocated. It would endanger all our hard-won gains and divert an undue proportion of the national income to the aid of a particular group. It would scrap a practical working old-age-insurance program, with its fair promise of greater benefits to come, in favor of a misguided tax and pension scheme that can only bring disappointment to the aged and economic disaster to the entire Nation.

My friends, the wars now raging on other continents have centered the attention of the American people, as never before, on the blessings of our democratic heritage. That heritage is safeguarded against military aggression by two vast oceans, reinforced by powerful armaments. Unlike some other neutrals closer to the scene of destruction, our democracy is not at the mercy of some neighboring dictator drunk with power. The fate of our democracy rests in our own hands.

Our task and our responsibility is the progressive elimination of poverty, insecurity, and unemployment in the midst of plenty. In these troubled times, our democracy could not withstand either a return to the hands-off policies of the past, or the devastating consequences of unsound panaceas. We must continue to press forward as we have in the last 7 years courageously and constructively, expanding the frontiers of social responsibility and improving our standards of life. So long as we follow that course, our democracy will be secure, and its future bright.

Chairman GRANIK. Thank you, Senator WAGNER. You have just heard Senator ROBERT F. WAGNER, of New York, in tonight's American Forum of the Air presentation on social security and the Townsend plan. And now we present Senator SHERIDAN DOWNEY, of California.

ADDRESS BY SENATOR DOWNEY

Ladies and gentlemen, this evening I shall first analyze the present Social Security Act, leaving for later discussion the Townsend plan.

Now, this act includes unemployment insurance and other features with which we are not concerned. The only provisions that I shall discuss relate to the two different pension systems, one for the workers under the so-called contributory plan and the other type of pension aid called Federal-State old-age assistance.

Both of these provisions were debated in 1935 when the bill was up in Congress. The act had the good fortune to be sponsored by our colleague and prior speaker, Senator WAGNER, one of the leading statesmen of the Nation.

Certainly, no one could have doubted the need for decent pensions to our older people after the Senator had painted a tragic picture of their destitution.

And he then expressed the opinion "that $40 a month per person has been estimated as the minimum requirement." Now, $40 isn't very much, as the Senator himself was quick to point out to his colleagues. And so I should like to ask him—how, believing $40 an essential minimum, he can defend a plan that gives less than $10 a month to suffering multitudes and an average of less than $15 to over one-half of the beneficiaries, or rather, I should say the victims of the act.

Let's be a bit more concrete. Let's quote the Social Security Board itself to show how far pension payments fall short of Mr. WAGNER'S $40 monthly. Take first the charity pension plan. The average payment is only $19 a month—less than half of the Senator's minimum.

He may argue that the responsibility for these miserable charity payments falls not on the Federal Government, but on the States. If true, does that lessen the misery of our older people? Alibis, evasions, the shifting of blame from one governmental sovereignty to another will accomplish nothing.

And certainly Senator WAGNER cannot argue that the Federal Government is not wholly responsible for the scanty payments under the contributory plan, because that plan is wholly the creature of the National Government.

With the use of tables supplied by the Social Security Board, we find the sad record reads thus: 15 percent of those taxed will be returned nothing at all, since they failed to qualify because of small earnings or partial unemployment. Their contributions will be stripped from them and they will not get one slender dime for them. Thus do we, a wealthy Christian people, penalize the part-time worker and the low-income groups. Another 15 percent of the contributors will get only the statutory minimum—$10 a month. And a good 20 percent more will receive under $19. This last group will have a monthly average of about $14.50. In other words, one-half of all those paying contributions will get less than is given free to the average recipient of State old-age doles, shamefully small as these are.

Of course, to these bleak amounts, other wretched sums must be added: The compensation due the wives, the widows, and the orphans of the poor. So, if the retired worker enjoying the minimum of $10 a month has a wife past 65, the Government lifts the amount to the pitiful sum of $15. However, if the wife is only 60, they must struggle along for another 5 years on 35 pennies a day for the two of them.

I must admit that a few fortunate recipients of workers' annuities will receive Senator WAGNER'S $40 a month. But, alas, these fortunate ones are individuals who generally won't need the $40 because it is only those receiving salaries of $3,000 a year and up who will get these larger payments. And in this respect of higher payments to our highly paid, I charge that the Social Security Act is rotten with injustice to its very core. I say that because it is hardly at all a contributory plan but almost wholly a fake scheme of social dividends in which payments of public money will be disbursed in the inverse order of need; that is, substantial payments to the prosperous and meager pittances to the miserable. For under this cruel law only a small portion of dividends will come from a worker's own contributions—the great bulk of what he receives will flow from public funds. And out of these public funds the well-to-do will be generously dealt by, the unfortunates of the world will be sustained hardly at all.

For while the Social Security Act collects special taxes from one group—wage earners—its benefits come hardly at all from these collections. For it also collects a tax from the employer and thus the consumer or the public to whom it is passed along; it confiscates the taxes of the lowly-paid and part-time workers; it will utilize and finally exhaust the contributions of the younger workers; finally it anticipates a governmental subsidy to help provide the annuities. And having raised a pension fund from all these public sources, it will disburse social dividends therefrom on a cruel, weird, and undemocratic principle—large dividends to the prosperous, little or nothing to the miserable.

One cannot help wondering: Is it credible that in a land as rich as ours, we can have the stupidity, the cruelty to provide for our retired workers at a scale that would scarcely keep a hound in dog biscuits or a horse in hay? Yet we do. And instead of hanging their heads in shame, our governmental leaders proclaim their program as a benefit to all, a model of generosity, an unmixed blessing.

One thing is plain, however; the advocates of social security have no conception of the meaning of social dividends in terms of purchasing power. They do not grasp the national necessity of increasing consumers' buying capacity by such means. For to seek these ends by pensions of $10 or $20 or $30 a month is ludicrous; it is an amount suited to the age of poverty, not of abundance; of the wheelbarrow, not the steam shovel.

And finally reflect in any age that turns loose all its ingenuity upon the task of displacing men by machines, why should we choose such a fantastically high pension age as 65 years? Our machines increasingly make certain that toilers past 60 have little chance at decent employment. We gear our industrial mechanism to a higher and higher tempo, and as the grueling pace begins to tell and we discard our workers at a younger and younger age then we have the monumental assininity or the callous cruelty, whichever it may be, to set our retirement line years above the point at which our senior citizens are tossed upon the labor scrap heap.

Quite clearly, what we need is not two bad pension plans for persons past 65, but one good one for those past 60. We need a national pension policy which, discarding all the clap-trap and muddled ethics of the Federal insurance scheme, will pay to every retired citizen over 60 a decent social dividend, not on a basis of pinch-penny accounting, nor of tainted charity, but as a matter of simple right. We need a program which will guarantee benefits adequate not merely to sustain life, but to grant it a measure of dignity and serenity—a program which will be founded on truly equitable taxation upon a base broad enough to support ample annuities—that is, upon the income of all society, and not simply that of the working class.

In short, what we need—and what increasing multitudes want—is the Townsend plan as submitted to Congress in 1940.

That plan calls for the imposition of a 2-percent tax upon all gross incomes except wages and salaries of workers up to $250 a month, which are exempt, while gross incomes of businessmen up to $3,000 annually will not be taxed. Thus the average worker, the small farmer, and small-business man will not have to file any return at all.

The amount raised by this tax will be equally divided among all American citizens past 60 years of age who have retired from gainful employment. We believe that 10,000,000 Americans will claim the benefit of the law. It is estimated that the 2-percent gross income tax will set over to our senior citizens approximately 8 percent of the national income, and as they represent about that percentage of the population, it would seem an equitable division.

While the tax should theoretically increase the cost of living to all of us by about 8 percent, it will save billions of dollars of present expenditures under the pension and relief laws, so that it is our opinion that the net increase in the cost of living because of the Townsend plan will be less than 5 percent. We are, likewise, certain that this increase will be far overbalanced by the increased business profits and prosperity that will result from the enhanced buying power of our older people.

But the crucial question, of course, is whether or not our senior citizens are to receive enough for a secure retirement? Well, we estimate the Townsend plan at the beginning will provide $50 a month, which, of course, is not enough, but the plan guarantees a steady increase thereafter as the national income rises.

As our industrial machine, now in low gear, shifted into second and then into high, our national productivity would advance in huge strides and would make possible the distribution of abundance to all, the senior citizenry sharing proportionately with the rest.

The Townsend plan, in fact, holds out an offer of assistance and security to every group. To labor, first, for it will shift a large share of the pension costs from its back to the financially stronger shoulders of the big-income class. To many a million burdened family, for it will lift from them the support of unfortunate parents no longer able to finance themselves. To youth, for by enabling hundreds of thousands of senior citizens to retire each year, it will open up as many jobs for newcomers upon the employment market. To businessmen, for though individually they may pay more and get a bit less in pensions, the plan's effect of reducing the excess savings of all age-groups and of stimulating the buying power of the senior citizenry will give such a boost to this economy as will more than compensate in rising profits for any personal-tax losses.

Last, and most pertinently, to the older partners of our Nation the plan promises their heart's wish—dignity and security. Neither the stigma of charity nor the aroma of poverty will surround their pensions. The Government will finally have recognized that it was they who by honest sweat built the cities, the factories, the highways, the utilities, by virtue of which the rest of us now live, and it is they who are entitled to ample social dividends from the vast wealth they helped to create.

With these potentially massive forces marshaled behind it—labor, youth, business, and the senior citizens—the Townsend plan cannot fail of eventual passage. Its political strength grows with each year, as word spreads from its simple meetings in country towns and great cities to millions of sympathetic people. From neighbor to neighbor the message of pensions goes out with prolific power, each convert bringing a new family, a new group into touch with this revitalizing social doctrine. The plan loses no adherents; it only gains them. Its movement can go but one direction—forward. And forward with it goes the faith of 20,000,000 Americans.

Chairman GRANIK. Thank you, Senator DOWNEY. This concludes the first half of tonight's forum on Social Security and the Townsend Plan.

Announcer MCCORMICK. Immediately following station identification we shall continue with the extemporaneous discussion.

This is the Mutual Broadcasting System.

Announcer MCCORMICK. This is the American Forum of the Air, originating in the broadcasting studios of the Department of the Interior Building in Washington, D. C., and presented over the Mutual network by WOL in cooperation with WOR.

We return you to the chairman, Mr. Theodore Granik.

Chairman GRANIK. And now as part II of tonight's American Forum of the Air on social security and the Townsend plan, we present an informal panel discussion. Our panel members are: Kenneth Crawford, Washington correspondent of the New York Post and new president of the American Newspaper Guild; Senator D. WORTH CLARK, of Idaho; Rt. Rev. John A. Ryan, director of the social action department of the National Catholic Welfare Conference; and Congressman MARTIN SMITH, of the State of Washington. Mr. Crawford will open the discussion.

Mr. CRAWFORD. I confess that I am already a little bit confused about some of these figures. I wonder if we couldn't get down to an agreement on some of the basic figures. Senator DOWNEY says that the act has fallen well below Senator WAGNER'S original estimates of decency and I am wondering about that. I am asking for information. I had understood that payments as large as $50 and $60 already were being made, and that $85 was possible this year; is that right, Senator?

Senator WAGNER. Yes. I don't want to take up the time of the panel members, but as a matter of fact, while Senator DOWNEY proposes now to pay $50 to everybody, whether rich or poor, let me remind you we have already reached in our Social Security Act the average of $37.50, which is very close to $40.

Senator DOWNEY. Let me interrupt. That is two persons, a husband and wife.

Senator WAGNER. Yes; married.

Let me say that we go as high as $85, and we do it under a practical plan, which is workable. I would like to go along with Senator DOWNEY. We are going higher as our experience permits

us to go and our financial condition, but let me just say this word to show the impracticability of the Townsend plan.

Senator DOWNEY. May I interrupt to give the figures?

Senator WAGNER. No; I was going to say this. Under the Townsend plan as you propose it, even a minimum of $50 to everybody, rich or poor, would require an additional tax of at least $7,000,000,000. That is added, which means doubling our taxes which we are raising today. The mere mention of that shows the impracticability of you, through your act, overnight wiping out all we have done, and also the experience of all of the other countries.

Senator DOWNEY. Senator WAGNER, your statements are just not correct. Would you yield?

In the first place it wouldn't be seven billion, but six billion, and it would do away with about three billion of our present taxes.

Senator WAGNER. That is very confusing. As a matter of fact, you do concede it is six billion, then. Will you state that to the American people today, that next year you are going to levy, in addition to all of our taxes, $6,000,000,000?

Senator DOWNEY. Senator WAGNER, that is not correct, because we now levy taxes for present payments and for relief for people past 60. We would do away with three billion of present expenditures under the Social Security Act and other relief agencies.

Senator WAGNER. And add it to the present roll.

Senator DOWNEY. It would be added to the cost of living.

Senator WAGNER. And without that tremendous increased burden of taxes, we are now paying an average of $37.50, and as high as $85. Well, I don't want to continue on that.

Senator DOWNEY. Your figures are just misleading.

Senator WAGNER. You admit yourself that there are to be three billion added.

Senator DOWNEY. Mr. Crawford, I hate to take your time, but I, for fairness, desire to get these figures out. Under the charity plan, according to the Social Security Act, Mr. Crawford, the average paid is $19.31. That is the average. Under the Social Security Act, they claim that the figure of Senator WAGNER of $25 for the primary benefit is correct. But let me say that they don't count in the 15 percent of the contributors who don't get anything whose money is stripped from them and they don't get anything, and counting them in, that average then comes down to about $19 a month.

Senator WAGNER. Well, we can't agree on that.

Mr. CRAWFORD. Then, Senator, it is for those who have not contributed at all.

Senator WAGNER. Wait; then I shan't interrupt.

Senator DOWNEY. It is because they make less than $200 a month.

Senator WAGNER. Senator, will you concede that if we reach your maximum of $200 a month, it will mean an additional tax of $29,000,000,000 per year?

Senator DOWNEY. We don't intend to go beyond 2 percent gross income tax.

Senator WAGNER. Exactly! That is $6,000,000,000 increase in taxes.

Senator DOWNEY. No, it isn't, sir.

Senator CLARK. Well, it is probably a $3,000,000,000 increase in taxes, as Senator DOWNEY says, net increase in taxes. Of course, the theory of the Townsend plan is that this increase in taxes will be more than compensated by an immediate rise in the national income. Every economist has been trying to sustain the national income in this country, and the present administration is doing it by deficit financing and deficit spending; and I think the Townsend plan is the only plan yet proposed that will definitely increase the national income and put it on a high level without borrowing money. I am not critical of the Social Security Act. I think that is one of the greatest epochal acts that has ever been passed. I think it marked a milestone in our entire economy. It recognized for the first time that this Government owes something to the people that built it, namely, the old folks.

Senator WAGNER. I agree that we have to go further, but I don't want to do it just as it is proposed here.

Father RYAN. Let me say that I am in entire agreement with the underlying theory of the Townsend plan as regards the distribution of the national income; that we have to put more purchasing power into the hands of those who will use it; and, therefore, all this talk that our Republican friends are indulging in of what to do about the unemployment is all beside the point because they don't realize we have to get more purchasing power into the hands of those who will use it. Who are they? The farmers and the workers. How to do that is another thing. The Minimum Wage Act does it in part, pretty slow. Even the Social Security Act as we have it does it in part. But the proposal of the Townsend plan, as I understand it, just won't work.

The other day I got a letter from a lawyer, a Townsendite, a Townsend man in Florida, but he was talking about the transactions tax. This 2-percent tax that is mentioned here, that the Senator mentions, that is the first I heard of that. I thought the Townsendites were all for the transactions tax.

Senator DOWNEY. They are practically identical.

Father RYAN. Yes; but this man had a table of what would happen with cotton. It starts here, and there are about seven persons, intervening transactors, between the producer of cotton and the ultimate consumer. Each of them pays a tax. The last one, the ultimate consumer, pays $15. Well, who pays the other $34?

The man specifies that they are not paid by the individuals who hand them over to the Government because he passes them on in the tax. What becomes of the $34 which the Government actually collects? Apparently it is gone with the wind.

Senator DOWNEY. If the transactions tax is confusing to you, just consider the gross-income tax.

Father RYAN. I am glad to see this, because it is much simpler.

Senator CLARK. The gross income takes in all transactions; I think the phrase "transactions tax" is a very unfortunate expression.

Father RYAN. That is very simple. Now, I just want to express the difficulty I find with the figures given. As Senator DOWNEY said in his speech and here, 2-percent tax on all gross income except wages and salaries of workers up to $250 a month. They are exempt. And that will bring 10,000,000 Americans—it is estimated that the 2-percent gross-income tax will set over to our senior citizens approximately 8 percent of the national income. Now there, I think, is the great discrepancy.

Here I have the report of the National Resources Committee published in August 1938, which is for the years 1935 and 1936, when the national income was just a little less than $60,000,000,000—$59,250,000,000.

Senator DOWNEY. Will you pardon me? You are referring to the net income. This 2 percent is upon what we call the gross income, and the gross income of the United States if it would be taxed would be about $300,000,000. That is very different from the net income.

Father RYAN. I don't see that the gross income would be that.

Senator DOWNEY. That is what the Department of Commerce gives.

Father RYAN. I never saw those figures. The figures on income given by the Department of Commerce and by the Brookings Institution and everybody else put it in 1929 at eighty or eighty-one billion dollars.

Senator DOWNEY. That is the net national income.

Father RYAN. That is all we have to deal with. I don't see where you get the gross thing. What are the figures? Where do you get them?

Senator DOWNEY. The Department of Commerce furnishes them.

Father RYAN. I haven't seen them, and I have read everything the Department of Commerce publishes on them.

Representative SMITH. Father Ryan, I think I can furnish the figures for the gross income of 1938 as given by Dr. E. A. Goldenweiser, Director of Research and Statistics of the Board of Governors of the Federal Reserve System, who is probably in a better position to make a reliable estimate.

Father RYAN. Goldenweiser knows his stuff.

Representative SMITH. He has estimated the amount for 1938 at $553,000,000,000.

Father RYAN. All right.

Representative SMITH. And, of course, as Senator DOWNEY has pointed out, the present bill of the Townsend plan is predicated on a 2 percent gross income tax, so you would figure 2 percent on that amount less the exemptions provided in the bill.

Mr. CRAWFORD. I don't understand that. What is my net and my gross income? I mean, as a salaried person or as a wage earner your gross and your net are exactly the same thing.

Senator CLARK. Your gross income is all the money you took in without deducting any expenses.

Mr. CRAWFORD. I see.

Representative SMITH. I would like to point out that before the Social Security Act was enacted there were only three great countries in the world who had no old-age security—China, India, and believe it or not, the United States, so I think we should at least compliment Senator WAGNER on the fact that we are no longer in that category. We are not in the same class with China and India any longer. We have made progress, Senator.

However, according to every poll of public opinion, the vast majority of the American people favor a Federal old-age pension, uniform in every State. We do not and cannot have that under the Social Security Act, which is a Federal-State contributory system, as Senator Downey has so forcibly pointed out. The Townsend plan, on the other hand, is Federal, and would provide uniform pensions to our senior citizens in every State, and I would like to ask what is particularly wrong with such a Federal uniform pension plan financed by a gross income tax, and it is very similar, of course, to a gross sales tax, which we have in effect in 27 different States in the Union, and in New York City, Senator WAGNER?

Senator WAGNER. Only in New York City.

Representative SMITH. And in New York City and 27 other States in the Union.

Senator WAGNER. That is only an emergency tax in New York, not a permanent sales tax.

Representative SMITH. That doesn't change the principle, it seems to me. What would be wrong with levying a gross-income tax without borrowing or going into debt on a strictly cash pay-as-you-go basis? At the end of every month the money would have been collected and that would be disbursed to the senior citizens to whom we paid the pensions, and based on the estimated gross income as estimated by Dr. Goldenweiser and other authorities, we could pay 10,000,000 citizens at the age of 60 and past approximately $56.50 a month, computed on our present gross income. What would there be wrong about that, and why wouldn't it work? Why would it be impracticable?

I am frank to say that I think it would work, and I think it would be very practical and superior to the present Social Security Act.

Mr. CRAWFORD. I would like to quarrel with Mr. SMITH about that a little. I think that this tax has precisely the same objection as a sales tax, the objection being that it falls hardest on those least able to pay. For example, a man with $2,000 income would pay $40 under this, with a $20,000 income he would pay

$400. That seems to me inequitable. It seems to me that all sales taxes are inequitable for the same reason.

Representative SMITH. Of course, you then would be opposed to the present State sales taxes that we have in all these various States?

Mr. CRAWFORD. Yes; indeed, I am.

Representative SMITH. And the Hawaiian gross-income tax, which is almost identical, and also particularly you would object to the gross-income tax in Indiana, which has operated so successfully in Indiana for 6 years.?

Mr. CRAWFORD. I am; I am opposed to all sales taxes.

Representative SMITH. What is your objection based on, Mr. Crawford?

Mr. CRAWFORD. I favor taxes based on ability to pay, the same as the income taxes, ranged on the size of the income, that is, you take a larger percentage from a large income than you do from a small income.

It seems to me here that the objection is that you take the same percentage from large and small equally.

Senator CLARK. You do, Mr. Crawford, but here is the point: We have exploited income tax almost to the limit of its possibilities.

Father RYAN. Oh, no, Senator. [Laughter.]

Senator CLARK. If I may intervene to answer Mr. Crawford this way, I think there is some hope for such a liberal as Mr. Crawford, and I want to try to convert him.

Mr. Crawford, the present Social Security Act is a tax upon pay rolls. In other words, you say that you object to burdening the working class by taxing also the wealthy; why, the present one is a tax only upon the lower income groups with incomes of less than $250 a month. Under our bill we exempt those $250 a month.

Mr. CRAWFORD. And their employers, however.

Chairman GRANIK. Father Ryan?

Father RYAN. I would like to come back for a moment to this phony thing about gross income. Mr. Crawford and I get incomes by way of salaries. I assume he does; I know I do.

Mr. CRAWFORD. I do.

Father RYAN. I never saw any distinction between my gross income and my net income, and that is true of all the persons who are working for salaries or wages. There isn't any difference.

Senator DOWNEY. That is right. It is for the people who are salary earners and wage earners, but you can see, for example, with a railroad company that takes in a million a year and pays out eight hundred thousand in expenses, the two hundred thousand is net income and the million is gross income.

Father RYAN. I know that, but I don't think that figures so largely in the picture. Let me state what would happen if we take the net income on the basis of the national income in 1935 and 1936, approximately $60,000,000,000. Those who received incomes of more than $2,000 a year in 1935 and 1936 paid 47.75 percent of the total net income, if you will. Two percent of that would be $565,000,000, and that is all that would be coming on the basis of net income in 1935 and 1936. Now, assume that the national income last year was $70,000,000,000. I think it was a little less. All right; 2 percent of $70,000,000,000 would be $680,000,000. That is all there would have been.

Senator DOWNEY. You are not arguing against the Townsend plan in giving those figures. We don't want to tax the net income.

Father RYAN. I know, but I say this: Net income, as far as these computations are concerned, I think, is a lot of hooey. I have got to be shown.

Senator CLARK. The tax, Dr. Ryan, would be levied upon gross income. That is all, however.

Father RYAN. Kenneth Crawford's gross income and mine don't differ, nor do they differ in the case of any salary or wage earner.

Senator CLARK. That is true, obviously.

Father RYAN. Who are the others who are going to produce these figures, businesses?

Senator CLARK. Other corporations and businesses.

Father RYAN. Oh, yes; that is all very vague. When you get down to examine the figures it isn't so hopeful.

Senator CLARK. It certainly is. The United States Steel Corporation would pay upon the total amount of money that it took in from the sale of steel in any year, and the officers of the United States Steel would pay likewise on their salaries. So you do, in fact, tax the same money, but by taxing it you put it back into circulation.

Father RYAN. I am all for the underlying theory that we have got to increase purchasing power in the hands of those who will spend it, but I don't think it can be done in this way.

Mr. CRAWFORD. We are doing that through the present Social Security Act, aren't we, Father?

Father RYAN. Yes; but except, as Senator DOWNEY states, the great part of that is coming from people who would spend it themselves.

Senator DOWNEY. If I may interrupt——

Representative SMITH (interposing). Would you let me have a word, Senator?

Senator DOWNEY. Yes, sir.

Representative SMITH. I would like to, if I may, just divert for a moment and suggest another line of thought, and what I think is another argument in favor of the Townsend plan. One of our most pressing problems today, we all agree, arises from idle capital as well as idle labor. There is too large an accumulation of earnings and savings from earnings, capital formation which is not being reinvested, remaining unspent, withdrawn from circulation. Through the medium of a gross-income tax, Father Ryan, not a net income tax which is an entirely different proposition, a gross-income tax, $6,000,000,000 to pay 10,000,000 aged $50 per month, would siphon off or divert at the source; almost immediately this money would be respent for necessaries of life and placed back into immediate circulation.

Father RYAN. I would like to see the exact figures of the basis of those estimates of $6,000,000,000.

Representative SMITH. I consider that is one of the strongest arguments in favor of the Townsend plan.

Senator WAGNER. Do you remember Dr. Moulton, of Brookings Institution, testifying before the House committee last year on the Townsend plan? He estimated your tax of 2 percent, even a gross tax which I don't favor, of course, by any means, because I believe it is a sales tax which falls upon the poor—but he estimated that a 2-percent tax would only produce enough, even with this increased tax, to pay $30 per month to each of the aged that you want to help, and that I want to help.

Senator DOWNEY. I am sure that is an error. I have checked the figures from the Department of Commerce, the Treasury, the Federal Reserve, and with the exemptions we have, the figures check out about $6,000,000,000.

Senator WAGNER. Has the Department of Commerce made a report upon this bill?

Senator DOWNEY. Not on this bill, but they testified and they have figures.

Senator WAGNER. Did they?

Senator DOWNEY. About $300,000,000,000 of gross income with these exemptions that we have, and 2 percent of $300,000,000,000 would be six billion a year.

Representative SMITH. I might say, Senator Wagner, that Dr. Nathan, chief economist for the Bureau of Foreign and Domestic Commerce, estimated the gross revenue and income of the Nation at $449,000,000,000.

Senator WAGNER. I see.

Representative SMITH. That is not quite the same amount as Dr. Goldenweiser's estimate of $553,000,000,000, and of course deducting the exemptions provided in the bill, it is very apparent that there would be a yield there, I figure, at $56.25 a month. You have it at approximately $50 a month.

Senator DOWNEY. Fifty, yes.

Representative SMITH. It would range from $50 to $60 at the start, in my opinion.

Senator WAGNER. It will be a tax of 2 percent gross, irrespective of whether the particular industry is making any profits or not.

Senator DOWNEY. That is right, and they have to pass it along in the cost of living. Of course we will all pay for the increased cost of living.

Senator WAGNER. And so it goes down the line.

Senator DOWNEY. But let me say this to you, Senator. The average worker will pay very little more under this plan than he would under the Social Security Act, and instead of getting $20 or $25 a month when he is 65, he will get $50 when he is 60.

Senator WAGNER. You and I agree upon our objective that we want to increase this pension as we go on, but you can't do it by overnight levying an additional tax of $7,000,000,000. I don't think the country can financially stand that sort of a shock. We agree on the objectives of getting a high pension, but under the Social Security Act, may I repeat, we are getting a higher pension than you propose to pay.

Senator DOWNEY. Senator WAGNER, I must object very strongly to that. You quoted those figures arising from the disaster in a mine in West Virginia. Some of those families did get as high as $52 a month. Those were families in which there were five children and a widow. I figured up the items, and it comes to $9 a recipient. In the State of New York, under your general relief laws, you would have paid an average of $12 a recipient. In other words, what the Social Security Act has done in that respect, Senator WAGNER, is to give to those widows and orphans less than they would have got under the general relief laws of the State.

Senator WAGNER. I——

Senator DOWNEY (interposing). Let me finish. Wait a minute, Senator! Let me finish.

Senator WAGNER. I disagree with you there. They wouldn't have gotten anything until the Social Security Act was passed in 1935. They would have been left to charity.

Senator DOWNEY. Evidently you don't know your own law. In the State of New York you have general relief, and under the general relief——

Senator WAGNER (interposing). This happened in Virginia.

Senator DOWNEY. They have it there, too. It was in West Virginia, anyway. Will you let me continue?

Senator WAGNER. Senator——

Senator DOWNEY (interposing). Will you let me finish, please?

In the United States the average paid by the Federal Government and the States combined to dependent orphans and widows, is about $12 per recipient. This Social Security Act, under this payment of the West Virginia mines, paid about $12 per recipient and you boast about it.

In addition to that, let me say this, Senator WAGNER. That money that will go to them comes from the low-income workers of America. What you have done, you have shifted off of the property owners and the well-to-do of West Virginia the support of those widows and orphans, and Mr. CRAWFORD, you have put it upon the low-income groups, because it is the contributions of the younger workers that are now being used to support the indigent, aged, and widows and orphans.

Senator WAGNER. Of course, I don't agree with your conclusions.

Senator DOWNEY. I am just stating facts.

Senator WAGNER. I still say that prior to 1935 those survivors wouldn't have gotten anything, and under the Townsend plan I see no provision at all for the survivors if the breadwinner dies before he reaches the age.

Senator DOWNEY. The Townsend plan doesn't cover the orphans and widows that ought to be covered.

Senator WAGNER. You say you don't?

Senator DOWNEY. You have shifted the support of the widows and orphans to the workers of the Nation, away from the general tax load; that is what you have done, Senator WAGNER.

Senator WAGNER. What are you going to do with them? You don't make any provision for them.

Senator DOWNEY. I would levy a tax against the men who had something instead of against a wage earner.

Senator WAGNER. Under your system you give the $50 a month to the richest men in the country as well as the poorest man. That is what the plan provides.

Senator CLARK. It is a social annuity; that is what it is.

Representative SMITH. And that removes the stigma, so that everyone is treated alike.

Senator WAGNER. We want to do the same thing. I think you are impractical, Senator.

Senator DOWNEY. So far, I haven't been able to get anybody to debate with me in the Senate. I would appreciate it if someone would.

Father RYAN. I don't think, Senator DOWNEY, it is fair to state that all of the money to pay the present social-security benefits comes from the poor or the workers. After all the pay-roll tax falls half on the employer and half on the employee, so that half of it comes from those who are more, on the average, better off than the workers. I would like to see it all come from the employers, and from the General Government, and then I would like to see it collected by the General Government through income taxes and estate taxes on those who have ability to pay, not through a sales tax, which is the most unfair tax that has ever been derived, for the reasons stated by Mr. CRAWFORD.

Representative SMITH. Of course, the objection usually raised against sales taxes is that they cause an increase in living, and reference was made a moment ago to what the probable increase in the cost of living would be as a result of the Townsend plan, and therefore I want to call your attention to the fact that during the social-security hearings it was estimated that the increase in the cost of living would only be 10 percent, and 22 professors from the University of Chicago who were opposed to the Townsend plan on other grounds, agreed with that conclusion, and they estimated it would be approximately 10 percent, which, of course, would be a very slight increase in the cost of living, and it would fall upon all of the people of the Nation.

Chairman GRANIK. Mr. CRAWFORD?

Mr. CRAWFORD. Father Ryan, I think, completed my argument. In making the distinction between a sales tax and the social-security taxes now, where half of the burden falls upon the employer, I think that is a very important distinction to be made, and it is the objection that I have to the Townsend tax as against the present social-security tax.

Chairman GRANIK. Senator CLARK?

Senator CLARK. Well, of course, the gross-income tax wouldn't fall so harshly on anybody. Senator WAGNER makes $10,000 a year, and so do I. That would be $200, and it would go down and the small fellow would pay his proportionate share. It wouldn't be anything devastating, this gross-income tax. I see Italy put one on the other day, 2 percent, by the way.

Mr. CRAWFORD. It is devastating on a man who makes $500 to $1,000 a year, however.

Senator CLARK. Exactly.

Senator WAGNER. I am quite willing to pay on any of my income to help in this situation, but when you impose a gross-sales tax, as has been repeated here time and time again, it has been recognized, Senator, that it is a tax upon the poor, primarily, and that is my great objection to it, together with the $7,000,000,000 tax which eventually will have to be levied, which the country at this time just cannot stand, and we can't deal with impracticabilities now; we have to deal with realities.

Representative SMITH. France has had a gross turnover or gross-income tax in operation since 1920, and the rate in France is 1.1 percent, and it has proved very successful in France.

Senator CLARK. And Hawaii, too. It has a 1¼ tax rate.

Father RYAN. France used to tax the windows of houses.

Representative SMITH. I can't answer that, Father Ryan.

Chairman GRANIK. Thank you, gentlemen. You have been listening to the American Forum of the Air presenting a discussion on Social Security and the Townsend plan. Our opening speakers were Senator ROBERT F. WAGNER, of New York, and Senator SHERIDAN DOWNEY, of California.

Our panel members were: Kenneth Crawford, Washington correspondent of the New York Post, and new president of the American Newspaper Guild; Senator D. WORTH CLARK, of Idaho; Rt. Rev. John A. Ryan, director of the Social Action Department of the National Catholic Welfare Conference; and Congressman MARTIN SMITH, of the State of Washington.

And now for a final word from Mr. McCormick.

Announcer MCCORMICK. Thus we conclude another broadcast in this season's series of the American Forum of the Air.

These programs emanate from the studios of the Department of the Interior in Washington. The facilities have been extended by the Secretary of the Interior, Harold L. Ickes, in order to promote educational broadcasts which present both sides of national problems.

Peace With Justice

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

ADDRESS BY THE MOST REVEREND FRANCIS J. SPELLMAN AND EDITORIAL FROM THE NEW YORK TIMES

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I wish to bring to the attention of the membership of the House the address given by the Most Reverend Francis J. Spellman, Archbishop of New York, together with editorial appearing in the New York Times of March 13, 1940. The occasion of this address was his investiture with the sacred pallium, symbolical of his high ecclesiastical rank, at St. Patrick's Cathedral, upon the first anniversary of the coronation of Pope Pius XII. I commend it to the House because of its moving beauty and simplicity. It exemplifies so well the relationship between church and state in our country by virtue of Archbishop Spellman's expression of gratification upon the appointment of a diplomatic representative to the Vatican State, in concurrence with my own expression to this body on January 4, 1940. The address follows:

Your Eminence, brother bishops and priests, brothers and sisters in Christ, 9 months ago I began my labors among you. Speaking for the first time in this cathedral, I made three requests, voicing these invitations.

"In the name of Jesus, dear people" I said, "may I not count on you to walk in the presence of God, to follow in the footsteps of the Master, to support the good works of our holy religion in the same generous measure that you have in the past, so as to maintain for your faith its renown in all the world?

"In the name of Jesus, men and women of religious congregations, may I not count on you to instruct the little ones of the flock of Christ to aid the poor, to comfort the sick, and to perform all the spiritual and corporal works of mercy so that through your zeal and sacrifice the charity of Christ may more and more abound?

"In the name of Jesus, priest of the Archdiocese of New York, may I not count on your sympathetic cooperation and your readiness to work with me with all your heart and with all your strength for the salvation of souls?"

For the answers to these questions, for the responses to these invitations, I am profoundly grateful and deeply moved.

DECLARES RESPONSES HEARTENING

The answers have been generously affirmative, the responses spontaneous and heartening. Thankful, therefore, and encouraged, today I receive the pallium, symbol of jurisdiction of an archbishop, sacred insignia blessed by our Holy Father, hallowed by reposition on the tomb of the prince of the apostles, St. Peter, vestment to be worn by me at solemn ceremonies, vestment to be placed on me after death as I am summoned before God's judgment seat to render an account of my stewardship.

I thank our Holy Father for bestowing the pallium, and I thank His Eminence Cardinal Dougherty for his great kindness in coming here today to officiate at this ceremony of investiture. I am grateful to Bishop Donahue for celebrating the mass, and I thank the archbishops, bishops, priests, and people for their attendance and prayers.

In the presence of God and before all of you, I profess my Catholic faith, I believe in God, Father, Son, and Holy Ghost, a God who has fathered all and redeemed all and who wishes to sanctify all. I believe in the Holy Roman Catholic Church as the church which the Blessed Son of God founded upon the spiritual rock, which was then Peter and is now Pius. I believe that in the bosom of mother church the Divine Son still abides, imparting to her His spirits, His authority, and His truth. I believe that the portals of this church are as open and as salutary as His very wounds, and that it is God's Holy Will that all men should enter and find peace and happiness beneath its ample roof tree.

WOULD FOLLOW EXAMPLE OF HAYES

Believing in God, I believe in man, in the fundamental goodness of the creature because of the absolute goodness of the Creator. It is true that man has fallen, but it is equally true that man has been redeemed and may by God's grace lift himself above the servitude of self. I believe that I am here to labor for your sanctification and salvation as well as for my own. I am committed to your service. My interests are catholic, that is, universal, and in the words of St. Paul, so far as may be possible I am striving "to be all things to all men." (I Corinthians ix, 22.)

Paramount among my interests is my desire to follow the example of Cardinal Hayes in his devotion and service to the poor and the suffering. The living monument to Cardinal Hayes is Catholic charities, and in the name of the Lord and in the name of countless beneficiaries of Catholic charities, I thank the countless benefactors who in this week just concluded have contributed services and gifts to enable us to carry on our work of charity. Charity may begin at home, but the home of Catholic charity is God's wide world, and no living creature is a stranger beyond its threshold.

Not alone do I profess my Catholic faith before you, I profess and glory in my American citizenship, and I pledge myself to maintain and defend our fundamental liberties, shining as they do like flaming jewels in our frame of Government, priceless and precious. I am for all of our freedoms and our freedom. Therefore, I am opposed to tyranny, even though it calls itself freedom. I am opposed to anarchy, even though it calls itself liberty. I am opposed to traitors to the United States, even though they wave American flags and call themselves patriots. I am opposed to lawlessness and violence in speech and in action.

REAFFIRMS FAITH IN AMERICA

Well aware of the serious menace of some modern trends in our political and economic life, I reaffirm my faith in America and in American institutions. Despite the need for proper readjustments and equalizations of our economic burdens, despite the necessity of providing much greater opportunities for work for men and women who need to work and wish to work, despite the need of more hands fraternally clasped and fewer fists menacingly clenched, despite the need of a renewal in our midst of the Christian concepts of life and Christian discipline of living in which our liberties were conceived and enfranchised, despite the need of strengthening our moral fiber grown weak through prosperity and indulgence, still I believe in America, in the fundamental righteousness of our Constitution, the basic righteousness of our people in their sincere desire to live in harmony, helpfulness, and peace with their fellowmen, and in obedience to her laws and the commandments of God.

I have professed my Catholic faith and my loyal devotion to my country, the United States. Sharing kindred feelings with approximately 21,000,000 Americans who are Catholics, and many other millions of men and women of good will who believe in God and who believe in peace with justice, I express gratification that President Roosevelt, in his historic message of Christmas time, sent his personal representative to the Holy See, with the rank of an Ambassador, in order that parallel endeavors for peace and the alleviation of suffering would be assisted.

"Peace with justice" is the motto of Pope Pius XII. Peace with justice is what America wills and prays for the world. Peace with justice is what all peoples of the world devoutly yearn for and pray for now, and not after world exhaustion and chaos.

COMMENDS PRESIDENT'S ACTION

Full of faith and hope and warning are the words in the message of the President, saying that "unless there is some trust in a divine plan, nations are without light and peoples perish." In interpreting the feelings of his fellow-citizens, the President told the Holy Father that "the people of this Nation know that only by friendly association between the seekers of light and the seekers of peace everywhere can the forces of evil be overcome."

Catholics, Protestants, and Jews can concur in that expression and be heartened at the collaboration of a union of endeavor, if not in belief, of all those who are on the side of right and justice, "all those—and they comprise the overwhelming majority of mankind—who still believe in God and pay him homage" in the words of Pope Pius XI. (March 19, 1937.) While the 21,000,000 Catholics and millions of other men of good will prayerfully and gratefully approved this action of our President—the President of a people that believes in and that defends freedom, in the practice of religion, freedom in the dissemination of truth, freedom of assembly and freedom of trade—still this approval has not been as unanimous as might reasonably have been expected.

There have been some persons who have not understood this collaboration of the two greatest influences for peace in the world, the spiritual leader of 300,000,000 souls, and the freely elected President of our Nation of more than 120,000,000 souls.

There are those who have not been in favor of this action of our President. But it would seem that good will and reflection on their part, both of which are readily assumed to be present, will persuade them to be more cooperative for the purpose of "warding off from mankind," in the words of Pope Pius XI, "the great danger that threatens all alike—in order that the enemies of religion may not attain the goal they have so loudly proclaimed to the world."

NO PEACE WITHOUT GOD

Pius XI was speaking of atheistic Communists. President Roosevelt and the reply of Pope Pius XII speak of peace, and all should realize that without God and without religion there can be no peace. The only reason which the nonapprovalists seem to have for their position is the shibboleth of separation of church and state.

With the conviction that these good men would like to be informed, I shall simply enunciate the Catholic principles in this regard. The immediate goal and object of the church is the supernatural sanctification of the souls of men. The immediate goal and object of the state is the temporal welfare of men, even in the moral order, and this is obtained by adhering to the principles of justice, supplying for the deficiencies of individual persons and families.

Now these objects may and do overlap, since it is obvious that if the church strives to make men better spiritually, they should be better civically and morally. Conversely, the state promoting the welfare of society works indirectly for the sanctification of souls. But this was true in 1797 when Mr. Sartori represented the United States, and it was true during the ensuing 70 years until the American mission to the Vatican was discontinued in 1867. And it was true during the subsequent 70 years, and it will still be true now that Mr. Taylor has been appointed.

Opposition from the forces of antireligion might have been foreseen, and the Soviet Union has in fact criticized the mission. But it is disconcerting to hear criticism that implies a preference to have men continue to slay one another rather than have peace through the cooperation of a Catholic and an Episcopalian.

SEES NONRELIGIOUS ASPECT

The Holy Father is not alone the supreme head of the Catholic Church. He is also head of a sovereign state. Thirty-eight countries have representatives at the Holy See. Nobody protests because President Roosevelt has an Ambassador to Great Britain, even though King George VI is the head of the Church of England. The heads of other countries are also heads of religions in those countries, but no protests are voiced. Because we send an Ambassador to the Emperor of Japan, who claims descent from the Son of Heaven, is there any one thoughtless enough to suppose that the appointment means a union of the Japanese religion and the United States Government?

It may also be recorded here that one of the first sovereign states to recognize the United States after the Revolutionary War was the Papal State, and this when the separation of church and state was recognized as an American principle.

The Papacy's service to peace among nations has long been recognized even among those who did not believe in the Catholic Church. Thus, Bismarck, a Lutheran, in October 1885 asked Leo XIII to arbitrate the dispute between Germany and Spain over the Caroline Islands. And speaking of the Lutheran body, I am most grateful to the Government of Finland, 96 percent of whose population are members of the Lutheran Church, for its gracious acknowledgment and expression of gratitude for the contributions and sympathy of the Catholic Church.

A $10,400,000 PROGRAM PLANNED

Returning now to my opening paragraphs in which I referred to the cooperation I have received from the priests, religious and faithful of the Archdiocese of New York, to whom I again renew my expressions of thankfulness, I wish to say that I am striving to carry out the spiritual, charitable, and educational programs of Cardinal Hayes and his predecessors. It may surprise some, as it surprises me, to realize that this archidiocese is so vast and the development is so rapid that at the present time a building program of work already begun or about to be started will require the expenditure of the sum of $10,000,000.

Two items alone represent approximately, $3,500,000, an addition to St. Vincent's Hospital and a new boys' high school on the Grand Concourse in the Bronx which will accommodate 3,000 boys. This school will be ready for occupancy in September 1941. While it is obviously impossible for the church to provide free high-school education for all children who desire it, it will do so for as many as possible whose parents cannot afford to pay, and for as moderate a sum as possible for others.

We hope that with the continued cooperation which we have been receiving we shall be able to pay for the school in 10 years.

COMPARES COST TO CITY

We think you may be interested to know just what this one high school will mean to the city of New York. First of all, it will take from the tax rolls the sum of $1,500 that the city of New York is receiving in annual taxes on this property. The school which will be erected there would cost the city of New York $2,500,000 to erect and equip and $474,000 per year to maintain, without taking into consideration interest and amortization expenses. Thus do we help our children, our homes, our city, our country, our religion. Thus do we help to relieve unemployment.

Praying God to bless us all, joining our prayers with the prayers of the Holy Father for peace among nations and peace among men, I close with the prayer attributed to St. Francis of Assisi, imploring peace for ourselves:

Lord, make me an instrument of Thy peace!
Where there is hatred, let me sow love.
Where there is injury, pardon.
Where there is doubt, faith.
Where there is despair, hope.
Where there is darkness, light.
Where there is sadness, joy.

O Divine Master, grant that I may not so much seek
To be consoled, as to console;
To be understood, as to understand;
To be loved, as to love, for
It is in giving that we receive;
It is in pardoning that we are pardoned;
It is in dying that we are born to eternal life.

[From the New York Times of March 13, 1940]

ARCHBISHOP SPELLMAN

In a city like ours the personality of a Catholic archbishop is of importance to men of good will of all faiths. The address given by Archbishop Spellman yesterday, on the occasion of his investiture with the sacred pallium, will confirm the high opinion that the public has formed of his earnestness, sincerity and generosity of spirit. The authority exercised by the beloved Cardinal Hayes has fallen into worthy hands.

One or two passages in the address were manifestly intended for all of us, Catholic and non-Catholic alike. Archbishop Spellman added to his profession of Catholic faith an equally warm profession of faith in American ideals. "I pledge myself," he declared, "to maintain and defend our fundamental liberties. * * * I am for all of our freedoms and our freedom. I am opposed to tyranny, even though it calls itself freedom. I am opposed to anarchy, even though it calls itself liberty. I am opposed to traitors to the United States, even though they wave American flags and call themselves patriots. I am opposed to lawlessness and violence in speech and in action. * * * I reaffirm my faith in America and in American institutions."

Archbishop Spellman did not need to reassure us on these points. His record speaks for itself. His kindliness and tolerance were obvious from the first. Yet, in this day of misunderstandings, of sinister hates and jealousies, of deliberate unreason, his words are brave and timely.

Air Route from New York to Toronto

EXTENSION OF REMARKS

OF

HON. PATRICK J. BOLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

Mr. BOLAND. Mr. Speaker, the Trans-Canada Airlines, a Canadian Government controlled company, on September 11, 1939, filed application with the Civil Aeronautics Authority for a foreign-air-carrier permit to operate a New York-Toronto route. A hearing was held on this application on February 7 and 8, 1940. The witnesses at this hearing clearly expressed the desire in their testimony that the Trans-Canada company would be given the exclusive rights over this route.

I wish, at this time, to enter my protest to the Civil Aeronautics Authority against any such permit being granted. There should be reciprocity in this matter. If a permit is granted to a foreign company then our American airlines should certainly have the same rights to operate into Toronto.

There is no opposition, and rightly so, to such application for the necessity of this air route, but there is much opposition to any exclusive rights being given away to any foreign country. Even with equivocal rights over this route with a United States carrier, the Canadian Government would be getting much the better of the bargain, inasmuch that they would be able to reach New York City, the greatest business and traffic center on this continent, and again, this fact presents itself: That 80 percent of the New York-Toronto route lies in the territory of the United States. On the other hand, Toronto and Montreal, the outstanding cities of Canada, lie just over the border.

Sound international policy in the matter of the establishment of important air routes between two countries requires that each grants to the air carrier of the other country concerned an equivalent right to operate over the same route.

Finally, it would be inconsistent with the Civil Aeronautics Act of 1938 to grant to the Trans-Canada Airlines exclusive rights over the New York-Toronto route because in its declaration of policy the act provides:

SEC. 2. In the exercise and performance of its powers and duties under this act, the Authority shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity: * * * (d) competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense. * * *

Eastern Safety Conference

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 14 (legislative day of Monday, March 4), 1940

ADDRESS BY REAR ADMIRAL C. H. WOODWARD

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Rear Admiral Clark H. Woodward, United States Navy, commandant of the Third Naval District, at the Sixteenth Annual Eastern Safety Conference, held at Newark, N. J., February 15, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President and members of the Eastern Safety Conference, it is, indeed, a special privilege to be able to talk to such a distinguished body of safety engineers as here assembled—executives whose daily responsibilities and duties bring them in immediate and continuous contact with industrial hazards, and whose every effort is bent on reducing accidents and the losses to life, limb, and property resulting therefrom. This is a subject in which we are also vitally interested.

In fact, long before the publicity regarding safety in industrial plants was started, the safety of the personnel on board ship was given the most elaborate and painstaking attention. It is doubtful if in any organization in the world safety measures are as complete as on board a man-of-war. In addition to the safety of the ship itself, from grounding or collision, very careful measures are in force to prevent loss of personnel overboard, and a most carefully worked-out system is maintained for fire prevention, handling of ammunition, etc., and particularly for control of damage resulting from the usual accidents at sea in peacetimes or from engagement in battle during war.

In this connection the Navy Department was one of the foremost agencies in the International Congress on the Safety of Life at Sea. Its representatives took a prominent part, and some of the most elaborate and extensive experimental work performed at the request of this Congress was at the expense of the United States Government. One of the experiments, for instance, was in connection with the determination of the floodable length of a ship. This involved the actual filling of the machinery spaces of a large merchant ship with water to determine permeability, or the amount of water it took to fill this space.

As for navy yards, for many years we have endeavored to foster safety by using the most advanced mechanical safeguards, by changing lighting systems and moving machinery in order to make more working space, by frequent inspections of operations and safety equipment, and by indoctrination—or extended and continuous educational campaign in methods of safety—to reduce risks to a minimum.

At the organization meeting of the Federal Interdepartmental Safety Council held in Washington, D. C., on June 18, 1937, the Secretary of Labor, Frances Perkins, stated:

"Remarkable strides in accident prevention have been made by several of our Government departments. For instance, had the accident rate of the United States Navy continued unchecked, based on its 1926 accident experience, 175 men who are alive today would have died as a result of occupational injury and disease. The United States Navy interposed a program of accident prevention, safety inspection, management, oversight, with this particular item in view and cut down its anticipated death and injury rate to this extent. Although twice as many men are employed today, doubling this exposure, the injury rate in the Navy is less than half the rate in 1926, which is just an example of what can be done by proper supervision in a very serious exposure."

Just as is done in civilian industrial establishments, we investigate and analyze all accidents, collect statistics, and compile safety rules from the many years of experience gained in the accident-prevention field. With these as a foundation, a competitive program was established, each shop or yard competing not against other shops or yards but against its own past record. As a result, we now have more than 100 shops with perfect records, by which I mean no accidents of any nature, ranging from 5 to 10 or more years. The cost

involved has been exceedingly small in comparison to the savings resulting both to the Government and its employees from avoidance of serious accidents. Such cheap insurance premium has paid "fabulous dividends in an amazingly brief time," as Secretary Perkins expressed it.

This brings me to the real subject of my talk today, which concerns the security of our Nation. Just as safety engineers attempt to remove industrial hazards through study and planning of responsible officials and increase the safety of workers through indoctrination of personnel, so we of the Navy, as a result of our estimate of the international situation, make every effort to reduce the dangers to our country's safety due to unpreparedness and try to show our citizenry the necessity for a proper national defense.

Realizing that it is much better to be safe than sorry and paraphrasing the title of one of the papers presented in your forenoon session of yesterday, I have chosen as my subject Regrets Pay No Dividends.

As you all should know, the Naval Establishment is itself a safety organization. It operates over a broad field which covers the waters of the seven seas, and has for its mission the security of the United States and the safety of its nationals and their property throughout the world. In order to accomplish this task, particularly in the world of today, where force plays the dominant role in the affairs of nations, we must have a navy of sufficient size and strength that no predatory militaristic nation dare challenge us.

Should we ever have to go to war again, which God forbid, we cannot afford to find ourselves in the same utterly unprepared state as that in which, during the past 160 years, we have entered every one of our six major conflicts, despite the tragic experience in each preceding venture.

This refers particularly to our position on the sea, where the Navy is our first line of defense. It must be prepared for any eventuality, and on short notice, for modern wars come quickly, and naval participation is brisk while it lasts. Because of the long time required to build naval vessels, it's too late to start building after conflict has begun. Our people must be brought to the stern realization that a navy with an adequately trained personnel cannot be improvised. Proper preparations, to be efficient and economical, must be accomplished systematically and coolly while there is yet time.

Undoubtedly such preparedness will be costly, but the cost is inconsequential as compared with that of war. Like the safety measures taken by industrial establishments, the cost is an exceedingly small insurance premium for the security obtained. It is much cheaper and saner to prepare in advance than to satisfy the excessive demands of a victorious enemy. As Secretary of the Navy Edison so truly stated recently, "defeat (in war) would cost us in money more than a dozen navies." This further emphasizes the correctness of my assertion that "regrets pay no dividends."

Be it remembered, any navy stands or falls by its strength at the time war breaks, and not by the ships we might wish we had. As the late Admiral Moffett so aptly phrased it, "When it comes to war, a second best navy is very much like a second best hand at poker." To complete the simile I may add that after being "called," it's too late to better one's hand. The more efficient we make our fleet in times of peace, therefore, the better off will we be should our country be challenged. And in this connection we must remember that we cannot depend on any outside help. Quoting Secretary Edison again, "Our Navy must be based on its ability to stand alone," for "the strength of friendly nations might even be turned against us if it should fall into the hands of conquerors."

Let us now look briefly into the actual cost of an efficient fleet as compared with the cost of war. Official statistics show that the World War cost the United States thirty-two and one-tenth billion dollars, or at the rate of twenty-eight and seven-tenths millions daily. And, remember, this was in the gold-standard days, when a dollar was worth almost twice as much as it is today. At this rate—and taking into account only the present-day reduced monetary value—a modern 35,000-ton battleship, such as we are now building at the Brooklyn Navy Yard, could be built for less than 2½ days' cost of warfare. Yet we hear vociferous protests regarding the so-called enormous amounts being spent to bring our Navy up to proper strength.

In this connection both the Secretary of the Navy and the Chief of Naval Operations, in their recent testimony before the House Naval Affairs Committee, strongly but unsuccessfully urged approval of the bill before Congress for an increase of 25 percent in tonnage over the present authorized strength, at an approximate cost of one and three-tenths billion dollars—the same to be spread over a period of several years. The committee, however, finally recommended an increase of only 10 percent, at a cost of something less than $700,000,000.

Using as a figure the daily expenditure during the past conflict, the total cost of the program as originally proposed by the Navy Department (or one and three-tenths billion dollars) would equal only about 45 days of warfare. That is food for very serious thought and earnest consideration.

The question that naturally presents itself at this point is: Why do we need all the extra tonnage asked for by the Navy Department? Secretary Edison gave a part of the answer to this query when he stated that, "Our present fleet, as of January of this year, is inadequate," and that "even when augmented by all ships now building or ordered, plus all ships authorized but not yet appropriated for," it still does not provide a fleet capable of meeting simultaneous attack by potential enemies in both the Atlantic and Pacific. Yet such a fleet is the minimum we must have for absolute security.

The other part of the answer—an astounding fact not generally known by the public—is that today our total authorized tonnage is only 75 percent of that which we possessed 18 years ago. At this point let us look back a bit at the record. At the end of the World War we had the mightiest fleet in the world, built and building. Our tonnage—then well over 2,000,000—was 40 percent greater than that of our nearest competitor, Great Britain, and considerably more than twice that of Japan's fleet.

The Washington Limitation of Arms Conference was called for the purpose of putting an end to naval competition. As a result of the treaty following this conference, which became effective in 1922, the United States surrendered her naval supremacy by scrapping 30 capital ships, including 10 of the largest and most modern and powerful vessels in the world, ranging in completion from 11 to 76 percent. This loss cost us 755,000 tons. Mind you, this stupid gesture was entirely voluntary on our part so as to permit Great Britain to have a fleet equal to ours and Japan one three-fifths as great—without either having to build up to that percentage. We had acted well the role of international Santa Claus. An additional 173,000 tons of ships were lost by the subsequent London Treaty of 1930, making our total loss 928,000 tons.

To make matters worse, and totally ignoring the fact that a nation's security depends wholly upon its ability to defend itself, during the 12 years following the Washington Treaty we deliberately failed to provide a building program, even for replacement of old and obsolete vessels. We soon dropped to a poor third place among the maritime powers of the world, as other nations—unwilling to renounce force as an instrument of policy—not only failed to follow our silly altruistic example of unilateral disarmament, but laughed in their sleeves at our folly, and continued to build toward treaty limits by a systematic and orderly annual increase for the purpose, as they claimed, of purely self-defense.

In March 1933 our Government awakened, disillusioned, from its pipe dream of false security, and with a loyal and patriotic vision—following the personal leadership of President Roosevelt—has since continued to make every effort to correct the serious errors of past administrations by authorizing the building up of our Navy to provide at least some semblance of real security.

By the Vinson-Trammell Act of 1934 Congress authorized us to build a treaty navy. This is the first time in our national history that any real naval construction policy had been officially adopted. Prior to that time the Navy had been forced to lead a hand-to-mouth existence—and mostly crumbs at that—until the advent of actual war when expense was no object—a policy unjustified by any precept of history. After each conflict, however, and regardless of the steady growth of foreign navies, our appropriations were cut to the bone. This fatuous and short-sighted policy of our Government in times of peace had kept our naval preparedness on the border line that separates security from national risk.

Because of our late start in building, when the Washington and London Treaties were abrogated by Japan on December 31, 1936, we were then 6 years behind in our treaty-limit tonnage, though both Great Britain and Japan had already reached their authorized goal. The abrogation of these treaties automatically removed the lid from any limitation of numbers or total tonnage, except that our bilateral agreement with Great Britain still limited our heavy cruisers in both number and size of guns.

In consequence of the then chaotic conditions in Europe, and realizing, as previously mentioned, that a navy stands or falls by its strength at the time war breaks, other nations took immediate advantage of this freedom from limitation by feverishly laying extra keels. Unfortunately, our Navy, alone, was limited in size by the Vinson-Trammell bill. It was necessary, therefore, for Congress in May 1938 to pass the so-called expansion bill, in order to give us a 20-percent increase in authorized tonnage.

For your information, this increase gave back to the Navy less than 30 percent of the nearly million tons lost by the Washington and London Treaties. This is mute evidence of the fact that we are not embarking in a mad scramble for naval supremacy, or even encouraging an international armament race, as so blatantly claimed by purblind armchair pacifists and militant antipreparedness zealots. We want no war. Our only effort is to bring the United States Navy up to its proper strength before it is too late in order to prevent war.

When all the ships now built, building, and authorized are actually in service—about 1946—we will then have a total of only 1,510,000 tons, or, as stated previously, just 75 percent of that which we possessed in 1922, while Great Britain will have well over 2,000,000 tons, according to her present building program. In other words, our previous relative standing will be exactly reversed. We are now definitely in no better than second place, with Japan pushing us closely for that.

The Navy Department's present request for an increase of 25 percent would give us less than 400,000 additional tons. This would still leave us short of the total combatant tonnage we had in 1922—18 years ago. Therefore, instead of being unreasonable, as claimed by some, it is a thoroughly justified request. When present rapidly changing world conditions are considered, the necessity for the additional ships is obvious. Being the richest nation on earth, and with two-thirds of the world's gold hoarded in underground vaults, to say nothing of the unlimited resources we possess, our best

interests demand a navy second to none in order to defend ourselves against the designs and selfish ambitions of some strong predatory nation, or coalition of nations. We would make a tempting and glittering prize for such an enemy.

In this connection let us see what other countries are spending for their national defense—army and navy combined. The latest statistics in this regard are most illuminating.

For the year 1939 the budgeted appropriations showed a total of 18.7 billion dollars for the 7 major powers, as compared with sixteen billion actually spent in 1938. This was divided as follows: Russia, 5.4 billion; Germany, 4.5 billion; Great Britain, 3.5 billion; France, 1.8 billion; Japan, 1.8 billion; United States, 1.1 billion; and Italy, six hundred million.

It is too early yet to obtain actual expenditures for the year 1939, so please note that these were the budget figures. This probably means that the amounts (except that of the United States, which is carefully controlled by our Congress) were actually exceeded, due to the advent of the European war in September last and to increased activities in the Far Eastern conflict. It is significant to note that the combined budget figures for Russia and Germany amount to $10,000,000,000 or slightly more than 53 percent of the total of the seven nations, whereas the United States actually expended only 6 percent of the total. This latter amount, representing a per capita expenditure of $8.46, was divided about equally between our Army and Navy. The Navy's share—$4.23—amounts to less than 1¼ cents per capita per day. Surely that is not too much to pay for our sea defense.

Since 1933 the people of the United States have become Navy-conscious and more enlightened as to the need of a reasonable naval safeguard. In consequence the country is almost unanimously in favor of building a navy second to none. We are not a warlike nation and have no territorial ambitions. Nevertheless, in a world where forces for war are greater than forces for peace, as we find them today, we must be prepared to meet aggression. The Navy is not willing to be unready and the country cannot afford to have a second-class fleet should war be forced on us.

As true today as when first uttered by the great Admiral Nelson, "A line of battleships is the best negotiator in the world." To express the thought somewhat differently and more completely, "The navy is, first, the statesman's tool, and, second, the warrior's weapon." Experience, as recorded in world history, shows that a strong navy is not only the best protection against the hazards of war but also the greatest bulwark of peace. By its very existence our Navy has prevented wars, and by its intervention at times has kept dangerous situations from developing seriously.

As that great American and former President, Theodore Roosevelt, said: "The Navy of the United States is the right arm of the United States and is emphatically the peacemaker. Woe to the country if we permit that right arm to become palsied or even to become flabby and inefficient."

Efforts to economize on national defense is a wisdom that is not wise and a folly that ends in futility, for national security comes first. To fail in the defense of our country is to fail utterly. Every other consideration must be secondary, for "regrets pay no dividends."

Carnegie Endowment for International Peace

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, March 14 (legislative day of Monday, March 4), 1940

EXTRACT FROM REPORT BY NICHOLAS MURRAY BUTLER

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the first four paragraphs of the annual report of President Nicholas Murray Butler, director of the division of intercourse and education, Carnegie Endowment for International Peace.

Each sentence of these four paragraphs brings vividly to the mind of the thoughtful, world problems as they affect nations and men. It is more than reassuring to know that there are in existence institutions which sponsor a thoughtful and studied approach to the solution of the problems of the world which stand in the way of making the earth serve its inhabitants to the fullest of its capacity.

Condemnation of that which is bad is found in these four paragraphs. An understanding approach to the methods of overcoming this badness is also found there. Since the ideals of the American Government can ultimately be preserved to the American people only through a conviction on the part of all that self-restraint and the recognition of self-restraint by all is the only sure road to safety, nations accordingly must learn that they, too, live only by so alining themselves with the purposes of bringing about the accomplishment of the good in the earth which comes from self-restraint.

There being no objection, the extract from the report referred to was ordered to be printed in the RECORD, as follows:

[Division of Intercourse and Education, Annual Report of the Director]

To the Trustees:

No attempt need be made, and none could be justified, to conceal the intense disappointment with which one looks back over the year which has passed. Despite the stupendous progress which has been made during the last half-century in the education of world public opinion against resort to war in the settlement of international differences and despite what would appear to be the controlling power of public opinion in many lands, we are again confronted by a world-wide war of appalling significance. The weapons of this war, which in almost every case is as yet not formally declared to be war, are primarily economic. They are directed to conquering the adversary nation by depriving it of the necessities of life and of combat. The actual military contest involving the lives of millions of human beings has not yet manifested itself on a large scale except in the invasion of China by Japan. On a smaller scale it is manifested by the invasion of Finland by Russia. Neither of these cruel invasions, we are told, is war.

Up to the present time, however, the aim of the struggle has obviously been economic control and paralysis of the enemy. How long this state of things can last is uncertain. It is certain, however, that it cannot last forever. Information which has recently been received from thoroughly responsible sources as to conditions in Russia, for example, makes it plain that the economic and military power of that people, however great in numbers, is very limited by reason of the fact that the Communist regime has wrecked and destroyed leadership. Communism is war on earnings and on savings, as well as war on excellence in every form. Its weapons are envy, hatred, and malice. The Russian idea of reform is the purge, which means the murder of every type and kind of excellence which might be turned to at a time like the present to guide and to direct public policy and public effort.

Under such conditions it is of course most important that the attention of the Carnegie Endowment and of those enlisted in its service should be turned to post-war conditions and post-war policies. Should the war end by reason of an economic collapse, the opportunity for a wise and constructive international economic policy may be far greater than it has ever been before. The principles and ideals which the leaders of opinion in the United States have been urging for 40 years, and which the Congress of the United States and both of the chief political parties have supported time and time again in their formal declarations—but not, unhappily, by their acts—are those to which the world must turn if there is to be an economic prosperity which will lead to peace and if there is to be a peace which will rest upon economic prosperity and national contentment. The call to the people of the United States for leadership is insistent and imperative. They, and they alone, will be seen to be in position to guide the thought of the world toward those constructive policies of international cooperation and international effort which are the one alternative to chaos and disaster. The time has passed for the discussion of so-called national problems. There are no longer any such problems of outstanding consequence. All these problems have taken on an international character because of international contacts, international influence, and international economic life. However important a national problem may seem today to the people of the United States, of Italy, of Germany, of France, or of Great Britain, it will, on examination and reflection, be found to be but one aspect or incident of an international problem.

Once more it must be emphasized that the noteworthy conference held at Chatham House on March 5–7, 1935, acting by the unanimous vote of as representative a group of world leaders drawn from 10 nations as could possibly be assembled, pointed the way through its declaration to the path of true progress. The Division of Intercourse and Education is centering all its efforts in every part of the world upon making this program known and understood. It is this program which, if intelligently and promptly acted upon when this war shall end, offers a wholly practical plan of international cooperation, international organization, and international stabilization, both economic and political.

Bermuda and the British War Debt

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14 (legislative day of Monday, March 4), 1940

ARTICLE BY LINN A. E. GALE

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD an article by the pen of Mr. Linn A. E. Gale, who serves as secretary to the Make Europe Pay War Debts Committee.

The article is entitled "If Bermuda Had Been American, Not British, Soil."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF BERMUDA HAD BEEN AMERICAN, NOT BRITISH, SOIL

(By Linn A. E. Gale, secretary, Make Europe Pay War Debts Committee)

"Britain Votes New Deal for West Indies" is the heading of a dispatch from London published in the daily press some days ago. The article relates to a plan for setting up a central organization for the West Indies at a cost of $20,000,000 to spread over 20 years.

Shortly after the publication of this news story came accounts of the seizure of American mail in Bermuda by British agents at the point of the bayonet. It would appear that, whether or not Britain gives the West Indies a new deal, the United States is getting a new deal from the mighty empire on which the sun never casts a setting ray—a new deal, not of humanitarianism and social welfare which have been the aims of the New Deal in American politics, but a new deal under which Britannia rifles our mail with impunity on the one hand, while on the other hand virtually demanding that we once more help her win a war.

All of which calls to mind the demands of the Make Europe Pay War Debts Committee, of which Senator ERNEST LUNDEEN, of Minnesota, that consistent and courageous foe of meddling in transatlantic wrangles, is national chairman. This committee, formed a few months ago, urged support of Senator LUNDEEN'S joint congressional resolution for acquisition of the British and French West Indies as part payment of British and French war debts of two decades ago, and for attachment of German, Italian, and other foreign deposits in American banks as part payment of the debts of those nations to this Government. The proposal met with widespread approval from the outset. It even, so it appears, stung Lord Beaverbrook to such a degree that he felt impelled to send a 3,000-word cablegram to the New York correspondent of the London Daily Express for use in American papers explaining why England had never paid a single cent on her enormous obligations to the United States—an explanation that was perhaps ingenious, but that was certainly far from convincing to the average sensible citizen of the United States.

Many distinguished persons of various political parties, religious affiliations, and racial origins have joined hands with the Make Europe Pay War Debts Committee. They include civic leaders of such divergent opinions on other subjects as Gen. Smedley D. Butler; ex-Senator Smith W. Brookhart; Governor E. P. Carville, of Nevada; Mayor Thomas L. Holling, of Buffalo, N. Y.; Senator Robert R. Reynolds, of North Carolina; ex-Consul General T. St. John Gaffney; Congressman Martin Sweeney; Editor Michael O'Reilly, of the Gaelic American, and Alice Lorraine Daly, one-time Non-Partisan League candidate for Governor of South Dakota—Democrats, Republicans, Farmer-Laborites, and Independents.

It would be superfluous to repeat what has been said in appropriately burning words by numerous Senators and Representatives that Great Britain has been guilty of a high-handed and indefensible act in the seizure of American mails. It would be superfluous also if it were not for the incessant, insistent, and insidious propaganda seeping through the Nation in favor of participation in the war on the allied side to add that America's definite duty is to keep out of the fuming hell's cauldron across the ocean. As in all wars, there are sins on both sides, and plenty of them. "A plague on both their houses."

Meanwhile, had we owned the West Indies the Bermuda incident would never have happened. With West Indian islands in the possession of Great Britain and France—or if they were in the possession of any other European nation—such incidents may be expected from time to time, despite the fact that they are palpable violations of international law, international postal agreements, and the most elementary common sense.

What else can be expected when the governments of Europe, some of them naked, brutal dictatorships, some dictatorships camouflaged as democracies, engage in a life-and-death struggle for pelf and power? War, as Scott Nearing observed in his recent lectures here in the Friends' meeting house, is not moral, but amoral. In the conduct of war, ethics, morality, and ordinary codes of honor are gone with the wind. In such times the end invariably justifies the means—the end—with each combatant being its own success. In such emergencies might makes right, and the position of a neutral nation is not an easy one, although this does not mean that any excuse is thereby afforded for abandoning neutrality. Unless there is actual invasion of the territory of the neutral country, it is still a million times better off than it would be if it were to yield to persuasions and threats and become embroiled in the vicious and gruesome saturnalia of slaughter.

It cannot, however, be stressed too strongly that if Senator LUNDEEN'S proposal were already a reality and the West Indies were American, not European, soil, there would have been no such event as that in Bermuda the other day. The happening constitutes another of the multitude of reasons why the Lundeen resolution or that of Senator REYNOLDS, or perhaps a composite resolution embodying the essential points involved, should be adopted.

Hatch Act

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14 (legislative day of Monday, March 4), 1940

RESOLUTIONS OF HOLLYWOOD CENTRAL YOUNG DEMOCRATS

Mr. PEPPER. Mr. President, by request I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by the president of the Hollywood Central Young Democrats, of Hollywood, Calif., together with resolutions adopted by that organization.

There being no objection, the letter and resolutions were ordered to be printed in the RECORD, as follows:

HOLLYWOOD CENTRAL YOUNG DEMOCRATS,
Hollywood, Calif., March 5, 1940.

Hon. CLAUDE PEPPER,
United States Senator,
Washington, D. C.

DEAR SENATOR PEPPER: Enclosed herewith you will find a copy of a resolution, recently adopted by California's largest group of young Democrats, the Hollywood Central Young Democrats, Inc., which expresses our sentiments regarding the so-called Hatch Act, Senate bill 1871.

We petition you in the name of thousands of American citizens, to not only restore those liberties and freedom lost by the enactment of such legislation, but to stand strong in your determination not to surrender the people's rights, which they have enjoyed under the Stars and Stripes for more than 150 years.

Cordially yours,

ALBERT W. MURRAY, *President.*

Whereas the first session of the Seventy-sixth Congress of the United States of America enacted into law Senate bill 1871, commonly known as the Hatch Act; and

Whereas subsections (a) and (b) of section 9 of this act prevents non-civil-service employees in the executive branch of the Federal Government, or an agency or department thereof, from participating or taking an active part in political management or political campaigns; and

Whereas the constitutionality of subsections (a) and (b) of section 9 of this act has been questioned by many of the country's leading citizens, since it infringes upon the civil rights and personal liberties of the workers coming under the provisions of this act: Now, therefore, be it

Resolved, That we, the officers and members of the Hollywood Central Young Democrats, Inc., in regular session assembled, urge the repeal of subsections (a) and (b) of section 9 of this act, as discriminatory legislation and an abridgement of the rights and personal liberties guaranteed by the Constitution of the United States; and be it further

Resolved, That we petition our Representatives in Congress to initiate necessary legislation repealing the objectional portions of this act; and be it further

Resolved, That copies of this resolution be forwarded to congressional Representatives, members of the county, State, and national committees of the Democratic Party, all organizations interested in maintaining the civil and political rights, and liberties of our citizens, and to the press.

The Relief Part of the So-called Farm Security

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. CLEVENGER. Mr. Speaker, the Farm Security Administration of the United States Department of Agriculture is a creation of the New Deal. This part of the program was a brain child of Rex Tugwell and was known as the resettlement project. Over 100 Russian-like communities were started, like the one at Arthurdale, W. Va. Large tracts were purchased and subdivided, and new buildings were erected in many places at great expense.

Some of these projects were started on submarginal or marginal lands. Millions of dollars were wasted on the projects but it appears that no new projects of this kind are being started. They have been changed over to a program known as rural rehabilitation. In this rural-rehabilitation program clients have been selected, many times from the relief roles, furnished $100 cows, $300 to $400 teams, and other equipment and started up new farmers with 100-percent Government subsidies. They have been set up in farming in competition with regular farmers, who have to pay their taxes, carry their own load and furnish their share of the money for the federally subsidized new farmers.

Where this money has been used to help real farm people it is comparable to a rural W. P. A. and these people deserve a kindly hand if anyone in the United States deserved it. However, there is no more justification for using Federal funds to start new farmers in competition to men already on their farms, nor is there any more reason for so doing than there would be to appropriate money from the United States Treasury to set up merchants, lawyers, doctors, or any other profession or business with 100-percent subsidies from the Government.

The Farm Security propaganda makes some very exaggerated claims for their ability to take these men and under their guiding hand, have them make a profit when 50 percent of the regular farmers of a community are unable to pay their interest.

The following table shows the amount of money allocated to each State up to June 30, 1939:

Rural rehabilitation loans—Expenditures by States and by fiscal years

States and Territories	1936	1937	1938	1939	Total cumulative as of June 30, 1939
Alabama	$2,173,181	$3,520,677	$2,795,740	$7,798,995	$16,288,593
Arizona	332,592	241,442	495,373	569,147	1,638,554
Arkansas	2,562,862	3,177,474	2,914,550	7,176,812	15,831,698
California	2,103,602	1,764,539	1,395,330	1,752,830	7,016,301
Colorado	3,081,885	2,047,721	2,786,634	3,658,019	11,574,259
Connecticut	111,835	122,031	67,466	193,539	494,871
Delaware	23,534	12,437	11,688	25,503	73,162
Florida	1,066,897	1,418,585	1,378,388	1,767,834	5,631,704
Georgia	2,336,466	2,971,062	2,213,149	6,493,010	14,013,687
Idaho	894,792	1,188,983	1,246,341	2,247,334	5,577,450
Illinois	1,613,442	1,546,869	1,462,113	2,735,469	7,358,893
Indiana	1,223,414	1,115,863	1,504,516	2,373,747	6,217,540
Iowa	1,389,505	1,995,763	1,865,034	3,140,372	8,390,674
Kansas	3,713,459	2,398,707	2,491,732	3,325,821	11,929,719
Kentucky	1,243,125	930,355	748,591	1,076,380	3,998,451
Louisiana	2,184,932	2,045,076	2,001,953	3,842,383	10,074,344
Maine	885,857	1,412,505	1,249,171	1,798,753	5,346,286
Maryland	113,535	91,442	49,698	240,679	495,354
Massachusetts	190,225	170,016	75,969	205,209	641,419
Michigan	1,905,247	771,459	970,630	1,884,046	5,531,382
Minnesota	2,748,964	1,910,362	1,404,977	2,377,569	8,441,872
Mississippi	3,104,737	2,221,719	3,424,056	5,998,388	14,748,900
Missouri	2,161,561	3,284,998	3,316,724	4,697,926	13,461,209
Montana	1,207,895	1,677,247	2,225,424	3,942,306	9,052,872
Nebraska	3,215,266	2,607,510	2,849,390	3,752,609	12,424,775
Nevada	227,692	118,010	130,666	165,297	641,665

Rural rehabilitation loans—Expenditures by States and by fiscal years—Continued

SOME GREAT TABLES OF REPAYMENT

On many occasions I have seen articles by this Department in praise of their great ability as collectors of money loaned and also their great ability to furnish information that made their clients successful financially. I have often wondered if this could not be partially accomplished by the grants or gifts that have been made to the clients as shown in the following table:

Grant program—Expenditures by States and by fiscal years

States and Territories	1936	1937	1938	1939	Total cumulative as of June 30, 1939
Alabama	$49,046	$124,829	$171,783	$601,265	$946,923
Arizona	50,916	4,551	146,578	312,094	514,139

Total	15,101,628	35,158,823	23,034,183	22,741,156	96,035,790

From the two above-mentioned tables one can see that possibly if one were to loan a client $200 and then give him a grant or gift of $20 a month the percentage of collection would be much higher than if the ordinary method of business were followed. What is your opinion?

If we are to believe the propaganda emanating from this Department, the farm problem is simple. All we would have to do is to turn the farms of the country over to the Farm Security Department, and through their benign influence and superior knowledge all farming would be put on a paying basis. We could forget soil conservation, parity payments, and all other agricultural programs, because this all-wise agency can take people off the relief rolls and set them up in farming so they can make profits even when the regular farmers who were born and raised farmers—but without this superior New Deal knowledge—cannot make the grade.

For 30 years I have held the pamphlets, bulletins, and materials from the United States Department of Agriculture in high regard. The propaganda of this Department is going too far afield from common sense to even expect the ordinary mortal to believe in it. In fact, it is a reflection on the intelligence of an infant, and I think the time has come when the Secretary of Agriculture in his wisdom be asked to give his personal approval before any more "bedtime stories" are sent out from this Department.

Rural relief can be properly administered, and it should be carried on in an intelligent and sensible manner. It is not necessary in a free country to make a vassal out of the recipient. I shall support legislation for these people, but I live in hopes of seeing more funds used for the people who need it and not so much on overhead with so many people spending their time in figuring out schemes to live the other fellow's life.

The following table will show the overhead of this Department:

Administration and expenses by States and by fiscal years

States and Territories	1936	1937	1938	1939	Total cumulative as of June 30, 1939
Alabama	$1,441,874	$1,229,404	$937,536	$1,735,196	$5,344,010
Arizona	30,666	38,299	68,456	119,389	256,810

Wisconsin	$966,126	$926,363	$670,732	$881,535	$3,444,756
Wyoming	62,919	177,144	137,924	200,175	578,162
Hawaii				7,925	7,925
District of Columbia			208,662	138,620	347,282
Total	15,155,050	20,102,580	15,935,851	23,311,274	74,504,755

It appears that with the 17-percent overhead, when free postage and other factors are taken into consideration, the cost of administration of this Department is very high.

From the foregoing facts once more I conclude that it is the great body of everyday Americans—and the average American farmers in this case—that are carrying the New Deal load. Large corporations and corporation farmers have been handsomely subsidized in their farm operations by one program and then on the other hand agencies are created that subsidize new farmers and set them up as competitors with 100-percent subsidies from the United States Treasury.

I think politics should be given back to the politicians. I also think the farm relief should be returned to the relief agencies. Then I think we could give the Agriculture Department back to agriculture, and then we would not have to have a Secretary of Agriculture "living the lives" for every farmer in America.

Flood Control In the Immediate Future In the Lower Mississippi Valley

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS BY HON. WILL M. WHITTINGTON OF MISSISSIPPI, BEFORE THE MISSISSIPPI VALLEY FLOOD CONTROL ASSOCIATION

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on Wednesday, March 13, 1940, at the meeting of the Mississippi Valley Flood Control Association, Washington, D. C., to wit:

I am glad to greet the citizens of the Lower Mississippi Valley at this annual meeting. We have assembled under happy circumstances. There have been no major floods for 3 years.

During the present fiscal year the regular appropriations for the Lower Mississippi River were larger than in any previous year. While generally there have been reductions in all appropriations, the appropriations for the valley for the next fiscal year, as already made by the House of Representatives, are satisfactory.

The problem is the most difficult of all problems because the Mississippi Valley is the largest of valleys and the Mississippi River is the longest and most important of navigable rivers. There is to me an appeal in the solution of difficulties. I am intrigued by major problems.

As we assemble today we are reminded that it took a hundred years to obtain recognition of the flood-control problem in the lower valley, and that recognition of the problem as a national one came in 1928, again in 1936, and finally in 1938, because of public sentiment and because of the cooperation that obtained among the people on both sides of the river and in all parts of the valley.

We have not always been of one mind; in fact, we have been of many minds. We have not always had the same politics; in truth, we have many kinds of politics—some good and some bad, but flood control legislation has always resulted from a spirit of cooperation and compromise of policy but not of principle. Legislation has resulted because the leaders of the valley have advocated a sound program and recognized and given consideration to the viewpoints of their neighbors. We have not pursued an ostrich policy nor have we followed the example of the justice of the peace, well known to lawyers, who refused to hear the attorney

for the defendant and gave as his reason that to hear both sides of the case was confusing to the court.

There are generally two sides to all questions involving flood control. We have endeavored to consider both sides and all viewpoints. I trust that such a policy will continue for the problems of flood control are constant and continuous. They will remain as long as the Mississippi River flows toward the sea.

AUTHORIZATIONS AND APPROPRIATIONS

Under the acts of May 15, 1928; June 15, 1936; and June 28, 1938, $637,000,000 have been authorized. The entire amount was authorized for the Mississippi River, including the Atchafalaya, except approximately $16,000,000 for the St. Francis Basin, $12,000,000 for the White River backwater area, and $48,000,000 for the Yazoo River Basin. There remains to be appropriated for the lower Mississippi River approximately $240,000,000.

DIVERSIONS AND ENLARGED LEVEES

We have always profited by a major flood. The New Madrid floodway and the Bonne Carre spillway were utilized for the first time in the flood of 1937, which was the largest of record north of Helena. The Government had only acquired flowage rights in the New Madrid floodway. The Chief of Engineers, following his experience in the New Madrid floodway, recommended the purchase in fee simple of lands in Morganza, West Atchafalaya, and the Eudora floodways and that these three floodways be constructed. He also recommended that the main-line levees be strengthened and that the discharge capacity of the river be enlarged. In the first flood-control bill passed after the flood of 1937 the recommendations of the Chief of Engineers were followed and $40,000,000 in addition to the previous authorizations for the purposes mentioned were provided in the act of June 28, 1938.

CUT-OFFS

There are 13 cut-offs between the Arkansas and Red Rivers, and all had been made at the time the act of 1938 was passed. As I have stated, there have been no major floods since. Extensive hearings were conducted before the act of 1938 was passed. Maj. Gen. Julian L. Schley, the Chief of Engineers, was heard at length. Gen. H. B. Ferguson, then president of the Mississippi River Commission, and the district engineers of the lower Mississippi Valley, all appeared before the committee. Especially thorough hearings were conducted respecting the value of cut-offs and the reductions in flood heights because of cut-offs. The 1937 flood was the greatest flood that ever occurred in the lower valley north of Helena.

Experiments following the flood of 1937 were conducted in the experimental laboratory near Vicksburg, Miss. Not one but many experiments were conducted before the passage of the act of 1938. General Ferguson furnished to the Congress the results of those experiments. The benefit of cut-offs was emphasized by General Ferguson. The results of the cut-offs were determined both by the flood and by the experiments following the flood. General Ferguson did not indicate that any further experiments were necessary to give to Congress and the country the benefits of cut-offs after the flood of 1937. The results were known. Flood heights were reduced at Arkansas City, at Greenville, and at Vicksburg. Experiments are based upon a given flood. The 1937 flood came out of the Ohio River. No experiments can change the experiments conducted before the act of 1938 was passed. The 1927 flood came out of the White and Arkansas Rivers. The situation as a result of the cut-offs might have been entirely different if the 1937 flood had come out of the White and Arkansas Rivers instead of the Ohio River. Additional facts as to the lowering of the flood heights could not be furnished, but there has been no flood since 1937. There are no additional facts as to the benefit of cut-offs or as to the reduction of flood heights from cut-offs in the light of said given flood.

Both the Chief of Engineers and the president of the Mississippi River Commission recommended that Eudora be constructed. The act of 1938 made provision for the acquiring of fees and for full compensation to owners. I have always advocated that no legislation be enacted unless it was recommended by the Chief of Engineers. There are some who advocate only such projects recommended by the Chief of Engineers as they approve. They oppose other projects recommended by him. The fuse-plug levee was opposed in 1927, because owners were not compensated. The Eudora floodway in 1936 was opposed because owners objected to flowage rights. When provision was made for acquiring fees, objections were made because of opposition to any floodways through the Eudora, although citizens of Louisiana advocated the West Atchafalaya floodway, the Morganza floodway, the Wax Lake outlet, and the Bonne Carre diversion. If diversions are sound in south Louisiana, they are sound between the Arkansas and Red Rivers.

I have always maintained that cut-offs in the Mississippi River, as cut-offs in all rivers, increased flood heights below the cut-offs. For this reason I advocated the substitution of Eudora for the Cypress Creek or fuze-plug diversion.

The act of 1938 made provision for the execution of the recommendations of the Chief of Engineers, and there has been no change in the river, and there has been no flood since the act was passed. It is time for constructing works authorized. The backwater area of the Red and the back-water area of the Yazoo were led to believe that Morganza would be of benefit. So was the Atchafalaya Basin. It is imperative to know how Morganza will be operated before proper consideration can be given to any changes in diversions or increased levee heights along the main river. If the fuze plug be opposed, the back-protection levee is in order. There will be two levees to protect the Boeuf Basin instead of one. It is time to complete projects already authorized and recommended by the Chief of Engineers.

THE IMMEDIATE JOB

Neither the Eudora floodway nor the northward extension thereof has been constructed. Morganza is under way but has not been completed. The Wax Lake outlet has not been completed. Levee foundations remain to be strengthened, and levees remain to be raised as authorized. Morganza is to be completed. The statute provides that funds authorized for both Morganza and Eudora and northward extension cannot be used for any other purpose. Highways and bridges are to be constructed in the Atchafalaya Basin. The immediate job in the lower Mississippi Valley is the completion of works already authorized.

I repeat to emphasize that there have been no floods by which to test the works since the report and testimony of the Chief of Engineers and the president of the Mississippi River Commission in 1938. No factor of safety should be eliminated or abandoned until it has been shown that no such factor is needed. I know of no better way to test than to have and to endure a major flood. It was a flood in 1927 that called for the act of 1928; it was a flood in 1937 that called for the act of 1938.

TRIBUTARIES

While legislation for the lower Mississippi River has treated the river as a unit from Cairo to the Gulf, and while I advocate the continuance of this policy, I have also advocated at the same time that the policy adopted in the act of 1938 to provide for flood protection along the tributaries of the Mississippi River should be continued as fast as authorizations can be secured. No work should be authorized or constructed along the tributaries that will jeopardize or endanger the main-line levees, but all sound works along the tributaries that will protect those tributaries or will aid in protecting the main-line levees should be provided. All of the funds authorized for the lower Mississippi River except for the St. Francis River, the White River backwater area, and for the Yazoo River System are to be spent along the Mississippi and the Atchafalaya Rivers.

The problem along the main river will never be completely solved until the problem along the tributaries is solved. The Flood Control Act of 1938, therefore, authorized the expenditure of $9,000,000 for reservoirs along the Missouri River; $25,000,000 for reservoirs along the White River; $21,000,000 for reservoirs along the Arkansas River, and $54,000,000 for reservoirs along the Red River. I know of no tributary of the Mississippi River that has been accorded more generous treatment than the Red River and no State will benefit more than the State of Louisiana from the construction of the Dennison Dam.

The authorizations for reservoirs along the Arkansas the White, the St. Francis Rivers and their tributaries will provide protection to the alluvial valley in Missouri and Arkansas. I have therefore advocated in the past and such will continue to be my policy in the future, flood-control works along the tributaries of the Mississippi River, whether they be levees or whether they be reservoirs, whether in the headwater or backwater area that will provide for protection along the tributaries and that will not endanger the integrity of the main river levees. Such a policy in my view is not only wise, is not only sound, but will contribute materially to the increased protection of areas that have been taxed for a century for flood protection from the overflows of the Mississippi River.

FACTORS OF SAFETY

I remember the overflow of 1884. I recall the major floods substantially every 15 years since then. The longer I live the more thoroughly I am convinced that there cannot be too many factors of safety. I have advocated levees; I have supported floodways; I have insisted upon diversions; I have championed spillways, for I repeat that there can never be too many factors of safety. In flood control as in civic improvements, as I grow older, I want to think that the best is yet to be.

In Holland there are two lines of dikes. The first is for ordinary floods; the higher dikes are for the great floods. In densely populated Belgium there are large floodways, constructed and enlarged since the World War.

There are two lines of levees along the Danube River, and these two lines obtain where the population is densest. The Danube passes the city of Vienna in a channel with levees on either side. Some 1,100 feet back of this levee are the higher levees. They are the second and last line of defense. These second lines of levees are in the nature of floodways; they are used only in the superfloods. There are two lines of levees along the River Po in Italy. If there can be a supplemental factor of safety in one of the oldest of all cities, surely there can be supplemental factors in the newest of all countries. We must plan for the future. If the nations of modern times, as well as ancient times, if the most progressive countries in all ages in dealing with floodwaters have provided not one line of levees but two lines of levees, if they have provided not only levees but diversions; if other nations along other rivers have provided in advance what areas shall be covered by floodwaters; if such provision has been made in the Sacramento Valley in our own country, in our own day the floodways and diversions to prevent higher levees and to supplement levees already dangerously high were being utilized in the great flood along the Sacramento River just a week ago, I believe that the people of the lower valley should cooperate

in planning in advance where excess floodwaters that will certainly come at some time shall go rather than leaving the entire valley subject to devastation from excessive floods. I know how people feel about the taking of their lands, but after all highways would never be built, railways would never be constructed, and public buildings would never have obtained if individuals had not made sacrifices, after being duly compensated, so that the greatest good might come to the greatest number in the progress and advancement of the country. I am therefore saying that for years we fought for the principle of diversions, for years we struggled for authorizations. While I have high regard for experiments, no two floods are ever alike. Morganza should be completed. No other factor of safety should ever be abandoned until the next major flood shows such a factor to be wholly unnecessary.

MAIN RIVER AS A UNIT

Whenever inequalities or weaknesses appear in any division of the main river, I shall continue to urge in the future as I have in the past that all cooperate to provide for the additional protection to correct the weaknesses and to remove the discriminations. I believe that the main river levees must and should be strengthened. I believe that while our immediate task is the completion of projects already authorized, as we look toward the future we must plan for strengthening the main-line levees.

THE CHIEF OF ENGINEERS AND PRESIDENT OF THE MISSISSIPPI RIVER COMMISSION

We are extremely fortunate in having as the Chief of Engineers Gen. Julian L. Schley, with his rich background, broad comprehension, and splendid executive ability, in charge of flood-control work, not only along the Mississippi River, but throughout the Nation.

I have known Gen. Max C. Tyler, the efficient president of the Mississippi River Commission, for some years, and I have known of his work in the Corps of Engineers much longer. I know especially of his experience in the lower Mississippi Valley, and in the construction of reservoirs. No man stands higher in the Corps of Engineers than the president of the Mississippi River Commission.

FLOOD CONTROL NOT NEW BUT OLD

We hear much about cut-offs. They are as old as rivers. We hear much about soil erosion. It has been going on through the ages. The Gulf of Mexico formerly extended to Cairo, Ill. After all, there is nothing more lasting or older than Nature. There is nothing more permanent or constant in their habits and courses through the ages than hills, rocks, and rivers. Isaiah drew a perfect picture of the forces of nature in pulling down the mountains, in building up the fertile plains of the valleys and in the action of rivers in their tendencies to straighten their courses, when he wrote long ago:

"Every valley shall be exalted and every mountain and hill shall be made low; and the crooked shall be made straight, and the rough places plain."

RIVERS

Many rivers are renowned in song and story, but none more so than the Father of Waters. Many rivers tell of human love and glory, but none more so than the King of Rivers. When I think of rivers I recall Victor Hugo's words:

"I love rivers. They do more than bear merchandise—ideas float along the surface. Rivers like clarions sing to the ocean of the beauty of the earth, the fertility of the plains and the splendor of the cities. I never think of rivers, those great works of Nature, which are also great in history, without emotion."

The Mississippi River will always play an important part in the development of the United States.

The Need of Larger N. Y. A. Appropriations for College Youth of the South and West

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

LETTER FROM PRESIDENT OF ARKANSAS STATE UNIVERSITY

Mr. ELLIS. Mr. Speaker, most college boys and girls in the Southwest are poor. The N. Y. A. has done a great work in assisting more of them to better prepare themselves for life. I submit herewith a letter from Mr. J. W. Fulbright, the able, young president of our University of Arkansas, in an eloquent appeal for restoration of the reduced appropriation:

FEBRUARY 19, 1940.

DEAR MR. ELLIS: On February 18 Mr. Aubrey Williams announced that the National Youth Administration has allocated $14,038,268 for assistance to students of the college level or above. This sum is allocated to 104,379 students throughout the United States. To Arkansas there is allocated $122,445 for 907 students. Approximately 222 students will be assisted through the University of Arkansas at Fayetteville during the current year. This is a decrease of 75 students from the 1938–39 figures. If Arkansas is to play its proper role in the national economy it is essential that our young people receive an adequate education. In view of the great concentration of wealth in a few eastern States, which enables their many privately endowed universities to give assistance to students, it seems only fair that the students in the poorer States should be given this assistance. Educational opportunities are obviously out of balance in this country when Harvard University can spend $14,000,000 in 1938–39 and many of the State universities in the South and West serving millions of people only get $1,000,000 or less. If democracy is to continue in this country, it must be supported by education of the people, and no more efficient way than N. Y. A. has been evolved to accomplish this.

I sincerely hope that you can prevail upon the Congress to restore at least part of the cut in the N. Y. A. appropriation. To neglect the education of our youth is the worst thing that can be done for the future of this country. We appropriate enormous sums for old people who are beyond the period where they can assist this country in the solution of our problems. In fact, if our young people were better educated they, more than any other factor, would prevent the necessity for old-age pensions and would tend to solve the unemployment problem. There is plenty of work to be done by those who have received a good education.

The Interdependence of Agriculture and Industry

EXTENSION OF REMARKS

OF

HON. BRUCE BARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS BY HON. HAROLD KNUTSON, OF MINNESOTA

Mr. BARTON. Mr. Speaker, under leave to extend my remarks in the RECORD I present an address delivered by my colleague the gentleman from Minnesota, Hon. HAROLD KNUTSON, before the New York Board of Trade on Wednesday, March 13, 1940. The membership of the board of trade is composed of the leaders of industry and finance in the great city of New York, and the meeting which the gentleman from Minnesota, Congressman KNUTSON, addressed was one of the largest which the organization has ever held. Mr. KNUTSON's subject was the interdependence of agriculture and industry.

The address follows:

Mr. Chairman and fellow Americans, when your president, Mr. Zellers, wrote and invited me to address this gathering, suggesting for my subject The Interdependence of Agriculture and Industry, I immediately accepted his gracious invitation because of my friendship for him and the appeal the subject has for me. I consider it a wonderful opportunity to expound certain very definite opinions long held by me on that subject.

We all realize that both are dependent upon each other. Daily you observe the importance of this interdependence. You stand between agriculture and industry, and thus are in an excellent position to know that industry prospers when agriculture prospers and that agriculture prospers when industry prospers. I might add that you have observed this phenomenon ever since you first became interested in matters pertaining to trade. It is my intention to discuss the nature of this interdependence from the standpoint of our recovery problem, to analyze the New Deal recovery program in the light of this interdependence, and to suggest certain general changes that I think must be made in our approach to the recovery problem.

First, what do we mean by the interdependence of agriculture and industry? Speaking generally, we refer to the tendency of farm and nonfarm income to rise or fall together. Thus, if one would plot the indexes of farm and nonfarm income, one would observe the sympathetic tendency of the lines to move in the same general direction; that is, a tendency to move upward or downward together.

We have here something of more than academic interest. Economists and others have observed this tendency, studied it at great length, and have brought forth theories. Some, I might say, have studied the tendency of farm and factory pay rolls to move together and have gone so far as to claim the discovery of a new economic law, a law that will in time be accepted as of even greater importance than the economic law of supply and demand.

Our practical interest in these theories traces to their acceptance by the New Deal as a point of departure for much of its effort in behalf of recovery. I am certain you will recall the argument presented by administration spokesmen from time to time in behalf of the various New Deal agricultural and industrial programs. For example, in the early days of the New Deal, advocates of Government control of production gained support for the first Agricultural Adjustment Act by contending that an increase in agricultural prices and income would promote industrial recovery. This same argument in reverse was used in support of the N. R. A. We were told that a rise in wages and factory pay rolls would encourage agricultural recovery. In still more recent years we have heard similar arguments used in support of spending and an extended Federal loan program.

Now, we know there is nothing wrong with the proposition that farm families would make a better living if city people would only buy more of the farmers' output, or that city workers would have more work at better pay if farm families would buy more tractors, new stoves for farm kitchens, and hay slings for barns. That has been true from the year 1. It represents nothing new. You have observed its truth from the first day you stepped on the trading floor.

What, then, is wrong? Not the theory, that is true, but the assumption that here was the key to general economic recovery. It was to be all so easy. A general recovery movement could be obtained simply by lifting farm or industrial income to a higher level. It didn't make a great deal of difference which we tackled first. Typical of our traditional impatience, however, we decided to do it on the double-quick and played both ends against the middle.

About as quickly as it took the President to say "pass this," "pass that," we had enacted legislation giving the Executive an unprecedented degree of power over agriculture and industry. We created a program for agriculture, a program for industry, a program for labor, a program for the consumer, and a program for youth.

We didn't miss a trick, but we did overlook many factors in our excitement to get things done. We forgot all about general recovery and concentrated upon specific ailments. Agricultural recovery, for example, became an end in itself, and as time transpired we even forgot about agricultural recovery. We soon came to be more concerned with the political consequences of a given action. Thus, we encouraged the rise of pressure groups.

After the pressure groups became entrenched, we discovered that consistency of purpose was no longer of any great concern. What did it matter if the agricultural program was inconsistent with the reciprocal trade agreements program, or that we raised industrial costs at the same time we tried to increase the farmer's real income? If a given action could be demonstrated as an aid to industry, it was prima facie an aid to agriculture. Its effect on the economy viewed as a whole was certain to be beneficial. Spending for power projects would help agriculture by increasing urban purchasing power for farm products. The fact that spending would further unbalance the Budget, necessitate an increase in taxes, and raise fears in the minds of businessmen concerning the hope for future profits from enterprise was ignored. For that matter, so was the thought that much New Deal spending was in direct competition with established enterprise.

We also overlooked an additional fact of even greater importance. When we began to think in terms of specific-recovery programs such as the A. A. A. and the N. R. A., we embarked upon a completely new conception of economic life. We didn't know it at the time, but when we accepted the New Deal we gave up our faith in free private enterprise and accepted instead the philosophy of economic planning. We opened the door to the professional planner, gave him bureaucratic status and respectability, and sat idly by while he experimented with our national economy.

The planner, of course, was not sufficiently omniscient to view the economic structure as a whole. He recognized this limitation and consequently set about to correct our ills in a piecemeal fashion. This piecemeal approach involved a difficulty of tremendous importance, for we lost sight of the true nature of the interdependence which exists between agriculture and industry. We began thinking in segments. We lifted agriculture, as it were, out of its place in the economy and attempted to approach its problems as though it were a separate, distinct reality. The fact is we even broke agriculture down into several subgroups. We developed a sugar program, a cotton program, a corn-hog program, a wheat program, an export subsidy program, a surplus-diversion program, and many other programs. We hired additional planners and put each of them in charge of a program. Then we did the same for industry.

Thus the tendency was to think less and less in terms of general recovery of the entire economic structure and more and more in terms of its elements. We thought that the whole was equal to the sum of the parts. The fact that the economic system wasn't a mathematical proposition didn't enter our heads. We forgot that agriculture and industry are mere words, the only use of which is to describe a given type of economic activity. We forgot that these branches of our economic structure are not clear and distinct. We forgot that agriculture has no vitality apart from industry or industry apart from agriculture. We ignored the fact that there are myriad lines interconnecting every element in our economic system and that these lines, though indistinct, are the nervous system of all of our economic activity. In other words, we gave up a form of economic organization that had a unifying agent—an agent that served to weld our sprawling and conglomerate system into a purposive order. This agent was competition.

And what did we get in return? In its place, that is in place of competition, we substituted the decisions of bureaucrats. Bureaucrats, I would like to add, are quite ordinary men and have the same limitations as you and I. They are mere men who sit behind desks applying average abilities to their respective tasks, getting their share of Federal taxes twice a month and never having to worry about meeting a pay roll. We can pass legislation that will increase their power, but we can't pass legislation that will increase their intelligence.

Now, I have said that we accepted the principles of a planned economy and rejected the principles of free private enterprise when we accepted the New Deal. Naturally the decision was not that cut and dried. The pity is that it wasn't, for I am certain that the outcome would have been different had the issue been stated clearly and definitely.

What we thought we were getting and what we got are two different things. We thought we were getting a temporary delegation of extraordinary powers to the Chief Executive for the express purpose of waging war on depression. We thought these powers would be relinquished once the emergency was over, and that these powers would be used only so long as the economic results justified their continued use.

After repeated fruitless endeavor we find that getting these powers back is like taking a bone from a growling dog. Instead of relinquishing power, there is a constant demand for additional power. Control of agriculture justifies control of industry. Control of coal justifies the control of oil and natural gas. Thus control reaches out its many tentacles until it has the entire economy in its grasp. Said in another way, control breeds more control. Like a guinea pig, it never stops breeding. The process is not yet complete, but we are rapidly working toward the day when our economy will be a completely planned order. Whoever first used the expression "creeping collectivism" expressed the idea well. It's like creeping paralysis. In time it will completely immobilize us.

This entire process is well illustrated by our attempt to control agriculture. On May 12, 1933, we passed the Agricultural Adjustment Act, the purpose of which was to raise farm prices to parity. This would be accomplished by controlling the production of a few major basic crops. In 1934 and 1936 the New Deal restricted acreage in the face of severe drought, and as a consequence the American consuming public had to rely upon vast imports of competitive agricultural products from abroad. The political repercussions were great, and the planners found it necessary to alter their plans. Their search for a foolproof scheme brought forth the ever-normal granary. We would protect ourselves against the vagaries of nature by storing surpluses produced in bumper years for use in years of subnormal production. Soon, however, the planners encountered further difficulties. As they restricted production and accumulated supplies in the ever-normal granary, exports fell off, and foreign producers took advantage of our short-sightedness and increased their production. Declining exports could be remedied by an export-subsidy program, but domestic production could not be controlled successfully unless the entire area of production, domestic and foreign, was controlled. How could we control cotton acreage in Brazil, wheat acreage in Argentina? In no time the planners found a solution. We would urge all surplus-producing countries in the world to enter into an international agreement to restrict world supplies.

Unfortunately for our New Deal agricultural planners, they have not succeeded in obtaining these international agreements, although they have tried to promote such agreements for the control of wheat and cotton. I said "unfortunately," for, as I look at it, they are out on the end of a limb, and it is a good long limb, partially cut in two. Why? Because the Department of Agriculture has taken the official position that production control cannot be successful unless it applies to the entire area of production and unless every major producing country or potential source of supply is included in a world scheme to control production. At the same time the Department has been unable to obtain such agreements. In my way of thinking, it never will, and couldn't enforce them short of war, even assuming such agreements were obtained.

Where, then, does this leave us with our schemes to control domestic production? The administration is caught in an untenable position. It has taken us down a blind alley. What is more, it will neither correct nor admit its mistake. Instead, the New Deal will request more power, justifying its demands on the ground of an unpredictable emergency, and on the further ground that it has worked miracles in the past, that it is leading the way to a prosperous America.

I for one think that it is high time we faced this question of New Deal accomplishments. I consider this of double importance inasmuch as every new request for additional power is justified by reference to the record. Just what, for example, is the New Deal record in support of its planned agriculture?

You will recall that the major objective of the New Deal farm program has been to raise prices to so-called parity levels. Up to last September, or to about the time the war broke out, the New Deal had failed to achieve this objective for any of the major farm products subjected to control. In August 1939 wheat was 51 percent below parity; corn, 43 percent below; cotton, 44 percent below; hogs, 39 percent below; butterfat, 27 percent below; and potatoes were 19 percent below parity. In many instances the farm price in August 1939 was further below parity than in May 1933, or at the time the first farm-control legislation was enacted.

While this indicates the extent to which the New Deal failed to reach its intended goal, a further examination indicates that the pre-war farm-price situation was worse in many respects than before the New Deal control schemes became effective. For example, the New Deal program for wheat was not announced until

June 16, 1933, and restrictions did not apply until the 1934 crop. On June 16, 1933, the date on which the program was first announced No. 2 red wheat on the New York market sold at 92 cents a bushel, compared with 82 cents on August 15, 1939. After 6 years of New Deal activity, prices had declined 10 percent. While prices have increased since September 1939, few are so bold as to attribute this to the New Deal.

The same applies to the price of corn and cotton. The first corn program was announced on October 18, 1933, and the first contracts applied to corn raised in 1934. On October 17, 1933, the day before the program was announced, corn sold on the Chicago market for 42 cents a bushel. Six years later, on August 15, 1939, corn sold on the Chicago market for 42½ cents a bushel, an increase of one-half cent in 6 years. The first cotton program was announced on June 19, 1933, and cotton was selling for 9.35 cents a pound. This was slightly higher than the price on August 15, 1939, when cotton sold for 9.29 cents.

Nor does an examination of income statistics furnish any greater measure of New Deal support. In other words, I am not one of those persons who can be scared out of a political argument by referring me to 1932. If the increase in farm income since 1932 is a measure of New Deal success in the field of agriculture, then I am prepared to take on all comers, for at the New Deal rate of recovery, that is at the average rate of recovery since 1932, the American farmer cannot expect to have regained his 1929 income level until after 1950. Cotton farmers are a little less fortunate, for at the New Deal rate of recovery it will be 43 years until they receive as much as they did in 1929. Perhaps you think that I am overly pessimistic concerning the outlook for American agriculture under the New Deal. Perhaps, but I find that I am keeping company with a few outstanding authorities. I call your attention to the following remarks recently made by a well-known cotton expert in reference to the current cotton situation. I quote:

"Cotton producers are going through one of the most critical periods in the history of cotton production in the United States. The prices received by domestic producers for their record 1937 and 1938 crops were 6.2 to 8.5 cents below parity and were the lowest, without exception of the prices of 1931 and 1932 crops, since the outbreak of the World War. Furthermore, in consequence of an effort to adjust production * * * the quantity of cotton produced in 1938 was nearly 2,000,000 bales less than the average for the 10 years ended 1932. The combination of reduced production and low prices resulted in a gross farm return for lint cotton in 1938 only about two-fifths as large as the average during the twenties and only slightly above that of the 1931 crop, when prices were the lowest in nearly 35 years. The total returns from the 1938 crop, even with payments to farmers under the Agricultural Adjustment Act included, were only half as large in relation to the national income as the average for the 5 years immediately prior to the World War.

"Prices and farmers' returns for the 1938 crop would have been even lower had the Government cotton-loan program not withheld from seven to nearly eleven and a half million bales of cotton from regular marketing channels. Without the supporting influence of the Government loans, the record-breaking supply of cotton and the disrupting state of world trade probably would have depressed domestic prices to the level of 1931 and 1932. But the loan itself * * * had the effect of impounding large supplies and of restricting the free flow of American cotton into export. * * *"

That quotation, I might add, is from the annual report of Secretary Wallace for the year 1939.

One conclusion on which we can all agree, assuming the merits of my argument, is that farmers aren't getting an increase in income at a rate that will enable or encourage them to buy the products of industry. Meanwhile, industry isn't making out so well under its load of regulation and taxes, and there is little hope that industrial workers will achieve a sudden increase in income sufficient in size to furnish farmers with any material increase in their economic well-being.

Originally the administration was very happy over the idea of basing its recovery program upon the interdepedence of agriculture and industry, but now since the entire economy has bogged down under the crushing load of bureaucracy it is used as an alibi. In effect Wallace takes the position that we can't do anything for the farmer until we clear up unemployment, and Hopkins takes the position that we can't clear up unemployment until we solve the farm problem. Thus Secretary of Agriculture Wallace, at the House Appropriation Committee hearings in 1939, said:

"With regard to the years immediately ahead, about half of the farm problem is to be found in the cities. If the people in the cities do not produce more and if there is not less unemployment, there is bound to be real trouble in agriculture, and there is nothing you can do in agriculture that will cure that."

Harry Hopkins, soon after assuming the office of Secretary of Commerce, said:

"There can be no solution to our problem of unemployment until the farmer regains his proper economic position."

Thus, after 7 years, we have reached a perfect impasse.

With this in mind we should be ready at last to begin searching for a constructive alternative to the New Deal. It is time we weighed the evidence for and against the New Deal and time we considered the relative merits of free private enterprise and a planned economy. Choosing between free private enterprise and a planned economy is the major decision to be made, and in making this decision we shouldn't be distracted by New Deal twaddle that choosing free private enterprise means going back to the days of laissez faire or to the dark days of 1932. Instead, we should constantly keep in mind that our need is for a general recovery program based upon an intelligent understanding of economic processes and the interdependence of the entire economy. A planned economy is not the way, for, as I have repeatedly pointed out, the very nature of a planned economy is a piecemeal approach. If we are to have a consistent program, we must think in terms of free, private enterprise and of perpetuating our competitive system. In order to promote sound recovery in both agriculture and industry, Representative JOSEPH MARTIN, of Massachusetts, Republican minority leader in the House of Representatives, outlined 12 major things to do to accomplish this result. In conclusion I wish to reiterate these points:

1. Keep the United States out of war.
2. Move immediately to curb unnecessary, wasteful, and reckless spending.
3. Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.
4. Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.
5. Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
6. Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present paralyzing discord.
7. Define specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.
8. Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.
9. Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.
10. Create a special committee of Congress to inquire into the effect of the reciprocal trade agreements policy on American industry and agriculture.
11. Clarify Federal rules and regulations so industry and business may know what to expect.
12. Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

Fellow Americans, I have attempted to give you the picture as I see it and as I believe it must appear to those who are giving serious and dispassionate consideration to the past, present, and future of our country. I have no sympathy for those who would have us believe that we have reached the limit of our development, that there is no hope for our youth, and that the dole is a permanent fixture of our economic scheme. As a matter of fact, we have but scratched the surface so far as the future is concerned.

Today we are very much like an automobile climbing a very steep grade, with the driver bearing down on the brake pedal with all his might. Let him take his foot off the pedal and give the engine a chance to develop its full horsepower and it will carry him to the top without difficulty.

Let us remove the restrictions that bind and hinder expansion by regimenting activities. For the American people the shibboleth should be "plenty" rather than "scarcity." In a land as rich as ours there is no excuse for unemployment, want, and hunger. These three evils, that will destroy us if not removed, can be cured by a simple application of common horse sense such as our forefathers used in making this the greatest country in all the world. In closing, may I leave with you the thought that America has but learned to walk. The marathon lies ahead.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

EXCERPT FROM LETTER BY JOHN R. MACFADEN

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excerpt from a letter received by me recently from John R. MacFaden, director of public information, Los Angeles, reading as follows:

Lee, you can correct a great wrong if you would rise on the floor of the House of Representatives and state that the National Youth Administration, a division of the Federal Security Agency, is in nowise connected with nor is it to be confused with the American Youth Congress. Unfortunately, in discussing and reporting youth movements, editors have been careless in not clarifying the distinction between the N. Y. A. and the American

Youth Congress. Every man that works for the N. Y. A. signs an oath of allegiance.

While you and I know that some subversive elements will do anything, I know that here in California all the young fellows are substantial Americans like you and I. The same confusion that exists in your mind was apparent in Sacramento where Seth Tillington and Fred Hauser at first confused our program with that of the then highly publicized American Youth Congress convention.

If you will refer to my letter written to you last November, I think I gave you a clear picture of our activities. I would appreciate it very much if it would be possible for you to get up, and "for the sake of the record" impart to your colleagues the fact that we on the staff of the N. Y. A. in California are not a bit interested in the American Youth Congress nor would we have anything to do with any group which would even recognize the Communist Party.

The Farm Program

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

LETTERS FROM A CONSTITUENT

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks in the RECORD, I am setting out herewith two very interesting letters from an outstanding farmer of my district who is very vitally interested in the development of the farm program. Mr. Hal Dane's letters are of special interest to all of us, regardless of our party affiliations or our views regarding the farm problem. Mr. Dane's statements are very clearly and effectively set out and they are worthy of our most careful study and consideration.

IOWA CITY, IOWA, *February 22, 1940.*

Hon. STEPHEN BOLLES and Hon. THOMAS MARTIN,
Members of Congress, Members of Republican Committee for Assistance to Indigent Dairymen, etc., Washington, D. C.

DEAR FRIENDS: The announcement that you have been honored as above mentioned caused me to take pen in hand. A very great majority of our farmers favor a crop-control program. Of that majority still a majority favor the present one. But the majorities are growing less each year—each year as the faulty and unfair administration of the present program becomes apparent.

It is useless to here recite those faults. You are Corn Belt men, and know as well as I just how the Corn Belt has been sold down the Mississippi River, how the corn acres in the southern cotton States have increased exactly the same as the acres taken out in the northern old-corn States.

The 1940 program again cuts our corn acreage—on my farm about 12 percent. This brings me down to about 40 acres of corn on a 160-acre cornland farm.

But, being a dairyman, another problem now comes to the fore. A problem I have pointed to for 4 years—a voice unheard crying in what may yet become a wilderness. But now others are raising their voices with mine.

Here it is.

When the A. A. A. program was first set up silage was included in corn acres; that is, oats cut before the grain was ripe and used as hay was not soil depleting and not counted as such. But corn cut before the grain was ripe and used as a roughage was counted as a soil-depleting crop. When protest was lodged, we were told that this corn displaced mature corn on the market and as such had to be included.

Now the facts are that corn in silage does not and never has displaced matured grain (ear corn). Any farmer who has operated a dairy or who has fed silage to beef will bear witness and the point needs neither argument nor proof. It is an axiom.

So they shift ground and now say that silage corn depletes the soil and so must be included in the corn base. Well, in only one instance does that happen. Silage acres are soil depleting only when the corn is carried to almost full maturity and so late in the crop season that the land cannot be used again for another crop.

Here again, the practical dairyman or beef feeder comes to his own rescue, for the practice is to seed the ground down to rye or wheat as soon as the corn silage is removed. This seeding gives a green manure crop to plow under the next spring. And so the silage ground instead of being depleting the soil is actually used to build soil through the green manure. Also, and this is just as important, every farm using silage is heavily populated with animals. They convert that silage into products plus fertilizer. And the fertilizer goes back on the land.

So when the actual situation is fully thought out and followed through, we find that silage farmers—those who feed it either or both to dairy and beef animals—are farmers who are building up their soil and at the same time not affecting the ear-corn market.

Therefore, if corn acres used for silage result in a situation in which the market price of grain corn is not affected, and in a practice which results in improved instead of depleted acres, why are silage acres left in the program as soil depleting and counted as acres of matured corn?

Here comes rub.

In this part of the Corn Belt, where the land is the finest in the world for the production of corn, we can plant corn land 2 years out of 3 safely in a proper rotation. This means that two-thirds of the cropland can be put in corn without injuring ultimate fertility of this soil. Of course it is just so much better when that proportion is lowered. And, with a world surplus of corn and fat, it is probably proper that some lowering should take place.

In getting right down to brass tacks on this farm, there are 130 acres of cropland. I could plant 100 acres of corn every year for 50 years, fertilize, and rotate and not deplete my soil. But I voluntarily had cut it down to about 65 acres (or half) before A. A. A. was started. Then came A. A. A. and started to cut some more. And the cuts were not in proportion to the crop acreage available but to the corn heretofore raised. Read this last again. It is most important. Thus the 130 acres next door which had been cropped to corn fully took the same percentage cut that mine did.

So with this last cut I am down to 40 acres of corn per year out of 130 acres of cropland.

Now, here comes the dairyman speaking.

Out of the 40 acres of corn allowed me, I must put in the two silos about 16 acres. These 16 acres of corn never have and never will affect the market price of corn, because matured corn cannot be used for silage nor silage corn for grain any more than immature oats can be threshed and sold for grain. Nor are these 16 acres soil depleting, because the crop will be fed to cattle and the resulting fertilizer spread over the land in addition to the green manure crop. (And if you think these two do not increase production, come and look.)

So, on my 160-acre Iowa farm with 130 acres God given to raise the finest corn in the world, I am now down to 24 acres which can be raised, harvested, husked, and cribbed to be used for hogs, chickens, fat cattle, and the other stock which needs matured grain to carry it along.

My case is typical.

Every meeting I have attended since the reduction figures came out, one of the bones of contention has been, "Shall I cut the A. A. A. and crop my own rotation again or go along with a corn base so low that it means accepting governmental charity to live?"

Seems to me here is a clear-cut case for your committee.

You two men have as big a percentage of dairymen constituents as about any two in Congress.

This is most important to these dairymen.

Maybe not so much close to the big cities, where little corn is raised, anyway, but certainly to us out here in the Mississippi Valley.

The A. A. A. is controlled from the bottom up, theoretically; but practically, once the three-man county committee was chosen, it is now almost impossible to engineer any change there. And the same is true of the State central groups. The ins stay in. And a Republican dairyman talking to three A. A. A. Democrats in Johnson County, who are all beef raisers and put up no silage, certainly gets no sympathetic hearing.

At the last time our township had a A. A. A. meeting—this was a sign-up meeting and one to elect our township committee of three—we voted unanimously a resolution to the county A. A. A. committee reciting that corn silage was neither a market crop nor depleting, and requesting the county to take it up at the State meeting and from there to A. A. A. headquarters to get that ruling changed—to put immature corn in the same class with immature oats, etc.

No attention was paid to this by the county committee and that was never heard of again.

Between now and May 1 I have to decide whether to take 24 acres of corn and have $400 subsidy from the Government or to take 40 acres more in corn and go it alone. I would rather cooperate; and other dairymen feel the same way. But it has now reached the end of the limit.

Thanking you, one and all—I mean each and every one; no, that is both of you—for your kind attention, and wishing you every good luck possible, I am,

Sincerely yours,

HAL DANE.

IOWA CITY, IOWA,
March 5, 1940.

Hon. THOMAS MARTIN,
Washington, D. C.

DEAR TOM: What disturbs me most about the farm problem might be summed up as follows:

1. Our costs of production are too high. Labor is the biggest element. These costs are being reduced by:

a. Mechanization: Tractors, milking machines, cotton pickers, etc. But the more mechanization, the more unemployment, because farm workers are then driven to the cities to seek other work.

b. Increased production per unit by: (I) Better seed, including animal seed stock; (II) better rotation; (III) better storage.

2. Our sales realization is too low.

a. Costs of distribution from farmer to consumer are too high. I get 5 cents a quart for my milk delivered to Sidwell's door. He gets 11 cents for pasteurizing, bottling, and delivering to your door. That is a spread of 6 cents—too much.

b. Consumption of many farm products is not at maximum possible. The unused portion at a dump price ruins the market for the rest. Example: Lard is begging here at 10 cents a pound, while Crisco sells for about 16 cents.

3. There will be no farm problem when—

a. The survival of the fittest results in the most efficient operators controlling the land. The Government has no good business subsidizing the inefficient, as at present.

b. The farmer has a market reasonably in line with other commodities.

This last point (b) is what Henry Wallace is aiming at. But I think that 7 years should now demonstrate to all, and especially you in Congress, that his ideas were probably all right for the emergency that existed but do not offer a solution which will be good 5, 10, or for 50 years. The present farm program seems to be a stopgap; with Congress called on to stop the gap every 2 years with an appropriation. And right now, the pressure is on to get the program out of Congress into some form where the dole will be repeated toward infinity without further congressional action.

Well, you say, all this is true. And we agree with you. But what have you to offer in a constructive way?

There you have me stumped. For I can offer certain concrete proposals but the thing is too big for one man. It must be worked out by a large group. And I think your newly formed Republican group is the one to do it.

First, I would remedy the mistakes in the present program. Land best fitted for cotton should not raise corn. Land best fitted for corn should not lie in grass. Land best fitted for grass should not be plowed up for wheat. Land best fitted for irrigated fruit should not be put in some other crop. I would make a survey of all crop land, rate it, and then proportion some way the crop to be raised that it is best suited to raise.

Second, I would go after the marketing end. If all the people of this country ate all they wanted every day, there would be no farm surplus. They will eat, if they have the money to spend for food. Therefore, unemployment is the first and biggest problem.

All things that add to unemployment—like killing 8,000,000 baby pigs and thereby depriving the trucker, the railroads, the packer, and the processor of the work of attending to 800,000,000 pounds of pork—should be stopped. Unions acting as a racket to hamstring industry are just as bad as predatory employers. Give industry a fair chance and a helpful attitude from the Government and many men will be put to work. I would survey markets as carefully as survey land. Then, if a subsidy is needed, let it be by the Government taking the loss on export and keep the domestic market up to parity. It is a big question.

Yours,

HAL DANE.

This Census Controversy

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

EDITORIAL FROM THE LOS ANGELES TIMES OF MARCH 10, 1940

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Los Angeles Times, Los Angeles, Calif., under date of March 10, 1940, entitled "This Census Controversy."

[From the Los Angeles Times of March 10, 1940]

THIS CENSUS CONTROVERSY

"And Satan stood up against Israel and provoked David to number Israel. And David said to Joab and to the rulers of the people, 'Go, number Israel from Beersheba to Dan; and bring the number of them to me, that I may know it. And Joab answered, The Lord make his people an hundred times so many more as they be; but, my Lord the King, are they not all my Lord's servants? Why then doth my Lord require this thing? Why will he be a cause of trespass to Israel? Nevertheless, the king's word prevailed against Joab. Wherefore Joab departed, and went throughout all Israel. * * * And Joab gave the sum of the number of the people unto David. * * * And God was displeased with this thing; therefore he smote Israel" (1 Chron. xxi, 1–7).

From this biblical record of one of the first governmental nose counts of history, it would appear (1) that the census is an invention of the devil, and (2) that even then a gross exaggeration of the true population figures was to be expected.

Neither opinion nor practice seems to have changed much through the ages, though it is recorded in the Book of Numbers that Jehovah had Moses count all the adult male Israelites. That was 500 years before David and was only for military purposes, so it was all right. Our early colonial history contains a number of instances in which censuses, then taken for taxation purposes, could not be completed, or sometimes even started, because of popular resistance.

So at least we come honestly by our dislike of the modern version of what Joab called a "trespass" on Israel's privacy, and which our Yankee forefathers usually resented by running the census taker off the place with a flintlock. On top of that, it can be argued that our provocation is greater, since the number of intimate, personal questions propounded by the Government enumerators is now much larger than it was in those early days.

There is, however, a pretty good case for the census, even the expanded 1940 version to which so much objection is being raised. Its aggregated results are by far the most important and authoritative source of economic and social data which we have, and since they form the basis of our representation in State and national legislatures, they have a large political significance as well. There is literally no important business, industry, or profession to which the census does not render services which could not otherwise be had. It is obvious, too, that the more questions asked and answered, the wider the field of information covered and the greater the utility of the results.

Necessarily we are asked a lot of personal questions, since it is the sum of individual data which makes a census useful. If the Census Bureau keeps its word—and it has not broken it yet—there need be no fear that personal facts will become public. The enumerators are strangers in their areas of operation and subject to heavy fine and imprisonment if they break their oath of secrecy. The new questions asked are not, in the main, devised by the Government but are culled from long lists of suggestions offered by businesses and industries, social workers, economists, and so on, as calculated to elicit information of the maximum utility.

Much the same objections as now have been raised to every census in our history, mainly by the Democrats when the Republicans were in power, and vice versa. A Government questionnaire circulated in connection with the industrial census of 1907 raised a terrible storm because it wanted to know how many petticoats each woman was wearing. The divorce query, probably the most objected to in the 1940 list, has been propounded in every census since 1850. The questions about individual income and related matters are much less detailed and penetrating than those of the income-tax blank, to which we have become more or less inured.

Only to persons in the low-income brackets will this new ebullition of Government curiosity be any particular novelty. As Wendell Willkie, utility magnate, remarked: "I have been examined so frequently by Federal commissions, the S. E. C., Government boards, and so on, that I don't think anyone can ask me a question—pertinent, impertinent, personal, or otherwise—that I haven't already answered."

Oregon Wins Award Again

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ARTICLE FROM THE SUNDAY OREGONIAN OF MARCH 10, 1940

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday Oregonian of March 10, 1940:

[From the Sunday Oregonian of March 10, 1940]

OREGON WINS AWARD AGAIN—BANKERS TOP NATION IN FARM ACTIVITIES

(By Leon B. Baketel, financial editor, the Oregonian)

No other State in the Union has even matched the honors which have been accorded to Oregon by the agricultural commission of the American Bankers' Association.

For the eleventh consecutive year it has won highest honors for its agricultural activities among farmers, 4–H Clubs, Future Farmers of America, and other groups.

Receipt Saturday of the glad tidings by Secretary Elwain H. Greenwood from Dan H. Otis, director, agricultural commission, American Bankers' Association, was cause for rejoicing.

AWARD IN APRIL

The award will be made at the spring meeting of the American Bankers' Association, to be held in Hot Springs, Va., next April.

At that time O. A. Houghlum, vice president of First National Bank of Eugene and immediate past president of the Oregon Bankers, and Clyde B. Williamson, cashier of the Bank of Albany and Oregon Bankers' Association president preceding Mr. Houghlum, will be in attendance and will receive the star and inscription to be added to the plaque hanging in the secretary's office.

Mr. Otis in his notification was highly complimentary of the national leadership of the Oregon Bankers' Association and its members and said this was the one State where he did not have to urge renewed efforts to gain the coveted 1,000 points.

COMMITTEE PRAISED

The work of J. H. Irvine and his committee, composed of C. E. Johnson, of Canby; H. B. Hager, of Clatskanie; A. M. Pace, of Enterprise; L. R. Fisher, of Salem; and Fred Stevens, of Milton, came in for complimentary words Saturday from both A. K. Parker, association president, and Mr. Greenwood.

Oregon 11 years ago started out at the top of the column and has kept its standings throughout the years, eclipsing the efforts of every other State and never failing to score its 1,000 points, goal of all competitors.

Factors that go to make up the 1,000 points are: Committee attendance, appointment of county key bankers, attendance at agricultural meetings, contributions for agricultural improvement, number of farm people contacted by bankers and encouraged to undertake definite projects, and special or miscellaneous agricultural activities particularly adapted to local communities.

More on the Neely Bill

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. ALEXANDER. Mr. Speaker, my remarks in the RECORD of March 5 regarding the motion-picture industry bill have received widespread notice and attention, and in all but one case my statement was received with approval. These endorsements are well summarized by the following letter which, among others, came in this morning's mail and which I quote verbatim:

——— THEATRE CO.,
———, *Ind., March 12, 1940.*

Hon. Representative JOHN G. ALEXANDER,
Washington, D. C.

DEAR SIR: I wish to hell there were a few more like you to take the stand that you took and let business regulate itself.

We were coming along nicely with some swell concessions from the producers, all that we needed, and that publicity hound, Arnold, threw a monkey wrench into the whole proceedings.

I'm a Democrat or was, but I, and a lot more that I know, are thoroughly and completely fed up with the whole mess.

I have yet to see the time, that if I had a grievance, I could not sit down with the manager of the district, and iron out the trouble.

More power to you. If they would get it through their thick heads the less they interfere with something that they don't know anything about, the better the country will recover. And not till then.

Sincerely yours,

A. H.

The one word of criticism is from my good friend, W. A. Steffes, president of the great and potent Allied Theater Owners of the Northwest, Inc., whose letter, after some introductory remarks, reads as follows:

In your statement in the RECORD on March 5 you express irritation that so much of the time of Members of Congress has been taken up by proponents and opponents of the Neely bill. I cannot answer for the opponents of the measure, but I can assure you that such efforts as the proponents have made were necessary to prevent the bill from being swamped in a sea of propaganda. Orders have gone out from New York to every employee of every film exchange and of every theater affiliated with any producer-distributor that he shall write his Congressman to oppose the bill and shall induce at least five other persons to do likewise. Some affiliated theaters are supplying their patrons with postal cards for signing which contain printed opposition to the bill and are addressed to the appropriate Members of Congress. One affiliated circuit has offered to defray the cost of sending telegrams to Congressmen if patrons will permit the use of their names.

A few years ago, when the public utilities attempted to defeat the Securities and Exchange Commission bill by similar methods, great indignation was expressed in Congress and an investigation was ordered. It seems to me the public has a right to expect a like reaction in Congress to the methods being used by the Motion Picture Trust against the Neely bill. In case you are interested in the nature and extent of the Motion Picture Trust's lobbying activities, particularly against the Neely bill, I suggest that you read chapter 6 of Kenneth G. Crawford's The Pressure Boys, entitled "Supercolossal Lobby."

You express hope that the different groups in the motion-picture industry "will iron out their differences and thus make the Neely Bill unnecessary." Lest your remarks encourage the thought that delay in the passage of the Neely bill may lead to voluntary concessions by the trust (a familiar strategy that has prevented consideration of the bill on several occasions), let me point out, first, that this is not merely a fight between the distributors and the independent exhibitors. Some 31 national religious, welfare, and educational associations are on record as opposing compulsory block booking and blind selling and most of these are supporting the bill. In the second place, I, personally, the regional association of which I am president, and the national association with which it is affiliated have been trying for more than 10 years to secure fair-trade practices in this industry by orderly processes of negotiation and agreement. Here is the record:

December 1929 to July 1930, negotiations leading to a tentative agreement on a revised contract, arbitration and appeals board. No action taken by the distributors to carry out the understanding.

Fall of 1932, negotiations leading to tentative agreement on the same subjects. Again the distributors refused to ratify the action of their representative except in a few unimportant particulars.

Summer and fall of 1933, negotiations looking to an N. R. A. code. The Deputy Administrator drafted a code in the interest of the distributors over the protests of the independent exhibitors. The few reforms included as sop to the independents were discontinued when N. R. A. was declared unconstitutional.

October 1938 to June 1939, negotiations looking to a voluntary code of fair-trade practices. Rejected by Allied States Association of Motion Picture Exhibitors after the lawyers for the distributors took charge and drafted code in the interest of their clients. (See exhibit D to speech of Senator NEELY, July 14, 1939.) This proposed code was later denounced by the Department of Justice as illegal and was abandoned.

Thereafter certain distributors announced new selling policies, including a cancelation privilege, the nonforcing of short subjects and news reels, and the elimination of score charges. Allied Theater Owners of the Northwest, meeting in Minneapolis last week, found that these announced reforms were being generally disregarded.

Allied States Association of Motion Picture Exhibitors in January adopted a resolution proposing that certain abuses such as unreasonable clearance, overbuying, arbitrary allocation of product to the chains, etc., be arbitrated. Copies were transmitted to the eight major distributors. The president of Twentieth Century-Fox Film Corporation replied in general terms that he favored arbitration, but the others have made no response whatever.

In view of this record, I submit that it would be a denial of justice to stay action on the Neely bill on the theory that the abuses at which it is aimed can or will be remedied by voluntary action of the producer-distributors.

In the course of your remarks you made the following observations:

"Why is it necessary to make such business problems matters of legislation? * * * It is not only foolish but it is just another way (of) * * * doing away with individual initiative, contaminating business with politics, and otherwise destroying the sound and fundamental principles of free government."

I would gladly join in these sentiments if it were not for the special facts of the case. Because of their general soundness, your observations are dangerous in the present situation and have been gleefully seized upon by the trust. But it is even more baneful, from the standpoint of the public, for the industrial trusts wielding great economic power to destroy individual initiative than for the Government to do so. Heretofore it has always been regarded as both desirable and necessary for the Government to step in and rectify such conditions. That is in accordance with "sound and fundamental principles of free government." The Constitution says the Congress, not the monopolies, shall regulate commerce.

In this connection you should not overlook the fact that the Motion Picture Trust is itself the beneficiary of Federal legislation, in that it derives much of its power from the broad provisions of the copyright law. Many restrictions are imposed on the exhibitors on the theory that the standard exhibition contract does not contemplate a sale, or even a lease, but a license under copyright. Moreover, the producer-distributors, with their powerful lobbying facilities, do not hesitate to apply to Congress for special consideration whenever they wish. At the special session films were excepted from the embargo law, and within the past 2 weeks they have applied for special amendments to the National Labor Relations Act. This may or may not be "contaminating business with politics," but legislative relief should not be poured out to the trust whenever demanded and withheld from the independent exhibitors when they so sorely need it.

I further submit that the independent home-owned theaters mean more to the domestic economy of the State of Minnesota than the producer-owned chains, the earnings of which do not remain in the State but are remitted to the parent companies in New York.

As above indicated, your remarks have been given wide publicity in the trade press and unless you cooperate in getting the underlying facts before the public they may do grave injury to the cause of the independent theater owners. I hope, therefore, that you will see fit to insert this letter in the CONGRESSIONAL RECORD so that those who may have been influenced by your remarks will know that there is another side to the story.

Yours very truly,

W. A. STEFFES.

Upon the request of Mr. Steffes, I am glad to insert the above letter and commend it to the consideration of all parties concerned.

Residents of the States Not Subject to District Income Tax

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

LETTER FROM THE COMMISSIONER OF CORPORATIONS AND TAXATION OF MASSACHUSETTS

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. Henry F. Long, commissioner of corporations and taxation of the Commonwealth of Massachusetts. In the recent case of James J. Sweeney, petitioner, against District of Columbia, respondent, No. 7361, decided March 11, 1940, by the United States Court of Appeals of the District of Columbia, the law as set forth by Commissioner Long is largely corroborated. I shall ask that the complete decision of the court be printed later in the CONGRESSIONAL RECORD.

THE COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF CORPORATIONS AND TAXATION,
Statehouse, Boston, February 27, 1940.

Hon. EDITH NOURSE ROGERS,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN ROGERS: Since writing you in response to your request relative to the Massachusetts income tax and the District of Columbia tax on intangibles, relating to the possibility of inhabitants of Massachusetts paying two taxes, I have had the opportunity of reading an extract of the opinion of the corporation counsel of the District of Columbia issued on February 8, 1940.

It is my opinion that an inhabitant of Massachusetts, even though spending the major portion of the year in the District of Columbia in the employ of the Government or any of its agencies, cannot be held to be subject to the District of Columbia income tax. Section 2 of that act provides:

"There is hereby levied for each taxable year upon the taxable income of every individual domiciled in the District of Columbia on the last day of the taxable year a tax at the following rates."

It therefore appears that the District of Columbia tax is in the nature of its application exactly like the Massachusetts tax, where the tax is on "income * * * received by any inhabitant of the Commonwealth during the preceding calendar year."

The test in both instances is inhabitancy, which legally must be translated into domicile. It is not possible for a person to have more than one domicile. It is not possible for a person to give up a domicile, once acquired, until there has been another one acquired; and when a subsequent one is acquired, then the old one is abandoned. Establishment of domicile which is a concept of law operates when the intent of a person is known, and acts which establish that intent are sufficiently expressive to permit the law to say on the basis of these facts the domicile of this person is in this or that jurisdiction.

In the cases in which you are interested it is clear that domicile has at some time actually been in Massachusetts. Therefore, the test must always be whether or not there was an intent on the part of the Massachusetts inhabitant to change the domicile to the District of Columbia. It is my thought that the courts would generally hold that in governmental positions, which are presumptively not permanent in character, domicile is not changed from that of origin to the District of Columbia. This situation, however, might be divided into two parts: Those who are elected to office or appointed to governmental positions without the protection of the civil service, probably except under unusual circumstances, would not be regarded as changing their domicile, as the appointment in Washington would be of temporary duration and the assumption must be that they would not abandon their old domicile. This does not mean that they cannot abandon their domicile if they wish, but the mere physical presence in the District of Columbia for any number of months or years cannot be said in and of itself to establish domicile. On the other hand, a person who was under the civil service who had his family in the District of Columbia, where he stayed for all practical purposes the entire year, might be likely to be held to be domiciled in the District of Columbia.

In my opinion every person now employed in the District of Columbia who in 1939 and in 1938 and years back filed a Massachusetts income-tax return, was on the voting list in some city or town in Massachusetts, and had no intention of changing his or her domicile is as to 1940 still domiciled in the State of Massachusetts and that any ruling by the District of Columbia forcing them to be treated as domiciled in the District of Columbia is without support of law or weight of authority. On the other hand, a person who has been living in the District of Columbia and has made no effort to retain his Massachusetts domicile probably will be prevented from now establishing a domicile in Massachusetts if he or she is physically present in the District of Columbia.

It is difficult to write this letter without going at length into the decisions and the reasons for the conclusion, but I am certain that no court is going to hold that an individual domiciled in Massachusetts is subject to the District of Columbia tax. I am equally convinced that no court is going to hold that the word "domicile" in the District of Columbia tax is to be treated any differently from the way similar words have been treated in the past in respect to tax laws of various States of the Union. I am of opinion that every inhabitant of Massachusetts who files a Massachusetts income-tax return should refuse to file a District of Columbia income-tax return on the ground of not being domiciled in the District of Columbia.

I shall be very glad to issue a certificate to the effect that such and such a person, if it is the truth, was domiciled in Massachusetts as of "the last day of the taxable year" and thus I believe by the presentation of this certificate the Massachusetts inhabitants will be relieved of any obligation to file and pay a District of Columbia tax. In the event that the District of Columbia tax authorities force the filing of a return, then such return should be filed under protest and there should be clearly stated under a properly authenticated document that the return is being filed under duress and every statutory remedy should be availed of. In the event that payment is forced, exactly the same protest should be made, namely, payment under protest with an assertion of compulsion.

My own advice in the matter is that if the District of Columbia tax authorities undertake to force inhabitants of Massachusetts to file a District of Columbia tax return, such force should be resisted and instead of filing a return and seeking recovery the District of Columbia tax authorities should be forced to make a test case with a view to settling the issue of domicile.

So far as I can find there is no provision for the protection of a person who files a District of Columbia income-tax return, because the only remedy, if there is any remedy, is found in section 34 which relates to the overpayment of the tax. This in my opinion is not broad enough to protect a person who is not domiciled in the District of Columbia but is forced to file a return and wait decision. In my opinion it would be just as sensible for Massachusetts to undertake to tax an inhabitant of Ohio who happened to be in Massachusetts for a substantial period in a capacity similar to a governmental capacity in which people are employed in the District of Columbia as it would be for the District of Columbia to undertake to tax an inhabitant of Massachusetts who is in the District of Columbia for the purpose of discharging governmental duties either by way of election, an appointment, or under the civil service.

If it is possible for me to do it, I will join with any individual inhabitant of Massachusetts who is being compelled under duress to file a District of Columbia tax return in resisting a tax by the District of Columbia on the ground that Massachusetts desires to protect its citizens from taxation by a jurisdiction that has no control over them, as they are not domiciled in that jurisdiction. Massachusetts will say to all of its inhabitants, "If you are domiciled in Massachusetts and because of that file a Massachusetts income-tax return, we will use every remedy to protect you from being taxed by any other jurisdiction that undertakes to tax you as an individual domiciled in the District of Columbia."

It is, of course, to be understood that there may be a difference, so far as the facts are concerned, in individual cases, and more than likely some people have been claiming inhabitancy in Massachusetts who, because of physical presence in the District of Columbia and the raising of families there, may be border-line cases which may be difficult to sustain as inhabitants of Massachusetts.

The general thought in my mind, however, is that the establishment of a domicile in the District of Columbia is likely to be less certain by physical presence than in any other jurisdiction, because a person who becomes an inhabitant of the District of Columbia gives up his voting privileges and also his privileges in respect to public welfare, institutional treatment, and the like, which an inhabitant of Massachusetts at least has in very substantial measure.

It is, of course, perfectly clear that so far as the elective officers are concerned they have nothing to worry about, because Massachusetts surely could not elect an inhabitant of the District of Columbia to serve in the Congress for Massachusetts, and this probably goes through to the higher elective officials. I think your problem lies with the governmental employees who have been in

the District for a great many years and still want to retain their domicile in Massachusetts. Of them I would say, with possibly very few exceptions, that they are still inhabitants of Massachusetts; and to them I will again state that, to the extent it is possible, Massachusetts will join in any legal procedure to assert Massachusetts domicile for those who desire it against the claims of the District of Columbia that they are inhabitants of the District.

Cordially yours,

HENRY F. LONG,
Commissioner of Corporations and Taxation.

Insurance on Nation's Corn Yield Will Provide Needed Economic Cushion—Statement Supporting the Bill H. R. 8889, to Amend the Federal Crop Insurance Act of 1938

EXTENSION OF REMARKS
OF
HON. WILLIAM H. LARRABEE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1940

Mr. LARRABEE. Mr. Speaker, I have introduced in the House of Representatives this week the bill H. R. 8889, to amend the Federal Crop Insurance Act, for the purpose of providing insurance benefits for the growers of corn, one of our major and basic agricultural commodities.

I am asking that this bill be given favorable consideration at the earliest possible moment by the Agricultural Committee, to which it has been referred, and that it be given right-of-way on the floor of the House when it is reported by the committee.

I feel that this is legislation of paramount importance. We of the Corn Belt, and especially the farmers of my State, where we grow the finest corn raised anywhere on earth, have come to the realization that one of the most beneficial instruments that could be devised for the benefit of not only the farmer but all the people in and surrounding the Corn Belt, is an instrument to cushion the economic shock that comes with a major crop loss. Such losses, occasioned by adverse weather conditions, not only rob the farmer and his family of their buying power, but that loss of buying power in the channels of trade is immediately felt by those people in towns and cities who are maintained directly by income from other pursuits and occupations.

Cognizant of these conditions, the Congress in 1938 enacted the Federal Crop Insurance Act of that year, but limited its insurance provisions to the wheat crop alone, on the theories that wheat is the major agricultural commodity of our Nation and that it would be in the best interests of the Nation as a whole to begin the insurance program in an experimental way and extend its provisions by enabling legislation to such other crops as Congress felt should be so protected at a later date.

The corn crop was excluded from the original Crop Insurance Act, partly, it appears, on the theory that there was insufficient data available to the Department of Agriculture at that time on which to base the necessary actuarial figures. However, the Department, through the Extension Service and surveys made in the various States, now has on hand, assembled and studied, much data pertinent to average corn yields, losses, and gains on which to base necessary insurance statistics; and I see no reason why we should await the development of data concerning other agricultural crops before making provisions of this very beneficial act available to the corn-producing States. To so delay may result in another disaster through crop failure in the Corn Belt. This we must avoid, if possible, and enactment of the bill H. R. 8889 will make it possible to eliminate the disaster that would otherwise attend a serious failure in the corn production.

The wheat-insurance program has been in operation long enough to determine conclusively the benefits that are obtained under the act, insofar as the wheat crop alone is concerned and with reference to the principles of crop insurance.

The wheat growers have received the act and its benefits very favorably. They are well pleased with the results. The first year of operation under this act saw nearly 170,000 farmers in 1,300 counties, representing 30 of the 48 States, participating in the opportunity to insure their crops against loss resulting from adversities or calamities of nature, such as drought, flood, or extreme cold at unseasonable dates. The insured production of about 70,000,000 bushels on approximately six and one-half million acres of land is involved.

Last year in Indiana alone there were over 28,000 applications for insurance on the wheat crop from approximately the same number of individual growers. In the 3 counties of my district, which is only about 50 percent agricultural, enthusiasm for the wheat-insurance program has been high.

In Madison County, the largest agricultural county of the three, there were 666 farmers participating. In Hancock County there were 459, and in Marion County, which is largely a metropolitan and industrial community, there were 207 applications for wheat insurance.

I am told by responsible persons connected with the agricultural program in my State and district that there are far more farmers there interested in insurance for corn than are interested in insurance for wheat, for the simple reason that there are far more growers of corn in my State and district than there are growers of wheat.

In fact, it is reported that many of those who signed up for wheat insurance did so primarily with the idea of cooperating in the wheat-insurance program to make certain that they would soon obtain insurance benefits for their corn crop, realizing that if the wheat-insurance program failed through lack of interest or cooperation, it would be difficult to interest Congress in enacting enabling legislation to make corn insurance available. However, those who were motivated to participate in the wheat-insurance program for that reason are nearly all so well pleased with the operation of the program thus far that they are continuing to participate.

However, it seems to be unquestionable that it is insurance on corn that they need and want.

Departmental figures show that there were 127,557 growers of wheat with an approximate production of 28,086,000 bushels in Indiana last year.

Figures from the same source show that there were 179,325 growers of corn in the State of Indiana last year with an approximate production of 213,225,400 bushels, almost one-tenth of the Nation's total production.

On these figures it is evident that corn is by far the more important agricultural crop in Indiana, as it is in several neighboring States. Wheat, to a large extent, is grown in Indiana as a rotation or soil-building crop, and so it is also in several neighboring States, and is not considered, nor does it assume the status of "the major crop."

President Roosevelt, in a message to the Congress, said, "Crop insurance and a system of storage reserves should operate so that surpluses in years of good weather might be carried over for use in years of unfavorable growing conditions. Crop insurance and a system of storage reserves would help to protect the income of the individual farmer against hazards of crop failure; it would help to protect consumers against shortages of food supplies and against extremes of prices, and finally, it would assist in providing a more nearly even flow of farm supplies, thus stabilizing farm buying power and contributing to the security of business and employment."

To that theory the Congress has subscribed only in part, while accepting the principle in whole. The action of the Congress has been limited to only one major crop. Knowing that application of crop insurance to the wheat crop has proven successful, and finding that we are ready to apply it to a second crop—our corn, I am urging the Congress to enact my bill during the present session in order that the insurance benefits may be available to the 1941 corn crop at the latest.

I would also urge that the benefit of crop insurance be made available to all other basic commodities just as soon as the

Department of Agriculture can prepare, from studies now under way, the necessary statistics on which to base such insurance.

We know by experience that when emergencies have come in the past through crop failures, the loss has not been limited to the farmer or the farming territory alone. The effect of such crop failures has spread to industry and to commerce in general, through diminished purchasing power of the farmer. The expense, in the past, to Federal, State, and local governments, arising by reason of crop losses points to the desirability of applying the principle of insurance in order to lessen the cost—financial and human—of future crop disasters.

President Roosevelt has also said, with reference to crop insurance—

> A program of crop insurance and storage of reserves should be a part of the foundation of agricultural policy which we are building and which must include the conservation of soil and water, better land use, increased farm income, and alleviation of distress in rural areas arising out of factors beyond the control of individual producers.

As I have said before, Congress has subscribed to these principles, but in the case of crop insurance has applied them only in part, limiting the benefits to the wheat crop alone.

All crops are subject, essentially, to the same hazards. Risks average as high in corn production as in wheat, if not higher. As in wheat, there is a loss somewhere in corn production every year.

While corn insurance would not afford a solution to all the problems that confront the corn grower, it would furnish a much greater element of security and distribute the risk over a period of years, diminishing to a very great extent, the disaster which always attends a major crop loss.

As the loss of income on the part of growers of either wheat or corn, occasioned by crop losses, seriously affects the growers of the other commodity, so the loss of such income on the part of both groups affects the welfare of the entire Nation.

German War Propaganda

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ARTICLE FROM FACTS IN REVIEW

Mr. THILL. Mr. Speaker, a news pamphlet entitled "Facts in Review" has been coming to me through the mail. It is purportedly issued by the German Library of Information, 17 Battery Place, New York, N. Y. So much pro-British news matter is printed in the United States that it now seems as if the Germans are taking a cue from the British and are sending out pro-German news material.

The following article appeared in the March 11, 1940, issue of the aforementioned publication:

[From Facts in Review of March 11, 1940]

GERMAN HIGH COMMAND REVIEWS FIRST 6 MONTHS OF WAR

The German high command issued the following review of the first 6 months of the war, covering the period from September 2, 1939, to March 2, 1940:

After 6 months of war on land, at sea, and in the air, the following military results are established:

POLAND VANQUISHED IN 18 DAYS

In a campaign of 18 days the Polish Army was smashed to pieces, Polish divisions destroyed, and the territory of the former Polish state occupied up to the boundary of German and Russian spheres of interest. Thereby the aim of the enemy to force Germany into a two-front war was thwarted in the shortest time.

In the west the Westwall was occupied according to plan and lengthened to the coast. The enemy did not venture to advance at any point to nor even within effective range of the Westwall, much less to attack it.

WESTWALL DEFENDERS BAR ENEMY

In daring scouting and shock-troop undertakings the German Army repeatedly proved its spirit of attack and showed a high standard of training and equipment. Whenever the enemy sought to force its way into German territory in the area before the Westwall army units drove the enemy back to its starting point by rapid attack.

The German Navy conducted sea warfare against England and France with increasing energy and growing success after destruction of the Polish sea force, excepting such units as fled before the campaign began or later were interned in neutral ports.

SUCCESSES AT SEA

In the North Sea, next to the security of the sea zone and protection of German commercial traffic, stress was laid on economic war with surface and submarine warcraft.

At the same time mine attacks were undertaken in the waters of the English east and west coasts. The armored ships *Admiral Graf Spee* and *Deutschland* were used in the Atlantic to conduct cruiser warfare. The enemy was handed considerable damage as a result of advances in the North Atlantic, which also were carried out with heavy fighting forces.

BRITISH WARSHIPS DAMAGED AND DESTROYED

Destroyed as a result of the German sea warfare were: the battleship *Royal Oak*, the airplane carrier *Courageous*, the auxiliary cruiser *Rawalpindi*, 8 destroyers—the *Blanche, Gypsy, Duchess, Grenville, Exmouth, Viscount, Daring*, and *Jersey*—and in addition approximately 20 men-of-war in patrol, mine-sweeper, and boat-pursuit service—these in cooperation with the air force—as well as several U-boats.

Heavily damaged were the battleships *Nelson* and *Barham*, the battle cruiser *Repulse*, the cruiser *Exeter*, a heavy cruiser of the *London* class, the cruiser *Belfast*, and a greater number of destroyers, patrol boats, and U-boats.

ONE MILLION NINE HUNDRED AND FOUR THOUSAND NINE HUNDRED AND THIRTEEN TONS VICTIMS OF RETALIATORY WAR ON ENEMY COMMERCE

In the same period 532 enemy merchantmen and neutral merchant ships with cargo useful to the enemy of a gross tonnage of 1,904,913 were destroyed.

Measured by these successes, our own losses were small. They totaled: 1 armored ship (the *Admiral Graf Spee*), 2 destroyers, 6 patrol or mine-sweeping boats, and 11 U-boats, an average of 2 U-boats monthly.

SUPERIORITY OF GERMAN AIR FORCE

The German air force participated in the victorious outcome of the Polish campaign in an outstanding manner. While destroying the Polish air force, it protected at the same time the German air zone in the west with other units.

Its superiority as regards the preparedness of the crews and the excellence of materials repeatedly was apparent. Reconnaissance flights carried out against England and France, even under unfavorable weather conditions, have supplemented material at hand regarding the enemy's measures.

ATTACKS FROM SKY SINK CONVOY VESSELS

In scouting against England, German planes again and again reached the Orkney and Shetland Islands despite enemy resistance. Repeatedly attacks were made on enemy sea forces, armed merchant ships, and convoys. Sixty-five ships, with approximately a gross tonnage of 75,000, were sunk. Concerned here for the most part were enemy or neutral commercial ships traveling to England with contraband as well as some lighter ships and British sea-fighting forces.

AIR BOMBS WREAK HAVOC

In addition, 52 ships with an approximate gross tonnage of 200,000 were heavily damaged and in part destroyed as a result of bomb hits. Of this number, 40 were British ships of her lighter sea-fighting forces, 2 were British cruisers of a gross tonnage of 15,300, 2 were British battleships of gross tonnage of 63,350, and 1 was a British aircraft carrier, gross tonnage 22,600.

AIR-RAID PROTECTION PERFECTED

Since the beginning of the war the German air-defense ground personnel has been developed as planned, the airplane-reporting service well practiced and tested, and air-raid protection measures and equipment perfected throughout the Reich.

Wherever they have attempted to fly over German territory with stronger units, the enemy has been successfully driven off by pursuit planes and antiaircraft fire.

ENEMY LOSES 335 PLANES; GERMAN LOSSES SMALL

In all, 285 British and French airplanes so far have been shot down. Added to this were some 50 planes of the British airplane carrier, so that the total loss to the Western Powers since the beginning of the war is at least 335 planes. Nine enemy captive balloons also were shot down.

On the other hand, the German air force lost 35 planes through direct enemy action and 43 planes which met with accident on enemy flights (emergency landings, crashes, etc.) in these 6 months on the west front and over the British fighting area.

RESERVES READY ON FRONT AND AT HOME

The full value of war experiences so far has been utilized among the three branches of the Army for further conduct of the war, for training, and for technical perfection of material.

The production of the German armaments industry has not been decreased by the enemy blockade but increased to the highest degree.

The strongest reserves of trained fighters of all kinds, as well as technical personnel, stand ready at their weapons and apparatus for continued actions at the front and in the homeland.

The Mississippi Valley Flood Control Association

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS OF MAJ. GEN. JULIAN L. SCHLEY, CHIEF OF ENGINEERS, BEFORE THE MISSISSIPPI VALLEY FLOOD CONTROL ASSOCIATION

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Maj. Gen. Julian L. Schley, Chief of Engineers, before the Mississippi Valley Flood Control Association, Wednesday, March 13, 1940, Washington, D. C., to wit:

It is a pleasure to meet with the association again and I welcome this opportunity to express my appreciation for the support the Mississippi Valley Flood Control Association has given to the Corps of Engineers during my administration. Your association performs two outstanding services to the millions of residents of the Mississippi Valley, first by crystallizing and promulgating public opinion on flood control and navigation improvements, and second by supporting sound policies relative to the accomplishment of those improvements. Although your association and my organization contribute our efforts in different form, we both have the same ultimate goal: That is, to serve our country in the conservation of our water resources, and in preventing loss from the destructive action of those waters. These annual meetings of the association give us the opportunity not only to renew friendships but also to view our progress toward the goal we strive to reach.

In making the statement that conservation is one of our mutual interests and efforts, I use the word "conservation" in a humble spirit. Although it is an excellent word, and thoroughly descriptive, it is not new, nor is the idea it conveys a new one.

In our early history, the natural resources of this great continent seemed limitless, endless. In time, we began to realize that our resources are no exception to the rule that everything is finite—that after using or wasting something, you haven't got it any more. Of course, the smart people found this out first and began to preach it.

Another thing which intelligent people have learned is that nearly everything occurs in cycles. Phenomena of nature repeat themselves; astronomical events recur in accordance with calculable laws; stocks prices rise and fall according to some law (which, by the way, most of us have failed to guess at one time or another), and even words or expressions have a way of being reborn. The word "conservation" is no exception. Within the past several years the people have become conservation-minded again and, holding it as a new cause, are forgetful of the efforts and accomplishments of their fathers and the constant, almost plodding work of those who devote their lives to the cause that conservation may go forward, or at least lose no ground. In 1879, Congress established the Geological Survey, whose pioneers began working on problems of water supply and land use. Shortly after 1900, the Department of Agriculture began conserving forests and making studies to prevent losses in soil by uncontrolled erosion. The Bureau of Reclamation was created 2 years later. Legislation to protect mineral reserves was enacted about the same time. The Federal Water Power Act soon followed. In fact, any conservation of natural resources which is possible today is largely predicated on a long series of practical steps taken by the departments of Government in years past. These departments have improved their methods and extended their services as knowledge and experience have been gained.

The conception of conservation on a national scale was brought to the attention of the public by the Chief Forester, Gifford Pinchot, under President Theodore Roosevelt. The wanton waste of timber in the United States had long been criticized by national leaders. In 1907 the forestry conservationists joined hands with those interested in the use and development of inland waterways and in October of that year the newly appointed Inland Waterways Commission persuaded the President to call a conference of Governors to consider the condition of the natural resources of the United States. This call resulted in a historical meeting in the White House on May 13, 1908. Those attending the conference included the President and Vice President, 7 members of the Cabinet, all Justices of the Supreme Court, the Governors of practically every State and Territory, many Members of Congress, representatives of 68 national societies, and over 50 selected citizens, and members of the Inland Waterways Commission.

Between the first World War and the beginning of the late depression, many laws were enacted that were fundamentally for the use and development of natural resources. Neither the legislation nor the useful work accomplished under such authorities received any wide publicity as conservation. In other words, while beneficial works continued to be constructed for navigation, flood control, irrigation, and reclamation, the spotlight moved from the term.

It is not surprising, therefore, that many believe the movement today to be entirely new. On the contrary, Federal operations toward conservation, though seldom recognized as such, antidate by many years not only the present work but also the early efforts of the National Conservation Commission and the Inland Waterways Commission of 1909.

Early in the 1800's the Federal Government was forced to consider the inland water resources of the United States which provided natural highways for the pioneers that were colonizing the vast territory west of the Appalachian Mountains. For reasons which I am sure you all know, Congress entrusted to the Army engineers the first work of conserving our water resources for navigation. That was more than a century ago. Since that time there has been formed slowly and efficiently, within the precepts of good administration, a combined military-civilian organization composed of experts trained and developed to obtain practical results in flood control, navigation, and allied water-conservation work.

In the meantime, public organizations such as you represent have been formed and have established long records of excellent public service in the interest of conserving water resources. Sometimes this work has been termed simply "waterway improvements," at other times the more specific terms of "flood control" and "navigation" have been used, and at present the broader expression, "conservation of water resources" seems to be popular. Call it what you will, it means the same. The basic idea is to use economically and fruitfully the great blessing nature has given us while at the same time preventing substantial loss during her periods of lavish bestowal.

Let us return now to consideration of the Mississippi Valley, where conservation of water resources has been in progress for three generations or more on the greatest combined flood-control and navigation project in the world. During and between these recurring cycles of the discovery of the term "conservation" this work has proceeded, the principal effects of the return of the spotlight to conservation being an increase in appropriated funds. Millions of acres in that great valley that were naturally subject to frequent overflow have been permanently protected, and other thousands of acres have been given partial protection. At the same time, the main river channel, that was once choked with drift and snags and numerous shoals, has been developed into an adequate year-round navigation channel. Millions of tons of cargo annually pass up and down this most important inland waterway. Thousands of acres of land that, without flood protection, were valued at little or nothing have become premium farm lands, where a bale of cotton per acre is the usual crop. Small trading centers have become neat, prosperous little cities, and the larger communities have each become an important metropolis.

I know that you are interested in the studies now in progress on the lower Mississippi. The report has not yet been completed in the field, and therefore has not been seen by me. All I can give you is that overworked remark of the statesman, "Substantial progress has been made, and all is proceeding at the rate anticipated."

It would be too lengthy at this time for me to detail to you the progress that has been made in each section where construction has been under way during the current fiscal year. High lighting the activities, I can say that considerable revetment—asphalt, willow, concrete, and gravel—has been placed along the river; corrective and maintenance dredging has progressed satisfactorily; and the work of bringing levees to grade and section is still going on. The White River backwater levee is about half finished; the Tyronza River channel improvement was completed 2 months ago; and many features of the Wolf River project at Memphis have been completed. The cold spell delayed work at Wappapello Dam for awhile, but now work is once more in full swing. Final plans and field preparation for Arkabutla Dam construction are approaching completion, and excellent progress has been made on Sardis Dam. In the Atchafalaya Basin work has been pushed vigorously on the Morganza floodway, Wax Lake outlet, Clarenton drainage canal, and the improvement of the Atchafalaya River.

Among the studies in progress is the comprehensive survey for navigation, flood control, and irrigation on the Red, Ouachita, Mermentau, Calcasieu, and Vermilion Rivers and several bayous. The Board of Engineers for Rivers and Harbors expects to receive this report during the current year.

The project as adopted by the acts of 1928, 1936, and 1938 authorizes a total appropriation of $637,000,000. Of this sum, slightly over $390,000,000 has thus far been made available, leaving a balance of $247,000,000 necessary to complete the existing project. For the current year $39,000,000 was made available, as you all know. The appropriation bill recently passed by the House of Representatives contemplates about three-quarters of that sum for the next fiscal year.

Although work is progressing satisfactorily on the existing project in the Mississippi Valley and that project is continually being improved by amendatory legislation, the job there is by no means done. There are still large areas where no protection or only partial protection has been given. As the capacity of the main river channel is increased and flood protection progresses on the tributaries, and as the valley becomes more prosperous, more protection in these areas is practicable and justifiable.

In the matter of flood control and navigation improvements which we here term "conservation of water resources," the ques-

tion of economic justification rightly influences the planning, but it must be remembered that the basis of computing economic justification is by no means static. With each successive improvement for flood protection or for navigable channels, the development and prosperity that follow are certain to justify greater improvements. The reclamation of useless lands, either by withholding excessive waters or by adding needed waters, inevitably leads to higher values as the lands are opened to profitable use. We must bear in mind, however, that progress in protecting these areas, or in conservation, if you prefer the term, will never be accomplished by the relatively simple expedient of adopting or approving projects. A substantial amount of flood protection is in existence in the lower Mississippi Valley but projects in the more removed portion of that basin, which incidentally will contribute to the security in the alluvial valley, are not so well advanced. The same is true elsewhere in the country where Federal flood control is a new operation. Congress has approved comprehensive projects for these basins but has made small authorizations for the initiation of the comprehensive plans. To stop there would be disastrous because comprehensive plans that involve reservoirs are not effective until completed. To spend hundreds of thousands of dollars in one part of a watershed only to have a great flood occur due to heavy prolonged rainfall in another part of the basin where planned protection had not been started because of insufficient funds would indeed be a calamity. The seriousness of curtailing appropriations to the point where orderly progress is no longer possible is therefore only too obvious. I should not like anyone to have the disagreeable task of meeting a flood-harassed populace after that populace had been allowed to believe it was getting flood protection.

During the past year a change in command took place in our forces on the lower Mississippi. As you know, Gen. Harley B. Ferguson, formerly president of the Mississippi River Commission, reached retirement age in August 1939, after a long and distinguished career. The work accomplished during his tenure of office has contributed greatly to the ultimate development of the valley's program, and I am sure that his name will be written in large letters in the history of "old man river."

The new president of the commission, Brig. Gen. Max C. Tyler, comes to you as an outstanding engineer with superior qualifications for the prosecution of the work yet to be done. In assuming his responsibilities, General Tyler has wisely adopted the policy of reviewing thoroughly the present status of the work before making recommendations relative to new undertakings. I am confident you will find his approach to the problem sympathetic with your needs and that the program of development will be prosecuted with broad vision and with an eye constantly on the best interests of the entire valley. I hope you will have the opportunity to know General Tyler as I know him, for, if you do, you will understand why he has my confidence and respect.

I desire to make grateful acknowledgment to the men of your association, as well as to the men of my Department, who have applied the policy of conservation of our natural water resources to the flood-control and navigation work under the jurisdiction of the Department. Conservation is a general social attitude or purpose affecting the operations of nearly every department of Government. It is a common-sense attitude that is indispensable to the best use of what we now have, or, as Theodore Roosevelt once said, "It is the application of common sense to common problems for the common good." So I commend those who have applied common sense to river improvements. They have made it possible for this Nation to take a great step forward and they have helped the public to see that the greatest questions before us are not partisan questions but questions upon which men of all shades of opinion may be united for the common good. The conservation of water resources in the hands of those who have been doing it for years will continue to make an important contribution to the development of the Nation.

Again I thank you for the opportunity of speaking to you, and I sincerely hope you may continue your good work to secure the adoption of worth-while flood-control and navigation improvements and the provision of adequate funds to carry on this useful work.

More About the Census

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. THORKELSON. Mr. Speaker, a rather interesting article has come to my attention. It was written by Mr. Boake Carter in relation to census snooping. I believe this is a subject to which we should give considerable attention, because it is in direct line with investigations that have been conducted by other intelligence departments of the Government. We are getting closer and closer to the dictatorial policing system of Russia and other European countries, and it is time that we call a halt to this Federal effrontery.

If the administration is dominated by a radical element to the point where it is now invading the private sanctum of the home, Congress should take notice and the people should be informed so that they may prepare to defend their rights. No one can deny that the people's rights are gradually leaving them, day by day, by some silly law passed by Congress, or some restriction or unwarrantable enforcement by Federal policing service.

The majority of our people are law-abiding citizens, and for 152 years have been willing to abide by their own laws, and it is not this majority that are the objectors today. It is the minority that objects to conforming to the law that is agreeable to the majority of the American people.

Congress should bear in mind that legislation is costly and destructive to business, because of its restriction and the continual employment of forces to meet the demands of the law.

Today, we have a clear example of it in the House. We have passed legislation that sets up judgeships in various parts of the country, with little or no consideration. I admit it is fine to have more courts or judgeships established, for it does give employment to the attorneys. However, there is another side to be considered in the establishment of a myriad of courts and laws. The judges are all put on a salary of $10,000 to $12,000 a year, and on a pension of $10,000 to $12,000 a year, as long as they live, which is a condition no other Government employee benefits by, today. It is not so funny for the taxpayers, and maybe they will not like all the courts and all the judges, and all the extra legislation—most of it unconstitutional—which has been passed so blindly by Members of Congress. This is a question to which all of us might give serious consideration, because it is not an aid to business. On the contrary, it is a handicap and a burden to business, and in a sense, responsible for the condition in which we find our Nation today.

Now about the census: No one objects to answering questions that have been answered in past census enumerations. But the Federal Government and Congress must bear in mind that we have no right to go into the very private lives of the people and ask, not only silly questions, but questions that can be of no value whatsoever to the Federal Government except to satisfy its curiosity or the curiosity of someone in the Government who is a better internationalist than nationalist.

It is unfortunate that the majority of the people are not sufficiently well acquainted with the power of the Constitution to know that it was drafted by the people to protect themselves against the Government and rotten political machines. It is high time that the Federal Government be informed that it has no greater power than that granted to it by the people, and Congress, in order to be just, and to respect its obligation, should protect these rights of the people which it represents.

I realize, of course, that little can be expected from the Department of Justice and our many courts, particularly those controlled by the minority party, for they, no doubt, are dominated by people higher up.

Be that as it may, when the Government fails to adhere to its obligated duty, it is the constitutional right of the people to protect themselves and their own Government. It is for this reason that I constantly advise the people to whom I speak that their greatest protection may be found in the Constitution itself, and that strict observance of that document will not only protect the States and the State rights, but will also protect the rights of the people. Yes; the rights of the people to be left unmolested and free in their own homes.

The article which I shall quote expresses the sentiment of a good many American people, and I believe it is pertinent at this time for there is no question but that the Federal Government is attempting to exceed its constitutional power, a power that is not granted to Congress or to the Federal Government by the people of the Nation.

I shall now quote an article from the Philadelphia Public Ledger, of Monday, March 11, 1940:

BOAKE CARTER SAYS

WHY THE CENSUS SNOOPING?—LEFTISTS WANT THEIR JOBS—COMES THE REVOLUTION?

WASHINGTON, D. C.—It is a pity that the apologists for the gentlemen who thought up the current list of questions to be asked us by the enumerators from the Census Bureau are not aware of some of the motives or some of the tricks that are obscured from public view at present.

If they were, their apologies for the Census Bureau doubtless would be exchanged for a chorus of horror.

Few citizens hold any objection to answering routine census questions. Heretofore no Federal administration has had aught but a simple, straightforward desire to enumerate the citizens of this Nation, their occupations, their employment status, their marital status, and such reasonable information.

But behind the present crop of questions lies no such simple, straightforward desire.

Instead, the questions have been framed for a specific purpose. The purpose is revolutionary.

First, it may be said on excellent authority that the questions have been devised by the leftist group in the administration. These are the snide young gentlemen—and some older ones, too—who are still bent on (a) keeping their political jobs and (b) actively promoting a social revolution.

The answers they hope to receive should tell them (a) where are the weakest spots in the country—that is the most likely revolutionary material; (b) a minute list of names of citizens best calculated to respond to the inflammation of revolutionary doctrines; (c) a minute list of names of possible reactionaries or conservatives in every city, town, and hamlet; (d) information to substantiate a propaganda barrage to sustain Federal relief and all its machinery to the States; (e) information on which to base a demand for further expansion of the Federal octopus through Federal aid to schools and thus control children from the cradle; (f) information to be used for purely political purposes to sustain the leftists in power; (g) information to smear any character of any citizen, should any citizen at some future time require the "mud" treatment.

It is true that when these questions were framed little thought was given to "Mrs. Snoop" down the street, who may have had herself appointed census enumerator and wouldn't let a little thing like a fine or imprisonment prevent her from peddling gossip she finds out around the neighborhood. No; their plans are deeper than that. They want to use the information to build their idea of a new America.

But what the public does not know—and this is not opinion or viewpoint but actual fact—is that subversive organizations already have had their own agents sworn in as census enumerators. The agents, or "enumerators," have gathered information required of them in specified sections, then resigned as Government employees. The facts they have gathered have been turned in, not only to the Government but also to their real employers, the subversive groups for whom they have been acting.

There is documentary evidence to this effect in the hands of several Senators. They haven't said much about it yet, simply because they believe in the old adage about giving a man enough rope and he'll finally hang himself. By permitting these subversive agents, disguised as Government enumerators, to extend themselves, it is hoped enough shocking information about their activities will be gathered to blow clear out of the water the little coterie of New Deal radicals running the census questionnaire.

One of the strange things about the rapidly mounting public temper against the impertinency of some of the questions asked is the psychology involved.

Had these quiries been put forward by any administration which had indicated by its conduct that it believed in the principle of morality in government, the popular indignation probably would be much less violent.

But that it is the administration of Franklin D. Roosevelt, replete with its staggering army of "snoops and peeps," its philosophy of materialism and its chicanery and double-dealing, which seeks to pry into the most intimate matters of every citizen's private life, is the factor which has created most of the public nausea.

It is not a comforting thought to consider that such intimate information as: How many times has a citizen been married; how much did he make; from what sources and how? are to be details to be pawed and leered over by the Cohens and the Corcorans of the administration.

One of the glib assumptions of the New Deal "snoop" directors is that it is the Federal Government's duty to "even up the disparities of opportunity" that exist for the average American in "rural Arkansas and metropolitan New York," and to that end the census is being taken. That is the same sort of argument Hitler made when seeking to lure the German people to his support. To assume that a government of mere men can "even up disparities of opportunity" is to presuppose that God made a gross mistake in endowing more capabilities in one man than in another. For Government to attempt such a fantastic performance would require complete dictatorship to insure any measure of success.

And that is precisely what the New Deal leftists desire. The questionnaire of the census is aimed mainly to collect information which may be used by the leftist in furtherance of their own ends—one of which is to destroy a free and individualistic America.

Rabbi Goldstein, in the New York Herald Tribune, Sunday, March 10, 1940, is not in favor of protecting the people's rights. He believes that his democracy should have full sway in the United States. I now quote him:

"Individualism is a valuable trait in a democracy," Rabbi Goldstein said, "but there is no sense in making a fetish of it. Common sense should dictate that the purpose of a Government census is to gather information which is intended to convey a collective picture of American life and which may serve as a basis for study of and provision for public needs.

"One of the standing problems of democracy is how to effect a successful balance between individualism and social cooperation. Let us not become so obstreperous in our individualism as to impede the social processes which are calculated to serve the interests of public welfare."

Rabbi Goldstein deplores the fact that objections are made to the questions of the census taker. He says:

Individualism is a valuable trait in a democracy, but there is no sense in making a fetish of it.

The American people are not making a fetish of their rights, but they are trying to protect their rights from minority usurpation. The worthy Rabbi should know that this Government is not a democracy, although he may wish to make it so. The United States is still a republic, as long as Congress reigns supreme and retains two major powers—to appropriate money and to impeach all officials who do not adhere to the fundamental principles of this Government. As long as the people support Congress and the principles set forth in the Constitution of the United States, they will have nothing to fear, if they send men to Congress who honor their obligated duty.

The word "democracy" should not be used because there is considerable difference between a democratic republic and a democracy. The Democrats, as I know them, believe in the fundamental principles of this Government, but those who so glibly shout "democracy" and expound other radical philosophies are not democratic but are Communists instead.

The Development of Our Rivers and Harbors

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS OF MAJ. GEN. JULIAN L. SCHLEY, CHIEF OF ENGINEERS, BEFORE THE THIRTY-FIFTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Maj. Gen. Julian L. Schley, Chief of Engineers, before the Thirty-fifth Annual Convention of the National Rivers and Harbors Congress, Thursday, March 14, 1940, Washington, D. C., to wit:

Mr. President, ladies and gentlemen, I am always honored by having the opportunity to address this convention. This is the third year I have appeared before you as Chief of Engineers, but the pleasure increases with each occurrence since I feel that I am among old friends whose interests coincide with those of the Department I represent. I certainly am not placed in the position of trying to convince you of the worthiness of our mutual interests for I believe this group has all the answers along that line. In previous years, I recounted in some detail the status at that time of river and harbor and flood-control projects. I am now assuming that each of you is conversant with the progress on these developments and, as you have convinced me thoroughly that you are experts on those projects close to your hearts, I am going to discuss briefly instead some of the broader aspects of river and harbor development.

It has occurred to me that it is an appropriate time for us to get away from the trees in order that we may view the forest. We know, but I believe we frequently forget, that the improvements in which we are interested are not an end in themselves, but only a means to an end. There is a definite objective in this work, yet I am at times surprised how little known the objective is. A few weeks ago, when a popular pictorial magazine carried an illustrated article on

the intracoastal waterway which recounted the pleasure trip of a small boat from New York to Florida, it came to my attention that a rather well-informed individual expressed surprise over the fact that this improvement was an accomplished fact and at the same time raised the question why the Government was justified in expending funds to make such a journey possible. Manifestly he lost sight of the fact that a continuous inland route of some 1,500 miles had been provided for commercial purposes and not for recreation alone, and he did not know that nearly 1,000,000 tons of cargo valued at $45,000,000 moved last year on merely the section of that waterway from Norfolk, Va., to Beaufort Inlet, N. C., and he also missed the point that such Federal expenditures were based on paying him dividends whether or not he took a yachting trip.

Correspondence coming into my office shows that many do not understand the difference between authorizations of projects and appropriations for their construction. Only a few weeks ago, one of the leading newspapers of the country carried a signed news story about a $407,000,000 river and harbor bill being before the Senate Committee on Appropriations. With the widespread misinformation and superficial knowledge which I am convinced is possessed by a large percentage of our people, it is no wonder that the general public has received or made erroneous conclusions as to the worthiness of projects, how they are selected, what the objective of river and harbor improvement is, and what influence these improvements have on our national economy.

Before going into the reasons for present river and harbor improvement, let us look at the situation that led the makers of the Constitution to include in that document authority to the Federal Government for such improvement.

The colonial development of the United States began where natural waterways afforded access to the interior, and for many years the sea afforded the best and often the only means of communication between widely scattered colonies. With the establishment of national independence, the more far-sighted founders of the Republic realized that free use and national control of our navigable waterways were of paramount importance to a lasting union. Restrictive State and local regulations over the use of waterways during the days of the loose confederation hampered trade between other States and caused ill feeling not conducive to union. Yet certain States drew into natural groupings based on compacts for the use of their common waterways.

It was to be expected, therefore, that the power to regulate commerce "among the several States" would be included in the basic law for union. For a time thereafter improvements were made by the States concerned with the consent of Congress. These improvements were mainly of harbors and river mouths and were largely local in character.

With the increasing movement of settlers into the trans-Allegheny region, the question arose of holding these people to the Union. Kinship and ties of culture held them to the tidewater States, but trade routes led down the Mississippi to Spanish territory or through the Great Lakes to British domain. This consideration exerted considerable influence in winning over the conservative groups, who believed that Federal authority was limited to marking obstructions to navigation, to the more liberal view that it was within the province of Congress to remove the obstructions, and that just as the Federal Government could participate in building an interstate highway so also could it participate in the improvement of an interstate waterway.

Through the years the people were concerned with their own local problems, their own urgent local needs, until it became the custom to view navigation improvements in a selfish light. Even though a broader vision was the fortunate possession of some, the country had to develop further before a national viewpoint with respect to water transportation could manifest itself. Such a viewpoint has, of course, been the foundation of the great work the National Rivers and Harbors Congress has accomplished. I am happy to say that the Corps of Engineers, in its many years of study and work, has never lost sight of the ultimate objective of creating a national water transportation system and, through the wisdom of Congress and your public support, we can view today that system—not complete, of course, but at least it is out of the nebulous stage. It would be a great step forward if the public could be made aware of the accomplishments and their value as you and I know them.

A moment ago I raised the question of the objective of waterway improvements and their influence on national economy. Why have water transportation, anyway? It is slow; it is not adapted to high-class commodity movements; it is subject to interruption from ice, fog, and flood; and waterways touch directly only limited areas.

There is only one reason for its existence. It meets public demands which other methods of transportation do not meet. It has the outstanding advantage of low cost of operation and extreme flexibility of carrier schedule to meet the needs of its users. The objective of waterway improvement is to facilitate the use of this low-cost transportation and thus reduce production costs. Lower production costs in the competitive markets of our economic system mean lower consumer costs and a consequent increased consumer market.

Water carriers do not possess and do not require exclusive right-of-way in order to function. If it develops that there exists an excess of transportation service on one waterway, some of the equipment may be shifted to another water route since no operator has exclusive rights in the use of a harbor or navigable river. The obvious result is that equipment can be employed in a flexible manner and it need not stand idle if it can find business at places other than on its usually traveled route. The basic consideration in the low cost of barge service is the fact that all the people own the channels through which it operates and the benefits of this low cost are shared by everybody. If some goods were sold under a monopoly, the low cost of transportation would possibly not enter into price and the price would be determined by what the traffic could bear. However, so long as there is competition both among carriers and producers, there can be no permanent pocketing of transportation saving, and price must be based on cost or the product will not be sold.

A water transportation system to give this benefit must be integrated and interconnected. The casual reader of any one river and harbor bill could well be led to believe otherwise for it is seldom that an entire project is adopted at one time. Back in 1909 the Congress called for a survey of a continuous waterway, inland where practicable, from Boston to the Rio Grande. Four years later the completed report, in five volumes, presented a sound engineering study and economic analysis of the proposal. The report recommended construction at that time only of the Chesapeake and Delaware Canal and the Norfolk to Beaufort section on the Atlantic Coast. The general engineering plan was complete, but economic studies indicated that the entire project should not be constructed. However, the economic situation changes from year to year and it has thus far been found justifiable to build most of that waterway. Construction of the Norfolk, Va., to Beaufort Inlet, N. C., section was authorized in 1912; construction of other sections was authorized in 1917, 1919, 1925, 1927, 1930, 1935, and 1937. My recommendation that the New Jersey Inland Waterway section be adopted as a Federal project is now before Congress and study of the proposed New York Bay-Delaware River section is still underway. One unfamiliar with the basic report and the entire plan would fail to get the proper picture of why an apparently isolated reach of waterway was adopted in any one of those eight bills.

The same situation holds true on other waterways, both rivers and harbors. Nearly any waterway construction is possible from an engineering standpoint if sufficient funds are available. But the larger problem is to ascertain its economic worth. Since establishment of the Board of Engineers for Rivers and Harbors, 38 years ago, that body has acted on 4,400 investigations and has reported adversely on approximately 60 percent of them. These rejections have been based primarily on the fact that the projects were not economically justified at the time of the reports.

The basic reasoning behind these recommendations is that the waterways shall return to the people of the Nation in cash savings due to cheap water movement of freight an amount sufficient to pay reasonable interest on the first cost, to pay all maintenance and operating charges, and to yield an additional sum or "dividend" on the investment. The requirement that a project shall result in a net economic benefit to the public is a guiding principle controlling our recommendations to Congress.

Computation of the probable commerce over any waterway is based on a limited type of commodity movements. I mentioned that water transportation is not adapted to high-class commodities. The major part of barge commerce consists of bulky, nonperishable, basic materials such as ore, petroleum, coal, pulpwood, logs, grain, stone, sand, gravel, sulphur, and crude chemicals. These commodities are essential to industry, but, since they are of such relatively low value or so generally available, they must move at low cost if they are to move at all. Some sources of these materials are not developed because it is too costly to move them to market. The only transportation sufficiently low in cost to move many items of this nature is water transportation. Now, however, we frequently find that when a waterway is developed the anticipated commerce does not move over it because rates on other means of transportation are lowered in order to hold, even though it be at a loss, the traffic which naturally would seek the cheaper route. It is true that the shipper obtains the benefit on these savings, but other shippers must take a corresponding loss because the competing carriers must try to make up their loss either by raising rates on cargo not suited to water movement or by raising rates on other routes. The net result is to deprive the people of some of the benefits of their investment in the waterway.

Today we have a system of about 30,000 miles of waterway which have been improved in varying degrees during the past century. However, a large share of the waterway money, technical skill, and effort and care of my Department is expended on some 50 principal improvements totaling about 7,000 miles of high-grade, modern standard channels varying from 8 to 14 feet deep, which handle almost all the inland water-borne commerce of the country. In addition, there are some 500 harbor projects on which Federal improvements have been made. The bulk of the commerce is received at 20 of these where the annual traffic exceeds 10,000,000 tons each.

The unity of this system becomes more apparent as the major links approach completion. The Great Lakes system has been well established for some time and is fairly well known. However, somewhat less familiar to the general public are the Mississippi-Ohio-Missouri River system, the Atlantic and Gulf Intracoastal Waterways, and the Pacific Coast Waterways. The last named consists primarily of three separate systems—those of the Los Angeles area, the Sacramento-San Joaquin System, and the Columbia River System.

While we have developed certain of our waterways to a high degree of efficiency, we have not as yet taken full advantage of our favorable topography as have most of the older nations. It is true that civilization has existed in them for a greater length of time; density of

population and necessity for free movement of low-grade commodities require them to make a fuller development of natural and artificial waterways. Frequently today news dispatches indicate the extensive and indispensable use of waterways by the warring nations. As yet we in this great country have not been forced to adopt the most practical and economical way of doing things but, if we want to continue our national prosperity, we will soon have to follow that course.

The past two decades have shown great advance in carriers in this country; new markets have opened and new sources have been developed. None of us can tell what the next few decades will bring, particularly what new resources will be within economic reach of the manufacturer and his market. Suffice it to say that as yet we have not taken full advantage of our potential low cost transportation units. And that is because our economy has not yet demanded it.

All in all, we are striving for a goal—the development of the Nation for the greatest advantage to all. We have local, regional, and national aspects and viewpoints. Those of us working for some mere parochial development must not be discouraged because they are in advance of the balanced national need. Looking back over history, we can see that some of our early leaders advocated waterway projects which were not of national necessity until years after their departure from the scene. Their ideas had merit, but it is most desirable to continue on a businesslike basis. An unbiased organization with a national viewpoint, such as the body I am proud to represent, is necessary to weigh, study, and eventually develop those projects essential to our well-being, and to recommend to Congress that those not yet essential be held in abeyance.

The position of my Department is that of a consulting engineer. The people of the country are the owners—the stockholders in the organization—and the Congress the board of directors. A sound, businesslike development requires not only an engineering and economic study of projects but also a rate of prosecution and construction suited to the national needs and the national policies. We can proceed at whatever pace is set, but, of course, a steady pace is most economical. My agency is an executive agency. We are not a policy-making body nor an educational body. We have never gone before the public for obvious reasons. Our job is to advise Congress, as your board of directors, when they call for advice and carry our economically and expeditiously their decisions.

But there is a need for education. The taxpayer should be informed where his money is going in waterway improvement, why it is going there, what the objective is, and where he benefits. He should know that the work is being developed with a long-range view; that waterways are being built with no objective in mind except future prosperity and security. The job of education, as I see it, rests with you who are informed and interested in the work; ours is the job of consultants and builders; and with the people and the Congress lies the responsibility of determination of policy as to nature, extent, and rate of development.

The record of my organization for more than a century and a third stands to show that we will carry forward our part, and I am anticipating your continued support in that effort.

Wheat Income Certificate Bill, H. R. 8838

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. BURDICK. Mr. Speaker, H. R. 8838 is introduced as an amendment to the Agricultural Adjustment Act of 1938.

This bill proposes to give the wheat farmer a decent wage income for his labor in producing wheat. There is no attempt to fix an arbitrary price and no demands are made upon the Treasury of the United States. The gist of the whole bill is to give the farmer a price for his wheat that shall represent a parity income based upon parity price or cost of production, whichever is the higher.

The principal part of the machinery to carry out the purposes of the amendment is already set up under the act of 1938. There is created under this bill an advisory committee consisting of three representative wheat farmers, one consumer, and one representative of the Federal Government. This committee shall meet prior to May 15 of each year, and, using all of the available statistics, they shall determine the probable average level of average wheat prices to be paid to farmers for the ensuing market year. They shall then compute the difference between the prospective average farm price and the parity price, or the cost of production price—as figured by the Bureau of Agricultural Economics—whichever may be higher, and shall recommend to the Secretary of Agriculture that this be declared to be the value of the wheat income certificates for the ensuing year. The Secretary of Agriculture may review the findings of this committee, but he must use the same available statistics used by the committee. After such review the Secretary shall declare the value of wheat-income certificates to be the difference between the estimated average farm price and the parity price or cost of production price, whichever may be higher. The Secretary of Agriculture shall cause to be printed each year wheat-income certificates in an amount equal to the annual domestic consumption of wheat for human food, plus a normal year's exports. These certificates are required to be purchased from the Secretary of Agriculture by the processor for all wheat processed by him in a ratio of 1⅕ certificates for each bushel of wheat processed. The funds so acquired by the Secretary are paid to wheat farmers immediately upon proof of compliance with their allotment agreement.

The receipt by the farmer of this money, together with the market price, will increase his wheat income to parity or cost of production, whichever is the higher. It will also relieve Congress of its obligation to appropriate from the Federal Treasury hundreds of millions annually for parity payments. At this point, it may be asked by many why the processor is required to purchase more than one certificate to each actual bushel processed. The reason is this: The processor normally would not purchase more than 500,000,000 bushels of wheat or the normal consumptive quota, but the farmer alone should not be required to finance the foreign-trade policy of the United States. Therefore, he is entitled to certificates covering both the domestic consumptive portion and the export portion of 100,000,000 bushels; therefore, the processor is required to buy enough certificates to protect the farmer on both the consumptive and the export portions, and since 100,000,000 bushels is one-fifth of 500,000,000 bushels, it necessarily follows mathematically that the certificates purchased by the processor must be six-fifths of the wheat which he actually processes. The processor must file a monthly report of all wheat processed and with it he must file income certificates, previously purchased, in the ratio mentioned above.

In order to more clearly show just how this bill will operate, let us set down some fundamental data on wheat.

Fact 1. Over a period of 20 years, the average acreage of wheat is 68,000,000 acres. Each wheat farmer will be allotted his historic share of this total national average acreage.

Fact 2. The average production in bushels over the same period of time is 790,000,000 bushels.

Fact 3. The average domestic consumption of wheat for human food during the same period is 500,000,000 bushels.

Fact 4. The seed requirements—average—for the same period amount to 75,000,000 bushels.

Fact 5. The average feed consumption is 75,000,000 bushels.

Fact 6. Roughly speaking, the United States has attempted to maintain, and has approximately maintained, its historic share of world wheat exports, about 20 percent. The entire world export market is now approximately 550,000,000 bushels. Hence, 20 percent of that would equal approximately 100,000,000 bushels. We have maintaned that quota of export quite consistently for a long period of years.

Fact 7. We can conclude from the preceding fact 6 that we shall most likely export during the next crop year 100,000,000 bushels.

Fact 8. Let us now add up and see where our average annual wheat crop goes:

Consumed in the United States	bushels	500,000,000
Used for seed	do	75,000,000
Used for feed	do	75,000,000
Exported	do	100,000,000
Total	do	750,000,000
Average annual production	do	790,000,000
Therefore, the surplus is	do	40,000,000

Under the terms of this bill, the farmer collects nothing on the seed item, nothing on the feed item, and nothing on the surplus item; but he does receive parity income on the domestic consumption item of 500,000,000 bushels and on the average annual export amount of 100,000,000 bushels. The

reason why we add this 100,000,000 bushels is that our economy is based on that amount of exports and since it is, there is no logical reason why the farmers should supply this item at a loss. Six hundred million bushels is the amount, therefore, on the average, that the farmer is secured against in this bill, or about 75 percent of his average annual production.

There are many things which may or may not be done under these amendments, which should be fully understood. I shall take them up in order:

First. If the farmer has not exceeded his acreage allotment, and as soon as that fact is ascertained, he will be certified for immediate payment of his certificate allotment.

Second. Should the farmer have a bumper crop and raise more than he anticipated, he, nevertheless, does not draw any benefits in excess of his certificate allotment. The overrun he may store up, to be used the following year should crop failure cut his anticipated production, or he may sell it for what he can get.

Third. There is no limit in this bill to the number of acres a farmer may sow to wheat. If his allotment is 100 acres and he sows 200 acres, he still shares in the benefits of 100 acres if he bins, or stores, half of his crop and keeps it off the market. He can use that the next year in case a shortage of crop makes it necessary. But with this distinction, as compared to a farmer who does not exceed his acreage allotment, the one who sows more, does not participate in the benefits of the certificates until the end of the crop year, nor in the soil-conservation payments, while the farmer who stuck to his allotted acreage can draw his benefits immediately and as soon as it is ascertained that he has complied. This farmer also receives soil-conservation payments.

Fourth. To make funds immediately available in the hands of the Secretary of Agriculture with which to pay the farmers the value of their certificates, the Reconstruction Finance Corporation is authorized to loan enough money to the Department of Agriculture to provide this fund to take care of current demands. The Reconstruction Finance Corporation is later reimbursed from the receipts of wheat-certificate sales.

Fifth. Whether there is a crop or not, the farmer who has complied with his allotment agreements gets in cash the value of his certificates, and in this the bill provides income insurance.

Sixth. Under the terms of this act, in all probability, there will be a constant supply of wheat in the possession of farmers and in that the program of an ever-normal granary is maintained.

Some of the results which may be expected from this act are:

First. Automatic income insurance.

Second. An ever-normal granary.

Third. No demands on the Treasury of the United States.

Fourth. The restoration of normal buying power to United States wheat farmers. The use of this buying power will create business in manufacturing, and both business and labor will directly receive the benefits of this new power.

Fifth. The scourge of farm foreclosure will be stayed, at least in part, as wheat farmers will be enabled to begin the liquidation of their indebtedness.

Sixth. The early removal of wheat farmers from relief rolls and grants.

Seventh. It will stop the march of the farm population to towns, villages, and cities, where they augment the number of day laborers, thus directly affecting labor and unemployment.

Eighth. It will eliminate the artificial price system which results from wholesale gambling in farm products. No gambling could possibly be engaged in in respect to wheat, except upon the 40,000,000 bushels constituting the surplus, or about 5 percent of the total which is today open 100 percent to gambling. And this gambling could still be limited by the fact that the Federal Surplus Commodities Corporation and other Government agencies would absorb in relief programs the most of this 40,000,000 bushels.

Ninth. This act need not raise the price of wheat to the consumers, at least not out of proportion to the benefits of new jobs that will be open to labor and business as soon as the farmers' buying power is restored; and again the price of bread is not determined by the price of wheat. Wheat, as cost, is an insignificant part of the many, many elements of cost found in the production of a loaf of bread.

The expected operation of this act should probably be illustrated: We will suppose that the parity price is $1.15 per bushel and the cost of production, figured on an average, is $1.05 per bushel. In that event this act starts out with the parity price as a basis. Now, suppose the average market price of wheat is estimated to be only 70 cents per bushel; then, in that event, a certificate allotment must make up the difference, or 45 cents per bushel. If the farmer has kept his contract or agreement, he not only receives the 70 cents at the elevator but draws 45 cents on his certificates just as soon as the Secretary of Agriculture has determined that he has complied. This makes it possible for the farmer to be paid this 45 cents per bushel on his certificate allotment long before he makes a sale at the elevator; in fact, he may draw this 45 cents before his wheat is grown, and he may draw it whether any wheat is grown.

The advisory committee and the Secretary of Agriculture cannot tell exactly what the market price will be throughout the ensuing year. Therefore the bill provides that compensatory adjustments must be made each succeeding year by the committee and the Secretary.

They come to this conclusion: The farmer's acreage allotment is 100 acres; his average yield is 1,200 bushels. The farmer is entitled to parity or cost on 75 percent of this 1,200 bushels, or on 900 bushels. His certificate allotment is then fixed at 900 bushels. They will also determine, as nearly as they can from all indications appearing, that the price, when the crop comes in, will range along about 70 cents per bushel. They have before them the tables showing that the parity price is higher than the cost-of-production tables; hence, their price basis is $1.15 per bushel. The Secretary of Agriculture, therefore, is required to proclaim the value of certificates at the difference between 70 cents and $1.15, or 45 cents per bushel. The farmer's certificate allotment is 900 bushels times 45 cents or $405. He receives a check from the Secretary of Agriculture for this amount just as quickly as his compliance with the program can be ascertained. If, as the matter works out, the farmer is paid too little or too much, that situation is adjusted in the next crop year.

In drafting this bill a great deal of thought has been given to ways and means for offering some protection to the operators of family-sized farms who must compete with large commercial operators and great corporation farms. One of the most serious problems which confronts democracy in the United States is the rapid increase in farm tenancy and the consolidation of the holdings of large multiple landowners into corporation farms. In an effort to reverse this trend toward loss of ownership by dirt farmers, this bill provides that percentage reductions shall be made in the value of wheat certificates in accordance with the following scale:

Percentage reduction of such portion of the allotment which is included within the following intervals	
10,000 to 12,000 bushels	10
12,000 to 14,000 bushels	20
14,000 to 16,000 bushels	30
16,000 to 18,000 bushels	40
All over 18,000 bushels	50

The income certificate provides the most perfect flexible tariff for the preservation of the domestic market to our United States wheat farmers that has as yet been devised.

I want to point out that under this bill we do get the Government out of business. Obviously, the higher the loan price on the basic commodities, the more likely it is that the Government will be found holding accumulated surpluses with the incident expenses of warehousing, interest, and so forth. Additionally, the Government could not be expected to maintain at high administrative costs the character of

personnel to liquidate and sell annually accumulated surplus stocks of wheat, corn, cotton, and so forth.

Under the wheat income certificate bill, which I have introduced, the cash market for the product both at the interior and primary markets is left fluid. These cash markets are left free, so that they may deal with the commodities on a basis of supply and demand for the particular qualities of the wheat or the cotton. In wheat, it is a common thing to find a difference of 30 cents a bushel on the same date. This 30-cent spread represents the difference between the poorest quality and grade of wheat as compared to the highest quality and grade of wheat. That is one of the most cogent reasons why the regular cash market price plus the income certificate is a more desirable method for creating the total necessary price than by the use of straight price fixing under Government fiat.

The income certificate, if you want to call it a tax, is not a general sales tax. It is not a manufacturer's tax. It is not a regressive tax. If we must call it a tax, let us now establish new terminology and call it a deficiency tax, employed, asserted, and enforced under the power of the Federal Government to equalize the difference between an unbearably low cash price and the parity price or the cost-of-production price or the fair-exchange price. It thus is a definite plan which assures parity price or cost-of-production price, whichever is higher.

This income certificate price will always be negligible in the cost of the bread or the flour purchased by the consumer. The leading representatives of the millers have already testified before Congress that if the farmer gave his wheat away, it would be difficult to reflect such a saving to the consumer in the cost of a loaf of bread at the retail store.

I shall exert every possible effort to secure enactment of this bill into law during this session of Congress. When we enacted the 1938 Farm Act, farmers had every reason to expect their purchasing power to be restored, based on the parity period 1909–13. This has been only partially accomplished. That we may keep faith with the wheat farmers, I solicit your consideration and support of H. R. 8838.

The Look Ahead In Flood Control

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS BY HON. WILL M. WHITTINGTON, OF MISSISSIPPI, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on this day, Thursday, March 14, 1940, at the Thirty-fifth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., to wit:

Rivers play an important part in the development of the country and should be improved for the general welfare.

Flood control was adopted as a national policy less than 4 years ago. Progress has been made since the last annual meeting of the Rivers and Harbors Congress. The objective during the current year was to secure adequate appropriations for works already authorized rather than passage of a bill for additional authorizations.

APPROPRIATIONS

It is a source of satisfaction for me to be able to report that during the current fiscal year Congress has made the largest annual appropriation for flood control both for the Mississippi and the National Flood Control Acts ever made. Cooperation and organization by the advocates of flood control resulted in securing a material increase in appropriations over and above the recommendations of the Director of the Budget.

CONSTRUCTION

Additional protective works have been constructed in New England, in New York, in the upper and lower Ohio River Basins, along the upper Mississippi River, in the Missouri River Basin, along the White River, in the Arkansas River Basin, along the Red River, in the St. Francis Basin, along the Yazo River Basin, and along the lower Mississippi River. Progress has been made in the Los Angeles area in California, in the Willamette River Basin, and along the Spokane River and its tributaries in the Northwest.

FLOOD CONTROL ACT OF 1939

While the advocates of flood control did not insist upon the passage of a flood-control bill during the year 1939, inasmuch as no appropriations had been made under the Flood Control Act of 1938, nevertheless the feeling is becoming general that there should be annual authorizations for flood-control projects to protect the lives and property of the people of the United States, and to provide for the orderly development of national flood control. It was believed, however, that the emergency during 1939 was not such as to require an authorization bill. While there were destructive floods in the early spring of 1939, there were no major floods in the United States.

Again, there were many areas in the United States where the flood-control problem is serious. Reports had not been submitted in these areas. They are entitled to consideration. The Committee on Flood Control in the House of Representatives during the last Congress did report, and the Congress passed, an authorization bill for preliminary examinations and surveys. This bill also adopted certain clarifying amendments to the Flood Control Acts of 1936 and 1938 that will be beneficial in the prosecution of flood-control works.

REORGANIZATION

During the debates on reorganization of the executive departments of the Government in both the Senate and the House, it was repeatedly stated that flood-control work and river and harbor work should and would continue to be the function of the Chief of Engineers and that under the Reorganization Act the President was without authority to transfer such works from the War Department or from the Corps of Engineers. I speak substantially the united sentiment of the Congress of the United States when I say that no transfer of flood-control and river and harbor work from the War Department or from the supervision of the Chief of Engineers will be tolerated or approved by the Congress of the United States. I assert that any such transfer would be breaking faith with the expressed mandate of the Congress, which excepted both the Corps of Engineers and their functions from the provisions of the Reorganization Act.

While a few additional flood-control projects were authorized in the Flood Control Act of 1939, the act contributes to the declaration of the sentiment of Congress that there shall be no reorganization with respect to flood-control and river and harbor works and makes emphatic the congressional intent that flood-control works and river and harbor works shall be the function and remain under the supervision of the Corps of Engineers of the United States Army. The following provision in section 6 of the Flood Control Act of August 11, 1939, is significant:

"That the surveys authorized to be performed under the direction of the Secretary of War, as well as all duties performed by the Chief of Engineers under the direction of the Secretary of War, shall be functions of the Engineer Corps, United States Army, and its head, to be administered under the direction of the Secretary of War and the supervision of the Chief of Engineers, except as otherwise specifically provided by Congress."

The Flood Control Act of 1939, therefore, while it approved but a few additional projects, did clarify existing law with respect to previously adopted projects, and did contribute materially to the clarification of the limitation of the reorganization powers of the President of the United States.

FEDERAL POWER COMMISSION

The act of 1938 not only provided for pen stocks and reservoirs, as did the act of 1936, but it went a step further. The Federal Power Commission represents the Federal Government in its power policies. The Commission will have an opportunity to examine all dam and reservoir sites. Substantially all of the reservoir sites authorized are primarily flood-control reservoirs. The act provides that the reservoirs are to be selected by the Chief of Engineers. The Federal Power Commission, as well as the Chief of Engineers, approves the installation of pen stocks.

There is, and should be, no conflict between the Federal Power Commission and the Chief of Engineers. Inasmuch as the Chief of Engineers plans the projects he should have a voice as to the construction and as well as the installation of pen stocks.

There should be no apprehension with respect to the Federal Government engaging in power development as a result of the 100-percent cost of dams and reservoirs because no power can be developed until Congress passes additional legislation. There is no provision in any of the flood-control acts that provides for superseding any existing State law with respect to the utilization and appropriation of waters, or for the present development of power.

FOUR FLOOD CONTROL ACTS

Floods are not new or different. They have occurred in all ages and in all countries. Annual provision should be made for surveys. All of the streams in the United States should be examined. The reports should be available to local as well as to national agencies.

Congress has passed four successive Flood Control Acts in the past 4 successive years; and while only two of them were general, the other two were progressive and constructive. The Nation is flood-control conscious. There was substantially no opposition to any of the flood-control bills in the Congress. The President of the

United States signed the four bills. More progress has been made during the administration of Franklin D. Roosevelt in flood control than during all of the preceding administrations in the United States.

OMNIBUS TRANSPORTATION BILL

Rivers and harbors are improved to provide for water transportation. Heretofore the Maritime Commission has been vested with supervision over coastal carriers, but there has been no governmental supervision over inland-waterway carriers. The omnibus transportation bill passed by both the Senate and the House in 1939 is now in conference, and this bill provides for supervision over inland-waterway carriers by the Interstate Commerce Commission.

The bill passed the Senate and a substitute was adopted by the House. It has been generally understood that the final bill will be written in conference. The advocates of river and harbor improvements and those who maintain that the citizens of the Republic are entitled to the inherent advantages of all forms of transportation should be on guard. Waterways as well as railways are entitled to fair treatment in the transportation bill.

We have undertaken to solve the problem of railway transportation by regulation, but regulation alone will not promote the progress of the railways. Increasing rates and discriminatory rates will not solve the problem. More regulation will not remove the difficulties. The real purpose of the omnibus transportation bill is to kill the waterways and thus eliminate competition to the railways. I voted to recommit the bill because I did not think it was necessary to kill the waterways in order to cure the railways.

While it was declared to be the policy to preserve the inherent advantages of every kind of transportation, friends of water transportation were not satisfied with the mere declaration of policy. We were unable to defeat the bill, but we were able to secure certain clarifying amendments. An amendment was adopted in the House declaring that the act should be administered and enforced with the view to executing the declaration of policy. The so-called Miller amendment had been adopted in the Senate. It was left out of the House bill. This amendment was intended to preserve the inherent advantages of water transportation. The Wadsworth amendment, substantially the same as the Miller amendment, was adopted by the House. An amendment was adopted to provide for the elimination of rate differentials. As reported to the House, the investigations of rate differentials were to cover manufactured products. The House adopted an amendment to provide that the investigations should cover not only manufactured products but raw materials and agricultural commodities as well.

Water carriers and their supporters must continue to keep in touch with the transportation bill now in conference between the Senate and the House. It is essential that the bill drafted in conference be carefully studied and that the water carriers be safeguarded in every way possible. Ample time should be given for both the study and consideration of the conference report.

The rivers and ports of the country are the property of the people of the United States. They should be preserved and kept free and open to all of the people. There is no occasion for their regulation. Whatever may be said of the competition among railways, whatever may be said of corruption in railway construction and in railway financing, there has been no evidence of any destructive competition among water carriers on the inland waterways. There is, therefore, no necessity for regulation. We have undertaken to solve too many problems by regulation. Such regulation should not be adopted unless imperative.

In the great interior plains and valleys of the United States the inland waterways are our last line of defense in the contest for reasonable and cheap transportation. If the water carriers are regulated, it means that the rates will be increased and that water traffic will largely disappear. The advocates of the control of inland and coastal waterways may well remember that "the voice is Jacob's voice, but the hands are the hands of Esau."

OBJECTIVE IN 1940

A flood-control act is the objective for 1940 just as increased appropriations was the objective in 1939. The House Committee on Flood Control announced that such a bill would be introduced and reported during the 1940 session. Reports have been submitted by the Chief of Engineers that will enable additional authorizations covering all of the great drainage basins of the United States. Authorizations are not self-executing. It is for the Senators and Representatives to see that appropriations are made to provide for the construction of projects already authorized. It is for the advocates of flood control to see that all projects are sound and that projects for areas in distress be adopted so that flood control may be provided for all parts of our country.

NEED FOR ADDITIONAL AUTHORIZATIONS

Flood damages largely exceed the costs of protection. Works should be prosecuted at a reasonable rate in order to prevent damages. The acts of 1936, 1937, 1938, and 1939 authorized a total of $693,000,000 for flood control throughout the United States, exclusive of the lower Mississippi River. Including appropriations as passed by the House for the fiscal year 1941, $322,000,000 will have been appropriated for flood control. This leaves a backlog of approximately $371,000,000. There are some three or four hundred flood-control projects in the country that need funds. The present "backlog," as it has been properly termed, is insufficient to provide for the needed projects.

Comprehensive plans for large river basins have been approved, and additional authorizations for the execution of the approved plans must be made so that the plans can be prosecuted with reasonable dispatch. They can be executed more economically if authorizations are sufficient to permit more progress than can be made under present authorizations.

Many important projects cannot be constructed without additional authorizations. In many instances flood-control projects must be constructed consecutively. One portion cannot be constructed until another portion has been finished. Sufficient authorizations are necessary before the first step can be taken.

Reservoirs require long periods to be completed. Authorizations should be made in advance. Benefits do not accrue until the reservoirs are completed. It has taken 6 years to build the Fort Peck Reservoir.

Dams for electric power are growing faster than the program for the generation of power. Authorizations of reservoirs for multiple purposes are in order.

Devastating floods may jeopardize national defense by halting industrial production, but shutting down power plants, by crippling railroads, by destroying highways, and by breaking communications. Additional authorizations both for national defense and the general welfare should be made. A flood-control act in 1940 is now needed.

Lump-sum appropriations have been the order in recent years. Heretofore reclamation projects had to be authorized and approved by Congress before appropriations could be made. I have always insisted that the Representatives and Senators who voted to levy taxes for public expenditures should have a voice in the selection and approval of the works to be constructed. Under lump-sum appropriations no such approval is necessary.

Under existing conditions no flood-control projects not previously authorized by Congress can be constructed. Such works cannot be undertaken with relief or emergency funds unless authorized by Congress. Such is not the case with respect to reclamation projects. A far-reaching provision and a change in policy with respect to reclamation projects was adopted in the Reclamation Project Act of 1939, Public, 260, Seventy-sixth Congress, first session, approved August 4, 1939. Section 9 of this act is most significant; it is certainly far-reaching. It provides that new projects, new divisions of a project, and supplemental works on existing works are in the discretion of the Secretary of the Interior. If the Secretary of the Interior finds, as provided in section 9 of said act, that the proposed construction has engineering feasibility and if the purposes are found by the Secretary to be proper, then the new project, new division of a project, or supplemental works on a project shall be authorized and may be undertaken by the Secretary. In other words, if the Secretary finds that the allocations equal the total estimated cost, then the project may be undertaken by the Secretary without congressional action.

Three steps are necessary in the construction of flood control and river and harbor projects: A report by the Chief of Engineers must be submitted; congressional authorization must be made; appropriations are then in order, but such is not the case with respect to reclamation projects, or to the flood-control benefits in reclamation projects. The decision of the Secretary is final. If new reclamation projects can be constructed without congressional authorization, the same consideration should be given to flood control and river and harbor projects, or additional authorizations should be made for projects that are imperatively needed.

ELECTRIC POWER

Water is essential to the life of people and to the life of the Nation. It is probably the most valuable of natural resources; it should not be polluted and it should not be wasted. It should be made to serve and not to destroy.

Electric power is generated by steam or by water. There are two kinds of electric power—firm and secondary. Firm power is always available and finds a ready market. Secondary power is not available all of the time and the market is not so ready. It depends upon rainfall and run-off.

Reservoirs may be built for flood control, for navigation, for the generation of power, for conservation, and for other purposes. They may be operated primarily for one purpose or for several purposes. It is practical to build reservoirs with sufficient capacity to store dangerous flood waters and with adequate capacity to store water for power or for other purposes. Reservoirs are made for single or for dual purposes. If operated for several purposes, they are called multiple reservoirs.

A single-purpose reservoir may produce some power, but the power may be all secondary. Such power is worth using. Dual or multiple-use reservoirs may produce both firm and secondary power. There should be a restudy of the value of secondary power. It is usually considered to have only the value of the coal that could be saved by an existing steam plant, but coal is just one element. There must be boilers, lubricants, replacements, labor, etc. While secondary power has been undervalued in many cases, those who are wise know its real value. On the Ohio and Kanawha Rivers private power companies have built plants at navigation dams to use the secondary power available at these dams. They pay the United States about $200,000 a year for the privilege of generating secondary power. If secondary power plants are not economical, why do the power companies operate these plants and pay for the privilege of operating them? There is another plant at Louisville, Ky. If plants capable of producing secondary power can be made to pay, and do pay private power companies, multiple reservoirs are economically justified.

The Federal Power Commission has an important function; it is one of the biggest jobs in the Government. The people are no longer willing that the natural resources be licensed to private corporations for long terms without supervision or regulation for

the protection of the public. Such regulations, however, should not be destructive. Private corporations often invite destructive regulation by refusing to cooperate.

In my view the Federal Power Commission would make a great contribution in solving the use and marketing problem of electric power. It is not necessary for the Federal Power Commission to engage in construction, but the marketing of power produced at dams that can and will be constructed for flood control to protect lives and property is becoming an increasingly important public question. The Federal Power Commission should not only be given power and authority to license, but it should be in position to know the marketing problem and submit sound advice to Congress for the marketing of electric power.

The public is entitled to the benefits of economic power that is developed from their natural resources. Water power is not only valuable in itself but it contributes to needed public improvements that otherwise might not be built for flood control, navigation, and irrigation.

Reservoirs for the control of floods are found in all countries but under the supervision of the Corps of Engineers, multiple reservoirs will more and more obtain in the United States.

Many of the most potential multiple uses are beyond private financing. Flood control, irrigation, and navigation projects, including power development, are unsuitable for private enterprise. These works must be constructed by the Government. The public is beginning to realize the great value of the multiple-use reservoirs and dams and they are being demanded throughout the country. In the Southeastern States where a new industrial empire is coming into being, there are widespread demands for power that can be developed on the Savannah, the Santee, and Etowah Rivers. The power possibilities along the White River in Missouri and Arkansas are really remarkable, and demands for power not only exist but will increase as the power is developed. It will take many years to construct reservoirs. By the time the projects have been completed all of the power that can be developed will be needed. The best multiple-use projects should be authorized now so that they can be prosecuted in an orderly manner to meet urgent needs for flood control, irrigation, and navigation, and to satisfy the growing demands for power.

THE CORPS OF ENGINEERS

As we look ahead in flood control we are grateful for the services and the leadership of the Corps of Engineers. They have not only rendered capable and efficient service but they have pioneered; they have originated. It was James B. Eads of the Mississippi River Commission who originated and built the jetties at the mouth of the Mississippi River. It was Gen. George W. Goethals who constructed the Panama Canal. The Corps of Engineers are honest; they are courageous; they have dared where others have faltered; they have adventured. They are graduates of West Point, but they are postgraduates of the leading universities of the United States and of Europe. They have constructed laboratories; they have experimented. Their experiments and their laboratories are not to manufacture bombs and implements to destroy life, but their experiments and their laboratories are devoted to the protection of human lives.

They are scientists; they study waters, rivers, hills, and mountains; but they are constructive scientists. They originate and they plan for progress and for protection.

Engineers and scientists can be saviors or destroyers of humanity. They can make or they can mar the human race. They can improve to kill or they can improve to live. They are capable of inventing the most destructive gases and bombs or they are capable of providing for the protection and advancement of mankind. The Corps of Engineers of the United States Army are utilizing their talents and their science to build and not to destroy.

Science and invention can provide jobs, relieve unemployment, construct highways, and build reservoirs, or they can construct tanks, cannons, and battleships. While some few may criticize, the members of the Rivers and Harbors Congress are glad to pay tribute to the Corps of Engineers of the United States Army.

Sir Christopher Wren, the architect of St. Paul's in London, has no monument or sculpture to mark his fame or to commemorate his triumph in the building of that marvelous cathedral. On a simple slab in one of the panels is inscribed the legend: "If you seek his monument, look about you."

If you seek the monument to the Corps of Engineers, look about you. In this broad land of ours, from the lakes to the Gulf, and from ocean to ocean. There is the Tygart Reservoir, the Fort Peck Reservoir, the Muskingum reservoirs, and the Bonneville Dam; there are the navigation locks and dams of the Ohio and Mississippi Rivers; there are the levees and floodwalls in all of the great regions of our country. Their works are the monuments to the Corps of Engineers of the United States Army.

Robert E. Lee, great as a general, but greater as a man, was a district engineer located at St. Louis, in charge of river and harbor works along the Mississippi River. He typifies the spirit of the Corps of Engineers.

AMERICA AND PEACE

More than ever, as war rages in Europe and Asia, the United States is the hope of the world. America was hidden away until 1492. Who can say that the United States has not come into the family of nations for just such a time as this?

All nations and all creeds have sought America in search of liberty and of freedom. The peoples of European countries have been welded into the greatest nation in human history in America. Ours is the first international nation. Our country is a practical demonstration that clashing creeds and warring peoples can be welded into a single nation. Freedom of speech, freedom of worship, and freedom of the press are the achievements of the greatest and mightiest of all republics. Poets through the centuries have dreamed of a united mankind. Their dreams are being realized in the United States today.

Ours is a cosmopolitan people. There are the English with the love for freedom; there are the Scotch with the love for adventure; there are the Irish with the love for romance; there are the French with the love for beauty; there are Germans with the love for science; there are the Italians with the love for music. All creeds and all peoples have been poured into the crucible of the United States to be transformed into the gold of a new civilization.

As we travel on our way and always toward the light, clouds now and then appear. We are reminded that civilization, like the sun, has its nights and its days, it has its plenitudes and its eclipses; it is now high and noble and then dark and gloomy. Sometimes it seems to disappear but in the march of the centuries civilization always returns.

America must remain at peace; America must escape the devastation of raging wars. The United States must be prepared to salvage civilization following the wars of Europe and Asia.

Progress hates war. We stand for peace and for progress. Dictators now, as heretofore, may strut and murder but they have always left their countries poorer and smaller. Alexander, at 33, dead after a drunken debauch, had conquered the world and sighed for more worlds to conquer. Hannibal committed suicide as he was cruelly and ruthlessly pursued by his enemies. Caesar was assassinated at the very climax of his greatest triumph, and dictators from his day to ours have met a similar fate. Napoleon, conquered and imprisoned, died on the obscure island of St. Helena. These are probably the four greatest generals of human history. Not one of them brought happiness to himself or to his people. Not one of them made a single permanent contribution to the progress or happiness of the world.

We look ahead in flood control feeling that we are building for the protection of the human race and that the engineering structures will remain long after the names of warriors are forgotten.

Reclamation in the Arid and Semiarid Lands of the West

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ADDRESS BY HON. COMPTON I. WHITE, OF IDAHO, CHAIRMAN OF THE IRRIGATION AND RECLAMATION COMMITTEE, HOUSE OF REPRESENTATIVES, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MARCH 14, 1940

Mr. WHITE of Idaho. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me today before the National Rivers and Harbors Congress:

Mr. Chairman and members of the National Rivers and Harbors Congress, I deem it a great privilege to again join with you in discussing plans for the utilization of the water resources of the country. As a representative from an area in which are located large Federal irrigation and power projects, I am happy that I can say to you, that the West has always given its unstinted support to national rivers and harbors and flood-control programs.

The Pacific Northwest is already beginning to receive material benefits from the construction of the great Columbia River projects, in the form of reduced rates for electric energy, reduced transportation costs for market-bound wheat and timber, and freight charges on incoming supplies such as petroleum products required for operation of our farm machinery and factories.

The recent contracts for Bonneville power with the Aluminum Co. of America and the Sierra Iron Co., are but the beginning of a large industrial development. This will provide for the employment of thousands now on relief and permit families to return to the American standard of living and a better return to the hard-pressed farmer for his produce because of a closer market and savings in transportation costs on account of a shorter haul and because of newly provided water transportation facilities.

The developments at Bonneville and Grand Coulee are only a small percent of the potential power supply that can be made available at reasonable construction costs at other sites on the Columbia and Snake Rivers. The Northwest is the great power storehouse of the United States. Along with the development of power at low cost and the locating of factories to use the products of our forests and mines, there will be provided as needed, new farming areas. It is in connection with the carrying forward to

completion of a very greatly needed program for irrigation and reclamation that I wish to ask your attention for a few minutes.

ARID AND SEMIARID LANDS OF THE WEST

One-third of the area of continental United States lies west of the one hundredth meridian. Seven hundred and forty million acres of arid and semiarid land, including practically all of the 11 Mountain and Pacific Coast States as well as large sections of the 6 Great Plains States.

To date only about 20,000,000 acres of this total has been provided with irrigation. Of the remainder more than 300,000,000 acres is devoted entirely to grazing, and the balance is largely forests, national parks, mineral lands, etc.

NECESSITY FOR IRRIGATION

The development of irrigation has been one of necessity to meet the requirements of the area for a supply of vegetables and dairy products for the cities and towns along the railroads and waterways, and the supplying of winter feed for the livestock from the vast expanse of range land.

More than 50 percent of the total acreage of Federal reclamation projects is devoted to the production of forage crops for the livestock industry to which 40 percent of the area of the West is devoted. The bulk of the production from the remaining acreage is consumed in the project areas, where the population of cities and villages is three times that of the farms, or elsewhere in the West. Sugar beets is an important crop on irrigated land, but since 70 percent of the sugar consumed in continental United States is produced off-shore, there is no competition here with produce from farms of other sections.

The fact is, reclamation complements the farm production of other sections of the country. Its produce is shipped eastward only when the farms near the great consuming centers are not in production.

As examples of the lack of competition with agriculture elsewhere, let me advise: Of cotton, only 2 percent is produced on Federal irrigation projects; of wheat, only six-tenths of 1 percent; of corn, less than one-tenth of 1 percent.

On the other hand the West consumes, in the form of manufactured goods, cereals, and stock feeds from the East, Midwest, and South, many times the quantity of so-called surplus crops produced on irrigated lands.

Let me ask what the Midwest would do with its great quantities of corn and other grains were it not possible to secure for its feeder pens trainloads of livestock from the western ranges? Can the automobile industry find a new market somewhere else for the quarter billion dollars' worth of automotive products the West purchases each year? In these days when the South is finding difficulty in disposing of its cotton, the West offers an ever-expanding market, for it consumes four times as much cotton as the few irrigated acres of the Southwest produces.

The annual increase in the demand for the manufactured products of the Midwest, East, and South and for agricultural products not grown under irrigation is in direct proportion to the Federal investment in reclamation construction. The population of the Mountain and Pacific States has more than trebled since the Federal reclamation policy was established in 1902. And this market is provided by projects built with provision for repayment to the United States of its original investment.

I may point out that of approximately $200,000,000 invested in Federal reclamation projects in operation where repayments have begun, more than 30 percent of the costs have been repaid. In other words, the water users and power consumers have returned more than $62,000,000 to the Treasury of the United States.

Continuation and expansion of the Federal reclamation program is needed not only in those sections of the 15 Western States in which projects are now operating, but the policy of water conservation must be extended speedily to the entire Great Plains area. Extending from the Canadian border to the Rio Grande, recurring droughts and agricultural maladjustments have driven hundreds of thousands of farm families from their homes.

I have just been informed that the most recent survey by the United States Weather Bureau of the Great Plains region is not very encouraging for 1940 crops. While the winter rains in several States have approximated the normal precipitation, the moisture has not been sufficient to replenish the sadly depleted subsoil. In North and South Dakota, the winter rains were only 67 and 65 percent, respectively, of normal.

FEDERAL RELIEF REQUIRED

The distress brought on by drought conditions has been reflected in the Federal aid required in the Great Plains. In many counties seriously affected the relief requirements were three times those in humid areas.

In less than 5 years 75,000 Great Plains families migrated to the States of Idaho, Washington, Oregon, and California, and in the last decade it has been estimated that twice that number from the drought regions have sought opportunities to rehabilitate themselves on a few acres of irrigated land. It is unfortunate, indeed, that great reclamation projects now under construction have not been advanced to the point where they could provide for at least a part of these families. While the Great Plains migrations westward have emphasized the land problem on the Pacific coast and in the Pacific Northwest, new arrivals from other sections since 1930 in an equal volume have complicated the situation.

I say it is unfortunate, but that is a mild expression. It has been an expensive proposition from every angle. The droughts and the utter lack of water-conservation facilities in the Great Plains area which have uprooted scores of thousands of farm families and driven them westward, have increased the financial drain on the Federal Treasury, and State and local resources of the far Western States.

In the last 7 years, in the 17 arid and semiarid States of the West and Great Plains, the Federal Government alone has expended on relief more than two and a quarter billion dollars. Compare this with the two and one-half billion dollars, the Federal Government has expended in 116 years for new work on rivers and harbors and flood control in the entire country. While not all of the Federal expenditures for relief in these 17 States can be attributed to the drought and the migration of Great Plains families westward, a large part of the outlays can be traced directly to conditions beyond the control of the migrants.

The spectacle of more than a hundred thousand homeless farm families, augmented daily by new arrivals from the Great Plains, wandering up and down the Pacific coast and in adjacent States, demands that we consider a plan for providing new opportunities and homes for these wanderers. While the peak of the westward movement appeared to have been reached in 1937, the 1939 migrations approximated those of 1938 and with no permanent improvement in the Dust Bowl in sight, the probabilities are that the number of persons demanding irrigated land will continue to increase.

SUGGESTED PROGRAM

To remedy this critical situation a twofold program has been proposed:

First, prompt action on the part of the Congress is required for water conservation and utilization in the Great Plains area that will serve to anchor families in that section and eliminate the necessity for further migrations. The Secretary of the Interior has proposed a 5-year program to this end. It would require $5,000,000 annually of reimbursable funds from the Federal Treasury and from $6,000,000 to $7,000,000 in relief labor.

The Congress in 1939 made a start in this direction when it enacted the Wheeler-Case bill, designed to provide for water conservation in the Great Plains. An appropriation of $5,000,000 was made the same year, but the Budget Bureau has not yet sent up a recommendation for funds for this purpose for 1941. It is quite obvious that $5,000,000, although supplemented by relief labor, was adequate only for a start toward conserving the meager water resources of the region that embraces substantial parts of 10 States.

Second, adequate funds to expedite completion of Federal reclamation projects under construction so that water resources now being dissipated may be conserved and utilized to provide for the more than 100,000 homeless farm families now drifting through the West. For the completion of projects authorized and under way, approximately $500,000,000 will be required. I am proposing that the Congress make available appropriations at the rate of $100,000,000 annually for 5 or 6 years to expedite construction. When we compare this need for permanent improvements that will take thousands and thousands of families off the relief rolls with the Federal expenditures for relief of more than $300,000,000 annually for 7 years in 17 States, there can be but one answer.

And bear in mind that these reclamation appropriations are 100 percent repayable. Also, you gentlemen who fear that more land will be brought into cultivation than is required should remember that in practically every Western State part of Federal reclamation funds are directed toward supplementing existing water supplies for established agricultural areas.

Let me also remind you that a large part of construction costs of these projects are expended for materials in the Midwest, South, and East.

It is not suggested that it is possible or even advisable to place all of the homeless farm families now in the West on irrigated land. But it is pointed out that in the towns and cities that grow in the wake of Federal reclamation projects employment will be found for two or three times the number of wage earners on the farms.

We hear a great deal about economy, but I want to say there is more than one kind of economy, and I am in favor of all kinds. I insist it is true economy to effect conservation of the water resources of this country and provide for their utilization in the arid and semiarid areas, where a modern civilization has been carved out of the desert. Especially is this true when we are providing homes where families can become self-supporting and repay the funds advanced by the Government.

Contrast this constructive, economical procedure with the results where we have expended billions for relief without accomplishing anything of a permanent nature or provided for the repayment of a single dime. As a result of conditions in which we found the country in 1933, a relief program was necessary, and I am not criticizing what has been done in this direction.

We now have a program looking to permanent rehabilitation of large areas of the western third of the Nation, of providing irrigated land for homeless families, of reducing relief rolls, and conserving and utilizing the water resources of the country. It is vitally important that we implement this program with sufficient funds to speed completion of projects under construction and advance conservation on the Great Plains.

Absentee and Remote Ownership of Local Business Bad for Entire Country

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1940

PRESIDENT OF UNITED STATES ON ABSENTEE OWNERSHIP

Mr. PATMAN. Mr. Speaker, the President of the United States visited Grand Coulee Dam, and in his speech on October 2, 1937, at the Grand Coulee Dam, he stated:

The concentration of ownership and control of industry is fatal to the operation of competitive economy. Concentration destroys the sources and possibilities of competition, and the antitrust statutes attempt to check it; but the courts, blind to this purpose, have said "size is no offense."

Concentration of corporate ownership of wealth, chiefly means of production, has proceeded to a surprising degree. In 1932, according to the statistics of the Bureau of Internal Revenue, 53 percent of all corporate-owned assets in this country was held by 618 corporations, which constitutes only two-tenths of 1 percent of the number of corporations reporting. Five percent of the corporations owned 85 percent of all the corporate-owned wealth in 1932. More than 50 percent of all the net income enjoyed by corporations in 1932 went to 232 corporations, while of the country's manufacturing corporations 1.2 percent of the total number accounted for 63 percent of the aggregate net profits. In 1934 the only group of corporations to earn an aggregate net profit was the group whose assets exceeded $50,000,000. Thus, the process of concentration was continuing.

There was likewise a high degree of concentration in the ownership of these corporations; 1929 was a banner year for stock ownership, and in that year the 3.28 percent of the population who filed individual income-tax returns accounted for the receipt of more than 83 percent of all dividends paid to individuals. And 78 percent of those dividends reported were received by three-tenths of 1 percent of our population.

In 1933 the Bureau of Internal Revenue statistics show that there were only 1,747,740 taxable individual incomes in the United States and nearly one-third of all the property reported as passing by death was found in less than 4 percent of the estates. You are all familiar with the Brookings Institution's studies in 1929, which reports that about 6,000,000 families, or 21 percent of all families, had family incomes of less than $1,000 annually, and that 36,000 families in the high-income brackets received as much of our national income in that year as 11,000,000 families with the lowest incomes.

Even these statistics do not properly measure the degree of concentration of control of industry for by holding companies and interlocking directorates many corporations may be under a single control and there is no discernible limit to the centralizing tendency.

This is a strong argument in favor of local ownership and against absentee ownership or control of any business that can be conducted by local people.

I hope no one will overlook what the President said in the preceding statement relative to the local merchant, local manufacturer, local banker, and local utility man.

Notice the indictment the President of the United States has made against the chain store. The logical and reasonable argument that he has presented against absentee ownership cannot be answered by representatives of the interstate chains.

PRESIDENT COMMENTS ON BAD EFFECTS OF CHAIN STORES

In addition to this statement by our President at the Grand Coulee Dam, he also stated:

This concentration of business accounts in large part for the lost influence of big business, and its press, and its legal lackeys, and its business organizations, in legislative and election struggles. Forty years ago big business had as its ally in every town and settlement the local merchant, local manufacturer, local banker, and local utility man. Each was a leading citizen, on whom many depended for information and leadership as well as for credit and jobs. This type of man has largely gone. Why he has gone makes little difference.

In the place of this strong and leading individual is a managing clerk at the chain store who cannot make a credit sale, and a local superintendent for the factory. The local bank is closed and nobody who has more authority than a bill collector represents the utility in most communities. Big business has found it to its advantage to rotate even those men so that no one of them is left in the community long enough to get his roots established or to really become a part of the life about him, to become a property owner, or to be regarded as a fellow citizen by those among whom he dwells as a representative of an absentee control.

Thus, big business has destroyed its own defense, it has devoured its own young. The small-business man who used to be our most ardent capitalist and the most uncompromising of conservatives has been crushed, or merged, or consolidated, or otherwise retired. This has brought about a subtle change not only in economic life, but in social and political life as well. There are values in local independence and responsibility which are being sacrificed to balance-sheet values.

The process seems not to be discernible to, or appreciated by the people who dominate the large industries in our great cities. It is plainly discernible to those who live in smaller cities and see the life of the community as a whole.

FEDERAL TRADE COMMISSION SAYS TAX LAW WAY TO REACH INTERSTATE CHAIN STORES

The Federal Trade Commission, in response to congressional inquiry, made a report on its chain-store investigation, December 14, 1934. In this report, which is Senate Document No. 4, Seventy-fourth Congress, first session, page 91, it is stated:

If, as a matter of policy, the Federal Government wishes to check the growth of chain-store merchandising on the theory that ultimate injury to the public interest outweighs any temporary benefits, it has been suggested that the course marked out by recent State legislation suggests a possible solution, provided no constitutional barrier were successfully interposed. The Federal Government might conceivably impose a graduated tax on chain stores similar to those imposed by the States and upheld by the Supreme Court.

JUSTICES BRANDEIS AND CARDOZO POINT OUT REMEDY

While a graduated Federal tax on chain stores might be made to produce substantial revenue, it is well to bear in mind the words of Justice Brandeis in the Florida chain-store tax case (*Liggett Co. et al.* v. *J. M. Lee, Comptroller*, 288 U. S. 517):

"The chain store is treated as a thing menacing the public welfare. The aim of the statute, at the lowest, is to preserve the competition of the independent stores with the chain stores; at the highest its aim is to eliminate altogether the corporate chain store from retail distribution."

And as Justice Cardozo said in the same case:

"The system (of special chain-store taxation) has had its origin in the belief that the social utility or inutility of one group is less or greater than that of others, and that the choice of others to be taxed should be adjusted to social gains and losses. Courts would be lacking in candor if they were not to concede the presence of such a motive behind this chain-store legislation."

As pointed out in the discussion of State laws on the subject, judicial affirmance of the principal of the graduated tax opens the way theoretically to an enlargement of the tax until it attains the social ends which underlie such legislation. It may be doubted that any of the State laws on the subject has done more than reduce somewhat the competitive advantages of chains over independents. Such a tax may fail in its minimum social purpose until it is so graduated as to entirely offset those advantages, and as Justice Brandeis said, "At the highest, its aim is to eliminate altogether the corporate chain store from retail distribution."

INTERSTATE CHAINS FAIR-WEATHER FRIENDS OF LOCAL COMMUNITIES

Foreign-owned chain stores take away local privileges and opportunities that formerly enabled local citizens to assume local relief, assistance, and responsibility. They never fail to keep down the price of farm products. They are leeches who move in after a town is well established as a lively business community, and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disaster. They charge different prices in different cities in the same State, and even in the same city, according to the competition from the independent merchant across the street, who is marked as the next victim.

EYES OF CONSPIRATORS ON EVERY COUNTY IN THE UNITED STATES

There are 3,070 counties in these United States. In every county there is one good town—usually the county seat—that has concrete highways leading to it from every section of the county. A few so-called wise men in the East have conspired to get control of retail distribution in this country. They know that if they can get control of the retail business in these 3,070 county-seat towns that they can control the retail business of this Nation. They know, too, that when they get this control that they can dictate to the people from whom they buy the price that they must accept; and at the same time they will dictate to the consumers the price that they must pay. The interstate chain-store system should be stopped. It is absolutely destroying local community life in our Nation. It is responsible for unemployment and relief.

We did not have a Federal relief problem until the local communities were weakened by interstate chain stores siphoning the net profits into the hands of their absentee owners.

HEARINGS

H. R. 1, to curb interstate chains, will be considered by the Ways and Means Committee of the House commencing March 27.

Mannerheim's Message to the Finnish Army

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was published in the Washington Times-Herald of today:

[From the Washington Times-Herald of March 14, 1940]

MANNERHEIM'S MESSAGE TO ARMY

(By Donald Day)

HELSINKI, March 13.—The commander in chief of the Finnish Army, Field Marshal Baron Carl Gustav Mannerheim, in his order of the day to the Finnish Army for tomorrow has made a classical piece of literature for the Finnish nation. This correspondent has the entire order in full:

"Soldiers of the glorious Finnish Army.

"Peace has been concluded between our country and the Soviet Union, an exacting peace which has ceded to Soviet Russia nearly every battlefield on which you have shed your blood on behalf of everything you hold dear and sacred.

FORCED INTO STRUGGLE

"You did not want war; you loved peace, work, and progress; but you were forced into a struggle in which you have done great deeds, deeds that will shine for centuries in the pages of history.

"More than 15,000 of you who took to the field never again will see your homes, and how many of those who have lost forever their ability to work. But you also have dealt hard blows, and if 200,000 of our enemies now lie on the snowdrifts, gazing with dead eyes on our sky, the fault is not yours; you did not hate them, nor wish them evil; you merely followed the stern rule of war—kill or be killed.

"Soldiers! I have fought on many battlefields, but never have I seen your like as warriors. I am as proud of you as though you were my own children. I am as proud of the men from the northern fields as of the sons of the Ostro Bothnias plain, of the Karelian forests, of the hills of Savo, the fields of Hame and Satakunta, the capes of Uusumaa and Sarsinais-Suomi. I am as proud of the sacrifice tendered by the child of the lonely cottage as those of the wealthy.

PRAISES RESERVISTS

"I thank all of you, officers, noncommissioned officers, and men, but I wish especially to stress the self-sacrificing valor of your officers of the reserve, their sense of duty and cleverness with which they have fulfilled a task which was not originally theirs. Thus theirs has been the greatest sacrifice in this war in proportion to their numbers, but it was made joyfully and with unflinching devotion to duty.

"I then thank the staff officers for their skill and untiring labor and, finally, I thank my own closest assistants, my chief of the general staff, my quartermaster general, the army corps commanders, and the divisional commanders who have often transformed the impossible into the possible.

STRESSES HEROIC DEEDS

"I thank the Finnish Army in all its branches, which in noble competition have done heroic deeds since the first day of the war. I thank the army for the courage with which it has faced an overwhelmingly superior enemy equipped in part with hitherto unknown weapons, and for the stubbornness with which it held on to every inch of our soil.

"The destruction of over 1,500 Russian tanks and over 700 enemy aircraft on our soil speaks of deeds of heroism which were often carried out by single individuals.

"With joy and pride my thoughts dwell on the Lottas (Lotta Svard's) of Finland. (These are the women who have a special organization to help the army.)

"Their spirit of self-sacrifice and untiring work in many fields has liberated thousands and thousands and thousands of men for the fighting lines. Their noble spirit has spurred on and supported the army, whose undivided gratitude and respect they have achieved. Posts of honor have also the thousands of workers who, often as volunteers and during air raids, have worked beside their machines for the army's needs or labored unflinchingly under fire, strengthening our positions. On behalf of the fatherland, I thank them.

"In spite of all the bravery and spirit of sacrifice, the Government has been compelled to conclude peace on severe terms, which, however, are inexplicable. Our army was small and its reserves inadequate. We were not prepared for war with a great power. While our brave soldiers were defending our frontiers we had by insuperable effort to procure what we lacked. We had to construct lines of defense where there were none. We had to try to obtain help which failed to come.

NO FOREIGN HELP

"We had to find arms and equipment at a time when all the nations were feverishly arming against the storm which now sweeps over the world. Your heroic deeds have aroused the admiration of the world, but after 3½ months of war we are still almost alone. We have not obtained more foreign help than two reinforced battalions equipped with artillery and aircraft for our fronts, while our men, fighting day and night without the possibility of being relieved, have had to meet the attacks of ever fresh enemy forces, straining their physical and moral powers beyond all limit.

"When, some day, the history of this war is written, the world will learn of your efforts.

"Without the ready help in arms and equipment which Sweden and the western powers have given us our struggle up to this date would have been unconceivable against the countless guns and tanks and aircraft of the enemy.

HITS AT SWEDEN

"Unfortunately, the valuable promise of assistance which the Western Powers gave us would not be realized when our neighbors, concerned for their own security, refused the right of transit for troops.

"Our fate is hard, now that we are compelled to give up to an alien race, a race with a life philosophy and moral values different from ours, land which for centuries we have cultivated in sweat and labor. Yet we must put our shoulders to the wheel, in order that we may prepare on the soil left to us a haven for those rendered homeless and an improved livelihood for all, and as before we must be ready to defend our diminished fatherland with the same resolution and the same fire with which we defended our undivided fatherland.

"We are proudly conscious of the historic duty, which we shall continue to fulfill: The defense of that western civilization which has been our heritage for centuries, but we also know that we have paid to the very last penny any debt we may have owed to the west.

This is signed simply "Mannerheim, the commander in chief of the Finnish Army fighting the Bolsheviks."

Enlarge the Sugar Fields

EXTENSION OF REMARKS

OF

HON. JOACHIM O. FERNANDEZ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

EDITORIAL FROM THE NEW ORLEANS STATES

Mr. FERNANDEZ. Mr. Speaker, under leave to extend my remarks I include a timely and interesting editorial of the New Orleans States, March 6, 1940, on sugar, the title being "Enlarge the Sugar Fields," as follows:

ENLARGE THE SUGAR FIELDS

American consumers paid an average of 10 cents a pound for sugar in 1923–24. Now they are paying about 5 cents a pound. During this time, the United States has heavily increased the production of beet and cane sugar. As this country consumes about 6,700,000 tons of sugar a year, the American housewife is saving about $670,000,000 a year.

Records show that when Cuban production dominates the market, prices are high; when domestic production dominates the home situation, prices are low.

Where can you find more conclusive proof of the importance of developing our sugar industry? Where can you find more absolute refutation of the propaganda that to encourage domestic sugar is to put a tax on every cup of coffee the Nation drinks?

In Louisiana, and in Florida, the sugarcane fields can be enormously enlarged. This State alone could treble its present output of sugar—giving employment to three times as many persons, increasing its tax contributions to the State in the same proportion,

making possible the development of hundreds of businesses and industries. The Federal Government, however, tenderly solicitous about Cuba and the financial stake some of the "fair-haired" boys of the East have in Cuba, has put quota hobbles upon Louisiana and Florida. They have confined our Monte Cristo industry in the dungeon of limited production.

Such a short-sighted policy ought to be junked. It ought never to have been adopted.

We see our wise Government, with one hand, beckoning the planters to increased production, with improved varieties of cane which it has developed at great expense; we see that same Government, with the other hand, marking limits to the productive capacity, and even directing the plow-up of stalks already fattening on the bounty of our soil.

Let there be an end of such nonsense. Sugar is the one American crop that can never be produced to excess in this country. If every possible acre that could produce sugarcane and sugar beets were planted to those crops, the yield of sugar would not equal the domestic consumption. There will always be a market for the production of our insular possessions, and of sacred Cuba.

We in Louisiana must have the privilege of raising what we can on our land. The American people should demand it. We will make money—they will save money.

The 1940 Census

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

EXCERPTS FROM ADDRESS BY REV. WILLIAM A. FORAN

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article containing extracts from an address of the Reverend William A. Foran, of North Adams, Mass.:

CENSUS QUESTIONS ASSAILED BY PRIEST

NORTH ADAMS, March 12.—Rev. William A. Foran, curate at St. Francis's Church, in an address before a meeting of the Holy Name Society of the church last night told several hundred men that no "bureau or department of this Government is authorized to ask questions at its discretion and jail Americans who decline to answer them or brand them as bad citizens." "That can be done," he added, "only by officials in Germany and the Soviet Union. We hope it cannot be done here with impunity."

Continuing, Father Foran said that "the towering bureaucracy at Washington today means little or nothing to the man on the streets at North Adams. Hundreds of political groups, responsible more or less loosely to Congress or to the Executive, are at work in the Nation's Capital. Mark it well, gentlemen, although the Government issued thousands of publications every year, there is no official register which lists and describes all the Government agencies and bureaus."

After reading from a section of the Constitution of the United States, the speaker continued in part as follows:

"The exclusive purpose of the decennial census is twofold—first, it provides the figures on which apportionment of congressional representation for the States can be raised; and, secondly, it gives Congress a working rule for the laying of poll taxes and direct levies upon our citizens. Now let us take a few choice samples from the census questionnaire which has been made available for public inspection. Sample No. 1: 'Is there a bathroom in the house?' We can see where the local board of health might ask that question. Can anyone tell me what a bathroom may have to do with the number of Congressmen to be sent from this district to Washington?

" 'How many times have you been married?' We cannot understand what this question has to do with congressional representation or a tax program, as expressly provided by the Constitution. However, that which the Constitution does not authorize Congress to do with the decennial census the Census Bureau plans to do anyway.

"It is unquestionably a symptom of a trend which will bear watching, even if the President last week counseled us not to mention the word 'dictatorship' out loud. As far as we know, the present occupant of the White House is the first President who ever issued a formal proclamation that citizens who refused to answer questions put by census takers are subject to fines and imprisonment. But nowhere in his proclamation does the President give us the text of the questions that must be answered by every adult under penalty of the law."

The Wheeler-Lea Bill Amendments

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. ALEXANDER. Mr. Speaker, I understand the House and Senate conferees may bring in their report in a few days on this very important piece of legislation—the omnibus transportation bill. I also understand that the vital and essential amendments which the House approved and inserted last July when the bill was up before us are to be left out, or so changed and emasculated that the benefit will be lost to the public, for whose benefit they were inserted.

In order to make clear the scope and meaning of these amendments, I have listed the four most-discussed items herein and offer a brief description of each and show its meaning, so the general public can understand the need for retention in the bill.

The four amendments to the Lea railroad transportation bill adopted by the House are as follows:

NO. 1. DECLARATION OF POLICY

In most essential particulars the declarations of policy in the Wheeler bill and the Lea bill are identical. The Lea bill provides for cooperation by the State and Federal agencies in the administration of the policy declared. This is not in the Senate draft. The Senate declaration provides for the encouragement of fair wages and working conditions to be arrived at "through collective bargaining." The House bill does not refer to collective bargaining.

The original declaration in the House bill read as follows, page 198, beginning on line 11:

NATIONAL TRANSPORTATION POLICY

It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, economical, and efficient service and foster sound, economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof, and to encourage fair wages and equitable working conditions; all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of commerce in the United States, of the Postal Service and of the national defense.

While this declaration of policy would seem to the layman to be a safeguard and a binder upon the Interstate Commerce Commission, we know from experience with the Transportation Act of 1920 that the declaration of policy contained therein, in which Congress declared its intention "to preserve in full vigor both rail and water transportation," was, when raised by counsel for water services, declared by the Interstate Commerce Commission to be merely a declaration of policy without the effect of law. This was upheld by the Supreme Court. Hence the Commission totally ignores the declaration of policy set forth by the Congress. The gentleman from Mississippi, Congressman WHITTINGTON, offered the following amendment, which I supported, and which has been added to the bill, and which, in my opinion, must be maintained at all hazards:

All of the provisions of this act shall be administered and enforced with a view to carrying out the above declaration of policy.

This would seem to effectively meet the Commission's opinion, confirmed by the Supreme Court, that a declaration of policy is simply a declaration of policy, and has not the binding force of the specific provisions of the statute, and may be departed from or modified according to the Commission's interpretation of the various provisions of the law.

NO. 2. THE JONES AMENDMENT

The Jones amendment, which I supported, and which should be retained in any legislation adopted, is found on page 202 of the Lea bill, line 21, as follows:

It is hereby declared to be the policy of Congress that shippers of wheat, cotton, and all other farm commodities for export should have substantially the same advantage of reduced rates, as compared to shippers of such commodities not for export, that are in effect in the case of shipment of industrial products for export as compared with shipment of industrial products not for export, and the Interstate Commerce Commission is hereby directed to institute such investigations, to conduct such hearings, and to issue orders making such revision of rates as may be necessary for the purpose of carrying out such policy.

Another amendment to this section, carrying out the same thought, is found in lines 20 and 21, on page 203. Originally the Lea bill read, beginning on line 18:

Provided, That the Commission in its discrimination may confine its investigation to such manufactured products and the rates thereon as shippers thereof may specifically request be included in such investigation.

The floor amendment, which I supported, added after the words "manufactured products", ", agricultural commodities, and raw materials,".

NO. 3. RATE-MAKING RULE

Water carriers expended a great deal of effort and thought on the rate-making rule. As originally embodied in the Wheeler bill, this was simply a restatement of section 15 (a) of the existing Interstate Commerce Act. Under pressure, the Senate committee found it desirable to broaden the rule, but the Lea bill gave no consideration to any change, leaving its rate-making rule identical in language with section 15 (a) of the present act.

To this rate-making rule in the House bill and in section 30, page 112, lines 5 to 12, inclusive, of the Senate bill, there was added from the floor, and passed by both Houses, what is known as the Miller-Wadsworth amendment, as follows:

In order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Commission shall permit each type of carrier or carriers to reduce rates so long as such rates maintain a compensatory return to the carrier or carriers after taking into consideration overhead and all other elements entering into the cost to the carrier or carriers for the service rendered.

To this the House added an additional proviso, as follows:

Provided, That nothing in this paragraph shall be construed so as to affect the long-and-short-haul provision of section 4.

The Miller-Wadsworth amendment is positively essential to the maintenance of river rates that will reflect the savings of low-cost water transportation.

NO. 4. HARRINGTON AMENDMENT

This is the amendment supported by the Brotherhood of Railway Trainmen. It is found on page 211 of the Lea bill, beginning on line 5, following provisions of the bill outlining an arrangement for consolidations. It is as follows:

Provided, however, That no such transaction shall be approved by the Commission if such transaction will result in unemployment or displacement of employees of carrier or carriers, or in the impairment of existing employment rights of said employees.

I fully discussed this amendment on two occasions, which matter will be found in the Appendix of the RECORD, page 588, and in the CONGRESSIONAL RECORD of March 1, page 2236.

I hope the conferees now considering the Wheeler and Lea bills will incorporate these four amendments in any bill reported by the conference, and that all Members of the Senate and the House from the valley States will insist upon this being done.

The Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. REED of New York. Mr. Speaker, the unholy alliance between the Roosevelt administration and Red Russia has resulted in the rape and ruin of Finland. It has placed Norway and Sweden in a state of future insecurity.

Moreover, it ought to strip the mask of pious pretense from those who have been pointing to our exports as a path to peace under the Hull trade-agreements program. I insist that our exports to promote mass murder abroad be separated from the legitimate exports, to the end that the hypocrisy of the whole Trade Agreements Act stand revealed to public gaze. What a sell-out of American moral standards.

While Finland thrilled the world with her heroism, this administration rushed bombing planes, bombing engines, oil, copper, and other essential war materials to "red" Russia. These war exports and those shipped to Japan were gleefully tabulated to pad the figures in support of the trade-agreement extension.

It is an appropriate time to recall the words of Candidate Roosevelt in 1932:

Remember well that attitude and method, the way we do things, is nearly always the measure of our sincerity.

John Andrew Martin

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. MARTIN J. KENNEDY. Mr. Speaker, ladies, and gentlemen, today it is my privilege to pay tribute to one of the most gentlemanly and picturesque characters I have been permitted since coming to serve here in this House to call a friend. That friend was JOHN ANDREW MARTIN, late Representative of the Third Congressional District of Colorado. Mr. MARTIN was an experienced legislator and served with great distinction as a member of the important Committee on Interstate and Foreign Commerce.

On December 24 last he left us for greater rewards. His passing has caused a deep feeling of lonsesomeness and cast a shadow over the Christmas holidays.

Mr. MARTIN came to Washington and this House by the "hard way." He was an alumnus of the school of experience, and as a result of his early training he gained a fine knowledge and understanding of human nature. Because of his experience he took a philosophical view of our problems, and his generous outlook and kindness endeared him to everyone in the Capitol.

He could be a diplomat when the occasion required, as well as boldly frank. He enjoyed rough-and-tumble debate, and always accepted the result most graciously.

It was my pleasure to have served with him on the Committee on Interstate and Foreign Commerce, and, as a result of this association, I came to know him intimately. During tense sessions of the committee when nerves were strained and feelings on edge, his wisdom and wit more than once came to the rescue to bring about a solution of the problem.

Few Members of Congress, in my time, possessed such a record of personal accomplishment as Mr. MARTIN. Farmer, railroad man, and editor of a newspaper, he found time to read law, to be admitted to the bar, and to be elected to the Colorado General Assembly. In his own autobiography he said, "Defeated for reelection, 1902; for State senator, 1904; for congressional nomination, 1906."

His public career started back when no small number of us were mere infants in arms. Although older in years than many of us, he had a spirit which made him the counsel and friend of the younger men. Always full of energy and enthusiasm, he was ever ready to enter the arena to fight for a worthy cause or to rescue a colleague who was caught in a legislative or parliamentary battle. He was well versed in the rules of the House, but never used that knowledge of the rules unfairly.

JOHN MARTIN was always doing nice things for people. He was especially solicitous of labor and railroad labor in particular. His interest was deep and personal and persisted until he actually obtained much favorable legislation for his coworkers on the railroads.

An intensely loyal and patriotic citizen of the West, Representative MARTIN brought to his office a love of people, regardless of race, color, or creed. His only dislike was for things un-American.

We shall miss his hearty laugh and happy smile, but I am sure that we shall never forget JOHN MARTIN because of his devotion to duty, his sterling character, and his love of God and man.

Dr. John H. Finley

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

TRIBUTE BY WILLIAM LYON PHELPS

Mr. SHANLEY. Mr. Speaker, in the death of Dr. Finley, editor, educator, orator, and poet-pedestrian, America loses an outstanding scholar and one of God's noblemen. No one, I think, has written a finer tribute than that of our distinguished William Lyon Phelps, professor emeritus of Yale University, which I insert in the RECORD at this point:

[From the New York Times]

LITERATURE

NEW HAVEN, CONN., March 7.—William Lyon Phelps, professor emeritus of Yale University, paid the following tribute today to Dr. John H. Finley:

"Dr. John Finley, member of the American Academy of Arts and Letters, recipient of many honorary degrees, and decorated by many foreign countries, was a great-hearted, genial, jovial man, intensely loved by those who knew him well.

"We all forgot the positions of honor and distinction that he held, because he was so entirely natural and unaffected that he seemed to have forgotten them himself. As a matter of fact, he was president of that admirable institution of learning, Knox College, and if what I remember about the history of athletics there is true, it would please President Hutchins.

"I read somewhere that Knox College lost its main football game 25 consecutive years, during which period the enrollment of students increased annually.

"Later Dr. Finley was a member of the faculty at Princeton, his frequent method of transport between Princeton and New York being on foot. He was president of the College of the City of New York and later head of the State Board of Education, but although he adorned all these places of authority, he was happiest after he had joined the editorial board of the New York Times, where he was successively assistant editor, editor in chief, and editor emeritus.

"It was a delight to meet him and Mr. Ochs and young Charles Merz and John Kieran and other leading lights of the great newspaper. At one of the daily luncheons held by the staff in the Times Annex, Dr. Finley was evidently so happy in his work, so full of the consciousness that he was equal to it (a totally different thing from conceit), that it was a delight to be with him.

"And although he held so many positions where he was 'the chief,' he was never a personage, he was always a person, a tremendous personality. One felt his vitality. He had the mind of a scholar and the heart of a boy.

"Like the late Leslie Stephen, whom he resembled in his love of learning and of the humanities, he was enormously fond of walking. He greatly preferred walking to playing games. I have never known anyone except Edward Payson Weston who walked so many miles. I have spoken of his walking between New York and Princeton; that seemed nothing remarkable to him. For he literally took it in his stride. He took tremendous walks all around the country; and whenever he crossed the ocean, which was rather often, he walked 25 miles every day on deck.

"He was a firm believer in the Greek and Latin as the best foundation for scholarship and for the good life; quotations from the classics came naturally from him. He was brought up on the Bible; he loved it; it was his daily food. Without being in the slightest degree sanctimonious, one felt his invincible integrity, his love of the best in character and social intercourse, and although a natural leader everyone instantly felt at ease with him because he was so full of human kindness.

"He loved good stories, was full of fun, and his laughter was antiseptic. He was affectionate; for many years all his letters to me were signed John Quill, with a pen picture of the quill and not the flower. He was a good man and is now with God."

Analysis of European War

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

ARTICLE BY RALPH McGILL

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and interesting analysis of the European conflict, which appears in an article by Mr. Ralph McGill, published in the Atlanta Constitution of Thursday, March 14. The article expresses the views which I hold on the proper relationship of this country to the war in Europe, and I believe the view which is held by millions of other Americans. I consider it a valuable contribution to sane thinking in these troublesome times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Atlanta (Ga.) Constitution of March 14, 1940]

ONE WORD MORE

(By Ralph McGill)

OH, SAY, CAN YOU SEE

Finland is defeated. An "honorable peace" has all but disintegrated the nation. It is a dying nation after another, and worse, "Munich."

The stubborn, courageous Finns, who, with a population no more than that of Georgia, held out for 3 months against millions of men and resources, have died in vain.

They fought for freedom, liberty, and democracy.

I am wondering, now the war of the north is done, if there are any left who have any illusions about this war in Europe?

Can there be those who truly believe it to be a war which had its origins in a clash between the ideologies, democracy and totalitarianism?

Are there those who believe we have a duty in this war because we are a democracy?

Finland was a democracy. One of the best.

Not until talk of a peace was imminent did the major democracies of Europe offer any help. It was then so patently only an effort to keep the Finns fighting no one was deceived. After offering help the Chamberlain government was careful to say there had been no official request for help.

When one of the finest and most courageous of the democracies was dying, there was no talk then by the brass hats of England and France of a fight for "democracy." The man in the street talked it, but not the governments.

This never has been, per se, a war for democracy. It isn't now.

It isn't even a war against Hitlerism. Hitlerism was all right in Austria, in the Sudeten territories of Czechoslovakia, and then in Czechoslovakia itself.

It was not until the war in Poland, and the extension of the economic control to the Danube and toward the Balkans generally, that Hitlerism became something for the Allies to fight.

It is a war for world trade and territory.

That ought to be very clear in the dawn's early light, with Finland dying.

ANOTHER GERMAN VICTORY

Hitler and Hitlerism are detestable. They are a very real menace to most everything that is decent and honorable in government and individuals.

This war, no matter who wins it, is going to be a very real tragedy to the entire world. It will be worse if Hitlerism wins.

But this war did not grow out of a clash with Hitlerism. Hitlerism was fostered in Austria. That was all right. Hitlerism was assisted to take Memel and the Sudeten territories. Hitlerism then took all of Czechoslovakia; and that, too, while regrettable, was all right with the Allies.

Now Hitler has assisted Russia to take Finland. Because Finland is gone. The Finns are left exactly as was Czechoslovakia. We will have, within a few weeks or months, an "affront" by the Finns. Russia will absorb the entire nation. Not a big job. It is a small nation.

It is another diplomatic triumph over the Chamberlain government, shaken by the German victories in the field and by the maneuvering of Russia and Germany into the now famous mutual assistance trade pact.

THE ALLIED "GUARANTIES"

What hope have the small nations which wished to avoid the German threat?

None at all. Once the Sudeten territory was taken the borders of Czechoslovakia were guaranteed. Poland was guaranteed. Finland believed she would have help. She got none. Finland was deceived. Cruelly. Of the lot, Finland was the only real democracy.

How does Rumania feel about her guarantee? What will Holland and Switzerland do, for instance, if Germany makes demands? Give in or seek a guarantee from the Allies?

What about Norway and Sweden? And Denmark?

Germany is going to make demands of them. This means increased supplies for Germany from Scandinavia. They can't trust the Allies.

Let's be realistic. Not sentimental.

"THE LAST BATTLE"

England will, I imagine and trust, follow the usual formula and "lose all the battles but the last one." The going will be more difficult with Finland gone.

But this seems to me the very best time, with Finland deceived and deserted, to assert once more that this is not our war; that we will lose no matter who wins in the collapse of economic fronts at the end of the war; that it is not a war for, by, and of democracy. If it had been, Finland long ago would have had the help offered the day before the treaty.

It is true that in this war for trade and territory the democratic nations find themselves engaged in a war with nations which would destroy democracy.

But to say that this is a war for democracy and therefore we belong to it, patently is so sentimental a bit of fantasy it is impossible to be accepted.

Actually, the only war for democracy which Europe has seen was the one which Finland waged against impossible odds, waiting for help, as did the Czechs and the Poles.

With the end of the war in Europe, whenever it does come, will come a world-wide break-down in economy. There will be severe tests put to our own economy and Government.

Let's be realistic about this thing in Europe.

If the time does come when the pressure is on us for getting into it with money or men, let's try to remember facts.

Farm Security Administration Loans in New York State

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

LETTER FROM ADMINISTRATOR OF THE FARM SECURITY ADMINISTRATION

Mr. MEAD. Mr. President, I desire to have appear in the RECORD the text of a letter received by me from the Administrator of the Farm Security Administration.

Mr. Alexander reports to me the results of a Nation-wide survey of the progress of the farm borrowers who have been benefited by the Farm Security Administration, with particular reference to New York State.

I think this is a tremendously significant record of achievement on the part of a vital agency of the Government not so widely advertised in my State.

Nearly $3,000,000 has been advanced to deserving farmers in the Empire State. The record of repayments on those loans is splendid, and it serves to indicate how substantially helpful this type of assistance can be when ably and thoughtfully administered.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
FARM SECURITY ADMINISTRATION,
Washington, March 12, 1940.

Hon. JAMES M. MEAD,
United States Senate.

DEAR SENATOR MEAD: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the State of New York.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 2,725 standard rehabilitation borrowers in your State had an average net income last year of $703.33 per family as compared with $565.39 in the year before they came to F. S. A. for help. This represents an increase of 24 percent.

Moreover, these families increased their average net worth, over and above all debts, by 10 percent.

In other words, these families not only have added $488,429 to the wealth of their communities but they also have increased their annual incomes by a total of $375,894. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the State.

At the same time the survey showed that the borrowers in your State already have repaid $727,575 into the Federal Treasury as installments on loans totaling $2,921,091. The typical rehabilitation family in New York has borrowed $1,071.96 and already has repaid $267. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant, because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else, and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems, which have been growing steadily worse for more than a generation, it is financed out of relief appropriations, and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged $59.64 per family, or a total of $162,519 over a 4-year period.

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling $1,392,973 have been negotiated for the farmers in New York. This represents a scale-down of 17.2 percent. As a direct result of these adjustments $42,510 in back taxes has been paid to local governmental agencies.

In helping rehabilitation borrowers to plan their farm operations, we always urge them to get away from one-crop farming and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your State produced $682,858 worth of goods for home consumption last year, as compared with only $612,962 worth before they came into the F. S. A. program.

These families canned 525,271 quarts of fruits and vegetables last year, or an average of 193 quarts per family. They also produced 1,053,976 gallons of milk for home consumption, an average of 387 gallons, and 158,323 tons of forage, an average of 58.10 tons. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which come to the F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start, we have made every effort to assist them in getting adequate-size farms. Consequently, the borrowers in New York are now operating an average of 123.8 acres, or an increase of 10 acres since they came on the program. This increased acreage has not added materially to the production of commercial crops, however, since virtually everything raised on it is consumed on the farm. It simply means a better diet and a better standard of living for these families.

Another main objective of Federal Security Administration is to help tenants and sharecroppers get more secure land-tenure arrangements, so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 651 tenants in your State have obtained written leases in place of verbal agreements.

In making the survey, our field workers found that there are 5,721 families in New York which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program, the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-size farms of their own.

While it has been necessary to confine loans to certain counties, because of the limited funds available, we had made 49 such loans in your State, totalling $267,810, up to the end of the last fiscal year. This year we are expecting to make about 53 Bankhead-Jones loans in New York, totalling approximately $310,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

WILL W. ALEXANDER,
Administrator.

Burke-Gillette Farm Bill

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE SIOUX CITY TRIBUNE

Mr. BURKE. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD an editorial from the Sioux City Tribune containing a brief but clear explanation of the Burke-Gillette farm bill, on which hearings will soon be commenced before a subcommittee of the Senate Committee on Agriculture and Forestry.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux City Tribune]

SETTING A FRIEND RIGHT

A farmer friend of the Tribune, C. H. Gibbs, of Newcastle, Nebr., has been studying a copy of the so-called Burke-Gillette farm bill which he says "certainly would not work without crop control and if tried as written would cost the Government billions unless used with the crop-control feature."

For the information of Mr. Gibbs and others, let it be said that the Burke-Gillette bill would not in any way interfere with the existing law. Congress still could appropriate as much money as it wanted to for conservation and attach any conditions to the use of the money it might see fit—just as at present.

The Burke-Gillette bill merely broadens the base of the commodity loan, making the loan available to every unit produced instead of limiting the loan privilege to those in compliance. It raises the minimum amount of such loans from 52 percent of parity to 75 percent of parity. It provides for the disposal of surpluses if, as, or when they occur. It contains a tariff provision that, regardless of how much or how little foreign products came in, would prevent them from selling in the American market at less than the parity price of the domestic product—the first "protective" tariff ever enjoyed by farmers.

We agree that if the Burke-Gillette bill were enacted it would be necessary to go before Congress each year and argue the necessity for conservation appropriations and production control—but that is necessary under the present law. The conservation money for this year still has not been voted, and one branch of Congress has already refused to vote an appropriation for the so-called parity-payment money for the next fiscal year.

The Burke-Gillette bill would increase the income of farmers by at least $2,750,000,000 per year without resort to direct taxation of consumption, because it would automatically lift prices to 100 percent of parity instead of 75 percent of parity where they now are and beyond which they are not likely to go under the present law.

Nor would the consumer be severely penalized, since the major portion of the cost of food, when delivered to the consumer, is represented by service. Whatever increase resulted would make less impression upon the consumer than processing or other forms of taxes. There would be no basis for complaints or disputes as under the old A. A. A.

As to the bill "costing the Government billions," that just couldn't happen, because the Government never would have "billions" invested, and means are provided for the Government recovering any sum that it might invest. Nothing in the present farm set-up would be destroyed; it would only be rendered more effective under the Burke-Gillette bill. Is that clear, Mr. Gibbs?

Policy Relating to Public Expenditures

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

STATEMENT BY MONTANANS, INC.

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement of policy relating to public expenditures issued by Montanans, Inc., an association of Montana businessmen.

I believe the reference therein to Federal expenditures, which are of a regenerative character, and which contribute to permanent relief of unemployment and improved standards of living, is especially worthy of consideration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF POLICY RELATING TO PUBLIC EXPENDITURES, ADOPTED BY MONTANANS, INC.

The Congress of the United States is to be commended for its present efforts to bring about economies in the expenditure of public funds.

Believing in the necessity of these economies, Montanans, Inc., recognizes that it is inconsistent to oppose appropriation cuts or to ask for increases in any particular items without first declaring a policy which will clearly establish its views.

The issue is one of determining where and how these cuts shall be made. Is it sound public policy to reduce all appropriations horizontally? Or is it better, from the standpoint of the welfare of agriculture, labor, and industry, that these reductions be proportioned according to the present and future needs of our country?

We believe the answer is obvious and that the latter is the sound policy.

The wisest course to pursue on some appropriation items may not as yet be too clear. But we believe that all Montana citizens will agree to the principle that fundamentally our existence as a nation, and consequently our first line of national defense, is in the intelligent conservation and use of natural resources.

No country is richer than the sum total of its natural resources—its timber, grass, water, soil, and minerals. We live in a war-torn world with powerful nations in a life-and-death struggle for the control of resources. The evidence is clear that neither this Nation, nor any nation, can long maintain a civilized society if it neglects its resources.

In Montana we live close to the soil. Primarily we are producers of raw products—timber, livestock, farm crops, and minerals, all of which come from the earth. In addition, we possess vast reaches of vacation country, much of which will remain in wilderness state for the enjoyment of the entire Nation.

It is essential to our security and prosperity as a people that first consideration be given to the protection, development, and wise use of these resources.

Temporary economic conditions may necessitate large expenditure for relief and subsidies of one kind or another. Such expenditures, however, are necessarily only palliatives for the relief of distressed people. While we recognize that these essential needs must be met, we appreciate the merits of the argument that they achieve nothing permanent. On the other hand, properly directed expenditures for conservation contribute toward permanent relief of unemployment and create opportunities for people to improve their standard of living. Included in such expenditures are the development and use of water resources; restoration and improvement of range lands; preservation of the productivity of our soils; fire protection for forest lands; replanting of cut-over or burned-over areas; development of outdoor recreational possibilities; readjustments in our dry-land farming communities based upon the recommendations of local people; insect-pest control; further explorations of our mineral resources; highway and forest road and trail construction, with

increased emphasis upon farm-to-market roads; and comparable undertakings that are basic to making a living and to enjoying the advantages which Montana can offer to her people.

Several agencies of the Federal Government have responsibility for the protection, restoration, and management of natural resources, either directly through their custody of Federal lands or indirectly through research, demonstration, advice, and encouragement of private initiative. Many of these agencies have been in existence for years. Their accomplishments and policies have merited the confidence and support of the people. The work of these agencies, so closely related to human welfare and the building up of national wealth, must go on uninterrupted by waves of economy. They should be adequately and properly financed. Budget balancing must be sought in expenditures not so definitely related to the very foundations upon which the future security of the Nation is to be built.

Montana's Congressmen and Senators are acquainted with the needs of the people in this State. We believe we should give them every encouragement in their efforts to maintain necessary expenditures at a reasonably high level. Where compromises must be made to harmonize expenditures with anticipated revenues, the reductions should be on items which can be deferred without impairing wealth-producing activities.

Politics From 1750 to 1940

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE ST. LOUIS STAR-TIMES OF MARCH 11, 1940

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the St. Louis Star-Times on Monday, March 11, 1940, under the headline "Politics from 1750 to 1940."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Star-Times of March 11, 1940]

POLITICS FROM 1750 TO 1940

In the year 1750 A. D., after debating the issue for 168 years, the British Parliament passed an act taking 11 days out of the calendar, to correct an error made by Julius Caesar.

This shift from the Julian to the Gregorian calendar precipitated one of the most acute political issues in British history. Opposition candidates arose, thundering in the voice of the people, "Give us back our 11 days." Parliament, they said, had robbed every man, woman, and child in England. Eleven days had been stolen from their lives. They must be restored and the villains who did it must be defeated.

The campaign for the recovery of the lost 11 days has stood for nearly 200 years as the most asinine exhibit in the history of political democracy, but it has been eclipsed in the year A. D. 1940 by the Republican campaign against the census questions.

The agitation against the census may fairly be said to eclipse the campaign for the recapture of the 11 days because the English voters were ignorant of science, illiterate and politically unschooled, lacking the marvels of radio and the newspapers, and minus the long discipline of American political hokum.

When Senator TOBEY started his anticensus campaign over the radio his Republican associates were inclined to laugh, thinking, perhaps, that Sir Toby Belch had returned to earth hunting for some new Aguecheek to make a fool of. When they saw how many were ready to be fooled, they began to shout as loudly as Senator TOBEY himself, until they could say of poor John Q. Public, in the words of Shakespeare's Sir Toby: "Why, thou hast put him in such a dream, that, when the image of it leaves him, he must run mad."

Most people think of the census simply as a count of persons. In reality that is a minor matter. For decades the chief use of the census has been for a national attack against poverty. That may, in one census, take the form of questions about mortgages. This year emphasis is put on unemployment, partial employment, and inadequate incomes.

When President Roosevelt said that one-third of the Nation was "ill-fed, ill-clothed, and ill-housed," when he said that the W. P. A. was needed, and when he guessed at the number of unemployed, Republican critics challenged him to take a census of unemployment and find out the facts. Without it, they said, there would be a waste of billions in relief money.

This year the census is being held. It seeks the information asked for both by the critics of the New Deal and its advocates, including a query which must furnish the foundation of any intelligent attack on poverty, How much wages did the family receive last year?

That question, which goes to the heart of the poverty problem in America, is singled out for attack by Senator TOBEY and his colleagues. The answers are made secret by law—the same law that protected farmers when they told Republican census takers what their mortgages were—but this is pictured as a trap. The 1940 census law provides a 60-day jail sentence for refusal to answer questions—the same penalty that was in the Republican Census Act of 1930—but it is pictured now as the tyranny of a Roosevelt dictatorship.

In such political strategy there are the elements of a triple tragedy:

First. That political principles of a major party sink so low as to sanction a resort to such demagogy.

Second. That public intelligence is so low as to make it worth while to use the issue.

Third. That, although we may feel sure the public will see through the gross dishonesty of it before the political campaign is over, it is likely to wreck the unemployment feature of the census, either by causing the Census Bureau to abandon the vital questions or by causing too many people to refuse to answer.

Like England's campaign cry of 1750, "Give us back our 11 days," this hullaballoo about the 1940 census may be only comic relief in the onward march of democracy. The way it affects the functioning of democracy and the callousness it reveals toward the plight of those for whose benefit the questions are being asked suggest a more serious import.

The 1940 Census

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE SHORE LINE TIMES, GUILFORD, CONN.

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Shore Line Times, published in Guilford, Conn., on Thursday, March 14, 1940, under the heading "We Pity the Census Taker."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Shore Line Times, Guilford, Conn., March 14, 1940]

WE PITY THE CENSUS TAKER

All the fuss about the census seems to us to be something of a tempest in a teapot. We can't help but believe that the furious debate and the acrimonious incriminations being flung back and forth in Congress are largely political.

The national census and the census of distribution are both tremendously important pieces of research—about the most important job, along that line, done by the Government today. Upon the statistics of the census, our industrial concerns and our distributors base their plans for development. There can be no argument but that the census figures are used by more people than any other governmental information.

The part of the census which seems to be arousing the most ire, seems to be the questions regarding personal income. Those who rant most vigorously—who object—do so on the basis that the information represents an invasion of private rights.

For a considerable number of years we have been quite accustomed to giving the Government the most intimate details of income on our income-tax returns. Why we should strenuously balk in giving the census taker, more or less the same information (although by no means as detailed) as we do the income-tax collector, we can't quite see.

It's a bit unfortunate, perhaps, that the census question comes up during a Presidential year, when political parties are ready to "pop-off" on any and all occasions and on any excuse. In all probability there wouldn't have been nearly as many fireworks, had the census been taken a year ago or a year or two hence.

The unfortunate part of the whole thing is that the violent discussion regarding the census is bound to have the tendency of causing a large number of people to be uncooperative when the census taker reaches their door. It's a hard—a difficult job at best. These questions regarding the census which have been raised by various of our lawmakers will have their effect upon many citizens, who will be apt to resent giving some of the information asked for.

We pity the census taker this year.

America's Attitude Toward Europe

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 15 (legislative day of Monday, March 4), 1940

ARTICLE BY J. R. BURROW

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article by Mr. J. R. Burrow, president of the Central National Bank and Central Trust Co., Topeka, Kans., entitled "America's Biggest Job Is to Save Itself, Not Europe." This very excellent article was published in the Farmers' Exchange, a weekly publication of New Paris, Ind., issue of March 8, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Farmers' Exchange, New Paris, Ind.]

AMERICA'S BIG JOB IS TO SAVE ITSELF, NOT EUROPE—TO SACRIFICE HUMANITY AND WRECK OUR OWN CHANCE TO SURVIVE BY GOING TO WAR WOULD BE FOLLY BORDERING ON INSANITY

(By J. R. Burrow, president, Central National Bank and Central Trust Co., Topeka, Kans.)

The civilization of western Europe, being precisely the result of civilizing influences working through all past time, is the most precious heritage of mankind. The French, the German, and the English peoples are the most glorious products of that civilization. They developed the grandest languages, the loveliest literature, the finest music, and the very best in all the arts. They brought the arts to the highest development yet achieved by man.

These peoples at home or abroad developed law, philosophy, and science. They relieved suffering and alleviated poverty beyond anything known before them. They raised the standard of living of the common man to a degree hardly comprehensible to our generation, the poor of which were born rich in comforts as compared even to our own fathers, let alone to our grandfathers. Yet the French, the English, and the Germans are now fighting among themselves to the death, like common beasts of the jungle. Why they are doing so, why they cannot better govern their own conduct, there is not now time to inquire. The fact is: The very finest flower of civilization is destroying itself before our very eyes. Why should America enter that gruesome alliance for suicide and do likewise?

That the peoples of England, France, and Germany do not want war is, thank God, admitted by everybody this time. Must it not inevitably follow that they are unable to control their own politicians? (Can we control ours any better?) If the people of western Europe—the most intelligent, civilized, and noble the race has produced—cannot keep their own governments from waging a self-destroying war the people do not want, can we, the American people, keep them from doing so?

No, America; your job is not to save Europe. Your job is to save yourself. You have a long way to go to do that. You must establish a government here that all men can trust—a government that knows its place and stays in it—a government that is proud to occupy a servant's place—to be the people's servant and not seek to become its master. If you can and do accomplish that, America, then your name will be blessed. But if you enter the war, you will destroy your own freedom and your opportunity to serve either yourself or humanity. You will become a dictatorship instead of a destroyer of dictatorships. If you enter the war, your history as a conservator of freedom will have been written, and "a futile experiment" will describe your short existence in the books of the ages.

I once thought the only sound excuse there could ever be for our again going to war in Europe would be to save the British Empire from collapse, but I no longer believe that would be a sound reason for participation. Was English Government capable of preventing the World War? Could England, victorious, write a peace treaty under which Europe could exist in peace? Could England, governing half the world, govern wisely enough to prevent the collapse of world trade which brought economic calamity to every country in the world? Was England able to prevent this new world war? No. There is no time to analyze the reasons, but the answer must inevitably be "No." Then why destroy America in an effort to prolong the life of the British Empire? Maybe some rearrangement of power and control would be better for everybody after all.

I yield to no man in my love for England and all the gorgeous things she stands for in the lives of all true Americans and of civilized people everywhere. But I love America more than I do England, and entering the war would be the end of American destiny. We would merely become another dictatorship country, with bloody revolution just around the corner.

War is not the answer. No true American could face 10 dictators in Europe with half the hate he'd have for 1 in Washington. No. Let's leave the war to those who couldn't master their own governments and do our bit for mankind by learning before it is too late how best to master ours. Peoples don't want war. How can peoples recover control of governments? That's our problem. Let's address ourselves to it without sentimentalism and with dispatch. There's nothing wrong with mankind. The trouble is with governments. Its only purpose is to protect the lives and property of its citizens. With its functions restricted to that, there couldn't be any war anywhere. The failure to comprehend this basic political principle may yet cost America all its hard-won freedom and the whole human race its chance to remain civilized.

There may be many to disagree with my view that we should not support England and France, especially if they get into dire straits. One broadcaster said "America could never stand it to have Germany bring England to her knees." Well, that would be hard for me to take, too, but it wouldn't have worried George Washington at Valley Forge. It wouldn't have worried our patriotic forebears in the War of 1812. It might not have worried Lincoln too much during the Civil War when England tried to evade our blockade of the South because she wanted southern cotton. The fact is, we all love England and all that dear word means to us of poetry, of common law, and of every kind of tradition that is good as well as native to us, so very, very much that it's hard to look plain facts in the face.

Biggest Lobby in the History of the World

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. PATMAN. Mr. Speaker, we are opposed in our fight against interstate chain stores by a fourteen and one-half billion dollar lobby. The biggest lobby in the history of the world.

Mr. Carl Byoir, president of Carl Byoir Associates, Inc., and public relations counsel for the Atlantic & Pacific Tea Co., made a speech at Rye, N. Y., September 19, 1938, before the members of the National Association of Chain Drug Stores, in which he, according to the printed proceedings, stated:

I have clients in American industry with assets of $14,500,000,000.

How much is $14,500,000,000? It is twice as much as all the money in circulation in the United States. It is equal to the value of all the retail stores in the United States. It is equal to the value of all the public utilities in the United States. I estimate that this vast aggregation of wealth includes 90 percent of all the national advertising in this country.

Why do Collier's, Saturday Evening Post, Chicago Tribune, and many other large publications want big concerns instead of small ones? The answer is simple. If the citizens of every town owned its own utilities, these publications would not get thousands of dollars a day or week for full-page advertisements from one utility concern. Instead the local newspapers all over the country would benefit from such advertising. If any line of business or industry is owned or controlled by a few people in one city, the owners of the big newspapers and magazines have little trouble and practically no expense obtaining advertising of tremendous value to them. Whereas if such business is separated into smaller units and scattered over the country, the smaller newspapers get more of the advertising and the larger ones less. It is in the selfish interest of the owners of the means of communication, including the newspaper and magazine, the radio, and the news reel, that a few people control all business, industry, and banking. Therefore they may be expected to oppose any proposed law that will retard, restrict, or prevent absentee or foreign ownership of business.

WHY THE FOURTEEN-AND-ONE-HALF-BILLION-DOLLAR BOAST

This fourteen-billion-and-five-hundred-million statement by Mr. Byoir was evidently made for the following purposes:

First. To let the newspapers of the country know that he controls enough advertising to determine whether or not any one newspaper which is dependent upon advertising is able to survive in business. By making this threat, newspapers that are dependent upon advertising for support will be very reluctant to fail to print and fail to give good publicity to any statement that is sent to them by Mr. Carl Byoir and will very quickly throw into the wastebasket anything against his interest.

Second. To threaten every member of the legislatures in all of the States, Members of the United States Congress, and all other public officials who have the power to restrict or curb absentee ownership of business. It advises them of his influence over the press and lets them know that it is within his power to injure them politically if they oppose his Wall Street clients.

Third. To advise the country that he possesses tremendous power over means of communication to the people, which results in obtaining favorable publicity for what he wants and the "playing down" or the stopping of all news that might be helpful to independent business.

Mr. Byoir's statement is an admission that the rich people of the Nation have pooled their wealth, their advertising, and their influence for the purpose of deceiving the people.

Mr. Byoir said in the same speech:

> It is necessary to create organization to bring that force of public opinion to bear on the legislators or Congressmen or elected public officials. That is a thing that remains yet to be done.

In the same speech he quoted:

> If I were a politician and I wanted to make a public reputation, and I wanted to be sure that, in the present state of public opinion, I would have the support of the great majority of the American people, I would pick the Patman bill.

In other words, Mr. Byoir says that the Patman bill is right; that public opinion will support it; that public men can make a great name for themselves by advocating it; but he, Mr. Carl Byoir, is such an expert at directing the minds of the American people and teaching them what to think and what to believe that he can take the millions of dollars furnished to him each year for that purpose, backed by the advertising of the concerns worth fourteen and one-half billion dollars, and cause the American people to oppose a bill that is in the interest of the general welfare of all the people.

His plan evidently contemplates getting his statements published and read by the people and at the same time preventing the statements from those in favor of the proposal from reaching the people.

DECEITFUL PROPAGANDA A POWERFUL WEAPON

Distortion and deceit accompanied by suppression of opponents' views represent a very powerful weapon. The people are getting wise to deceitful propaganda.

Mr. Byoir has not agreed to make Congressmen believe that black is white or that white is black, but he has taken upon himself a task just as extraordinary, and that is to make Congressmen believe that it is in the interest of the country for local business to be destroyed, private initiative crushed and the wealth of the Nation concentrated into a few hands.

In addressing that group of chain-store representatives he said:

> You had better sit down and assess yourselves at $20, $40, $60, or $80 a store, and had better put it in a fund.

That was tantamount to saying that they should immediately raise from three to twelve million dollars and put it in a fund. This fund would be in addition to the one already created by the Atlantic & Pacific Tea Co. which aggregates millions of dollars. They are people who believe they can take a large slush fund and control State legislatures and Congress.

DISCLOSURES OF CONGRESSIONAL INVESTIGATING COMMITTEE

When I was chairman of a congressional committee in 1935 and 1936 investigating large-scale buying and selling, our committee discovered from testimony that among the things many of the people who are now opposing us in this fight against an interstate store monopoly were guilty of, were the following:

(1) Conspiracy to obtain control of retail distribution in America.

(2) Stopped the showing of a picture, Forward America, which was favorable to independent business.

(3) Attempted through influence to have our committee appoint as our principal investigator a man who, it was later discovered, was employed by chain-store interests under investigation.

(4) Organized what they called a "cornstalk brigade," which was composed of key farm leaders whom they paid to go before legislatures and pose as farmers' representatives for the purpose of defeating certain legislation.

(5) Employed influential men in each State who were close to members of the legislature and the Governor and who could stop legislation they were opposed to.

(6) They admitted that their attorneys were instructed if they could not succeed in defeating a bill in a State legislature to get some amendment adopted which sounded good, but would cause the law to be declared unconstitutional if passed.

(7) Employed influential people on contingent basis to defeat legislation. That is, if the bill did not pass a certain session, they received a certain large amount of money. If it did pass, they did not receive anything.

(8) Faked consumer groups were organized to deceive the people, and at some meetings held by certain groups every person attending was on the pay roll of the interstate corporate chains.

(9) Schools were held to teach their representatives how to deceive the people.

(10) They had unlimited funds, which were used for bribery, deceit, trickery, and treachery.

(11) They brought pressure to bear on newspapers that carried their advertising to print nothing about independent business, but boost absentee-owned business.

ABSENTEE AND FOREIGN OWNERSHIP

Interstate chains are making ghost towns all over America. They are especially objectionable for the following reasons:

First. Interstate chain stores cause three major evils—monopoly, community destruction, and money and credit concentration.

Second. Foreign-owned chain stores constitute conspiracy by a few big bankers to obtain control of retail distribution, national finances, and create a private monopoly.

Third. The few men who control the few banks that rule the corporate and much of the Nation's private wealth are interlocked in directorates with the few big chain-store systems; 24 banks own one-third of the banking resources of the entire Nation, and 13 of the 24 are in New York City.

Fourth. Farmers are being ruined by the interstate chain-store system. The Department of Agriculture reported facts which prove that under the interstate chain-store system consumers pay more and farmers get less. Low-income groups, instead of being helped by the chains, are hard hit by them.

Fifth. The octopus-like foreign-owned chains are invading small cities and towns and making unsafe all lines of business.

Sixth. We must crush monopoly or monopoly will crush us.

H. R. 1 intended to curb interstate chains will be considered by the Committee on Ways and Means commencing March 27.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. BARKLEY. Mr. President, I ask unanimous consent to insert in the RECORD a very able radio address delivered last evening on the American Forum of the Air by the senior Senator from Illinois [Mr. LUCAS], discussing the reciprocal-trade agreements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the short time allotted me to discuss the reciprocal-trade agreements I shall base my plea for the continuation of this program upon undisputed facts, and not upon some theoretical or speculative doctrine. Having been born and reared on the farm, and being the owner of farm lands in the Corn Belt district of Illinois, I shall confine my remarks tonight strictly to agriculture.

No one can deny that this program, under the leadership of the Honorable Cordell Hull, Secretary of State, was inaugurated not only in the genuine interest of agriculture, but industry, labor, and all America as well.

My beloved and distinguished colleague, the Honorable ARTHUR CAPPER, who is on the negative side of this debate, represents, in the United States Senate, the great State of Kansas. Kansas is not only famous for the statesmen she produces, but Mother Nature has supplied her with a soil and climate that produces great quantities of wheat, and permits herds of cattle to thrive and prosper.

It is therefore logical and proper that we first discuss wheat. Have trade agreements helped or hurt the wheat farmer of Kansas, Illinois, and other wheat-producing States? Listen, my friends, to these cold, hard facts, and as fair and impartial American jurors you render the verdict.

Complaint is made about the excessive importation of wheat, but remember that no trade agreement has lowered the tariff of 42 cents per bushel on wheat for human consumption placed thereon by the Smoot-Hawley Tariff Act, passed under the last Republican administration. However, the program has removed a 6-percent preferential tariff on wheat exported to the United Kingdom which was made by that country originally in retaliation for the Smoot-Hawley Tariff Act.

Has the program helped our exports? Following the drought years of 1934 and 1936, when we consumed practically all the wheat we produced, we find this country exporting in 1937–38 over 100,000,000 bushels; in 1938–39, 107,000,000 bushels; and during the calendar year 1939 we exported 300 times more wheat than imported.

The average farm price of wheat in the crop year of 1931–32 was 39 cents a bushel; in the crop year 1939–40, 67.6 cents per bushel; and today wheat is selling at the farmer's elevator for from 90 to 95 cents per bushel.

With these facts, you answer the question, Mr. Wheat Grower, as to whether you are better off today under the program of trade treaties, or would you rather try some new and noble experiment which, judging from the utterances of many of those who oppose this plan, would return us to the tariff days of the Hoover era.

From the Kansas wheat fields let us turn to the cattlemen of the West. Have they been injured by these trade agreements? You be the judge. In our first agreement with Canada in 1936 we reduced the duty and agreed to permit 156,000 head of cattle weighing over 700 pounds to come into this country annually at the reduced rate, which is approximately the same rate as levied in the Fordney-McCumber Tariff Act of 1921. In 1939 we made another agreement with Canada replacing the former, permitting 225,000 head of cattle to come in at the reduced rate, the latter amount being about 1.5 percent of our total slaughter. In order to keep these imports from glutting the market at any particular time we limited the imports in any one quarter to not more than 60,000 head.

Has this trade agreement destroyed the cattlemen's market? Is there an American farmer who believes that if the Canadian farmer exports a steer and a half into the United States such a shipment will have any effect upon the price the American farmer receives for his 98½ steers? Annual prices received by the American cattle producers are primarily determined by the number of domestic cattle produced plus the economic conditions which affect buyers' consuming power.

Let us examine the record. In 1934, the first year of the program, the average price received by the farmers for beef cattle was $4.13 per hundred pounds; in 1935, $6.06 per hundred pounds; in 1936, $5.82 per hundred pounds; in 1937, $7.01 per hundred pounds; in 1938, $6.56 per hundred pounds; in 1939, $6.87 per hundred pounds.

These prices, my friends, are on the very rim of parity. And I am advised by the Department of Agriculture that in the past year not a single month has gone by that the cattleman has not received at least parity price for his beef cattle.

I respectfully urge that the cattlemen of this Nation think this thing through for themselves. Be not deceived by misinformation and half-baked statistics. Compare these near-parity prices with the $3.75 per hundred pounds you received in 1933.

Compare your total cash income for cattle in 1932 of $620,600,000 with $1,248,700,000 in 1939, an increase of over 100 percent.

From the cattlemen, let me turn to my own section, famous for corn and hogs. This is one of the largest divisions of American farming. Meat processing is an outstanding American industry. The American farmer has 99 percent of the American pork market. What he needs is an outlet for his surplus hog products. Have the trade agreements helped or injured the corn-hog farmer? Again let us examine the record for facts.

Since 1934, 16 trade-agreement countries have either reduced or entirely abolished their tariff on American pork and lard. Let me give you one or two examples as to how this is working.

The first treaty was with Cuba. Under this agreement Cuban imports of American hams, bacon, shoulders, and salt pork rose from $200,000 in 1933 to $600,000 in 1937; Cuban lard imports from $500,000 in 1933 to $4,900,000 in 1937.

The 1939 program with the United Kingdom is still in the early stages of operation, but under that agreement the 10-percent tariff on American lard exported to the kingdom is abolished. This agreement also gives a quota for American hams alone greater than the quota under the Smoot-Hawley Act upon hams, bacon, shoulders, sides, and other pork-cured products combined.

Recovering from the drought of 1934 and 1936, we find for the year ending June 30, 1938, American exports of pork and lard $8,500,000 more than the year before. In 1938 the domestic pork supplied by the American producer, excluding lard, was 7,563,000 pounds. The total pork imported during that year was 52,413 pounds, or about 1 percent of the domestic pork, and the largest part of the 1 percent was the result of the continued demand for luxury products, such as Polish canned hams.

Is there a corn-hog farmer in the Midwest who believes that the importation of one ham, or one shoulder, or one live hog will affect the market of the American farmer who sells 99 hams, or 99 shoulders, or 99 hogs? The bugaboo "Stop importing foreign pork" now being raised in a campaign year is political buncombe to hoodwink the corn-hog farmer. But, my friends, the farmers are better posted upon these vital questions than most politicians. They understand that what controls the price of pork is what they can get for their exportable surplus. This is one year when the farmer will demand facts, not theories, bald assertions, glittering promises, and bobtailed statistics.

With respect to corn, let me make this one emphatic observation: Any corn imported from Argentina or any other country comes in at the same tariff rates established by the Smoot-Hawley Act of 1930. Trade agreements have nothing to do with this.

And lastly, let me say a word about the dairy farmer. Remember he has 99 percent of the domestic market. His annual income has been approximately $300,000,000 more than the low-income years of 1932 and 1933. Exports of dairy products have increased in the last 4 years from $4,114,000 in 1935 to $7,100,000 in 1939. I ask you whether or not the trade agreements have injured the dairy farmer?

My friends, under the leadership of the Honorable Cordell Hull, conscientious and sincere Secretary of State, and the Honorable Henry A. Wallace, brilliant and resourceful Secretary of Agriculture, the farm program of America has made real progress during the last 6 years notwithstanding the many obstacles that have been placed in its path. No administration in all our history has been so interested in the farmer's cause. The President has truly been the farmer's friend. I repeat once more to independent, intelligent, thinking farmers throughout the country: Think things through for yourselves.

Forty-fourth Anniversary of the Founding of the Volunteers of America

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

STATEMENT BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a few observa-

tions which I have made in writing about the Volunteers of America. I take this means of giving expression to my thoughts at this hour rather than take up the time of the Senate at a time when we are considering legislation in the interest of the farmers.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

March 9 marked the forty-fourth anniversary of the founding of the Volunteers of America, a religious and philanthropic organization which has extended the hand of aid and practical sympathy to the needy throughout the Nation during these many years.

I deem it appropriate, therefore, at this time to call to the attention of my colleagues the record of service of this far-flung organization and to voice what I am confident is the hope of all here that it will continue for many years to bring physical comfort and spiritual succor to those of our people who through force of circumstances find themselves at a material disadvantage or spiritually bereft.

It is a happy thought that Gen. Ballington Booth and Mrs. Maude Booth, the inspiration and founders of the Volunteers, are still the active leaders of the tremendous force which they created for the common good. Both have grown old in the service of their fellow man. Both have seen the organization which they created in New York on March 9, 1896, spread over the entire United States, until now, as they look back on lives well spent, they can visualize the gray uniforms of those they lead ministering to the poor in every city and State in this country.

To those of my colleagues who may not be familiar with the great variety of services which the Volunteers render to our people, may I suggest that they visit agencies maintained and operated here in the Nation's Capital. The Volunteers have here an institution which I believe to be unique in this country, if not in the world—the Girls' Club and Hospice at 1526 Sixteenth Street NW. In a beautiful old mansion there is a haven of refuge for girls and women who find themselves in destitute circumstances. Aided by the women's clubs of Washington and many public-spirited citizens, the Volunteers extend a helping hand in the form of a happy home life to those who otherwise would be in most desperate straits.

We well know the trials and the tribulations and temptations which beset the path of girls and women who, without proper homes, find themselves without jobs and without a means of livelihood. If this hospice sheltered only one such girl and gave her the chance to get on her feet and restore herself to a happy sphere of life it would more than command the respect of all.

Somewhat closer to the Capitol, many of you have noticed the relief mission maintained by the Volunteers on Pennsylvania Avenue only a few blocks from here. In this mission are sheltered and fed hundreds of men, women, and children every day. Many of us see this great work in progress as we go about our duties, and I think it would be well if all of us on our way to and from these Halls would stop at that building and observe at first hand the problems which face so many of our people throughout the Nation.

I should like to comment especially on that phase of the work which is particularly under the charge of Mrs. Booth, the activity of the Volunteer Prison League. It is a work which has deservedly earned her the title "Little Mother of the Prisoners."

In this activity Mrs. Booth is doing a tremendous job of aiding men and women to go straight after they are released from penal institutions. Maintaining direct contact with thousands of them, she helps them to get jobs and sees that they are given a chance to come back to again become useful and respected citizens.

Directly related to this work—so needful if our crime rate is to be really curtailed—is the aid which the Volunteers in the various communities render to the families of prisoners. Many times these families, although completely innocent of any wrongdoing, actually suffer more than the man who is sent to prison. Often they are left destitute. To them the Volunteers lend a helping hand. It is a necessary, a vital work.

Let me cite a few figures which show a few of the activities which this organization carried on during the last 5-year period; 2,607,211 free lodgings were provided to needy or unemployed; 15,768,648 free meals were furnished to the worthy poor; 7,825,561 free lunches of soup, bread, and milk were given; 108,729 were given medical aid; 61,612 stranded persons were given transportation; 3,130,944 garments and shoes were distributed; 228,487 days of enjoyment at fresh-air camps were furnished; and 677,903 Christmas and Thanksgiving meals were provided.

Such organizations as this and the support which they receive typify the finest things in American life. Without them our country would indeed be in a pitiful condition, as they are doing a marvelous work.

I feel, therefore, proud of the privilege of paying this small tribute to Gen. and Mrs. Ballington Booth and their great organization on this anniversary.

Charitable Irish Society

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. HENRY CABOT LODGE, JR., OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask leave to have inserted in the Appendix of the CONGRESSIONAL RECORD an inspiring and able address, in response to the toast The United States of America, delivered by my colleague the junior Senator from Massachusetts [Mr. LODGE] at the banquet of the Charitable Irish Society in Boston on March 16, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am extremely honored to be selected to respond to the toast The United States of America at the two hundred and third annual meeting of this ancient, historic, and distinguished society. In responding to this salutation my mind goes back to the dominant part which they have played in building our common country. As a matter of fact, America was not the only stage on which Irishmen have played a large part. I am indebted to Ripley's Believe It or Not for a striking episode which I think is symbolic of what the men of Irish extraction have done:

"In the time of Queen Victoria, in the year 1848, nine young Irish rebels were tried and convicted in Her Majesty's courts of insurrection and treason and sentenced to death. The young Queen's heart was touched to pity in acting upon the sentences. She was moved to commute the sentences upon condition that they should leave Ireland forever. The Prime Minister urged that they be sent to Australia, a British colony, where they would not participate in politics, and where colonists were needed. Twenty-six years later Prime Minister Disraeli, in conferring with the Queen, reported that—

" 'Sir Charles Duffy is the same Charles Duffy banished from Ireland with eight others 26 years ago. He is now Prime Minister of Australia. Thomas Francis Meagher, another, is now Governor of the State of Montana. Terence McManus and Patrick Donahue are brigadier generals in the United States Army. Richard O'Gorman went to Newfoundland and is now Governor General. Morris Lyons is attorney general of Australia, and Michael Ireland will shortly succeed him in that office. John Mitchell is doing well in New York and is influential in Tammany Hall—he was the grandfather of John Purroy Mitchel, for 8 years mayor of the city of New York. The ninth rebel is Thomas D'Arcy McGee, member of Parliament from Montreal, minister of agriculture, and president of the Council of the Dominion of Canada.' "

But we do not need to look outside of our own borders. We all know about Gen. John Sullivan, who was in command at Charlestown, and Gov. James Sullivan. I have with my own eyes seen the name of Colonel Dillon and those of his regiment on the base of the great battle monument at Yorktown. We think of Gen. Jeremiah O'Brien and his Massachusetts Navy, and John Barry, of Wexford, who said, "Not the value and command of the whole British Fleet can seduce me from the cause of my country."

Every day that Congress is in session I go past a building which houses a well-known American, and of which James Hoban, a man of Irish descent, was the architect. I refer to the White House. Contemporary with him were the numerous signers of the Declaration of Independence who were of Irish stock. It is indeed no wonder that Lord Mountjoy stated in Parliament, "England has lost America through the exertion of Irish immigrants."

In that greatest of all tests of our national spirit—the Civil War—this tradition continued sturdy and strong, particularly so insofar as Massachusetts was concerned. The colonel of the Ninth Massachusetts Regiment at the Battle of the Wilderness was Patrick Guiney. Not a spring goes by since I have been in Washington that I do not go to the battlefield of Gettysburg and see, only a stone's throw from the great Celtic cross erected to the memory of the soldiers of Irish extraction, the tablets in memory of the Second Massachusetts Brigade, commanded by Col. Patrick Kelly, and the Twenty-eighth Massachusetts Regiment, commanded by Col. Richard Byrnes. On the larger canvas are inscribed forever the names of such men as Kearny, Kilpatrick, Sheridan, and Meade. They are the spiritual ancestors of the brothers-in-arms of men like the late Michael J. Perkins, of South Boston, who was one of

three in Massachusetts to receive the Congressional Medal of Honor as a result of the World War.

It is with profound gratification that we can be here tonight conscious of the fact that the contribution which men of Irish blood have made to this country can now be made for the building up of Ireland herself. It is true that Ireland still has her problems. It was, nevertheless, clear to me when I visited Ireland in September 1938 that real progress was being made in solving these problems and that everyone whom I met in Ireland in every walk of life had a feeling of confidence and hope—a willingness to endure privations because of the certainty that the nation would be richly repaid in the end.

I was interested in the realistic and intelligent steps which were being taken to develop Ireland's economic life. In the dairy industry, for example, obstacles which have proved insurmountable in many European countries were overcome in order that Irish dairies might take a high place among the nations of the world as producers of pure, healthful milk. I was impressed with the moderation with which erstwhile enemies were treated. One example was the manner in which the Government paid off the old landlords so that Irishmen of the future might own their own farms and look upon themselves as self-respecting men. I may add that this rectitude in their internal financial dealings is carried out into the foreign field. Ireland stands as one of those rare nations which pays its debts.

When I called on Prime Minister DeValera I could not help but be impressed by the fact that in his waiting room were only two objects of adornment. One was a facsimile of our Declaration of Independence. The other was a statue of Abraham Lincoln. This was symbolic of the attitude of the people. As soon as anyone discovered that I was an American I was given the most cordial and hearty welcome that could be imagined. Yes; they like America. America likes them. Let us all hope that this friendship between Ireland and the United States will always continue. I shall do all that I humbly can to strengthen and promote it.

I take the liberty of going back this way over the past because I think it will help us to see the future. I am emboldened to do so because of all peoples in the world the Irishman is one who does not forget the past.

Chief Justice Thomas J. Brogan, of the Supreme Court of the State of New Jersey, put it this way:

"Now, what is it that differs the Irishman from the other members of the family of Celts, for different he is? His nature is different from any other that ever came from the hand of God. His is a fanciful, poetic, valiant, spiritual nature. He lives in the present, but in spirit he dwells in the past, and that past for him is still a living actuality.

"Not so with the rest of the British Isles. The Scot will recall the disaster of Flodden Field, will enthuse over Bannockburn, will weep over his betrayal of Mary Stuart, his martyred queen, will sit up all night supping sorrow or joy, but next day he is his practical self again.

"The Welshman plods along thinking not of the days of his greatness; the Englishman will recall his yesteryear in history, the days of the seven kingdoms, the Wars of the Roses, but not for long—the spirit of utility in a moment will have asserted itself.

"But Ireland events do not pass so rapidly. Ireland has her traditions and she meditates. Monuments of war, of nobility, of religion cover the land. The poorest peasant lingers in the noonday shadows of historic walls and towers that tell him his forefathers were not slaves, but that they lived as heroes and died as men. He plows the fields or walks the country roads with scenes before him that have been immortalized by his poets, and lying down in his humble cottage at night, he hears the wind rushing through the ancient battlements, in a faint voice, a voice that stirs him to the very depths of his soul, for it brings back to his mind the voices of scholars, of heroes, and of saints."

And so, when we survey this past, and realize the heroism and the bravery it enshrines, we are inspired to do all that we can to be worthy of it.

To make ours a land of opportunity for our young men and women.

To maintain a civilization in which the aged may have real security.

To uphold with every means at our disposal that glorious American tradition that men shall be judged on their merits, and that insofar as government is concerned no one shall be prejudiced because of his race.

To make every conceivable sacrifice to the end that freedom of religious worship may be forever maintained.

And, as an indispensible foundation for all these great objectives to keep our Nation at peace, and never draw the sword except for a vital American interest. Thus, I think we can attempt to be deserving of these acts of heroism and self-sacrifice which men of Irish stock—this precious, stimulating, activating leaven—have laid upon our national altar.

No better epitome of what the United States of America should be has been written than that composed by John Boyle O'Reilly, when he said:

"That nations grow where every class unites
For common interests and common rights;
Where no caste barrier stays the poor man's son,
Till step by step the topmost height is won;
Where every hand subscribes to every rule,
And free as air are voice and vote and school."

Yes, we can be proud to think of the contribution of America's sons of Irish extraction, which from the beginning has been so integral a part of our national life. Let us remember that the password adopted by George Washington 164 years ago tonight was "Saint Patrick." Let us, in a modern spirit, close with these lines by O'Reilly and raise our glasses, saying:

"Then drink, all her sons—be we Keltic or Danish,
Or Norman or Saxon—one mantle was o'er us;
Let race lines, and creed lines, and every line vanish—
We drink as the Gael: 'To the Mother that bore us.'"

Census of 1940

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

TELEGRAM, LETTERS, AND EDITORIALS CONCERNING THE CENSUS

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram which I sent to the President of the United States on the 15th instant, a letter written to me by Hon. Harry L. Hopkins, Secretary of Commerce, dated the 16th instant, and my reply thereto, dated yesterday, together with several editorials on the matter of the 1940 census.

There being no objection, the letters and editorials were ordered to be printed in the RECORD, as follows:

[Telegram sent to the President on March 15, 1940, by Senator CHARLES W. TOBEY, of New Hampshire]

The PRESIDENT,
Washington, D. C.:

My attention has been called to your statement regarding the disputed income questions in the census questionnaire, that for the first time in your knowledge a United States Senator has openly advised the American people to violate the law and held himself out as the one person who will not answer. In view of the serious nature of your charge I am obliged to ask you to kindly advise me what law you refer to. In making your reply please bear in mind the following:

1. That the Senate Committee on Commerce by official action has determined that the income questions are illegal and were never authorized by the Congress;

2. Article IV of the Bill of Rights says: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated";

3. The words of the Supreme Court of the United States: "That the principles that embody the essence of constitutional liberty and security forbid all invasions on the part of the Government and its employees of the sanctity of a man's home and the privacy of his life. Of all the rights of a citizen, few are of greater importance or more essential to his peace and happiness than the right of personal security and that involves not merely protection for his person from assault but exemption of his private affairs, books, and papers from the inspection and scrutiny of others. Without the enforcement of this right all others would lose half their value."

4. If it is your position that an unauthorized ruling of a departmental bureau constitutes a law of the United States, then it is important that the people recall that such were the tactics used by Hitler in gaining powers never sanctioned by the people. It is time to call a halt to attempts of departments to arrogate to themselves the function of a legislative body, especially in matters which threaten the people of this free country with imprisonment for not bowing to the will of a bureau.

CHARLES W. TOBEY,
United States Senator.

THE SECRETARY OF COMMERCE,
Washington, March 16, 1940.

Hon. CHARLES W. TOBEY,
United States Senate, Washington, D. C.

MY DEAR SENATOR TOBEY: In response to your telegram which the White House has referred to me, I feel the only thing I can do is read the simple A, B, C's of the census law to you.

A. The 1929 Census Act, passed by a Republican Congress, signed by a Republican President, and containing the authority for the 1940 census, makes it mandatory upon the American people to answer all census questions.

That same act states: "The number, form, and subdivision of the inquiries in the schedules used to take the census shall be determined by the Director of the Census, with the approval of

the Secretary of Commerce," provided that these are "restricted to inquiries relating to population * * * to unemployment * * * etc." Any reasonable person knows that wage income is the best possible measure of employment and unemployment.

In a radio talk on March 9 you announced that you would not answer the two questions on income. Ergo: A United States Senator openly states he will flout the law of the 1929 Census Act. In the same talk you told the American people that they would have plenty of company in refusing to answer the questions and urged them to form committees to resist these queries. Ergo: A United States Senator, using his own intention to flout the law as an example, urges the American people to violate the law. The law covering the 1940 Decennial Census is the same law that covered the 1930 Decennial Census.

B. Apparently you are trying to justify your threatened law-breaking by the action of the Senate Commerce Committee last Tuesday. It should be noted you broadcast your intention to flout the law on March 9, and the Commerce Committee did not act until 3 days later, March 12.

C. As a Senator you know that even if the Senate had approved the resolution adopted by its Commerce Committee, which it had not on the night you broadcast your intention to flout the law and still has not to this day, it would be an expression of opinion by a majority of Senators and could not be construed by the Secretary of Commerce and the Census Director as overriding the Census Act of 1929 which was passed by both Houses and signed by the President. Such a vote by the Senate or a majority of a small committee thereof could only be advisory to the Secretary of Commerce and the Census Director. In no sense would it relieve any person from compliance with the census law. This could only be accomplished by an amendment to the Census Act of 1929 passed by both Houses of Congress and signed by the President.

We are just as mindful of the Bill of Rights as you. I feel it necessary, however, to call your attention to the fact that the patriots who gave us the Bill of Rights wrote into the Constitution a provision for the first and all subsequent censuses and the same founding fathers made it mandatory upon the American people to answer census inquiries. This compulsion has existed for 150 years.

I feel it necessary also to recall to you the oath a Senator takes upon assuming office which reads:

"I, ————, do solemnly swear or affirm that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same, that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter, so help me God."

The spectacle of a United States Senator calling for resistance to the authority of the Government, appealing for civil disobedience, urging an informational sit-down strike against the Government is un-American and a menace to the processes of self-government.

Very sincerely yours,

HARRY HOPKINS,
Secretary of Commerce.

[Reply of Senator CHARLES W. TOBEY to Secretary of Commerce Hopkins on the census]

MARCH 17, 1940.

Hon. HARRY L. HOPKINS,
Secretary of Commerce,
Washington, D. C.

MY DEAR MR. HOPKINS: I am in receipt of your letter of March 16, in which you set forth your views regarding my efforts on behalf of the people to have the illegal income question stricken from the census questionnaire.

You criticized my availing myself of the same privilege which is granted to all of the people, namely, to stand upon my constitutional rights and refuse to answer the questions which violate the people's guaranteed constitutional right of privacy, and wrote: "A United States Senator, using his own intention to flout the law as an example, urges the American people to violate the law."

What law, Mr. Secretary?

Surely you are not still contending that an unauthorized ruling of a departmental bureau constitutes a law of the United States, particularly where, as in this case, you threaten the people of this free country with imprisonment for not bowing to your will. While you contend that I have an intention to flout the law you make light of the fact that you, as a responsible head of a department, are flouting the law and the Constitution by commanding the people to answer these illegal questions or go to jail. This, in free America.

Regarding my action, I refer you to a book written by Prof. Andrew C. McLaughlin, professor emeritus of history, University of Chicago, entitled "A Constitutional History of the United States," in which he wrote: "Withal it must be remembered that no one is bound by an unconstitutional act. Such an act is not law; in strictest theory it binds no official and no person whatever; and if no one objected to a law, it would be difficult or impossible for a court to pass upon its validity; an officer carrying out an unconstitutional act, before as well as after a judicial declaration of unconstitutionality, may be held personally liable for invasion of private liberty or property."

Next, you say that the patriots who gave us the Bills of Rights wrote into the Constitution a provision for the first and all subsequent censuses, and the same founding fathers made it mandatory upon the American people to answer census inquiries. If, by this, you mean the type of inquiries going on under the present inquisition, then I must express my complete disagreement with your position. The founding fathers, in the Constitution, made it mandatory upon the American people to submit to an enumeration of the people, meaning a count of the people.

Section 9 of article I reads as follows: "No capitation or other direct tax shall be laid unless in proportion to the census or enumeration hereinbefore directed to be taken." From this it is clear that in the minds of the makers of the Constitution the word "census" was meant to be the equivalent of the word "enumeration" and nothing more. Yet to justify the violation of the rights of the people to be "secure in their persons, houses, papers, and effects," you refer to the constitutional provision which, in my view, is clearly limited to an enumeration of the inhabitants of the several States.

Next, you say, "The spectacle of a United States Senator calling for resistance to the authority of the Government" is a "menace to the processes of self-government." Shades of Hitler and Mein Kampf. Anyone who is able to diminish the "self-government" of a bureaucrat, which autocracy has been so much in evidence in recent years, is rendering a service to democracy. There is altogether too much "self-government" in Washington on the part of departmental heads.

I cannot better describe the situation than to use the words of your friend, Mr. Hugo Black, "Bureau upon top of bureau, bureau on top of bureau, until they pile up, towering into the sky, each one emitting rules and rules and rules, like the volcano belches forth its smoke, until the average citizen is lost in the meshes of the multitudinous laws, rules, and regulations more than he ever dreamed he could be."

Next, you have set forth the oath a Senator takes upon assuming office. The United States Code provides that the head of every department is required to take that same oath, and thereby solemnly to swear or affirm that he will support and defend the Constitution of the United States and bear true faith and allegiance to the same, without any mental reservation or purpose of evasion. This Constitution of ours clearly forbids the type of "self-government" which you champion.

As a climax to your letter, you boldly indicate that even though the Senate of the United States should vote in favor of this resolution, thereby pronouncing its opinion that the income questions are illegal and never authorized by Congress, such a vote by the Senate, or a majority of a small committee thereof, would in no sense shake you from your determination to insist upon these income questions.

I am amazed that a head of a department would treat so lightly such action by the Senate of the United States. This dogged persistency in your Department's determination to compel the people to answer these questions on income gives impetus to the growing apprehension on the part of the already overburdened taxpayers of both the low and high income groups that the Government has an ulterior purpose in demanding this information.

It is said that William the Conqueror kept continually by his side a book which contained a detailed record of the financial status of every English serf, compiled after a seaching inquisition into the private affairs of every individual. He did this in order that he might know at any moment how much more fleecing the English people could bear. This was commonly referred to as the Domesday Book, because, like the day of doom, it was inevitable.

Our forefathers left England seeking sanctuary in this country from such inquisitorial methods. In the Constitution they assured inherent rights of privacy to the people, but by the questions you are attempting to compel them to answer, under penalty of imprisonment, you are subjecting them to Old World autocratic methods.

This week, out of the many thousands of letters I have received from sincerely apprehensive people from all parts of the country and from all walks of life, I have received a letter from an American citizen who wrote as follows: "A doctor who came from Germany 2 years ago, upon seeing the various questions in the census questionnaire, said, 'Those questions remind me of what I ran away from.'"

The right to demand answers to these questions is not in the law and they are illegal, regardless of the manner in which they are asked. The law is the law, and you cannot with impunity cast aside its restrictions.

Very sincerely yours,

CHARLES W. TOBEY.

[From the Columbus (Ohio) Dispatch of February 23, 1940]

IMPROPER CENSUS QUERIES—A SENATOR FIGHTS AGAINST THEM

Senator TOBEY, of New Hampshire, who led one phase of the fight against lifting the arms embargo last summer, now is heading up another battle which, while it may turn out to be just as futile, does him equal credit and will win the favor of many citizens.

He believes that some of the personal questions to be asked in the forthcoming census are impertinent, unnecessary, and susceptible of abuse. He particularly objects to the queries relating to the amount and source of income of the individual and to the amount of rent he pays or the size of the mortgage on his house.

The New Deal census heads who framed the extensive questionnaire defend the first of these questions on the ground that there is no violation of privacy in the queries about salary, since this data

is already on file in income-tax and social-security reports. The second group is explained as representing invaluable information for future reference as to housing needs, etc.

It may be true that the Government knows already how much most of its citizens earn. But the census is taken through local canvassers, temporarily employed on a political patronage basis. The Government may have the best intentions in the world of protecting this data from snoopers and busybodies. It probably is true that once the statistics get into the maw of the tabulating machines they will be just impersonal figures—no more. But human nature is unchanging, and how is the Government to control its census people after their short term of work is over? What is to prevent the gossip or the opportunist from talking about or attempting to utilize information gained by intimate questioning backed by the law of the land? The same objections apply to the questions on how much rent a man pays, how much he owes on his house, who holds the mortgage, etc. And this is information which has always been regarded hitherto as a matter between the principles to the transaction only, unless they wish to talk about it of their own volition.

There may be grounds for the fears that some hold that the New Deal bureaucrats desire the information for purposes of some new taxation scheme, and again there may not be. But simply on the basis that there are a few personal reticences left into which Government ought not to thrust its ubiquitous nose, there are undoubtedly hundreds of thousands who will wish more power to Senator TOBEY'S tonsils as he carries on his Senate crusade for the elimination of these questions from the final approved list.

SUBVERSIVE AGENTS HAVE THEIR HANDS DEEP IN THE CENSUS SNOOPING ACTIVITIES

(By Boake Carter)

It is a pity that the apologists for the gentlemen who thought up the current list of questions to be asked us by the enumerators from the Census Bureau are not aware of some of the motives or some of the tricks that are obscured from public view at present.

If they were, their apologies for the Census Bureau doubtless would be exchanged for a chorus of horror.

Few citizens hold any objection to answering routine census questions. Heretofore no Federal administration has had aught but a simple, straightforward desire to enumerate the citizens of this Nation, their occupations, their employment status, their marital status, and such reasonable information.

But behind the present crop of questions lies no such simple, straightforward desire.

Instead, the questions have been framed for a specific purpose. The purpose is revolutionary.

It is true that when these questions were framed little thought was given to "Mrs. Snoop" down the street, who may have had herself appointed census enumerator and wouldn't let a little thing like a fine or imprisonment prevent her from peddling gossip she finds out around the neighborhood. No; their plans are deeper than that. They want to use the information to build their idea of a "new" America.

But what the public does not know—and this is not opinion or viewpoint but actual fact—is that subversive organizations already have had their own agents sworn in as census enumerators.

The agents, or "enumerators," have gathered information required of them in specified sections, then resigned as Government employees. The facts they have gathered have been turned in, not only to the Government but also to their real employers, the subversive groups for whom they have been acting.

There is documentary evidence to this effect in the hands of several Senators. They haven't said much about it yet, simply because they believe in the old adage about giving a man enough rope and he'll finally hang himself.

By permitting these subversive agents, disguised as Government enumerators, to extend themselves, it is hoped enough shocking information about their activities will be gathered to blow clear out of the water the little coterie of New Deal radicals running the census questionnaire.

It is not a comforting thought to consider that such intimate information as: How many times has a citizen been married; how much did he make; from what sources and how? are to be details to be pawed and leered over by the Cohens and the Corcorans of the administration.

One of the glib assumptions of the New Deal "snoop" directors is that it is the Federal Government's duty to "even up the disparities of opportunity" that exist for the average American in "rural Arkansas and metropolitan New York," and to that end the census is being taken.

That is the same sort of argument Hitler made when seeking to lure the German people to his support. To assume that a government of mere men can "even up disparities of opportunity" is to presuppose that God made a gross mistake in endowing more capabilities in one man than in another. For government to attempt such a fantastic performance would require complete dictatorship to insure any measure of success.

And that is precisely what the New Deal "leftists" desire. The questionnaire of the census is aimed mainly to collect information which may be used by the "leftists" in furtherance of their own ends—one of which is to destroy a free and individualistic America.

[From the Boston Post of March 16, 1940]

NOT QUITE FAIR

The President's attack on Senator TOBEY, of New Hampshire, was unduly harsh. He accused the Senator of urging persons to violate the law of the country by refusing to answer certain personal questions in the census blank relating to incomes.

In the first place, it is highly doubtful if the law of the land is involved. The whole business seems no more than a departmental regulation. Otherwise the Department of Commerce could not so readily change the census rules as it has done.

The President seems to think that Senator TOBEY is responsible for the whole agitation against these census questions.

That cannot be so. He raised his voice in the Senate only when large numbers of his constituents appealed to him in protest against the inquiries. He was merely doing his duty in giving publicity to the protests.

Other Senators did likewise, and some were more emphatic than the New Hampshire Senator.

If memory is correct, Senator TOBEY did not urge a general refusal. What he did say was that he, personally, would go to jail rather than reply to the questions. That was an individual position.

Despite the fact that he lays the whole blame at Senator TOBEY'S door, it is pretty plain that the President knows well that the agitation was substantial and country-wide. Otherwise he would not be forced into making the concessions announced.

The protests were irritating to him because they added to the impression that New Deal officials were too zealous in invading the privacy of citizens and the incident might have political repercussions. It therefore touched the President in a sore spot.

It may well be that the protests were exaggerated and due to unnecessary fears. But it certainly is understandable that persons canvassed would resent giving such personal information to neighbors who were appointed census takers. As these census jobs are political jobs and apportioned out by Democratc leaders, there is every reason to suppose the census will be taken by local men and women.

The public would not be so skeptical if the enumerators were civil-service appointees and if supposedly secret Government records sometimes become public.

The whole agitation is not harmful to the Government. It is really beneficial. It will show that there is still a strong spirit of independence abroad in the land and that citizens are quick to resent what they think, however mistakenly, is an invasion of their rights.

[From the St. Louis Globe-Democrat of March 16, 1940]

CRACK IN CENSUS LAW

Secretary of Commerce Hopkins now rules that individuals unwilling to give census enumerators verbal answers to intimate questions about income and how it is spent, may mail the information to Washington without signing their names. They may use franked envelopes which will be supplied by the enumerators. This is a surrender in the face of public protest but is an evasion of the law rather than a permanent remedy. What Congress should do is to amend the law to rid it of offensive features which are a plain invasion of the rights of an American citizen.

Senator TOBEY has received considerable abuse from New Dealers including the President, for his leadership in the Nation-wide protest. The cry of "cheap politics" has been raised by the administration, but this does not explain why Democrats as well as Republicans share resentment and have given their voice to the demand that the census law be altered. The unvarnished facts are that the administration proposes to conduct a snoop census which would seek information of an intimate and frequently embarassing character. This information could easily become public property if the enumerators gossiped, as well they might. This information might easily be available to any prying politician who wanted a financial index of his community.

And despite the plea of Secretary Hopkins that the statistics are necessary to ascertain the extent of mass buying power and unemployment, there is the substantial suspicion they will contribute little or nothing of value to the solution of economic problems. An unemployment census can be made without obtaining the life history of every man and woman who happens to have a job.

Senator TOBEY has performed a useful public service in leading the fight against the present census law. The President himself plays doubtful politics when he attempts to impugn the New Hampshire Senator's motives and brands him as an inciter of law violation. Since when is it criminal to say that a nefarious law should be amended?

[From the Hartford (Conn.) Courant of February 25, 1940]

THOSE CENSUS QUESTIONS

It used to be said that the "horse and buggy" doctor knew more about the people of the community than they knew about themselves, but even such a reputation as a public confidant may well pale before the activity of the 1940 census taker. Whereas the doctor had to depend on voluntary contributions to add to his store of knowledge, the man from the Census Bureau is forearmed with

a list of detailed questions guaranteed to pump facts from the driest source. The administration claims that its "information please" quiz will afford the most accurate picture possible of the social and economic conditions in the country. It will also pry unnecessarily into personal and private affairs without giving absolute assurance that the knowledge will be held in confidence.

In the near future the doorbell will ring, and the census taker will begin firing: "What is your age, name, sex; your educational record, place of birth, and previous residence?" The answers to these questions are on the tip of your tongue. But then will follow: "What is your home worth? What is your salary? Was an income or $50 or more derived from any source other than your job?" According to law, the civil and reasonably accurate reply must be given to each particular; fortunately the law has no ear for the little man behind your eyes who just cusses and cusses.

Yet another question pops: "What is your race and color?" Reasonably American and reasonably white should be a suitable answer, and a little "sotto voce" is entreating you to give the gentleman his hat. The enumerator not so calmly turns another page: "Where were your parents born? What language did they speak? Are you divorced?" Since the report desires an "X" to designate the answer whenever possible, perhaps it will suffice in all these instances. The statistics hunter goes merrily on: "Do you own a refrigerator, radio? What is your mortgage indebtedness?" and so on and on and on.

Small wonder that the public has demanded an investigation of this questionaire by the Senate Commerce Committee. The 1940 census is typical of the unhappy faculty of the administration for broadening its activities to affect in multiple ways the daily lives of the people under the guise of social and economic betterment. The New Deal may see social significance in questions on refrigerators and divorces; the layman calls them nosey.

[From the Detroit News of February 24, 1940]

CENSUS QUESTIONS

Advance notice of the questions to be asked in taking the 1940 census has provoked criticism. The Census Bureau is getting heaps of letters from worried citizens who don't want to tell how much or how little income they have; how much they are in debt or whether there is a mortgage on the homestead.

This body of anxious public sentiment is finding representation in Congress, in both Senate and House, and some hurry-up legislation may shorten and modify the list of questions in time for the beginning of the census, April 1.

A bill to remove from the census form, questions about amounts received as salary or wages and whether income of $50 or more from sources other than money, wages, or salary have been received, has been introduced by Senator CHARLES W. TOBEY, and a like measure will be backed in the House by Representative DANIEL A. REED.

In deciding so important a policy, the Congressmen should measure the need for the information against the possible damage that may be done by collecting it and putting it on record. It is not a sufficient answer that census authorities do not make public the facts concerning private affairs of individual citizens. There is cause for anxiety in the fact that a great Government agency has such information in such a form that it might become accessible for purposes other than the public good.

In smaller communities the knowledge that local businessmen or corporations are heavily in debt and have not met expenses during the last year, might be used to ruin individuals and bring unemployment, distress, and poverty to many innocent persons. Putting on record the private affairs of the more prosperous is preparing a sucker list of immense proportions.

It is doubtful if any census advantages can offset these dangers.

[From the Wilmington (Del.) Journal Every Evening of February 24, 1940]

THE NEW CENSUS

Most of the questions which American citizens will be asked in the census to be taken a few weeks from now are harmless and perfectly legitimate. No one can well object to telling where he lives, when and where he was born, where he was educated, and how many people are in his household. But unless Congress intervenes in time they will also be handed some highly personal inquiries which no citizen ought to be compelled to answer on pain of fine or imprisonment.

He will be asked to tell the enumerater, who may be a neighbor, a stranger, or a worker for the local political machine, "the amount of money, wages, or salary received, including commissions," and whether he got $50 or more from other sources. He will be asked to give the value of his home, if he owns it, or the monthly rent he pays, if he does not. He must give this information with the knowledge that it may be passed on to unauthorized persons, misused, or opened to public inspection, if high political authority decided on that course. In addition he must answer a large number of other questions about his home life, his background, and his personal affairs that have never been asked in any previous census.

All of the data which may be compiled in this day would undoubtedly provide a field day for the statisticians. It would give the advocates of a planned society, numerous in the inner circles of the New Deal, a vast amount of new material to work with. It would be useful to serious students. But there is also a grave chance that it would be seriously misused by an administration as highly political as is this one which has shown very little conscience about revealing information gathered on a confidential basis or about twisting statistics to suit its own purpose.

The point is that the information requested in the questions cited above has always been regarded by Americans as their own personal and private affair. In the past they would have resented strongly any such attempt to pry into their private lives. Congress can, and we hope will, remove these particular queries from the questionnaire or at least remove the severe penalties for failing to answer them. But if this is not done we shall not be surprised to see a very considerable revolt of American citizens when the census enumerators come to their doors.

[From the Allentown (Pa.) Call of February 26, 1940]

THE CENSUS PROBE INTO SMALL INCOMES

Congress will have to act rapidly if it decides to listen to the many petitions which are going out from this city and from many other parts of the country protesting those census questions which are considered mere prying into the personal affairs of the American people.

Already the Government knows the business affairs of the thousands of people who report their incomes for income-tax purposes. Under the census it would learn exactly what every person in the lower earning brackets receives in income from all sources in the course of a year.

While there is promise that this information is for census purposes only, and that census takers who reveal any information will be punished for violation of a trust, only too many people distrust the promise. They remember that income-tax reports were given the promise of inviolability, and then one day the United States Treasury Department published the mile-long lists that the newspapers promptly published, picking out those names of people in their own localities.

With the fear that this precedent may be followed, and with the belief that the Government has no real right to know what the lowliest-paid worker is getting—especially if that information is to be used for the extension of the tax base and new impositions upon the underpaid who already pay so much in hidden taxes—protests are going up from all parts of the country and in hundreds of newspapers.

But, as said before, action must be speedy to be effective. Five weeks from today the census men will begin their rounds and will be asking the host of questions that constitute the census report.

[From the Beaver Falls (Pa.) News-Tribune of March 2, 1940]

WHAT THE CENSUS MAN WILL ASK

There is a great deal of interest in the number and nature of the numerous questions that the army of census takers will ask when they are turned loose on the county in a few weeks.

There is much opposition to some of the questions that the census authorities propose to include in the list. There is no doubt that if the people were allowed to decide whether certain questions should be asked there would be a practically unanimous objection to many of them.

But we seem to be under a bureaucracy that believes that it rules the people instead of being the servants of the people.

The opposition to some of the questions is being led by Senator CHARLES TOBEY, of New Hampshire, who believes that some of the questions are not in accord with the law governing the taking of the census and, in addition, are an intrusion of the Government into the private affairs of citizens which should not be allowed.

The 130,000 census takers are supposed to keep the information they glean to themselves, but, knowing human nature as most of us do, we are ready to admit there will be a large number of leaks.

In addition, numerous commissions and bureaus will mull over the returns, and they must publish the information they obtain, so there is scarcely a thin veil of secrecy covering the information.

Secretary of Commerce Hopkins, who has supreme charge of the census, has decided what are the questions to be asked and whether you like it or not you will be interrogated as to the amount of your income the past year and its sources; whether you have been divorced; how old when first married and how many times you have been married; whether you own your own home; if mortgaged, to what amount; whether you pay your debts; whether you have a flush toilet and whether you use your bathtub.

Never before in the taking of the census have people been compelled to tell the amount of personal income.

There is high authority for believing that some of the questions asked are in direct violation of the Bill of Rights.

There is no place in the Census Act where the question of disclosing incomes is authorized.

This is precisely the way Hitlerism started in Germany more than a score of years ago.

That great Democrat, Jefferson, said that "the country that is least governed is best governed."

Senator TOBEY asks that you write to him telling him your opinion on the income question.

[From the Kansas City Daily Drovers Telegram of March 14, 1940]

TIRED OF SO MUCH GOVERNMENT?

We are told from Washington that all this fuss about answering census questions is one of those teapot tempests; that most of the questions about which so much complaint is being made have been asked in other years and were answered without argument.

Granting that this is so, it furnishes a guide to the present American temper and frame of mind which should be of interest to politicians and other national leaders. For if we, the people, are objecting to answering the same questions which we have answered unhesitatingly in others years, there must be a reason, and it isn't entirely impossible that this reason could be that we simply are getting tired of being shoved around by a lot of our public servants and their hirelings.

Never probably in all our history has the average American voter and taxpayer been cursed with as much of this sort of thing as in the last few years. Between the interminable tax reports and other statements businessmen are required to furnish under one law or another, they have been in such close and constant contact with Government that they are raw all over. Even the common garden variety of citizen, be he a wage earner or a relief client, finds himself rubbing elbows with some functionary at every turn. Farmers are told what to plant and where to plant it, and so active a part has Government taken in their affairs that they can hardly be blamed if they charge this same Government with a good share of the responsibility for their disappointments and failures.

In short, the present wave of public resentment against what may be just a lot of perfectly innocuous questions looks like it might be the beginning of a first-class popular revolt against all the snooping, prying, regulating, and shoving around that has been going on during the last decade. If it is, politicians who have thought that they were secure, and gliding along smoothly with little to worry about had better start trimming sail and getting ready for rough weather. For while the American citizen of today may be a lazy, procrastinating individual who would rather put up with some inconvenience than make a fuss, he's still just as stubborn and belligerent a customer as his pioneer ancestors when he finally does get mad.

[From the Baltimore Sun of March 16, 1940]

MR. HOPKINS IS MORE MUDDLED THAN USUAL

By order of Harry L. Hopkins, Secretary of Commerce, you are no longer under the necessity of telling your exact income to the census enumerator, even if it is less than $5,000; you may hand the information in a sealed envelope to the census enumerator, to be mailed to the Census Bureau.

Mr. Hopkins issued, along with the concession, a statement that exhibits a confusion of thought notable even in him. Reasserting his belief that the enumerators will keep their oath not to reveal any information given them, he proceeds to say: "To question their integrity is to question the democratic process."

Nonsense, and worse than nonsense. To question the integrity of jobholders of all sorts is the very heart of the democratic process. Under a despotism, nobody dares question a jobholder. Under a democracy, everybody questions all of them, and the more sharply they are questioned the more democratic the government. But job holders are job holders, under any form of government, and they naturally dislike being questioned; therefore, they tend to identify the questioning process with all sorts of objectionable procedures. Under an autocracy, they call it lese majesty; under a dictatorship they call it subversive activity; under a democracy, they call it an attack on the democratic process.

Under an autocracy or under a dictatorship they can put it down, but under a democracy they can only cry it down. When Mr. Hopkins cries it down he is not defending democracy; he is only expressing the age-old resentment of the job-holding class against the one restraint that prevents public servants from becoming public masters—an alert and suspicious public.

Presidential Third Term Resolution

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

LETTER FROM HON. WILLIAM H. SMATHERS, OF NEW JERSEY, TO PRESIDENT OF NEW JERSEY STATE ASSEMBLY

Mr. LEE. Mr. President, there appears in the CONGRESSIONAL RECORD under date of March 9 of this year, on page 2592, a copy of a resolution passed by the New Jersey Assembly memorializing Congress to pass legislation to prevent a violation of the third-term precedent. This resolution was introduced into the RECORD by the junior Senator from New Jersey [Mr. BARBOUR].

The resolution provides that each Member of Congress from the State of New Jersey shall receive a copy thereof; and while my colleague, Senator SMATHERS, is the senior Senator from New Jersey, he informs me that he has failed to receive a copy.

I therefore ask unanimous consent to have published in the Appendix of the RECORD a copy of a letter written by my colleague the Senator from New Jersey [Mr. SMATHERS] to the president of the New Jersey Assembly.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *March 16, 1940.*

PRESIDENT, NEW JERSEY STATE ASSEMBLY,
State House, Trenton, N. J.

DEAR SIR: Recently the Republican members of the New Jersey Assembly passed a resolution memorializing Congress to enact legislation to prevent any President from seeking a third term, and pointing out the inviolate and sacred precedent against the President's seeking more than two terms.

While the resolution provided that each Member of the Congress from the State of New Jersey should be sent a copy, the clerk must have thought that he would be wasting postage if he dispatched a copy to me. If this is the conclusion he reached, he was correct. Knowledge of the assembly resolution came to me through the CONGRESSIONAL RECORD—my distinguished colleague having received it and inserted it therein. However, I would like to have you forward to me a copy of the assembly resolution passed by the Republican members in 1939, expounding the sacredness of the two-term precedent; and also obtain and forward to me a copy of a resolution passed in 1928 by the Republican State committee of New Jersey, urging Calvin Coolidge to violate the two-term precedent that now has become so sacred in 1939.

I would like to have both of these resolutions, so that they may be placed in the CONGRESSIONAL RECORD, side by side, in order that those who may want to know how much credence to give to the recent assembly amendment may be able to see the whole picture.

Sincerely yours,

WM. H. SMATHERS.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on the American Forum of the Air on March 17, 1940, on the subject of reciprocal-trade agreements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the few minutes I have tonight to tell why I am opposed to the proposed 3-year extension of the Reciprocal Trade Agreements Act I shall limit myself to five propositions:

1. The American farmer has lost part of the American market for his products, and his share of the export trade of the United States has been diminished, under the trade agreements.

2. The exports of American manufactures, on the whole, have increased more to nonagreement countries than to agreement countries.

3. Under these treaties the treaty ratification powers of the Senate, and the taxing powers of Congress, have been taken from the legislative branch of the Government and turned over to the executive, which I regard as a serious violation of a basic principle of Anglo-Saxon representative government.

4. The trade agreements have been used in the interest of power diplomacy, rather than in the interest of our foreign trade.

5. If the trade agreements principle as applied to date is sound, then our entire program of high wages, short hours, parity for agriculture, and a high American standard of living are unsound.

First, I will take up the case of the American farmer who, let me tell you, gets caught going and coming.

Under the high protective tariff system the farmer was penalized so the American manufacturer could have the domestic market.

Under the trade agreements, the American farmer is being penalized so the American manufacturer can build up his foreign market.

When the original trade agreements act was passed, nearly 6 years ago, the American farmer was promised that he would be protected in his American market, that the agreements would give him a larger export market for his products.

The exact opposite has happened.

As is generally known, there are two classes of imports of farm commodities. There are noncompetitive, such as rubber, coffee, bananas, etc. There are competitive, all farm commodities grown in marketable quantities in the United States.

Now what does the record show as to farm imports and exports? Here it is for the 5 fiscal years immediately preceding trade agreements and for the 5 fiscal years afterward.

According to the Department of Agriculture, which makes the division between competitive and noncompetitive farm products, the average annual imports of competitive farmer products for the 5 pre-trade-agreement years amounted to $495,395,000.

The average annual imports of competitive products for the first 5 years of the trade agreements amounted to $616,149,000.

Increase in competitive farm imports averaged $120,754,000 annually. This is an increase of 25 percent.

Average annual imports of noncompetitive farm products, on the other hand, show a decrease of $37,210,000, or 7 percent, annually for the 5 years of trade agreements. Average last 5 pre-trade-agreements years, $574,143,000; for the trade-agreement years, $536,933,000.

The annual average value of farm exports, 5 pre-trade-agreements years, was $982,593,000. For the 5 trade-agreements years, average annual value of farm exports was $784,244,000.

Farm exports averaged $184,389,000 less under the trade agreements. This is a decrease of approximately 20 percent.

Here is the picture:

Under the trade agreements imports of competitive farm products increased 25 percent.

Imports of noncompetitive farm commodities decreased 7 percent.

Exports of farm commodities decreased 20 percent.

In other words, farmers of foreign countries increased their sales in the American market 25 percent, while American farmers lost 20 percent of their foreign markets, in addition to losing that part of the American market which was taken by imports from abroad of competitive farm products.

Now, as to the total of all exports to agreement and nonagreement countries. In analyzing this comparison I have segregated five world areas that had declared or undeclared war, revolutions, invasions, embargoes, economic sanctions during most of the time of the trade agreements. These regions are greater Germany, Italy, Spain, Japan, and China.

During the past 6 years the first 6 months of 1934 and the first 6 months of 1939 were two periods fairly comparable.

Total exports to all countries in the first 6 months of 1934 were $1,036,053,000. In the first 6 months of 1939 they were $1,415,427,000, a gain of 33.4 percent.

Total exports to the war-torn areas show a decrease of 11.4 percent, from $257,245,000 to $227,745,000.

To all other countries total exports show an increase of 52.5 percent, from $778,808,000 to $1,187,682,000. This is most gratifying, and looks well for the trade agreements.

But if we break down these other countries into trade-agreement and non-trade-agreement countries we get the result:

Exports to trade-agreement countries, including Cuba—with Cuba we have really a bilateral trade agreement rather than the usual unilateral—exports to trade-agreement countries increased from $561,192,000 to $824,376,000. This is an increase of 46.8 percent.

But exports to the non-trade-agreements countries, outside the war-torn areas, increased from $221,120,000 to $374,238,000. This is an increase of 69.2 percent.

Imports of competitive farm products up 25 percent; exports of farm commodities down 20 percent.

Exports of all commodities to agreement countries up 46.8 percent; to nonagreement countries up 69.2 percent.

I say, by the pragmatic test—which means how does it work—the trade-agreements program so far as increasing our export markets is a failure. I have high regard for Secretary Hull, a great American, but in this matter he is on the wrong track. I say so far as the farmers are concerned, trade agreements have positively and seriously injured agriculture.

I am overwhelmed with appeals from farm organizations of Kansas and other Western States demanding that these trade agreements be repealed; if not repealed, then that ratification by the Senate as the Constitution provides be required. They demand this because they find these trade treaties are taking away from the American farmer enough of his American market to drive farm prices down to the point where the American farmer's purchasing power is seriously impaired.

Now, under our Constitution the Senate shares in the treaty-making power, by having the right to ratify or reject treaties negotiated by the Executive.

Also the taxing power under the Constitution is vested exclusively in Congress.

If these trade agreements are treaties, then the Senate should have the power to ratify or reject them.

If they are not treaties, then they are revenue laws—taxing power—because they change the rates of tariff duties prescribed in revenue acts passed by Congress.

It took the Anglo-Saxons hundreds of years to wrest the taxing power from the Executive and place it in the hands of the people, through their legislative representatives.

The trade agreements must violate one or the other of the constitutional provisions just cited. In my opinion they violate both.

In this connection let me remind you 18 of the 21 nations with whom we have negotiated trade agreements have required approval of their legislative bodies to make these treaties effective. The United States takes a place alongside the three exceptions—Ecuador, Venezuela, and Cuba—when it resorts to the indefensible, un-American, one-man, star-chamber method of negotiating trade agreements with foreign nations.

I maintain further that the bulk of the trade agreements Secretary Hull has negotiated were deliberately made for diplomatic purposes rather than for trade purposes. In many of these treaties the program seems to have been to purchase goodwill of foreign nations by granting these trade concessions at the expense of the American farmer. I protest with all my might against such a thoroughly un-American policy.

Lastly, we have built up a civilization in the United States based upon high wages, high prices, a high standard of living.

Except for agriculture, these high wages, high prices, high standard of living are either fixed by law or protected by government. In the case of agriculture, under the A. A. A. we subsidize farmers through the Agricultural Department to reduce production to hold up prices.

Then, through the State Department, we use these trade agreements to break down domestic prices, to bring in more goods from foreign countries produced at low wages, long hours. I say to you, the two programs just don't make sense.

I have seen a circus performer ride two horses at once—but never when the horses were going in opposite directions.

Our entire system of agriculture, trade, and industry in this country is going in the opposite direction from the trade-agreements program.

To me it is as plain as anything can be that we should abandon this nonsensical reciprocal trade agreements program as now being applied. If the Congress will not do that, it should certainly require ratification of all these trade agreements by the Senate, as the Constitution requires.

Wire Tapping

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

STATEMENTS BY THE ATTORNEY GENERAL AND THE DIRECTOR OF THE FEDERAL BUREAU OF INVESTIGATION

Mr. ASHURST. Mr. President, there has been considerable discussion, some in the Senate and much in the country, regarding what is called wire tapping. I ask unanimous consent that there be printed in the Appendix of the RECORD a statement by the Attorney General of the United States, issued this morning, regarding wire tapping, and that there also be printed a statement issued on March 13 by Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, on the same subject.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[For release, Monday morning papers, March 18, 1940]

Upon the recommendation of Director J. Edgar Hoover of the Federal Bureau of Investigation, Attorney General Robert H. Jackson today issued the following order:

"As of this date the provision of the manual governing the operations of the Federal Bureau of Investigation, which was adopted in 1931 on order of the Attorney General, and which reads as follows, is superseded:

" 'Wire tapping: Telephone or telegraph wires shall not be tapped unless prior authorization of the Director of the Bureau has been secured.' "

In its place and stead there is hereby reinstated the provision of the manual which prevailed until 1931:

"Unethical tactics: Wire tapping, entrapment, or the use of any other improper, illegal, or unethical tactics in procuring information in connection with investigative activity will not be tolerated by the Bureau."

There will further issue all United States attorneys and attorneys of the Department of Justice orders directing that no case originating in or investigated by any other department of the Government be presented to grand jury or otherwise prosecuted in which it appears that the case has been developed in whole or in part

as the result of wire tapping after April 1, 1940. Any case so developed shall be called to the attention of the Assistant Attorney General in charge of the Division and shall not be presented except upon special direction of the Attorney General.

This action is required in order that the rules governing the Federal Bureau of Investigation shall conform to the decisions of the Supreme Court in recent cases, which have held interception and divulgence of any wire communication to be forbidden by the terms of the Communications Act of 1934. These decisions have in effect overruled the contentions of the Department that it might use wire tapping in its crime-suppression efforts.

Charges of violation of several Federal laws, such as the income-tax laws, narcotic law, mail-fraud statute, and alcohol-tax law, are not investigated by the Federal Bureau of Investigation but by other departments of the Government. These agencies are not bound by this rule of the Attorney General. But all their cases are presented to grand juries and courts by Department of Justice attorneys. Cases, wherever originating, must, under this rule, be free of illegality on the part of the Government if they are to be presented to courts under the sponsorship of the Department of Justice. From the time of its reorganization under Attorney General Stone until 1931 the practice of wire tapping was not authorized in the Bureau of Investigation. In 1931 the Department of Justice had two investigative forces, the Federal Bureau of Investigation, in which wire tapping was prohibited, and the Prohibition Enforcement Bureau, in which wire tapping was resorted to. In 1931 Attorney General Mitchell was confronted with the inconsistency of the two practices and stated to a House Appropriations Committee as follows:

"The present condition in the Department cannot continue. We cannot have one bureau in which wire tapping is allowed and another in which it is prohibited. The same regulations must apply to all. * * * I think I should give a direction applicable to all bureaus and divisions in the Department that no tapping of wires should be permitted to any agent of the Department without the personal direction of the chief of the bureau involved after consultation with the Assistant Attorney General in charge of the case. Something, of course, can be said in favor of permitting the tapping of wires when efforts are being made to detect the perpetrators of heinous offenses or to apprehend and bring to punishment desperate gangs of criminals. In such cases the criminals are usually equipped with all modern scientific inventions such as the radio, the telephone, and the automobile, and the Government is at a considerable disadvantage in any event in dealing with them."

Thereafter the rules were amended to permit wire tapping by the Federal Bureau of Investigation in the discretion of the Director.

I am informed by the Director that this authority has been very little used and only in cases of extreme importance; that without the use of wire tapping several kidnaping cases would not have been solved; and that wire tapping has never been used in minor cases nor on Members of Congress, or officials, or any citizen except where charge of a grave crime had been lodged against him.

In view of the widespread charges of indiscriminate wire tapping, it is only fair to Mr. Hoover to state that the records of this Department show that on two occasions he has advised strongly against extension of wire tapping. In March 1939 he advised this Department to oppose a bill pending in Congress to legalize wire tapping, and stated his view as follows:

"While I concede that the telephone tap is from time to time of limited value in the criminal investigative field, I frankly and sincerely believe that if a statute of this kind were enacted the abuses arising therefrom would far outweigh the value which might accrue to law enforcement as a whole."

Upon another occasion he advised this Department against trying to sustain in the Supreme Court the practice of wire tapping.

Notwithstanding it will handicap the Federal Bureau of Investigation in solving some extremely serious cases, it is believed by the Attorney General and the Director of the Bureau that the discredit and suspicion of the law-enforcing branch which arises from the occasional use of wire tapping more than offsets the good which is likely to come to it. We have therefore completely abandoned the practice as to the Department of Justice.

In a limited class of cases, such as kidnaping, extortion, and racketeering, where the telephone is the usual means of conveying threats and information, it is the opinion of the present Attorney General, as it was of Attorney General Mitchell, that wire tapping should be authorized under some appropriate safeguard. Under the existing state of the law and decisions, this cannot be done unless Congress sees fit to modify the existing statutes.

MARCH 13, 1940.

STATEMENT BY MR. J. EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION, RELATIVE TO THE SUBJECT OF WIRE TAPPING

Recently statements have been reported in the press and have been made otherwise indicating that representatives of the Federal Bureau of Investigation have indiscriminately tapped the telephones of Members of Congress. This is untrue. At no time has the telephone of any Member of Congress been tapped by any representative of the Federal Bureau of Investigation since I have been Director of the Bureau.

Statements have also appeared to the effect that wire tapping has been used by representatives of the Federal Bureau of Investigation in violation of existing laws. At no time has there been a single instance of any action of this kind on the part of any representative of the Federal Bureau of Investigation since I have been Director of the Bureau.

Further allegations have been made to the effect that representatives of the Federal Bureau of Investigation have tapped wires indiscriminately and in violation of fundamental civil rights. At no time since I have been Director of the Bureau has this been done.

In 1939 I refused to endorse proposed legislation, which had been introduced in Congress, designed to legalize wire-tapping evidence obtained by Federal officers.

The Federal Bureau of Investigation has utilized wire tapping as a method of securing information of investigative value only in extraordinary situations and in an entirely legal manner, where either human life was at stake or where the activities of persons under investigation were of such an aggravated criminal nature as to justify the use of extraordinary means to detect their activities and cause their apprehension.

Friendly Sons of St. Patrick

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. CLARK. Mr. President, I ask unanimous consent to insert in the RECORD a very patriotic and inspiring address delivered on Saturday night by Postmaster General Farley before the Friendly Sons of St. Patrick.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The sincere friendship and the eminent good will expressed by your distinguished President in his introduction of me are deeply appreciated. Coming from him, these sentiments mean more to me than you will ever know. For if the Friendly Sons of Saint Patrick don't feel that way toward me, who else would?

Speaking of introductions, I am happy to say that my introductions in all parts of the country have always been most hospitable, always most generous. Lately they have become somewhat of a problem, however, and I often find myself torn between two emotions. I cannot make up my mind whether to leave the room hurriedly, or whether to stay and hire the toastmaster for my manager.

No political implications are to be attached to the brief remarks I shall make this evening. I shall not presume on this festive occasion and this brilliant gathering with anything of that nature. In fact, I don't dare. My 14-year-old daughter, Ann, is listening in and Ann is quite adverse to my political proclivities. She wants me to give up politics entirely and spend more time at home.

Recently Ann was spending the evening with a chum and happened to hear the broadcast of the Jackson Day dinner, and my reference to fellow candidates. She immediately put on her things and hurried home to consult her mother.

"Mother," she said, "did you hear what dad said tonight over the radio?"

"Yes, I did," Mrs. Farley replied, "but I don't know what we can do about it."

Ann was silent for some time. Then she bent over, put her arms around her mother, and said:

"Mother, we will have to pray just twice as hard."

It is a genuine pleasure for me to have the privilege of attending this notable celebration. For Washington is favored in having a group of public-spirited citizens—newspapermen and men from other fields of endeavor—who assist each year in producing the pageant at the annual dinner of the Friendly Sons of Saint Patrick. I congratulate you on the delightful musical presentation we have just seen and heard.

It has been my good fortune to have twice visited Ireland within the past few years. I only wish that each of you might have accompanied me on those memorable journeys, for you would have brought back a profusion of happy and beautiful impressions. It is refreshing, indeed, to meet the generous, liberty-loving people in all walks of life in Ireland; to see their great cathedrals, and splendid churches; their ancient, magnificent universities, their schools and colleges; and to visit their enterprising cities and picturesque towns and counties.

In no other country in the world will you find at every glance a greater wealth of scenic beauty. The homes of the people, the fresh green meadows of the countryside, the protruding castles, the ancient ruins, and the moss-covered cemeteries are all of spe-

cial charm and interest. The mountains, rivers, and lakes, celebrated for centuries in song and story, make an impression of everlasting grandeur and romance. I believe that I shall never see a view more exquisite than the Lakes of Killarney.

And, while I am on the subject, may I repeat, once and for all, for the enlightenment of Mike Hennessy, of the Boston Globe, who is always raising the question, that when I visited Ireland I kissed the Blarney stone and the Blarney stone did not kiss me.

One of the things that astonished me in visiting Ireland was the universal interest of the people in all things relating to America. They know the names of our athletes, our educators, scientists, composers, our businessmen, and our public officials, particularly our Senators and Congressmen. I chuckled with mirth when the fine little curate of a parish in West Meath began to recount to me the eloquent achievements of "that grand gentleman from Mississippi," our mutual friend, Senator PAT HARRISON. Over there Pat is classified definitely as a Friendly Son of St. Patrick.

In Ireland they seem to have a feeling that the welfare of their country is bound up with the progress and success of America. The ideals of our democracy have had a strong appeal to them, our heroes have been their heroes, and the history of our struggle for liberty has always been an inspiration to them. Nathan Hale and Robert Emmet, two youthful patriots—one American, the other Irish—were executed from the gallows by the British within a comparatively short time of each other. Both died in their Nation's struggle for liberty. If we had no other bond in common, these two heroes would be a perpetual source of mutual inspiration for the youth of both America and Ireland.

The Bible says, "By their fruits ye shall know them." And on this St. Patrick's Day I ask you, Is there anything more gratifying to the American people, anything more convincing, as to the value and efficiency of our democratic institutions than the honest measure of progress that has been made under the Stars and Stripes by our citizens of Irish birth and Irish descent?

When our ancestors came here from Ireland practically all of them were the victims of centuries of oppression. They came from a country where their civil rights were suppressed; their property rights denied. But they had the genius of appreciation. They were high in their determination to make worthy citizens of a great republic, they were strong in their love of liberty, and they were steadfast in their Christian faith. Indeed, it would seem the very beatings they received in their efforts to preserve their freedom and their faith only served to bring melody, mirth, and song from their distracted hearts.

The radio has been vibrant this week with the melodies and ballads of Ireland. Rotary clubs, Kiwanis, and chambers of commerce have made Ireland the subject of the talks at their weekly luncheons; and many hundreds of these citizens who began their meeting with The Star-Spangled Banner ended it with the happy words and music of My Wild Irish Rose and When Irish Eyes Are Smiling.

Why is this? Surely it is not because these good people know so much about St. Patrick. They know a few legends, perhaps, like the one about the snakes, and the symbol of the shamrock, but that's about all. It is certainly not because they are acquainted with St. Patrick, the great Christian missionary, who harnessed the faith and fidelity of the people of Ireland into an organized force for the spread of Christian truth and the moulding of heroic Christian character.

No, my friends, the English-speaking world celebrates the festival of St. Patrick's Day because the Irishman, exiled from his native shores, has won a place in the hearts of all mankind for his wit, his song, his traditional courage, his flaming imagination, his patent suffering, and his indomitable will to preserve and maintain at the very cost of life itself those rights which God gave to every individual; rights which no man or group of men or the state may abolish without the consent of the governed.

Probably no race of people coming to our shores has been more appreciative of the blessings of freedom; and no race of people has done more to embrace the legitimate opportunities of our growing country with distinguished credit to themselves, their fellow citizens, and their beloved country. That is why the people of America join with us each year in the joyous festivity of the feast of St. Patrick.

We are living in strange times; times when so-called statesmen are experimenting with the forms of government that allow to citizens only such liberties as the ruler may dictate; systems of government under which one may not think aloud if his thought be different from the mind of the ruler. And it is not an altogether uncommon thing to hear so-called American citizens advocating the overthrow of our democracy that they might build upon its ruins one of the destructive "isms" of the Old World.

We cannot deny, of course, that there are many and serious faults in American democracy. Who will deny that there will be serious faults in any system of government so long as human beings direct it? But with all its faults, what is there under the other systems of government, after 20 years of experiment, that we would care to exchange for The Star-Spangled Banner and all it represents?

Despite what some may now say to the contrary, America is still the land of opportunity; opportunity for the poor to grow rich; the weak to grow strong, the honest to grow great. It has happened here; and opportunity still knocks every day at the door of our industrious and resourceful citizen.

Never let us forget the sacred purpose to which this hemisphere is dedicated. Recently my attention was called to Lamartine's Life of Christopher Columbus, which contains the prayer used by Columbus in dedicating this hemisphere. It is a significant reminder. This is the prayer: "Almighty and eternal God, who, by the energy of Thy creative word, hast made the firmament, the earth and sea, blessed and glorified be Thy name in all places. May Thy majesty and dominion be exalted forever and ever, as Thou has permitted Thy Holy Name to be made known and spread by the most humble of Thy servants in this hitherto unknown portion of Thy empire." He then christened this land with the name of Christ—the island of San Salvador.

With this thought in mind we must never permit our outlook on life, our American skyline, if you please, ever to become obscured by the cloud of social and economic problems. We must never allow the fabulous wealth of this Nation to deprive us of the simple virtues that have made this Nation the hope of all makind. We must never permit the ideals of this Republic to sink to a point where every American father and mother, regardless of race, color, or creed, cannot look proudly into the cradle of their new-born babe and see a future President of the United States.

I am speaking now of human realities—human realities that we can hand down to our children if we will but keep the faith of our fathers and cherish the bonds of unity that are so necessary, so essential, for our continued progress. Give America a united front, and there is no power on earth, within or without, that can weaken or destroy our democracy.

Every place I have gone today I have seen smiling faces. I have seen people everywhere wearing the green shamrock—the three-leaf shamrock. It is delightful to see a profusion of them in this representative assembly, because if there is any one thing that is the symbol of unity in our life today it is the Irishman's shamrock.

Here is the reason: After laboring zealously and with ever-increasing success to Christianize the Irish nation, St. Patrick discovered that there was still one sharp, difficult obstacle in the path of his mission. The people of Ireland, despite the eloquence of his cause, were not able to grasp the essential idea of the Holy Trinity. They could not, in all honesty, visualize the mystery of the unity of one God and the three Divine persons.

In this predicament St. Patrick sought out and appropriated for his purpose—yes; dramatized—the green and modest little shamrock, which, like our own three-leaf clover, grows in such abundance on the hillside and in the meadow. He pointed out that the three leaves of the shamrock exemplified the three persons of the Holy Trinity, and that the stem on which they grew represented the Godhead and was typical of the unity of three in one. With this illustration, the success of his mission was immediate and far-flung, and from that day to this, under all the stars of Christendom, the unity of God may be distinctly visualized by anyone who has a mind to do so.

My friends, is this not an opportune moment in the tragic period of contemporary history to take an inspiration from this lesson of the divine unity? Can we not find in it a clear light showing us the way out of our difficulties? Can we not find here an invitation from heaven itself calling to all our people to close ranks and to move forward in unity for the preservation of our democracy and the promotion of our American ideals and opportunities?

After laboring zealously and with ever increasing success for 7 years, we must acknowledge there is still one sharp, difficult obstacle in the path of the ultimate goal of this fine and generous Nation. We have in this land of material abundance, this paradise of the western world, 9,000,000 unemployed, unfortunate citizens looking for the chance to make an honest living; 9,000,000 people looking for the elemental necessities of life for themselves and for their dependents. In this group, it is estimated that there are more than 2,000,000 young men and women, in the flower of American youth, who have never been able to get a permanent job. Many of them have not been able to get a job at all.

If this condition were to go on indefinitely, the time will come when this large element, unemployed through no fault of their own, will lose faith in the ideals of the Republic. They will lose hope in the ability of our democracy to solve its pressing problems, and the morale of these millions will become so impaired, so destroyed, that the first effective demagogue that comes along will find them ripe for the harvest.

We are doing our utmost to remedy the situation, remedy it according to the accepted American tradition. We have employed the greatest creative minds that can be found. We have utilized the best brains of the great American universities. I am happy to say, we are making progress and I am firmly convinced that we will solve this problem as we have solved every other problem that has confronted us since the foundation of the Republic.

I believe we are going to solve it in the last analysis through a revitalized, a fresh-minted spirit of national unity and cooperation. I believe we are going to solve it in the melting pot of common sense by the united action of our sincere and patriotic people working together as one. If we keep before us the eternal purpose and essential unity of the founders of this Government, and if we will have but one objective in life, the fulfillment of our threefold obligation to our God, our country, and our neighbor, we can solve our problems definitely and without protraction.

The success of this Nation's prosperity stems upon a threefold, equally balanced development of industry, labor, and agriculture. As a product of our American institutions these three factors in our national life should and must necessarily thrive and flourish together as one. A perfect unity of this kind operating for the general welfare would draw down upon it the blessing of the Master, and with the loyal and energetic support of the friendly sons of Uncle Sam, which includes the friendly sons of Saint Patrick, there is no limit to the success, the happiness, and the prosperity to which the people of this country may not justly and conscientiously aspire.

In conclusion, may I leave with you the lesson of the shamrock under the Stars and Stripes, the thought of unity in American industry, labor, and agriculture, and the assurance of national happiness and success through loyalty and devotion to our God, our country, and our neighbor.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

LETTER BY EDWARD SNYDER

Mr. McCARRAN. Mr. President, in the next few days following the passage of the bill which is now the unfinished business, the Senate will take up what are known as the reciprocal-trade agreements. I believe there is no one more conversant with the effect of the reciprocal trade agreements policy on business and also on labor in America than is Mr. Edward Snyder, of Nevada. In a letter addressed to me, published in the Lincoln County Independent, Mr. Snyder goes into that subject quite at length, setting forth what ruinous effects the reciprocal-trade agreements have had on the mining industry in the West, and on labor in connection with the mining industry.

I ask that that letter in its entirety be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. PAT McCARRAN,
Senate Office Building, Washington, D. C.

DEAR SENATOR: As the House has passed the bill to renew the reciprocal trade treaty powers of the President, we sincerely hope the Senate will defeat the bill or amend it to make the trade treaties subject to ratification by a two-thirds vote of the Senate as the Constitution provides.

The zinc industry's experience with the State Department's economic rule, and the problems incident thereto, were ably covered in statements by Messrs. Julian D. Conover, Ernest V. Gent, and Evan Just before the Ways and Means Committee of the House, along with their suggestions as to modifications of the proposed act. For your convenience, I am forwarding, bound herewith, copies of said statements, along with a copy of my letter of February 24 to Senator WILLIAM H. KING (Senate Finance Committee).

I am attaching a statement showing the zinc imports by countries for the year 1938 as compared with 1939, from which you will note the imports for 1939 totaled 66,966 tons as compared to 226,157 tons in 1938. The imports for December 1939 totaled 15,700 tons, equivalent to a yearly rate of 188,400 tons. The total production of slab zinc in the United States during 1939 was 538,198 tons.

Of the total of 66,996 tons of zinc imported in 1939, only 8,015 tons (12 percent) came from Canada, the country with which the trade agrement was made. This agreement, like all other so-called reciprocal-trade agreements, affected tariff reductions for not only Canada but for all other countries with whom we have treaties by virtue of the most-favored-nation clause in all treaties.

The following salient facts relating to our Nevada operation will give you an idea of the importance of our industry to the employment problem and the other industries it helps to sustain:

(1) The yearly production of zinc from our Nevada mine from 108,000 tons of crude ore is 14,783 tons.

(2) The gross recoverable value or new wealth per annum had from the production of 108,000 tons of Pioche crude ore, using metal prices of gold ($35 per ounce), silver (71.11 cents per ounce), lead (at New York, 5 cents per pound), and prime western zinc (at St. Louis, 5 cents per pound), is estimated at $2,808,000, equivalent to $26 per ton of ore and $189.95 per ton of zinc recovered therefrom.

(3) The average number of men employed at the mine, mill, smelter, and reduction plants for the above production is 370; man-shifts worked per annum, 111,084; and man-shifts worked per ton of zinc, 7.51.

(4) The annual pay roll at mine, mill, smelter, and electrolytic plants to produce 14,783 tons of zinc from Pioche ore is estimated at $710,900, equivalent to $48.09 per ton of zinc.

(5) The dependent population in Utah, Nevada, and Montana supported by the Pioche ore production is estimated at 6,290 people based on Van de Graff's survey for Utah showing an average of 17 people dependent on each person employed in the mining and smelting industry, equivalent to more than 42 people supported for each 100 tons of zinc produced.

(6) The freight paid the railroads for the transportation of the ore, concentrates, bullion, and the metals from said ore is estimated at $670,680 per year, equivalent to $45.36 per ton of zinc. These figures do not include freight on fuel and supplies for the mine and plants nor on the supplies used by the communities sustained by the industry.

(7) The electric power purchased for the mining, milling, and reduction of the Pioche ore is estmated at $344,500 per annum, equivalent to $23.30 per ton of zinc produced.

(8) The supplies purchased for mine, mill, and electrolytic plants to produce 14,783 tons of zinc from Pioche ore are estimated at $271,000 per annum, equivalent to $18.33 per ton of zinc produced.

Assuming that the Canadian Government made the treaty with their eyes open and on a business basis, they undoubtedly did not make any large concessions to us in consideration of the reduction of $7 per ton the State Department granted on the duty on zinc. This reduction applied to the total of zinc imported from Canada during 1939 of 8,015 tons represents a total gross tariff concession to Canada of only $56,105 for the year. This concession, however, cost the American zinc producers during the first 8 months of 1939, $7 per ton on the 334,391 tons of zinc produced during that period, or a total of $2,340,737, as well as the loss of a domestic market for approximately 41,000 tons of zinc (representing the increase over 1938 in the total United States imports during the year 1939), and the loss of a production of not less than $4,500,000 in new wealth to the Nation as a whole. As the Indian would say, "Bum trade."

You can readily understand that the concession to Canada of $56,105 in duty reduction would have been of minor importance if it had not involved the large loss of market to Mexico, Peru, and Belgium, and the equivalent of a tax of $7 per ton on the entire domestic production of zinc. Why should the State Department have arbitrary powers to secretly make effective levies of this kind on selected industries?

There is no question in our minds that the State Department failed to properly analyze the effects of the zinc tariff reduction, or else deliberately reduced the duty with a view of subsidizing trade with Mexico, Peru, and Belgium, and used Canada as a blind, realizing the fact that the public wished an expansion of trade with our good neighbor to the north, and that the people generally would not appreciate the fact that the Canadian agreement was giving a substantial portion of our market to South America and Europe.

After analyzing the procedure used by the State Department in its treatment of the zinc industry, I cannot help but think its entire reciprocal-trade powers should be greatly reduced, if not entirely eliminated.

Someone may say why all this agitation by the zinc industry when the price of zinc is above the cost of production, as at present. The three outstanding reasons are:

1. High-grade foreign ores, combined with cheap labor, United States technology, and depreciated exchange make it possible for foreign producers to sell zinc in our market, duty paid, at a St. Louis price ranging from 4¼ to 4½ cents per pound, as compared to a cost of 5 cents per pound for a large portion of the domestic industry under present economic conditions.

2. In view of the above, the mine and plant development necessary to perpetuate the domestic industry are not warranted on the basis of existing duties, and the industry is forced to mark time as far as said development is concerned.

3. We believe large military stocks of zinc in Europe will be dumped in this market upon cessation of hostilities at prices far below the cost of production in the probable scramble for dollar exchange.

On your request, I shall be pleased to furnish any additional information I can on this subject.

As our Nevada wages, based on a union contract, vary at the rate of 40 cents per shift for each 1-cent variation in the price of zinc, you can readily understand why our men are vitally interested in the protection of their wages as well as their employment by an adequate duty on zinc. I know they will also appreciate anything you do to have the duty on zinc restored and to prevent the extension of power to the State Department that will jeopardize the tariffs on lead, copper, and other western raw materials.

This letter requires no answer.

With kind personal regards, I remain,

Yours sincerely,

EDWARD H. SNYDER.

Summary

	Per ton zinc	Per annum
New basic wealth (includes gold, silver, and lead) produced	$189.95	$2,808,000
Additional employment—Man shifts	7.51	111,084
Additional pay roll	$48.09	$710,900
Additional power business	$23.30	$344,500
Additional railroad freight revenue	$45.36	$670,680
Additional supplies purchased	$18.33	$271,000

Federal Taxation of Municipal Bonds

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

ADDRESS BY CECIL F. BATES

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address delivered by Hon. Cecil F. Bates, mayor of Mobile, Ala., at the Southern Regional Conference of the United States Conference of Mayors, held at Birmingham, Ala., on March 8, 1940. The subject of Mr. Bates' address is Federal Taxation of Municipal Bonds. I think his speech is worthy of the thoughtful consideration of all persons who are interested in that subject.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The theories of dual sovereignty and intergovernmental immunity of the Federal and State Governments and their instrumentalities from interference, the one by the other, seems to have been established by the adoption of the Constitution of the United States on September 28, 1787.

It may be surprising to many of you to learn, however, that in the many cases arising since the adoption of the Constitution, where the validity of an act of a State legislature or of the Congress of the United States has been attacked on the ground that it violated one of these principles of government and was, therefore, unconstitutional, that there is not a single word contained in the Constitution of the United States which relates directly thereto.

These principles rest not upon any definite written words contained in the Constitution, but solely and only upon the decisions of the Supreme Court in its interpretation of the intent, theory, and underlying principles of government indicated by the Constitution as a whole. Many early cases challenged the sovereign right of the Federal Government and this principle did not come to be generally recognized until after the decision of the Supreme Court in 1819 in the case of *McCulloch* v. *Maryland*. In this case, Chief Justice Marshall, in delivering the decision of the Court, held that any State tax, whether discriminatory or not, on the operation of a Federal agency constituted an unconstitutional interference with the Federal Government. This case established for the first time the principle of dual sovereignty under the Constitution. This case was followed by a long line of decisions, each reaffirming the theory originally established in *McCulloch* v. *Maryland* and, quite often, more clearly and definitely established its scope. In the case of *Weston* v. *Charleston*, the Supreme Court, again speaking through Chief Justice Marshall, held that any tax which burdened the borrowing power of the Federal Government is unconstitutional, since "if the right to tax exists, it is a right which in its nature acknowledges no limit." With the coming of the decision of *Dobbins* v. *The Commissioner* and the case of *Collector* v. *Day*, in which latter case it was held that the salary received by a judge of probate in the State of Massachusetts was not subject to an income tax levied by the Federal Government, it has been accepted that the constitutional immunity applied reciprocally, and there has been since then little, if any, question as to the existence of this principle of government nor of its soundness.

This principle was definitely reaffirmed in the decision rendered in 1895, in the case of *Pollock* v. *The Farmers Loan and Trust Company*, involving the application of a Federal income tax on municipal bonds, wherein Chief Justice Fuller held, "A tax upon income derived from the interest on bonds issued by a municipal corporation is a tax upon the power of the State and its instrumentalities to borrow and is consequently repugnant to the Constitution of the United States." As late as 1934 the Supreme Court, speaking through Mr. Justice McReynolds, upheld the principle of constitutional immunity in these words: "No State may tax the appropriate means which the United States may employ for exercising their delegated powers; the United States may not tax the instrumentalities which a State may employ in the discharge of her governmental duties."

Although, in the case of *Helversing* v. *Gerhardt*, in which case a decision was rendered on May 16, 1938, and in the case of *Graves* v. *People, ex rel O'Keefe*, it was decided that, under the sixteenth amendment to the Constitution of the United States, the Federal income tax did apply to the officers and employees of the States and their instrumentalities, the established principles of dual sovereignty and tax immunity were again reaffirmed.

Since these principles of government were originally established in the early days of our existence and have been recognized and reaffirmed at various times throughout the life of our Government, there is doubtless a question in the minds of many of you as to why we should now be disturbed by the question of the levying of a Federal income tax upon the income derived from State and municipal bonds, and on what legal basis the messages of the President of the United States, sent to Congress on April 15, 1938, and January 19, 1939, and the efforts of the Treasury Department, urging the passage of legislation authorizing the levying of such an income tax, can possibly rest. It seems that it all comes about because of the adoption on February 25, 1913, of the sixteenth amendment to the Constitution of the United States, which is commonly known as the income-tax amendment, and which authorizes the levying of an income tax upon "income from whatever source derived." At the time of the submission of this amendment to the various States it was never, at any time or in any way, indicated that by its adoption the Federal Government would seek to levy a tax upon income derived from State or municipal bonds, but, on the other hand, all were led to believe that it was the sole and only purpose of this constitutional amendment to amend paragraph 3 of section 2, article I, of the Constitution, which provided that all direct taxes levied by the Federal Government should be apportioned among the States according to population. Although this amendment was adopted in 1913, no serious attempt had been made by the Federal Government to levy such an income tax, as is now proposed, until the time of the delivery of the message of the President in 1938. This present attempt is most interesting, in view of the fact that, since the time of the adoption of this amendment to our Constitution, there have been a number of decisions of the Supreme Court reaffirming the principles of dual sovereignty and reciprocal immunity, particularly the decision rendered by Mr. Justice McReynolds, from which I have quoted above. The Federal Government, now claiming that there has been delegated to it through the sixteenth amendment a right to tax the income derived from State and municipal securities, has attempted to exercise its right through legislation introduced in Congress, and with great gusto has offered to give to the States and their instrumentalities a reciprocal right to tax the income derived from Federal securities.

The reasons advanced as to the soundness and for the necessity of the passage of such legislation were stated by Mr. John W. Hanes, Under Secretary of the Treasury, to the special Senate committee on January 18, 1939, at which time he urged the extension of Federal income tax to the income from future issues of public securities. He gave three principal reasons to sustain his position: First, because the existence of tax-exempt securities permits large taxpayers to defeat the effect of a graduated income tax by switching to this type of investment to avoid payment of a tax in the higher brackets; second, because the existence of attractive bonds of a tax-exempt character makes the market too attractive for them, thus influencing investments in them and avoiding placing funds in productive enterprises involving risks; and, third, for the reason that even with an increased rate of interest the elimination of tax-exempt securities would, in fact, result in a substantial net financial gain to the Government as a whole.

Probably the best-informed man on this subject today, and surely the one who has conducted the most thorough study of the subject, is Dr. Harley L. Lutz, professor of public finance at Princeton University. Dr. Lutz made a thorough and exhaustive study of the tax-exempt securities held by large estates and reached the definite conclusion that the ownership of tax-exempt securities is incidental to the ownership of securities of corporate and private concerns. In the course of his study he analyzed the holdings of 3,044 estates of over a million dollars and 105,499 estates under that amount and found that the total ownership of State and municipal bonds amounted to only 5.63 percent of the total holdings of these estates. His study further developed the fact that it is only the investor who has an income of above $60,000 per year that begins buying this type of security. He further points out that, while Mr. Hanes claims that an investment in this type of security is so attractive to an investor that he will not invest his money in the ordinary enterprises involving risks; that the greater part of the State and local debt was created prior to the year 1930, at a time when business was at its best, industrial development was enjoying its greatest strides, and money for the development of private enterprises was more easily obtainable than at any other time. Dr. Lutz points out, in answer to the statement of Mr. Hanes, "the elimination of tax-exempt securities would, in fact, result in a substantial net financial gain to government as a whole"; that upon the imposition of such a tax the interest rate on Federal Government securities would so increase as to cost the Federal Government $187,000,000 per year in additional interest rates against an additional income of $204,000,000 from the tax, or a resulting net gain to the Federal Government of only $17,000,000 per year. Against this he estimates that there will be a resulting net loss to the States and their instrumentalities of at least $96,000,000 per year because of increase in tax rates, or a

net loss to the various governments through the reciprocal taxation of income from their securities of an amount of not less than $79,000,000 per year. The loss of such an amount is indeed staggering.

It might here be stated that the proposal will not, in general, affect the present debt in its present form, but would apply to future issues of bonds, including refunding bonds. Because of this fact, the actual increase in financing cost can only be estimated, using the present debt as a basis.

Of course, since it is proposed that the Federal Government, the States, and their instrumentalities would have a reciprocal right to tax the income from the bonds issued by each, the theory is that complete justice would be done. From even a casual study of the matter it will easily be seen that the justice of it all lies in theory alone and not at all in fact.

The theory of this proposal is that under the sixteenth amendment the Federal Government has a sovereign right to tax the income derived from bonds issued by the States and their instrumentalities. The right proposed to be given to the States, however, to tax the income of Federal securities would rest entirely upon the willingness of Congress to grant this right and its willingness for it to continue. If the states and their instrumentalities should ever allow the establishment of such a sovereign right, it could be abolished only through the adoption of an amendment to the Constitution, whereas the reciprocal right of the State and its instrumentalities to tax Federal securities could be abolished by the same Congress granting it or by any succeeding Congress. But assuming, for the purpose of considering this question, that such right would be accorded the States and their instrumentalities, as is proposed, and that this right would not be withdrawn, what then would be the actual effect of this legislation upon them? Since Dr. Lutz estimates it would bring about an annual loss to them of not less than $96,000,000 per year, the matter should surely be given serious study.

To begin with, in order that each State in the Union might enjoy some benefit of this reciprocal right, and that reciprocity might, to any extent exist, it would be necessary for each of the States to levy an income tax in order that an income might be derived by it from Federal securities. We find, however, that of the 48 States in the Union, 12 of them have no income-tax laws of any kind, and it would be necessary for these 12 States, in order that they might receive some measure of protection because of the levying of a Federal income tax upon their securities, to enact an income-tax law which, up to now, in the operation of their State governments, they have not found necessary to enact, or because of good and sufficient reasons the people of these States have not seen fit to authorize. Insofar as these States are concerned, the citizens would be required to pay added taxes, not now paid by them or necessary in the operation of their government, simply because of the invasion of their rights by the Federal Government. As to the States which now have an income tax in effect, it will be found that the rate of the tax in effect is, on an average, far less than the tax levied by the Federal Government, and that, on the very face of things, a true reciprocity would not and could not exist because of this vast difference in the rate of taxation. These States would then find themselves, although they now had a State income tax, in a position little better than the 12 States that do not have one. They would be faced with the necessity of either materially increasing their rate of taxation in order to recoup their loss to the Federal Government, or would be forced to the point of having to levy additional taxes in other forms to make up this terrific loss.

With reference to this matter Dr. Lutz has stated: "The unfairness and discrimination as between States is also illustrated by the fact that in Louisiana the added cost of interest would amount to 99.4 percent of the total income taxes collected, while in Wisconsin it would be 8.2 percent."

The theory, of course, of the Federal legislation is that all States and their instrumentalities would stand upon the same footing. Once again the Federal Government is entirely wrong in this assumption, because, after a study of the matter is made, it would be found that the ownership of Federal securities is not evenly held in the 48 States of the Union but that they are held largely in the States of Delaware, Massachusetts, New York, and Wisconsin. These States alone would have an opportunity of breaking even on this reciprocal legislation, or of possibly showing a small net profit by reason of its enactment.

As pitiful as would be the plight of the States of the Union by reason of the passage of such proposed reciprocal legislation, the position in which the municipalities of our country would find themselves would be even more horrifying. Of the 36 States of the Union which now levy an income tax, it is only in 13 of them that any attempt whatever is made to distribute to the municipalities of the State any part of the revenue derived by the State through income tax. In view of the fact that all of the States, with the exception of the 4 just mentioned, would themselves suffer a severe loss, it would hardly seem reasonable to expect that any one of them would be willing to increase the amount of this loss by distributing a part of the revenue collected from income on Federal securities to their respective municipalities. So with the vast majority of the municipalities of the Union, whatever increase in interest rates that might accrue because of the levying of an income tax on the income derived from their securities would be a total loss, which, of necessity, would have to be recouped through the levying of taxes in other forms.

Dr. Lutz, in his study of the effect of such legislation upon interest rates of the States and their instrumentalities, has reached the conclusion that there would be an increase of 0.614 to 100 points, or from slightly more than six-tenths of 1 percent to 1 percent in interest rates, amounting to an average increase of approximately 20 percent in the cost of State and municipal financing. His figures in this regard are supported very largely by the estimate of Mr. Hanes, and, in the light of studies made by municipal financial experts throughout the country, must be taken as very conservative.

The benefit of the smaller increase in tax rates would, of necessity, come to those States and municipalities of our country which are now or may hereafter be in the best financial condition, and because of this condition enjoy the benefit of smaller interest rates. In other words, the increase would be smaller in those States and cities which, because of the soundness of their financial condition, enjoy lower tax rates, and could, because of their stronger condition, better afford to pay the increase. The burden of the greater increase in tax rates, and therefore the greater increase in the costs of municipal financing, would fall upon those municipalities of our country which are now or which may hereafter be in a poorer financial condition or which are hampered by restrictive laws. Those municipalities, the least able to pay at all, would be those upon whom would fall the greater burden.

This conference is composed of mayors of the Southern States, and while this proposed legislation is not sectional in its character, I believe that we should here come to understand that its greatest burden would fall upon the States from which we come or upon the municipalities that we represent. We all know that it is the States and cities of the South, those States and cities which we represent at this conference, which, because of limited tax rates, because of other adverse circumstances, or because of their poorer financial condition, as compared with the richer States and cities of the East and the North, have had to pay for years a rate of interest greater than that paid by our other sister States and cities. If this legislation should come, the burden which we are now having to bear will be increased in greater proportion than that of any other section of our country. It is but reasonable for us to expect that the increase in our interest rates will be nearer 1 percent than six-tenths of 1 percent, and that our costs of financing will be increased well above the average of 20 percent.

Because of the vast scope of this subject and the limitation of time, it will not be possible for me to point out to you the amount of this increase on each of your individual cities. You can take the figures which I have given to you and apply them to your own debt situation, and in doing so I believe that you will arrive at a result which will be startling to everyone of you.

I come from a city which has just emerged from a most trying financial experience. It is a city which probably would be typical and might well be used as an illustration. Being located in the South, in a State of tax limitations, we have always had to pay the penalty in the interest rate borne by our bonds. We are struggling today because of the inroads of the State government, because of the relief burdens which have been placed upon us by relief legislation, and because of our limited income, to pay the interest now borne by our bonds and to operate our city on a most economical basis. Improvement is necessary in present services, and new facilities should be furnished. Because of a lack of revenue this cannot be done. Yet if this legislation be enacted into law, with a present debt of approximately $11,000,000, we would have forced upon us an added burden of approximately $100,000 per year as a contribution to the support of the Federal Government without the receipt of any additional revenue to compensate for this loss.

With the growth of our cities, we will, of necessity, have to issue new bonds, and municipal securities have in the past been issued at the rate of approximately a billion dollars per year. Many cities are now involved in the refinancing of their existing obligations, and many others will face the necessity of refunding their existing debt within the period of the next few years. We are not only confronted with the necessity of having to pay increased financing costs on these obligations, but, in the face of a tax levy which may vary from year to year with the convening of each succeeding Congress and the meeting of each State legislature, it will be a most difficult problem to sell our securities at all, as a prospective purchaser would never be able to determine, at the time of submitting his bid, what income-tax rates might be made effective during the life of a long-term security.

The proposed legislation speaks of reciprocal-tax rights and the curing of a bad situation by abolishing tax exemptions. There could only come true reciprocity in taxation between the Federal Government, the States, and their instrumentalities and a complete and just solution of the situation complained of by the abolishment of all tax exemption, whether it be on securities or on real estate. The only avenue of escape of the cities, and of the States as well, from the effect of the proposed legislation would be the levying of additional taxes upon property, a source of revenue which is now overburdened and at present constitutes approximately 80 percent of the revenue of the municipalities of our country. Yet when we go to collect this revenue, we find on every hand various pieces of Federal-owned property of great value which, because of its exemption from taxation, not only fails to contribute to the support of the local government within the jurisdiction of which it might be located, but does not even pay for the ordinary municipal service rendered to it by the community in which it is located. We find that this property is not only exempt from payment of ad valorem taxes, but that the exemption also applies to the costs of expensive improvements from which the property derives a special benefit, and which the people of the community must bear in addition to paying for the special benefits derived by each of their particular properties.

It has been estimated, and I believe correctly, that if the Federal Government paid taxes on the various properties owned by it,

and located within the limits of the States and their municipalities, at the prevailing rate of taxation, this would amount to $100,000,000 per year. The removing of this tax exemption existing in favor of the Federal Government would, of course, work to the benefit of the States and their instrumentalities, and would approximately offset the amount of loss which would be suffered by these levels of government by reason of the taxation of their securities.

There is hardly a municipality in our country which is not today suffering because of a lack of income. The sources of income of a municipality are limited and, as I have said, real estate bears approximately 80 percent of the cost of the Government. If there should be any additional burden placed upon this source of revenue, it should be done solely and only for the purpose of meeting the dire needs of the community and not for the purpose of affording a greater income to the Federal Government.

While this is, as I have stated, a conference of the mayors of our Southern States, this is not a sectional matter, although the burden would probably fall more heavily upon us. Its effect upon us, and upon every section of our country, is far too great for it to be a matter of partisan politics. No matter from what section of the country we may come or to what political faith we may adhere, this is a matter which knows no sectional lines nor party principles. We are all affected most drastically because of the proposed legislation, and each of us should realize the importance and absolute necessity of its defeat. We should each go home firmly resolved that we will continue to carry on the fight and will forcibly bring to the attention of the Senators and Congressmen of our respective States and districts that they are, in the final analysis, the representatives of the people of our States and districts, and, since this proposed legislation adversely affects the interest of every one of their constituents, that they should join in our fight against this legislation and bring about its final and lasting defeat.

Authority Vested in Government Bureaus

EXTENSION OF REMARKS

OF

HON. JOHN E. MILLER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE EL DORADO (ARK.) DAILY NEWS OF MARCH 13, 1940

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial dealing with the authority vested in Government bureaus, published in the El Dorado Daily News, published by Clyde E. Palmer, at El Dorado, Ark., on March 13, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the El Dorado (Ark.) Daily News of March 13, 1940]

SUPREME COURT PASSES BUCK TO CONGRESS

One of the most important decisions rendered by the United States Supreme Court since it assumed its New Deal dress was a decision late in January wherein Justice Frankfurter developed the opinion of the Court in the case of the Federal Communications Commission versus the Pottsville Broadcasting Co.

While this decision was of primary interest to the broadcasting industry, yet its implications are so broad as to be of major importance to every line of industry and commerce in these days of Federal regulation and supervision and of governmental commissions whose edicts and rulings have the force of statutory law.

In effect, the Supreme Court passes the buck to Congress. While the opinion brings out the fact that basic characteristics of trial procedure, rules of evidence, and general principles of appellate review have been established over a long period of time, yet modern administrative tribunals are the comparatively recent outgrowth of far different conditions. The opinion points out the striking extent to which administrative agencies have been invested with power far exceeding and different from conventional judicial modes for adjusting conflicting claims; that "administrative agencies have power themselves to initiate inquiry or, when their authority is invoked, to control the range of investigation in ascertaining what is to satisfy the requirements of the public interest in relation to the needs of vast regions and sometimes the whole Nation in the enjoyment of facilities for transportation, communication, and other essential public services."

Further, that the laws under which these agencies operate prescribe the fundamentals of fair play. However, from this point on the decision evidently is based on the idea that if Congress, in the enactment of a statute, does not properly provide for fair play between various interests in the proceedings of an agency which Congress sets up, the onus of correcting any miscarriage of justice lies with the Congress rather than the courts.

In the specific statement, "But courts are not charged with general guardianship against all potential mischief in complicated tasks of government, the present case makes timely the reminder that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts.' Congress, which creates and sustains these agencies, must be trusted to correct whatever defects experience may reveal. Interference by the courts is not conducive to the development of habits of responsibility in administrative agencies."

Here is plain notice to the people of the United States that the Supreme Court disavows any responsibility upon them to protect the people from even those most glaring inequities and injustices from bureaucratic and autocratic policies or rulings of the innumerable Federal agencies where Congress in the enactment of the law under which such agencies are established has not included provision requiring equity and fair dealing of such agencies with the public.

The challenge from the Supreme Court of the United States to the Congress is clear and unmistakable in this decision, and creates a vital necessity for immediate corrective legislation by Congress.

Preparing Coercion

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE WASHINGTON POST OF MARCH 15, 1940

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post of March 15, 1940, entitled "Preparing Coercion."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 15, 1940]

PREPARING COERCION

Albert S. Goss, Land Bank Commissioner, whose resignation has just been announced, is the third high official to retire from the Farm Credit Administration since its transfer by Executive order to the Department of Agriculture.

Mr. Goss confirms reports that a major conflict has developed over the policies to be pursued by the agencies of the F. C. A. In a formal statement he indicates that the farmer-managed cooperative system, based on careful selection of risks and joint responsibility of borrowers, is being jeopardized by efforts to use the system for political purposes..

The fact that a Presidential election is in the offing may help to explain the urgency of the pressure to relax lending safeguards, as Mr. Goss hints. But the major cause of the conflict of policies goes deeper. It grows out of fundamentally different conceptions of what the objectives of the Farm Credit System should be.

The former management of the F. C. A. rightly believed that a strictly independent organization, free from political influences, is essential both to prevent dissipation of public funds through unsound loans, and to achieve the original objectives of the Farm Credit System. That was to establish permanent credit agencies controlled and owned by farmers and able to finance themselves without Government subsidies.

Since the F. C. A. has become a subordinate unit of the Department of Agriculture, subject to the control of the Secretary of Agriculture and his appointees, attainment of that goal has been jeopardized. Mr. Goss asserts that the present tendency is "toward a type of so-called credit in which personal responsibility is denied, loans are made to everybody, no adequate margin of safety is provided, and the Government pays the loss whenever the borrower wants to quit paying."

That is the almost inevitable result of making the F. C. A. an integral part of the Department of Agriculture, with its innumerable programs for crop control, price stabilization, and various forms of aid for farmers, all providing relief under the guise of loans. It is no secret, indeed, that Secretary Wallace and the newly appointed F. C. A. governor, Mr. A. G. Black, lean toward the type of easy credit which Mr. Goss denounces.

Mr. Black recently stated that the F. C. A. is "taking the broad social view that its duty is to help farmers become landowners, even if it has to adopt special measures to help them." He also said that, while farmers would not be required to participate in A. A. A. crop-control programs, the F. C. A. would suggest that they take part. In short, it seems plain that the new management favors using the F. C. A. as a weapon to force upon farmers the agricultural programs of the administration.

If the F. C. A. is to become completely integrated with the Department of Agriculture in this fashion its doom is sealed. For a sound, self-supporting system of agricultural credit must be based on sound credit policies. It is impossible to mix politics with banking without courting disaster. It is equally impossible to combine relief with sound credit management.

As the former president of the Federal Land Bank of Spokane said in tendering his resignation recently: "The thing that makes integration with the Department of Agriculture unsafe for the Farm Credit Administration is that the Secretary of Agriculture, with all his multitudinous programs, must be continually asking Congress for legislative assistance and appropriations of public funds. It is only common sense to say that under present procedure these things cannot be accomplished without concessions here and there along the line, in which political patronage is very definitely involved."

Prompt action is essential if the F. C. A., which has been in process of upbuilding for almost a quarter of a century, is to be saved for the farmers. The least that Congress should do is to appoint an investigating committee to inquire into the causes of the upheaval that has deprived the Farm Credit Administration of trusted and valued officials.

In the light of the information secured, it would then be possible to follow a conscious legislative policy, designed either to save or deliberately to transform the existing system. As matters now stand, the issue is likely to be irrevocably decided by personal decision of the Secretary of Agriculture and his aides.

Regulation of Investment Trusts

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE NEW YORK TIMES OF MARCH 16, 1940

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an editorial entitled "Overdue Regulation," appearing in the New York Times of March 16, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 16, 1940]

OVERDUE REGULATION

Proper regulation of investment trusts has been long overdue. Many shocking abuses and scandals on the part of poorly managed companies, with attendant losses to a class of investors who could least afford them, could have been avoided if such regulation had been instituted 10 or 15 years ago when investment trusts on a large scale were first making their appearance here. The main justification for the very existence of investment trusts is the service they can perform for small or uninformed investors. The small investor who does not want to put all his eggs in one basket but who lacks the funds to distribute his risks among a large number of companies, and who would probably in any case lack the detailed knowledge necessary to choose a large number of investments wisely, may find the solution of his problem in purchasing the securities of a well-managed investment trust. The trust can then diversify its own investments and keep an alert watch over them. The well-managed investment trust, in other words, performs a function which in a way parallels that of the savings bank, the chief difference being that it offers investors the possibility of a greater return on their investment or of an increase in their capital, with, of course, a corresponding risk of capital shrinkage. But there is no excuse whatever for the existence of investment trusts that are primarily speculative vehicles or instruments for manipulation by their managers.

It is true that the worst abuses by investment trusts seem to belong definitely to the past, and that there have always been many well-managed companies of the highest integrity. But this is no reason why proper regulation should not be instituted to assure that past abuses will not return and that any remaining abuses will be abolished. The best investment trusts will doubtless welcome such regulation because its existence will tend to increase public confidence in the trusts as a whole, just as the strict regulation of savings banks has led to such high public confidence in the latter.

The Lea-Wagner bill gives the general impression of a moderate and well-considered measure. It does not require the simplification of existing systems of investment companies, but does try to eliminate the evils of complex capital structures in the future. It is difficult to see any objection to its requirements for full publicity of the compensation paid to managers; for annual or other periodical reports; for authorizing the S. E. C. to prescribe uniform accounting and auditing methods and to examine books. There seems good reason for the provisions putting minimum and maximum limits on the size of trusts. The bill has a constructive aim in its attempt to permit and encourage a type of investment company that could invest its funds in new industrial enterprises on the condition that it plainly informed its stockholders that such investment was its policy. Anything that can encourage the supply of risk capital for new ventures, particularly at the present time, should be welcomed.

All this does not mean that the Lea-Wagner bill must be blindly endorsed as it stands. Some of the matters with which it deals are highly technical; they call for full hearings and thorough study. Questions may properly be raised concerning the wisdom of individual provisions, concerning the broader question of whether or not too much discretionary power is placed by the bill in the hands of the S. E. C., concerning, perhaps, the still broader question of the extent to which this type of regulation should be State or Federal. But the need for proper governmental regulation of the investment trusts, which this bill recognizes, is not in the realm of doubt.

Traffic in Intoxicating Liquor Has no Place in a Democracy

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ADDRESS BY HON. EDWARD H. REES, OF KANSAS

Mr. REES of Kansas. Mr. Speaker, under leave given me by unanimous consent of the House to extend my remarks in the RECORD, I include herewith the following address that I delivered at the annual banquet of the Woman's Christian Temperance Union at the Rosevelt Hotel on Wednesday evening, March 13, 1940:

It is a distinct privilege on my part to meet with a distinguished group that has an enviable record dedicated for the betterment of human kind. And it is also an honor on my part to meet with you in the atmosphere of the Nation's Capitol.

If time would permit, it would be interesting to review the record of the organization represented by this group. It would, I am sure be surprising, even astounding, if it were possible to know something about the effectiveness and influence this organization has had upon the people of this country through the years. We owe an obligation that we will never be able to repay, to those men and women representing organizations of this kind, who have given unselfishly of their time, their money, and their very lives in order that the various communities of the country may provide better opportunities for the generations to follow.

It would be interesting, if we had the time, to review the story of the founding of the Woman's Christian Temperance Union, and to follow its development through the last 65 years. The life story of Mary A. Livermore is most fascinating; Ella Wheeler Wilcox, Frances Willard, and hundreds of unnamed patriots who have fought the good fight for the betterment and uplift of human kind. As evidence of the universal esteem in which Frances Willard was held by this country—a white marble statute was placed in the Hall of Fame in the Nation's Capitol in 1905—the first to be placed there in honor of a distinguished woman.

We seem to be living in bewildered and confused times. It would appear that our present civilization just doesn't seem to be able to adjust itself to the advancement of modern science and invention. With all our background, and all of our experience, and with the advancements we think we have made in the progress of civilization—we still seem to be unable to solve problems that are close to us. Hardly anyone, anywhere, really wants war. And yet, almost half the people of the world are either directly or indirectly involved in war.

That leads me to this statement, that while we are interested in the conflict that is going on in Europe, and while we realize that it does affect us and our country and we cannot turn our backs on that situation, it is my opinion that we should not focus our attention so deeply upon the affairs of Europe that we neglect the most important and vital problems in our homeland. Let it be understood here and now that while we can not entirely separate ourselves from Europe and its war problems, the United States of America must not, and shall not, become involved in that crisis.

We must give more concern to our own problems, if we expect our democratic form of government to endure. Democracy throughout the world is on trial. It will prevail in the United States, but it is up to the American people to prove that democracy will actually work.

The question under discussion here this evening—the liquor question—is not the only important one. There must be some-

thing wrong when we are said to have a surplus of food in this country, when farmers are asked to cooperate in cutting down the production of things people eat and wear, and yet "one-third of our people are ill-housed, ill-fed, and ill-clad." Here we are, in a great democracy, with lots of things to do, and yet with 10,000,000 men willing to work and unable to find jobs. Nobody likes this situation. Nobody wants it, but we seem to be able to do so little concerning it.

The problem of the use and abuse of alcohol, like the poor, "has been with us always." Why do we care about this problem? It is because it goes to the very heart of civilization itself and because as our civilization becomes more complex and as we make progress socially, scientifically, and industrially we come more and more to a realization of the importance of dealing with the question of the abuse and use of intoxicating liquor. I believe the time is not very far distant when the people of this country are going to realize that the use of alcohol and the abuse of it do not belong in a democracy.

One of the most severe criticisms that can be levied at our democracy is our crime situation and the manner in which we deal with it. America's crime record is a national disgrace. The most serious phase is the number of youthful criminals. So long as the greatest single cause of crime—the excessive use of intoxicating liquor—is permitted, protected, and even promoted by the Government, crime will continue to be as deadly and costly as war. Right now the combination of liquor and other violations is growing worse.

J. Edgar Hoover in his report last year said that the crime bill amounted to about $15,000,000,000—6 times the cost of education; more than our exports; 10 times the cost of maintaining our Army and Navy in normal times; represents one-fourth of the national income. It is one and one-half times as much as was appropriated by Congress to run all the departments of the Government and to pay all of its obligations for a year and still have $6,000,000,000 left.

We are privileged tonight to meet in the great city of Washington, the greatest Capital City of the world. There is none like it. London is a metropolis, Paris a city of French culture. Washington knows no East, no West, no North, no South. It is the Capital City of the United States of America. Americans throughout the country have contributed to its support. They are proud of it. Hundreds of millions of dollars have been spent on this home for the capital of the greatest democracy in the world. We have idealized it and decorated it with fine buildings and memorials—the Washington Monument, the Lincoln Memorial, the Congressional Library, the home of Robert E. Lee, the Tomb of the Unknown Soldier, with all they mean and symbolize to the American people.

It is a city of beautiful homes and parks—a city where business hasn't even known there was a depression during the past 10 years—and yet I am told on this very night that crime is rampant here. I have read through the newspapers during the last 2 or 3 days about the trouble they are having enforcing the laws, and especially the laws dealing with the sale of liquor in the District of Columbia.

I am informed there are over 2,000 places where various kinds of intoxicants are sold. There are 400 hard-liquor stores in the Nation's Capital. In Virginia there are 89; in the State of Alabama, 58; and in Pennsylvania, where the population is 16 times as great, there are 560 such stores.

What does that have to do with the situation? We will look at it for a moment. Last year there were approximately 18,000 arrests in Washington of persons who were either drunk in public places or driving while under the influence of liquor. Those in authority say that intoxication is the cause of 55 percent of all jail commitments. Right here, in your Nation's Capital, it costs a million dollars to take care of the prisons each year, and the workhouse population has increased 80 percent since 1930.

One of the national health problems today is what to do with the increasing number of alcoholic addicts. Dr. Merrill Moore, in the Boston City Hospital, has made a careful study that appears in the New England Journal of Medicine for January 1939, in which he says, "Alcoholism is to be classed as one of the three major problems of health. Tuberculosis and syphilis are the other two."

Life-insurance companies in recent years have been giving the effect of liquor on health a lot of careful consideration. The Northwestern Insurance Co. in its report shows the first three causes for turning down risks are high-blood pressure, excessive use of liquor, and heart impairments. Of the average 100 cases rejected, 27 are high-blood pressure, 24 for undue use of liquor, and 21 for heart impairments.

The Travelers' Insurance Co. in a report entitled "Lest We Forget" has this to say: "The time will come when driving after drinking will be placed in the same category as carrying concealed weapons and highway robbery."

I cite these two items to show that life-insurance companies, who deal with the problem of life on a cold-blooded basis, deem this as one of the most important of their problems in the consideration of life-insurance risks.

As I said before, we just do not seem to be able to adjust ourselves to our modern and scientific inventions. The modern automobile in the hands of one who does not have complete control of himself is a dangerous weapon. Last year 36,000 people were killed on the highways of this country and more than a million were injured. That means that someone is killed every 16 minutes and someone is hurt every half minute.

The National Safety Council in a report states that from 9 to 13 percent of the persons involved in automobile accidents had been using intoxicating liquor. We have a most glaring inconsistency in the promotion of safety campaigns. We are urged to drive safely and sanely. We must observe the signs on the highways and be careful—and then we clutter the highways and roadsides with signs urging the use of alcoholic drinks of all kinds. Newspapers and magazines on the one hand have articles about safety, and on the next page you will read attractive advertisements about the fine qualities of alcoholic beverages. The expenditure of millions for safe highways doesn't fit in very well with the advertising of a thing that makes driving hazardous.

Time will not permit us to discuss at length the economic phases of the problem, but I would like to direct your attention to a few striking comparative figures: We spent about $2,000,000,000 in taxes for our elementary and high schools last year, and about six hundred million for our universities and colleges. The American people spent approximately $5,000,000,000 for alcoholic beverages. Our expenditure in 1939 for elementary and high-school education was $15.30 per capita. It was 38.93 per capita for alcoholic beverages. We spent more money last year for drink than was spent by all the public agencies for the people who are on relief. We talk a lot about the youth problem. The total amount spent for N. Y. A. last year was two hundred and ninety-two million—about one-fifteenth of our liquor bill.

Perhaps I can put it another way: If we could have used the $5,000,000,000 that was wasted for alcoholic beverages last year we could have bought an 80-acre farm at $2,500 for 2,000,000 of our destitute farmers, or it would buy homes for 1½ million tenants at $3,000 each.

Our Government and our people are struggling with the employment of youth and yet we permit the cultivation of habits that impair them and help prevent them from securing positions of responsibility. We talk a good deal about the question of national defense. We spent billions of dollars in trying to bring about a more adequate defense program. We are told that the physical well-being as well as the mental well-being of our people is the first line of defense. Someone has said that the strength and endurance as well as the intelligence of our men in the Army and Navy are far more important than the airplanes and other modern equipment placed in their charge.

I said a moment ago that the unemployment problem is one of the gravest and most difficult to solve. We have 10,000,000 men out of employment today. The $5,000,000,000 I have just mentioned would provide the heads of 10,000,000 families with approximately $40 per month for every month of the year.

We must attack this situation from a much broader scope than we have tried to do it before. We cannot ignore the moral side of it, of course; but we have got to take into consideration all these other phases of the question. All forces interested in this question must join hands and work together for a broad, planned program of education through the schools, through the home, and through the church. But also through all other groups of all kinds, bringing to the attention of the thinking public—yes, arousing their attention to the demoralizing effects of the excessive use of intoxicating liquor upon the social, moral, and economic well-being of the people of this country. Give everyone to understand that this is a question that involves everybody, whether they know it or not.

We are going to have to depend upon the churches, the homes, and the schools; and I believe we are going to have to enlist the cooperation and assistance of the various organizations throughout the country in an effort to bring home to the people that the well-being of the people of this democracy is being retarded in its health and in its social and economic life because of the excessive use of alcoholic drink.

The liquor interests told us when the eighteenth amendment was repealed that the amendment itself retarded progress; that it was a partial cause in the increase of crime in this country; and, above all things, they pledged their support to see to it that better conditions would come about after this law was set aside. They just did not keep the faith.

When repeal of the eighteenth amendment was enacted in December 1933 the President said: "The policy of the Government will be to see to it that the social and political evils that have existed in preprohibition era shall not be revived or permitted to exist. I trust that the good sense of the American people will not bring the curse of excessive use of intoxicating liquors to the detriment of the health and morals and social integrity. The objective is the education of a greater temperance throughout the country."

The liquor interests also told us that the repeal of the eighteenth amendment would bring about reemployment and was one of the first requisites for prosperity. The answer to this statement is obvious. We still have the national debt and still have 10,000,000 unemployed.

It is unfortunate, it is a shame and a crime, that the Federal Government has not been able to do much about the liquor problem. I think one of the unfortunate things that has been done by our Federal Government is the appropriation of several million dollars in subsidies to the Virgin Islands to be used for the purpose of manufacturing alcoholic beverages. The waste and expenditure of funds is enough, but the use that is made of them makes the situation still worse.

The greatest sin, I believe, that is being committed by the people of this country is the sin of indifference. We know about these problems, but we do not have the courage of our convictions to deal with them. This is true of so many things that have to do with situations affecting our public life. Our tendency has been to "let the other fellow do it." What we need is an aroused and inspired public cooperation, with a realization and appreciation of the fact

that we have made a dismal failure in the settling of this question. You and I are responsible for the situation as it exists just so long as we do nothing about it. It is your responsibility. It is the responsibility of every red-blooded American citizen.

Those pioneers who have gone before us left a heritage and a challenge that we would maintain and perpetuate the principles of a great democracy. We have been sleeping on the job. I don't believe the expenditure of twice as much money for alcoholic liquor as for educational purposes promotes the general welfare. Nor does spending more money for liquor than we spend for relief and for the churches and hospitals combined help to secure the blessings of liberty. Certainly to increase the population of our jails and workhouses and to contribute to the increase of death on our highways doesn't promote domestic tranquillity or provide for the common defense. You can't make me believe that the pouring of alcoholic beverages into the delicate digestive systems of the people of this country is in the best interests of a great democracy.

Just to "pass a law" will do no good. It was Lincoln who said: "With public sentiment, nothing can fail. Without it, nothing can succeed. Consequently he who molds public sentiment goes deeper than he who enacts statutes or pronounces decisions. He makes statutes and decisions possible or impossible to be executed."

In the name of the founding fathers of a great democracy, in the spirit of love for the greatest Government in all the world in devotion to our homes, our institutions, our liberties, and all that is near and dear in life, we ask the liberty-loving people of this great Nation to meet the challenge of the day and join in a determination to rid our country of this enemy of humankind.

Farm Imports

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I am including a table showing the increase of competitive agricultural imports in the year 1939 over the year 1938. It is most discouraging to note that the farmers of this Nation are losing their American market. This table contains some startling figures in regard to the great increase in the importation of cattle, mutton, hides, potatoes, wool, raw wool, wool noils, wastes and rags, milk, casein, and silver-fox furs.

United States imports of agricultural products for calendar years 1938–39

[U. S. Department of Commerce figures]

Import items	Unit	1938	1939
Cattle	Head	424,022	753,570
Canned beef	Pound	78,597,000	85,863,000
Mutton, fresh	Pound	43	105,000
Hides and skins (total)	Pound	181,951,000	323,446,000

NOTE.—1939 increases over 1938.

Importance of Construction of Roads and Trails

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. WHITE of Idaho. Mr. Speaker, the construction of roads and trails to open the inaccessible regions in vast, rugged, mountainous sections of the West is one of the most important undertakings depending on the policy of the Federal Government. The development of the extensive mineral, timber, and water-power resources of this important section of our country is entirely dependent on the construction of the necessary roads by the Federal Government. In support of the program, I have appeared before the Senate Appropriation Committee and presented the facts concerning this appropriation, which is submitted for the RECORD.

Mr. Chairman, I come to you to speak about one of the most important appropriations carried in this appropriation bill, as I see it. That is the item for forest roads and trails. I understand the Budget authorization of $10,000,000 has been cut by the House to $7,500,000.

IMPORTANCE OF DEVELOPING ROADS AND TRAILS

In dealing with the appropriation for forest roads and trails we are dealing with the development of our great resources which are inaccessible. I have a very heavy responsibility in representing a district which contains the greatest concentration of national forests within the United States. There may be a little greater area in California, but in that great strip of country which commences at the National Divide and extends down to the Snake River, dividing Oregon and Washington, we have vast resources that are locked up. They are in the national forests. Seventy-two percent of the State of Idaho is federally owned, and there is no way of opening up the country. We are working under a terrific handicap. The forest needs every dollar in that item. It is a short-sighted policy to cut that appropriation, which should be increased, if anything.

We are dealing here with the great Territory of Alaska. The habitable portion of Alaska, in the southern part, is largely in national forests. We are dealing with Arizona and with all the Western States—with a territory that is in the undeveloped section of the country. There is no way the States and counties can go into this territory, where there is no taxable property. If we could develop the resources of that territory, we could put men to work. The strategic minerals which the Government is searching for are to be found in that territory.

I have here some pictures of Stibnite, Idaho. I wish to take the time of the committee to show some of the pictures of the things we have in Idaho. I could furnish you a whole book.

Antimony comes from stibnite. The Government has gone in there and is financing the development. That country is reached by going over three mountain roads to a place called Yellow Pine, where the stibnite operation is going on, employing about 200 men, producing a metal which is of vital importance in supplying alloys needed in the manufacture of steel.

That activity is concerned with this item of the appropriation for forest roads and trails. These pictures show the character of the country and the kind of roads we have to build to obtain access to the territory. This [indicating] is a bird's-eye view. This [indicating] is a picture of old Thunder Mountain, the place that was opened when William Allen White went in there and the town of Roosevelt was established, in Teddy Roosevelt's day. I have here a picture of the town of Roosevelt, which was built in Teddy Roosevelt's time. It is now under about 40 feet of water. A slide came down the mountain, crossed the valley, and formed a big dam, which backed up the water. This is the way it looks today [exhibiting a photograph] with a few houses floating around.

We are also dealing with gold treasure. We have the great Idaho granite intrusion, containing seams of gold which produced gold back in 1860 and 1870. We are credited with having produced $300,000,000 in gold. Heavy machinery must be taken back into the mountains to operate the mines, and the work is done under a terrific handicap.

Senator RUSSELL. What minerals were produced at the Roosevelt mine?

Representative WHITE. They are now producing gold there. There is a mill there. That is the way they got oil in [exhibiting photograph]. The mine was up on Thunder Mountain.

A peculiar thing about Thunder Mountain is that the only way to get in to Thunder Mountain is to follow the forest roads and trails to the end and then go in on horseback. I was up there. I followed the forest trails and roads to the end, parked my car, and the little party I was with was met by a string of pack horses.

In the center of the United States, we cannot get a road into Thunder Mountain. This picture [indicating] shows a barrel of oil which was dropped from an airplane, to keep that mill in opera-

tion. It broke into a thousand pieces. Some of the oil was scooped up out of the snow.

We are dealing with a serious proposition when we talk about roads and trails. We must have a constructive policy that will open up the country and put men to work developing our resources. I was trying to help this thing along. I saw Mr. Bell, Director of the Budget, and tried to impress him with the importance of this activity and pave the way for a slight increase in the Budget for forest roads and trails. I went on to tell him about the gold lying there waiting to be developed. He said, "We have too much gold now." I said, "All right. Let us fold up and go home."

This picture shows the way they get machinery into the mine. This [indicating] is a winch. The machinery is let down from the top of the mountain. If you want to get down to a mine you have to let the machinery down with a hand winch. When you get it down there how are you going to get your gasoline and fuel oil in to run the machinery and open up the country? Those are some of the things we are up against.

Mr. Chairman, I do not wish to take too much of the time of the committee. We are making many, many appropriations. I certainly hope that when the committee scans the little item for roads and trails it will have a little appreciation of what it means to all of us. It is important to the eastern section of the country, which supplies the machinery. It is important to the oil-producing section of the country, which supplies the oil to run the machinery. It is important to those who supply the food and clothing that go in there.

In that rough and rugged country there is no competition. Everybody in there has to take in everything he consumes, whether it be oil to drive a Diesel engine, the clothes he wears on his back, or the food he eats.

We are interested in permanent employment. We are not interested in the little job of building a road. We do not care anything about that. We are interested in putting men to work permanently in these mines and adding to the national wealth.

AMOUNT OF AUTHORIZATION

Senator HAYDEN. The situation, for the record, is that the authorization for this appropriation was $14,000,000 the previous 2 years. For this 2-year period, because of the failure of Congress to appropriate the amount authorized, there was a lag in the expenditures. The authorization for this fiscal year is $10,000,000. The reduction from $14,000,000 to $10,000,000 was caused by the failure of Congress to appropriate the amount of money authorized by law. Congress simply has not appropriated the money, and the lag in the authorization has accumulated in that way. For the fiscal year 1941 the authorization is $13,000,000. I take it, what Mr. WHITE wants is the full amount authorized by law appropriated.

Representative WHITE. I do. I am not asking you to go beyond that.

Senator TOWNSEND. You are in favor of developing our domestic gold, and not buying so much foreign gold.

Representative WHITE. I think the whole monetary policy of the country is in error. It does not conform to the fundamental principles of economics. We must have in this country a good, workable, adequate money system based upon precious metals; and we will never get away from it.

Just now we are witnessing another reduction of the gold content of the franc. In the old days things were stabilized and nearly all the European units were on the basis of 5 to our dollar—5 marks to a dollar, 5 francs to a dollar, and so forth. Just think of the experience those people are going through over there, on account of the money system we have, which has upset the whole situation.

I do not want to go into the money question with you gentlemen, but just contrast our policy in the United States with the policy being followed in Canada. I have a photostatic copy of an article telling of the money being spent by the Canadian Government to assist in developing their mining industry. They are doing everything in the world, and they are just walking right away from us. Up to the last few years we have always exceeded Canada in the production of gold, but in recent times we have fallen further and further behind. Canada's gold production is contributing to her industry, her prosperity, and her business recovery.

We are dealing with a serious problem.

Senator TOWNSEND. The Canadians are developing their mining interests and sending the gold to us, and we are paying $35 an ounce for it.

Representative WHITE. Mr. President, Mr. Mark Means, president of the Lewiston, Idaho, Chamber of Commerce, is present. He is one of the successful pioneer businessmen of Idaho. He knows something about the roads and trails situation. I wish you would give Mr. Mark Means a little of your time.

Senator RUSSELL. We shall be glad to hear from Mr. Means. First we will hear from Representative PIERCE of Oregon.

The Senate Appropriations Committee in recognition of the need for an adequate appropriation for this work has increased the amount in the appropriation bill from $7,500,000 to $10,000,000 as it appears in the amended bill H. R. 8202, an act making appropriation for the Department of Agriculture for the fiscal year ending June 30, 1941, which is shown in the item for forest roads and trails, page 46 of the amended bill inserted herewith:

FOREST ROADS AND TRAILS

For carrying out the provisions of section 23 of the Federal Highway Act approved November 9, 1921 (23 U. S. C. 23), including not to exceed $59,500 for departmental personal service in the District of Columbia, $10,000,000, which sum consists of the balance of the amount authorized to be appropriated for the fiscal year 1940.

J. Edgar Hoover—an Able, Fearless, and Honest Public Servant

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. CELLER. Mr. Speaker, it will be a sad day in the history of this country when the Representatives of the American people in Congress fail to resent injustice. I feel very strongly that a grave injustice has been done upon the floor of Congress and elsewhere. This is reflected in the criticisms which have been directed at the Federal Bureau of Investigation and the Director of that organization, J. Edgar Hoover.

I have watched the development of this organization during the years. I have admired the administrative skill, the probity, the idealism, the boundless energy of Mr. Hoover. There has not been a breath of scandal connected with the work of this organization. In law-enforcement work where enemies must be made, this is saying much. The attention of the chronic enemies of the Federal Bureau of Investigation seems to have been recently centered upon a certain case originating at Detroit covering the arrest of a number of individuals charged with violating the statute prohibiting the recruiting of persons for military service abroad. I am utterly unable to understand how any unbiased person could possibly hold that the Federal Bureau of Investigation is guilty of any wrongdoing in connection with this case.

In the first place, the record clearly shows that the investigation was originally ordered by Mr. Hoover's superiors in the Department of Justice. The presentment of the evidence in the case to the grand jury at Detroit in the middle of January 1940, was specifically ordered by former Attorney General Murphy. The indictments were returned by the grand jury. The indictments were dismissed by Attorney General Jackson. Certainly no responsibility for any action in connection with these matters can be charged to the Federal Bureau of Investigation. The Federal Bureau of Investigation, of course, must carry out orders.

There have been charges made that the representatives of the Federal Bureau of Investigation were overzealous in the performance of their duties. These charges are always made in these cases. I have been advised by high officials of the Department of Justice who know the facts concerning this case, that representatives of Mr. Hoover's Bureau acted throughout this matter in pursuance of specific instructions and that they functioned in an entirely lawful manner in all respects. It has been charged that the defendants at Detroit were subjected to third-degree methods; that they were intimidated; that their constitutional rights were violated. These charges I know to be absolutely untrue. The defendants were treated with every possible consideration while they were in the custody of the Federal Bureau of Investigation. There is not one scintilla of evidence indicating that any one of them has any just cause for complaint.

A photograph has appeared in the press showing the Detroit defendants chained together. I desire to advise my colleagues that the chaining of these defendants was not

done by special agents of the Federal Bureau of Investigation. The chaining occurred after the defendants had been arraigned in court and after they had left the custody of the Federal Bureau of Investigation.

It seems ungrateful for any of us to forget the outstanding service which has been rendered to this country by J. Edgar Hoover and his associates. Let us not forget the situation which existed several years ago when the country was faced with a terrible kidnaping menace. Never in the history of this or any other country has a similar menace been so successfully combated. Since June 1932, 178 kidnaping cases have been investigated by this Bureau and all but 2 of these cases, those involving the little Mattson boy in Tacoma, Wash., and the Levine boy at New Rochelle, N. Y., have been solved. During 1939, 20 kidnaping cases were reported to the Federal Bureau of Investigation and all of them were solved.

Success in combating kidnaping is not the only accomplishment of the Federal Bureau of Investigation. Bank robberies, a few years ago, were committed with some degree of safety by those criminals addicted in this pastime. This is no longer true. Since Congress gave the Federal Bureau of Investigation jurisdiction to investigate bank-robbery cases, there has been a reduction in this type of crime approximately 75 percent. The decrease in this type of crime has been accompanied by a monetary benefit since the surety companies, as a result of the work of the F. B. I., have reduced bank-robbery insurance rates from between 30 and 40 percent throughout the various States, which has resulted in a great saving in these insurance costs. Businessmen are not guided by sentiment. You all know of the efforts of various groups of businessmen to secure various types of legislation to protect their interests and of their demands upon Members of Congress to pass legislation which will enable the Federal Bureau of Investigation to extend the scope of its activities into their fields of operation in order that they may receive the protection which this Bureau obviously affords.

The records show that each year the work of the Federal Bureau of Investigation results in more than 5,000 convictions. Over 96 out of every 100 persons taken into court for trial by Mr. Hoover and his men are convicted. Is it not strange that since so many thousands of persons have been convicted through the efforts of this Bureau without there being the slightest criticism that suddenly there should arise innuendoes and insinuations that this organization is developing into an Ogpu or Gestapo? As in the Detroit cases, the Federal Bureau of Investigation operates under specific authority. It collects evidence which is presented to the various United States attorneys and to the assistants to the Attorney General at Washington.

All of the operations of the F. B. I. are publicly known. The results of their investigative work are presented to prosecuting officers. Each year their appropriations are submitted first to the Attorney General, then to the Budget Bureau, then to the President, and the Appropriation Committees of Congress. It would not be possible for this organization to develop any secret modes of operation in violation of the fundamental civil rights of our citizens.

The Federal Bureau of Investigation has made a notable contribution to the application of scientific methods to the solution of criminal cases and the detention and apprehension of criminals. Its laboratory is a center whose services are available not only to Federal prosecutors, but to State and local police and prosecuting officials as well.

Perhaps even a greater contribution made by the Federal Bureau of Investigation, under the intrepid leadership of John Edgar Hoover, than the direct suppression of crime is the effect that its work has had on the psychology of the Nation toward crime and criminals. Up to a few years ago it was the practice for motion pictures and magazines to glorify the criminal as a brave and adventuresome hero and to depict police officers as hirelings who, by fair means or foul, endeavor to persecute the heroic law violator. As a result of the work of the G-men all this is changed. Today the criminal is portrayed as what he is, an enemy of society, and the law-enforcement officer is properly delineated as a peacetime soldier who risks his life in the service of his country. But a few years ago little boys in their games used to play gangsters. Today they play G-men. This change of attitude on the part of the entire Nation toward the criminal and crime is a vital factor not only in helping to suppress crime but in preventing crime in the future and in training the coming generation to become law abiding.

It would seem to be the part of wisdom to encourage the retention in the Government service of those whose talents would bring them much larger rewards in the business world. Criticism is justified in some cases; we should be ready to praise, however, where praise and praise alone is due. Along these lines, let me narrate an incident which came to my attention several years ago when Mr. Hoover was offered a radio contract which called for his appearance on a radio program for a period of 3 minutes' time each week for 26 weeks and for which he would receive a very substantial sum for his services. Mr. Hoover declined this offer because the radio program was one which advertised a commercial product. I do not believe there would have been any criticism of Mr. Hoover if he had accepted such an offer. It would have enabled him to acquaint the general public with various aspects of law-enforcement problems. However, these were the ideals which guided him then; a similar idealism has guided him through his entire career, since he entered the Government service in 1917. I am happy to pay this tribute to a devoted, self-sacrificing, and patriotic Government official.

I take pleasure in including herewith an editorial which recently appeared in the Evening Star.

[From the Washington Evening Star]

ATTACK BY INNUENDO

Recent days have witnessed the development of what appears to be a widespread and coordinated effort to undermine public confidence in the Federal Bureau of Investigation. In the waxing fury of this attack, conducted principally by innuendo, the splendid record of the F. B. I. in smashing the major criminal gangs which infested the country has been conveniently forgotten. By some mysterious alchemy this agency, once hailed as the nemesis of the gangster, has been transmuted into a vague but sinister threat to the American way of life.

For the most part, the criticisms have not been directed specifically to the F. B. I. as such, nor to its record. The critics, on the whole, have preferred to deal in suggestive generalities, possibly realizing that, in the absence of supporting evidence, they are more difficult to answer, and, therefore, more damaging than direct charges. There has been much talk, for example, of wire-tapping and eavesdropping by "Government police." To guide public suspicion more directly to the target without actually making a specific charge, this has been followed by assertions that "if" the F. B. I. has been tapping any wires it should be investigated. Other thinly veiled charges have been aimed at the Bureau's recently created General Intelligence Division, the implication being that this is a sort of American Ogpu set up by Director J. Edgar Hoover to pry into the personal affairs of law-abiding citizens as well as those who are beyond the law. But the complaints neglect to mention the fact that this division was established under an order issued by President Roosevelt last September designating the F. B. I. as a central clearing agency for the investigation of espionage, sabotage, and other subversive activities. Nor do they state that there is not the slightest evidence of any abuse of power by this agency.

Senator NORRIS, of Nebraska, has made a specific complaint concerning the manner in which F. B. I. agents arrested certain persons who were under indictment in Detroit for a technical offense. These men were seized at 5 a. m. and taken to court at 3 p. m. on the same day. The manner of this arrest, Senator NORRIS has said, was designed to "frighten" the men and "to fill their hearts with fear and trepidation." This complaint was referred to Attorney General Jackson, who is certainly no enemy of liberalism, and, after an investigation, he fully exonerated the F. B. I.

The Star believes that the F. B. I. has performed, and is still performing, an important and difficult task in an efficient manner, and with appropriate restraint. If that is not the case, if it has abused its powers or if it is menacing traditional liberties, it is entitled to specific charges and a day in court. In the meantime, it should not be made the victim of a movement which has all the earmarks of a "smear" campaign.

President Says Democracy in Opportunity Should Be Restored

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. PATMAN. Mr. Speaker, President Roosevelt made a wonderful speech at Dallas, Tex., June 12, 1936. All of his speeches are good, but this was one of the best I ever heard or ever read. Among other things he stated:

Your farmers were among the first to rebel against exploitation by the railroads. In a period of monopoly, combinations, overcapitalizations, high rates, poor service, and discrimination against the small shipper, you established a landmark in the regulation of public utilities for the good of their users.

TEXAS SECOND STATE TO PASS EFFECTIVE ANTITRUST LAWS

Later, when industrial development came to Texas, you were confronted by corporations that got out of hand. Here again you called into play the old Texas spirit of freedom for the individual, and out of it came your antitrust laws, preceded by only one other State in the Union.

It is, as I recall my history, a fact that during this period there were many prophets of evil who foretold the ruin of Texas by the enactment of legislation to curb these abuses. Yet it is a matter of record that several years later an authoritative survey reported this: "No part of the Union is more prosperous, no other State has so systematically pursued a policy of corporation regulation, and no other State is so free from the domination of special interests."

DEMOCRACY IN OPPORTUNITY

Why did the people of Texas do this more than a generation ago? They believed in democracy in government, but they discovered that democracy in government could not exist unless, at the same time, there was democracy in opportunity.

You found that certain forms of monopoly—the combinations of public utilities and other businesses which sought their own ends—were undemocratic because they were bearing down heavily on their smaller competitors, and on the people they served. Because of this they were taking away opportunity.

Today we have restored democracy in government.

We are in the process of restoring democracy in opportunity.

YEOMANRY OF BUSINESS, INDUSTRY, AND AGRICULTURE LINE OF DEFENSE

In our national life, public and private, the very nature of free government demands that there must be a line of defense held by the yeomanry of business and industry and agriculture. Not the generalissimos, but the small men, the average men in business and industry and agriculture, those who have ownership in their business and a responsibility which gives them stability. Any elemental policy, economic or political, which tends to eliminate these dependable defenders of democratic institutions, and to concentrate control in the hands of a few small, powerful groups, is directly opposed to the stability of government and to democratic government itself.

ACCUMULATION OF PROPERTY IN FEW HANDS

The statistics of the Bureau of Internal Revenue, which were quoted by the President of the United States in his message to Congress on April 29, 1938, contain the following information relative to the ownership of corporations:

Ownership of corporate assets: Of all corporations reporting from every part of the Nation, one-tenth of 1 percent of them owned 52 percent of the assets of all of them.

And to clinch the point: Of all corporations reporting, less than 5 percent of them owned 87 percent of all the assets of all of them.

Income and profits of corporations: Of all the corporations reporting from every part of the country one-tenth of 1 percent of them earned 50 percent of the net income of all of them.

And to clinch the point: Of all the manufacturing corporations reporting, less than 4 percent of them earned 84 percent of all the net profits of all of them.

The President, in this message, stated:

The danger of this centralization in a handful of huge corporations is not reduced or eliminated, as is sometimes urged, by the wide public distribution of their securities. The mere number of security holders gives little clue to the size of their individual holdings or to their actual ability to have a voice in the management. In fact, the concentration of stock ownership of corporations in the hands of a tiny minority of the population matches the concentration of corporate assets.

The year 1929 was a banner year for distribution of stock ownership.

But in that year three-tenths of 1 percent of our population received 78 percent of the dividends reported by individuals. This has roughly the same effect as if, out of every 300 persons in our population, one person received 78 cents out of every dollar of corporate dividends while the other 299 persons divided up the other 22 cents between them.

The effect of this concentration is reflected in the distribution of national income.

A recent study by the National Resources Committee shows that in 1935–36 "Forty-seven percent of all American families and single individuals living alone had incomes of less than $1,000 for the year; and at the other end of the ladder a little less than 1½ percent of the Nation's families received incomes which in dollars and cents reached the same total as the incomes of the 47 percent at the bottom."

Then the President added these significant words:

We believe in a way of living in which political democracy and free enterprise for profit should serve and protect each other—to insure a maximum of human liberty not for a few but for all.

It has been well said that, "The freest government, if it could exist, would not be long acceptable, if the tendency of the laws was to create a rapid accumulation of property in few hands, and to render the great mass of the population dependent and penniless.

WHERE WEALTH ACCUMULATES AND MEN DECAY

Two hundred years ago a young boy was growing up in a village in central Ireland, who later became one of England's most famous poets. He witnessed the farms of his surrounding countryside passing from the hands of their local proprietors into those of absentee English landlords. Thirty years later he immortalized its wasted remains as The Deserted Village. Its lines are as vibrant with warning to us today as they were poignant with memories to his impoverished countrymen of that generation:

Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay;
Princes and lords may flourish, or may fade;
A breath, can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroy'd, can never be supplied.

The peasantry to which Goldsmith referred in those living lines were not the farmers as employed laborers but farmers as independent proprietors and businessmen, the owners and managers of their farms as business enterprises. It was their independent proprietorship that gave them that sturdiness which was their country's pride; it was their reduction to tenancy and the ranks of employed labor that broke their spirit and sapped the life of their community. The problem that then afflicted rural Ireland menaces rural and urban America today.

H. R. 1

The bill H. R. 1 to restrict interstate chain stores and restore democracy in opportunity is now before the Ways and Means subcommittee. Hearings will commence March 27, 1940.

Is it a Crime to Have a Dollar?

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

ARTICLE BY DR. JOHN J. WICKER, PRESIDENT OF FORK UNION MILITARY ACADEMY, VIRGINIA

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by Dr. John J. Wicker, of Fork Union, Va.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS IT A CRIME TO HAVE A DOLLAR?

(By Dr. John J. Wicker, president, Fork Union Military Academy, Virginia)

There are four classes of people in the United States—(1) capitalists; (2) evenists; (3) thieves; (4) unfortunates.

A capitalist is one who lives on less than his income, whether he is a bootblack or a banker.

An evenist is one who succeeds in paying all his debts and may accumulate enough to have a home or a little farm and stops just there.

A thief is one who insists on spending more than his income, whether he is the president of a corporation or a hold-up man.

An unfortunate is one who for some real reason is incapable of taking care of himself.

The first class you do not need to think about—they always take care of themselves. The second class ought to furnish a lot of recruits for the first class. The third class ought to be near a jail. And the fourth class you cannot do too much for.

The only thing that can keep a man's face clean is his own sweat, but there are a lot of people who want to clean up this country on the other fellow's sweat. So far as I am concerned they can go to bed without a bath and stay there; that is, if they will furnish the bed.

SOCIOLOGY VERSUS BIOLOGY

No kind of legalized sociological legislation can succeed in overthrowing the constitutional laws written in the biology of man and everything else that has life. Yet this is exactly what is being attempted in the United States. You cannot legislate a man, rich or poor, sick or well, educated or ignorant, strong or weak, good or bad. These things depend upon biology. Everything that has life has to fight for it or die. Darwin did not create the struggle for existence, nor yet the survival of the fittest. He discovered these laws in the universe. And these laws are as invincible as God Himself. A good book says, "If a man will not work, neither let him eat." This is another way of saying "Root hog or die." A hog that is unwilling to root ought to die, for no matter what his shape, he is a hog.

The greatest lawgiver said, "Six days shalt thou labor," but a lot of people in this country think they are smarter than Moses. Why did Moses say "Six days shalt thou labor"? To keep us out of devilment. Every man or woman everywhere, under all conditions, needs an honest day's work if they are to live moral lives. A man who is not tired at bedtime is always a moral liability. Work is essential to character.

If you arbitrarily give men short days and big pay you will create a far bigger problem than the one you are trying to solve.

If you put a stovepipe hat on one end, a pair of spats on the other end, a swallowtail coat halfway between, and set it up behind a steering wheel, when it never earned the price of a tire, it is in grave danger of driving down the wrong road and ending in an expensive disaster.

You cannot fit a $10 hat on a 10-cent head, and the trouble is not with the hat. The most skillful magician in all the world can't make the fit.

There is a Nation-wide effort to put swallow-tail coats where overalls belong and the amazing thing is, the political tailor blames the misfit on the manufacturer of the cloth.

A Socialist is a man who wants you to divide until he gets the biggest end. That always cures him. A Communist is a man who is determined to take both ends, and is willing to blow up the whole structure of civilization to get it. There are a lot of these fellows lying around disobeying the eighth commandment, "Thou shalt not steal," and defying the tenth commandment, "Thou shalt not covet thy neighbor's house or anything that is thy neighbor's."

It is not the size of the check that passes between employer and employee that decides what the check will do, but the size of the man receiving it. If you give a little man a big check, you have the story of the prodigal son. If you give a big man a small check—well, Jesus took 5 loaves and 2 fishes and fed 5,000 and had 12 baskets full left—all because of the size of the man. It was a sorry day for all concerned when the father divided his living with the prodigal—it brought disaster to all, even though it brought a kind of apparent prosperity while the prodigal was sowing his wild oats. This is the kind of prosperity we have now. For the first time in the history of the world millions of men are being invited to ride down the avenue of destruction in order to enter the palace of prosperity. Production, not destruction, is the only highway to prosperity.

Men are made through their brains, cattle are made through their bellies, and it is tragic to deal with men as we would with cattle.

The measure of a man's success depends on what he does beyond what is required of him. Folks who never do more than they get paid for never get paid for any more than they do.

THE POOR GET IT ALL

Some people seem to think that men of money, capitalists, the royalist class, if you please, are consumers of what they make.

Rockefeller gave away in 1 year more than he could spend in a hundred, yet he gave every year, and finally to the tune of $750,000,000.

Look at the libraries of Carnegie all over the country. Even a tightwad like Russell Sage left a fortune that has blessed many—look at the beautiful $100,000 chapel where girls with little money worship every day in the East Northfield Seminary, built with Sage money.

WHAT THE RICH GET

People forget that the rich man gets nerve-health-breaking responsibilities of the great load on him, food that he often is physically ill prepared to digest, and many sleepless nights, with not infrequent suicide. About all the rich man gets out of all his wealth is what he can eat, what he can wear, a house in which to live, and something to travel in. On the other hand, by his genius he is furnishing labor for thousands and hundreds of thousands, who otherwise could not organize themselves into such a system with such rewards.

The rich man may have 50 rooms elegantly furnished, but he can occupy but 1 at a time, and he cannot consume more than 3 good meals a day. He can wear but 1 suit of clothes at a time, and he cannot have as big a library as is free in the average city to everybody, so where does the kick come in? Thousands of these rich men are looking for a fishing pole, a cabin away from everybody down on some river bank, where they can seek a little peace and rest.

WOULD YOU BE RICH?

If this is what you want, go out and get it, and after you get it you will find that you haven't got what you thought you would have. How to get it? Just begin today to save a dollar out of your week's earnings and keep adding a little to it every week. You can do it, no matter what your income is, for John D. Rockefeller started out on $4.50 per week. Theodore Roosevelt once said, "Extravagance rots character; train your youth away from it. On the other hand, the habit of saving money, while it stiffens the will, also brightens the energies. If you would be sure that you are beginning right, begin to save."

Be your own man, do your own thinking, stand on your own feet, make yourself invaluable to your employer (if you are any account you can) and in a little while your salary will be increased, your income will be enlarged, your saving account will grow, and one fine day an investment worth while will drop right down in your lap and bring you big returns. Your rich employer will be glad to advise you; he will not charge you a cent; he will work overtime to help you get rich. He had rather do it than work for himself.

What our young men need, and our young women need is to stop envying the man who has gone out and accumulated what we call a fortune, and remember that they can do the same thing if they are willing to pay the same price. It is eternally true that the man who hides his talent buries himself, and the man who invests his talent gains twice as many more. Talents grow or go, multiply or die.

THE COUNTRY'S NEEDS

What we need in this country is not less load but more horse, not more money but more man. Character will produce the cash if you have it, but if you take it from the other man by some arbitrary method or some wildcat legislation, it will only help to ruin you that much faster. If there is any good in money, the fun comes in the making of it.

CLASS AGAINST CLASS

Labor may destroy the rich, but if it does, it will destroy its best friend and in the end ruin itself.

The worst enemy of man is the man who would put class against class. From all such, good Lord deliver us!

National Labor Relations Board v. Highland Park Manufacturing Co.

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 18 (legislative day of Monday, March 4), 1940

OPINION OF JUDGE PARKER, OF THE UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the full text of the opinion of Senior Circuit Judge Parker, in the United States Circuit Court of Appeals, Fourth Circuit, in the case of the National Labor Relations Board v. Highland Park Manufacturing Co., which has just been made available.

This opinion is an exhaustive and brilliant analysis of the colective-bargaining process, and supports at every point the criticisms I made of the Smith amendments to the Labor Act bearing on that issue in my speech of March 13.

I have secured an estimate of the cost of printing from the Public Printer, as required by the rules.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[United States Circuit Court of Appeals, Fourth Circuit. No. 4564. National Labor Relations Board, petitioner against Highland Park Manufacturing Co., respondent. On petition for enforcement of an order of the National Labor Relations Board. Decided March 11, 1940. Before Parker, Soper, and Dobie, circuit judges]

Parker, Circuit Judge:

This is a petition to enforce an order of the National Labor Relations Board based on a finding that respondent refused to bargain

collectively with a labor union representing its employees. Respondent was ordered to cease and desist from refusing to bargain collectively with the union and from interfering with its employees in the exercise of the rights guaranteed them by section 7 of the National Labor Relations Act; upon request by the union, to bargain with it as the exclusive representative of employees, and to embody in a signed agreement any matters upon which an understanding might be reached. The order was entered May 26, 1939, in a proceeding commenced in August 1937, upon petition of the union, which was shown at the time of the filing of the petition to represent 80 to 85 percent of respondent's 1,000 to 1,100 employees. Petition for enforcement was filed with this court October 12, 1939, and was set for hearing at the January term, 1940. On December 29, 1939, respondent filed a motion with the court that the cause be remanded to the Board to take additional evidence for the purpose of ascertaining whether the union still represented a majority of respondent's employees. Three questions are presented for our consideration: (1) Whether the findings of the Board are supported by substantial evidence; (2) whether the order of the Board is proper; and (3) whether the cause should be remanded for the taking of additional testimony.

On the question as to whether the order is supported by substantial testimony, there is evidence tending to establish the following facts: Late in May 1937 the union, having attained the right to represent 80 to 85 percent of respondent's nonsupervisory production and maintenance employees, requested and was granted an opportunity to confer with the officers of respondent. At this conference the union representatives submitted a draft of contract as a basis for negotiations, but no conclusions were reached, and a second conference, held about 10 days later, was cut short as a result of the illness of respondent's president. Conferences were held on June 15 and 25, but the proposed contract was not read or discussed, and respondent's vice president took the position that it had complied with the requirement to bargain collectively inasmuch as its mill superintendent had conferred with the union's shop committee concerning several specific grievances. At a meeting on July 27 the union's representatives made an effort to have the provisions of the proposed contract discussed, but failed, and no counterproposals were made.

On August 4, 1937, another meeting was had. The representatives of the union presented a modified draft of its proposed contract providing for a smaller wage increase than it had originally sought, abandoning an earlier provision that new employees join the union as a condition of employment and providing for the enforcement of the contract's provision against strikes by the discharge and expulsion from the union of employees advocating violation of contract. Respondent's officers at first declined to enter into a detailed discussion of the union's proposals, and insisted that it had already satisfied the requirements of the law by meeting with the union committees. When the union's representatives stated that they would resort to action before the Board respondent's officers agreed to discuss the union's proposals seriatim. The proposed contract was then read, and respondent disposed of most of its subtantive provisions with the statement that it was already following the practices provided for and intended to continue to do so, but would not enter into any agreement with regard thereto. The proceedings of the meeting are more fully described by the Board in its findings, as follows:

"The first paragraph of the draft involved the fixing of a term for the operation of the contract. The respondent's representatives were unwilling to accept such a provision. However, there was little discussion upon the subject, for the union representatives were anxious to reach and have considered the more important substantive provisions. The second paragraph, setting forth that the parties would preserve harmonious relations and protect 'the interest of the textile industry occasioned little comment. The discussion then turned to the section providing for a workweek of 40 hours, and a workday of 8 hours, and for an increased rate of compensation for overtime work. The respondent's president, C. W. Johnston, stated that the respondent already was operating on a 40-hour-week 8-hour-day basis, and proposed to continue doing so; that its employees were not and would not be required to work overtime; that, consequently, there was no need for an agreement upon these matters. With respect to the provision for observance of Labor Day, Thanksgiving Day, Christmas Day, and Fourth of July, and the payment of compensation at the rate of 'time and one-half' for any work performed on those days, the respondent's representatives stated that the respondent, as a matter of practice, had always granted its employees holidays; that it had no objection to allowing these holidays if the 'employees wanted them,' but it 'didn't care to agree to the section * * * as a stipulation to be put into effect as a regular thing.' A like position was taken by the representatives regarding a provision prohibiting the employment in the mills of any person under 16 years of age. They contended that the State law prohibited such employment; that the respondent was not employing persons below that age and would not do so; that, therefore, an agreement concerning that matter was unnecessary. Similarly, a provision for settling through arbitration questions concerning 'work loans, proper distribution, or reclassification' was set aside, because 'there is no use trying to find trouble and arbitrate some conditions that don't exist.' Provisions for an increase in wage rates, for a 'preferential shop,' and check-off were flatly rejected. Concerning the requested wage increase, the respondent's representatives contended that 'competition would not allow us to raise wages.'

"Throughout the August 4 conference the respondent's representatives stressed the fact that while the respondent was always ready to confer with union committees on employee grievances, the respondent had no intention of entering into an agreement or signing a contract with the union. The respondent's president, C. W. Johnston, was emphatic in this. In connection with a provision of the proposed contract embodying the principle of seniority for increases and reductions of working force, a principle which the respondent's representatives asserted the respondent had followed in the past and would adhere to in the future, Johnston was expressly asked by the union representative, Lawrence, 'Will you agree to this seniority provision?' Johnston replied, 'I am not going to agree to a thing.' At the hearing Johnston testified that his reply to this question was, 'I would not sign anything'; that 'Mr. Brewer and Mr. Lawrence (union representatives) insisted on signing a contract which I stated I would not sign it because the law didn't require me to do it and I had no idea of signing a contract.' While Johnston's testimony in terms refers only to the signing of a collective contract and not to the making of an agreement, we are satisfied, and find, upon the foregoing facts and the record, including the circumstances mentioned below, that the respondent had no intention whatsoever of entering into any collective agreement, written or oral, with the union, and did so inform the union representatives.

"At what proved to be the end of the conference, the union representatives, 'for the purpose of determining * * * whether or not it was possible to bargain at all' with the respondent, inquired of Johnston whether the respondent would be willing to make an oral agreement with the union covering merely some of the provisions of the proposed contract, 'enough of (the union's) * * * requests' to satisfy both the union and the respondent, and then to post in the respondent's mills a written statement of the terms thereof as a 'statement of policy,' signed by Johnston. The union representatives indicated, as an inducement to such action, that the union would be willing to have the statement unsigned by it. Johnston replied that the respondent would make no agreement with the union, even under those conditions. The union representatives then asked whether the respondent would do so if the respondent's superintendent rather than Johnston were to sign the statement of policy. Johnston's reply was again in the negative. Finally, he was asked whether the respondent would make such an agreement and merely have its superintendent read to the employees an unsigned written statement thereof as a statement of policy for the ensuing year. Johnston answered that the respondent would not do so, and the conference thereupon ended."

On August 15 another conference was held, at which the southern director of the Textile Workers Organizing Committee took the matter up with officers of respondent without result.

The Board summarized its findings and conclusions on the evidence relating to refusal to bargain as follows:

"The attitude and position of the respondent toward collective bargaining with the union may be epitomized as follows: The respondent recognized the union as the exclusive collective bargaining representative of its production and maintenance employees; it was willing to meet with the union whenever the union wished; it was ready to confer about employee grievances. Furthermore, with respect to requests of the union which involved no substantial changes in existing conditions, the respondent was willing to give assurance that it intended no change in such conditions. This was its response to the provisions of the proposed contract involving the existing workweek, holidays, employment of minors, and seniority. However, the respondent was adamant in its stand that it would not enter into any contractual relationship with the union irrespective of what terms the union proposed or what understanding was reached, it would not render legally obligatory any assurance given or understanding had with the union, nor would it memorialize by or integrate into a written instrument, signed or unsigned, any such assurance or understanding, or any agreement entered into with the union. In view of this resolve of the respondent, and in the light of the entire record, we are convinced that the respondent had no intention to consider sincerely requests of the union involving material departures from existing conditions.

* * * * * * *

"Manifestly, the respondent has not fulfilled its duty to bargain collectively with the union. The attitude and position which its representatives assumed at the August 4 conference clearly show that the respondent was not then negotiating, nor did it intend to negotiate, in good faith with the representatives of its employees. Although good faith demanded that the respondent, in entering the conference, accept fully the procedure of collective bargaining, the respondent was not ready to do this. From the outset its intention and purpose were to make no binding agreement with the union, irrespective of what terms were proposed or understanding reached. Equally, it was determined, regardless of the request of the union therefor, to refrain from making or signing a written memorial of any agreement reached with the union, or from integrating into a signed written agreement any understanding had with the union. We see no persuasive reason, nor has the respondent advanced any, for its unwillingness to enter into any signed agreement with the union.

"Lastly, as we have found the respondent had no sincere desire to explore the possibility of reaching even an understanding upon those requests of the union which involved material changes in existing conditions. It first undertook consideration of the provisions of the proposed contract after the union representatives

threatened resort to the Board. The provision for increased compensation for overtime work on workdays and holidays was rejected on the bare assertion that its employees would not be required to work overtime. As a matter of fact, subsequent to August 4 the employees were required to work overtime for which they were compensated at the regular rate. Throughout, the action of the respondent's representatives on issues was dominated by its intent to make no contract.

"We find that the respondent by refusing on August 4, 1937, and at all times thereafter, to enter into any agreement with the union, irrespective of what terms might be proposed by or understanding had with the union, to reduce to or merge in a signed written agreement any oral understanding or agreement that might be had with the union, and/or to consider sincerely the requests presented by the union, as aforementioned, did on said August 4, 1937, and at all times thereafter, refuse to bargain collectively with the union as the representative of its employees in the appropriate unit in respect to rates of pay, wages, hours of employment, and other conditions of employment. We also find that by such refusal the respondent has interfered with, restrained, and coerced its employees in the exercise of the rights guaranteed by section 7 of the act."

We agree with the Board that the conduct of respondent as embodied in these findings, which are supported by substantial testimony, amounted to a refusal to bargain collectively with the union within the meaning of the National Labor Relations Act. The requirement to bargain collectively is not satisfied by mere discussion of grievances with employees' representatives. It contemplates the making of agreements between employer and employee which will serve as a working basis for the carrying on of the relationship. The act, it is true, does not require that the parties agree, but it does require that they negotiate in good faith with the view of reaching an agreement, if possible; and mere discussion with the representatives of employees, with a fixed resolve on the part of the employer not to enter into any agreement with them, even as to matters as to which there is no disagreement, does not satisfy its provisions. "The act contemplates the making of contracts with labor organizations. That is the manifest objective in providing for collective bargaining" (*Consolidated Edison Co.* v. *National Labor Relations Board*, 305 U. S. 197, 236). "The legislative history of the act goes far to indicate that the purpose of the statute was to compel employers to bargain collectively with their employees to the end that employment contracts binding on both parties should be made" (*National Labor Relations Board* v. *Sands Mfg. Co.*, 306 U. S. 332, 342).

The duty imposed by the statute was well expressed by Judge Sibley, speaking for the Circuit Court of Appeals of the Fifth Circuit in *Globe Cotton Mills* v. *National Labor Relations Board* (5 Cir.; 103 F. (2d) 91, 94), as follows:

"We believe there is a duty on both sides, though difficult of legal enforcement, to enter into discussion with an open and fair mind, and a sincere purpose to find a basis of agreement touching wages and hours and conditions of labor, and if found to embody it in a contract as specific as possible, which shall stand as a mutual guaranty of conduct, and as a guide for the adjustment of grievances."

And that was said by the Circuit Court of Appeals of the Third Circuit in *National Labor Relations Board* v. *Griswold Mfg. Co.* (3 Cir.; 106 F. (2d) 713, 723) is applicable here. The court said:

"Respondent failed utterly to discharge its duty to bargain with the lodge, as the representative of the majority of its employees, in good faith. It is clear that the respondent at no time during its negotiations with its employees entertained any intention of entering into an agreement with the lodge as the bargaining unit, as provided by the National Labor Relations Act. It is obvious that an employer who enters into negotiations with a labor union representing his employees, with his mind hermetically sealed against even the thought of entering into an agreement with the union, is guilty of refusing to bargain collectively with the representatives of his employees in good faith, as required by the act, and is therefore guilty of an unfair labor practice. The studied and meticulous efforts of the respondent, in the course of its negotiations with its employees, and in its relationship with its own dominated union, to be 'within the law,' tell their own story. Duties imposed by law cannot be discharged by offering shadow for the substance."

Respondent's repeated declaration that it would sign no written agreement with the union is a pertinent circumstance for consideration on the issue of refusal to bargain. It is argued that since no agreement was reached between respondent and the union, there was nothing to put in writing; but the attitude of respondent toward signing a written contract was of a piece with its refusal, as found, to make even an oral agreement regarding matters as to which there was no real disagreement. Both arose out of a determination not to enter into real collective bargaining with the union. If some valid reason had been advanced for unwillingness to reduce agreements to writing, this conclusion would not necessarily follow; but in the absence of explanation, it clearly indicates respondent's hostility to the whole process of collective bargaining.

The purpose of the written trade agreement is not primarily to reduce to writing settlements of past differences, but to provide a statement of principles and rules for the orderly government of the employer-employee relationship in the future. The trade agreement thus becomes, as it were, the industrial constitution of the enterprise, setting forth the broad general principles upon which the relationship of employer and employee is to be conducted. Wages may be fixed by such agreements and specific matters may be provided for; but the thing of importance is that the agreement sets up a modus vivendi under which employer and employee are to carry on. It may be drawn so as to be binding only so long as both parties continue to give their assent to it; but the mere fact that it provides a framework within which the process of collective bargaining may be carried on is of incalculable value in removing the causes of industrial strife. If reason and not force is to have sway in industrial relationships, such agreements should be welcomed by capital as well as by labor. They not only provide standards by which industrial disputes may be adjusted, but they add dignity to the position of labor and remove the feeling on the part of the worker that he is a mere pawn in industry subject to the arbitrary power of the employer.

The importance of the trade agreement in the process of collective bargaining is universally recognized by economists. (John R. Commons and John B. Andrews, Principles of Labor Legislation (1937), p. 129; R. F. Hoxie, Trade Unionism in the United States (1923), p. 269; Twentieth Century Fund, Labor and the Government, p. 337; Dale Yoder, Labor Economics and Labor Problems (1933), p. 439; William H. Kiekhofer, Economic Principles, Problems, and Policies (1936), pp. 153–154, 229; Summer H. Slichter, Annals of the American Academy, vol. 178, p. 116; Selig Perlman in the Encyclopedia of the Social Sciences, vol. 7, pp. 667 et seq.; Ralph F. Fuchs in the Encyclopedia of the Social Sciences, vol. 4, p. 629, 631; J. B. S. Hardman in the Encyclopedia of the Social Sciences, vol. 4, p. 621; Walton H. Hamilton in the Encyclopedia of the Social Sciences, vol. 2, p. 628 et seq.) The author last cited has this to say of the nature of the trade agreement: "The process of collective bargaining results, not in a labor contract but in a trade agreement. This imposes no obligation upon the employer to offer or upon the laborers to accept work; it guarantees neither to the employers workmen nor to the laborers jobs. It is nothing more than a statement of the conditions upon which such work as is offered and accepted is to be done. The contract of employment is still between the individual employer and the individual employee, though the provision of the order in which men are to be taken on and laid off may give to or withhold from laborers a chance to dispose of their services. It is through the trade agreement, which is subsumed in the labor contract, that collective bargaining becomes an agency of industrial order."

And that Congress contemplated that collective bargaining should be pursued with the end and aim of arriving at trade agreements, so important to giving labor a proper voice in industry, does not admit of doubt. House Report No. 1147, Seventy-fourth Congress, first session, page 20, says: "As has frequently been stated, collective bargaining is not an end in itself; it is a means to an end, and that end is the making of collective agreements stabilizing employment relations for a period of time, with results advantageous both to the worker and the employer." Senate Report No. 573, Seventy-fourth Congress, first session, page 13, says: "The object of collective bargaining is the making of agreements that will stabilize business conditions and fix fair standards of working conditions."

In the recent case of *Art Metals Construction Co.* v. *National Labor Relations Board* (2 Cir. — F. 2d—), the question was squarely presented to the Circuit Court of Appeals of the Second Circuit whether refusal to put an oral agreement with employees in writing constituted a refusal to bargain collectively within the meaning of the act. In holding that it did, a majority of the court, speaking through Judge Learned Hand, had this to say:

"The argument on this point rests upon the admitted truth that the act does not force the parties to come to any agreement at all; for, although an employer must honestly negotiate with his employees collectively, that is as far as he need go. But if, the argument runs, he is forced to make it a term of any oral agreement that it shall be put into writing, he loses that absolute freedom in negotiation which he had at common law, and which Congress meant to preserve to him (*Inland Steel Co.* v. *N. L. R. B.*, 7 Cir. — F. 2d. —). It is indeed true, and for that matter a truism, that a stipulation in an oral contract that it shall be put into writing is one of its terms, and that if an employer must put it in, he is not free pro tanto. But he is no longer wholly free anyway; before the act he was not obliged to bargain with his employees collectively; he was at liberty to refuse to negotiate with them at all, or otherwise than severally. The act impaired that freedom; it meant to give to the employees whatever advantage they would get from collective pressure upon their employer; and the question here is what are the fair implications of that grant. They should include whatever is reasonably appropriate to protect it, and no one can dispute that a permanent memorial of any negotiation which results in a bargain is not only appropriate but practically necessary to its preservation; it is hardly necessary to observe that without it the fruits of the privilege are exposed to the sport of fugitive and biased recollection. The purpose of a contract is to define the promised performance, so that when it becomes due the parties may know the extent to which the promisor is bound; and it is the merest casuistry to argue that the promisor's freedom to contract includes the opportunity to put in jeopardy the ascertainment of what he has agreed to do, or indeed whether he has agreed to anything at all. The freedom reserved to the employer is freedom to refuse concessions in working conditions to his employees and to exact concessions from them; it is not the freedom, once they have in fact agreed upon those conditions, to compromise the value of the whole proceeding, and probably make it nugatory."

We agree with the second circuit as to this rather than with the decision of the seventh circuit in *Inland Steel Co.* v. *N. L. R. B.*, (7 Cir. — F. 2d —); and we think its decision is in line with what

was said by the fifth circuit in *Globe Cotton Mills* v. *N. L. R. B.*, quoted, supra. In the case before us respondent has not merely refused to reduce to writing an oral agreement made with its employees, but, as the Board has found, has refused to bargain in good faith with the union representing them. Its announcement that it would reduce no agreement to writing was merely a circumstance to be considered, along with others, as indicating an intention not to enter into real collective bargaining with the union. If, however, the fact be, as certain witnesses of respondent testified, that respondent's refusal went merely to the putting of agreements arrived at in writing, this would amount to a failure to comply with the provisions of the act for the reasons stated by Judge Hand.

As to the propriety of the order entered, respondent makes two points: (1) That the Board, not having found against it except on the issue of refusal to bargain collectively, was not justified in ordering it to cease and desist from interfering with the right of self-organization guaranteed by section 7 of the act; and (2) that the order should not have required that any understanding reached as a result of bargaining be embodied in a written agreement. There can be no question, we think, but that a refusal to bargain collectively with representatives chosen by employees amounts to an interference with their right of self-organization for the purpose of collective bargaining within the meaning of the act; and it is interesting to note that the decision to the contrary by the second circuit in the *Remington Rand case* (94 F. 2d 862), has just been overruled by that court in the recent *Art Metals Construction Co. case, supra*. To like effect, is the decision of the ninth circuit in the case of *N. L. R. B.* v. *Biles-Coleman Lumber Co.* (9 Cir. 98 F. 2d 18, 22–23). And we think it clear that it was proper for the order to forbid generally any interference with the right of self-organization and not merely the particular kind of interference covered by the findings of the Board. *N. L. R. B.* v. *Swift & Co.* (7 Cir. 108 F. 2d 988). What has already been said sufficiently covers the point as to the requirement that agreements arrived at by negotiation be reduced to writing. Even if there were no obligation originally to this effect, the provision would be proper upon a finding that respondent had refused to bargain, since it is a provision "adapted to the situation which calls for redress." *N. L. R. B.* v. *Mackay Radio and Telegraph Co.* (304 U. S. 333, 348). We note that such a provision was approved in the *Globe Cotton Mills case, supra* (103 F. 2d 91, 94), wherein the Circuit Court of Appeals of the Fifth Circuit said:

"Because of the refusal on the part of the mills to make any proposal for an agreement touching wages, hours, and conditions of employment, we will uphold and enforce that part of the order of the Board which requires affirmative action as follows: That the Globe Mills, 'upon request bargain collectively with the Textile Workers Organizing Committee as the exclusive representative of all its production employees, except supervisory and clerical employees, with respect to rates of pay, hours of employment, and other conditions of employment, and if an understanding is reached on any such matters embody said understanding in an agreement.'"

We do not think that the motion to remand the cause to the Board for the taking of additional testimony should be allowed. Respondent is not faced with conflicting claims as to representation, but raises the question as to the authority of the union to represent its employees as a means of escaping any obligation to bargain at all. In such case it is reasonable to presume that the authority of the bargaining agent continues until the contrary be shown. (See *N. L. R. B.* v. *Remington-Rand*, 2 Cir. 94 F. 2d 862, 870; *N. L. R. B.* v. *Biles-Coleman Lumber Co.*, 9 Cir. 96 F. 2d 197, 198; *N. L. R. B.* v. *Louisville Refining Co.*, 6 Cir. 102 F. 2d 678.) And we think that no sufficient showing is made to overcome this presumption. There are filed 10 blanket affidavits in general form by employees of respondent, who are not shown to have any particular knowledge of the matters to which they testify, and whose affidavits amount to little more than expressions of opinion of little or no value. This is all except an affidavit by a former president of the union, which fails to set forth any definite information as to the present membership of the union, and thus discounts the whole effort to establish loss of majority representation.

It is reasonable to assume, moreover, that any decline in union membership has been due in large measure to refusal of respondent to bargain with the union as representative of the employees in the manner contemplated by the act of Congress; and, in such situation, an order requiring respondent to bargain as contemplated by the act is reasonably necessary to overcome the effect of the interference with self-organization resulting from the refusal to bargain. An employer should not be allowed to discredit a bargaining agent selected by an overwhelming majority of his employees by refusal to bargain with it and then take advantage of the loss of membership due to his wrongful act as an excuse for refusing to recognize it as a bargaining agent. It must be remembered that the union represents the employees, not the employer; and, if a majority of the employees are not satisfied to be represented by it, they can apply to the Board for relief. It is significant that, while the affidavits filed before us state that a majority of the emlpoyees are not members of the union and that for some time it has not been the designated or selected representative of the majority, there is nothing in them to the effect that the employees are not willing to have it bargain for them. If respondent's refusal to bargain had been due to bona fide belief at the time that the union did not represent a majority, a different situation would, of course, be presented; but it is admitted that at that time the union represented between 80 and 85 percent of the employees. Under such circumstances, we feel that we should decide the case on the record certified by the Board (*N. L. R. B.* v. *Newport News Shipbuilding & Dry Dock Co.*, — U. S. —; 60 S. Ct. 203, 208) and leave any question of representation which may have arisen out of changed conditions since the record was made to be dealt with by the Board under the provisions of the act.

The order of the Board will be enforced.

Order enforced.

Other People's Money

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

RADIO DISCUSSION BETWEEN HON. EMANUEL CELLER, OF NEW YORK, AND PROF. DANIEL E. CASEY, EXECUTIVE VICE PRESIDENT OF AMERICAN TAXPAYERS' ASSOCIATION, INC.

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint discussion by Prof. Daniel E. Casey, lecturer on economics, Georgetown University, and executive vice president, American Taxpayers' Association, Inc., and myself broadcast over the coast-to-coast network of the Columbia Broadcasting Co. from station WJSV, Washington, D. C., March 13, 1940:

Mr. CELLER. In previous radio broadcasts we have discussed taxation, unemployment, and their related problems. Today public interest seems to be centered largely on Federal spending, and since many appropriation bills are now pending in Congress, it seems in order for us tonight to talk about this spending of the people's money.

Mr. CASEY. Let's begin, Congressman CELLER, by referring for a moment to the President's latest Budget message. He proposed a $775,000,000 cut in Government expenditures for the next fiscal year. He asked Congress to provide $460,000,000 in new taxes. He stated, also, that unless Congress followed these two recommendations it would have to raise the present Federal debt limit of $45,000,000,000.

Mr. CELLER. That is correct. Congress, however, feels this is no time to increase the tax load. Instead of considering new taxes, the House Appropriations Committee took a sharp pruning knife and went to work on the President's estimates. We must reduce them by $460,000,000 or raise the debt limit. In the appropriation bills so far passed by the House, approximately $290,000,000 of the required amount has been saved. With one or two exceptions, the Appropriations Committee has done a good job. The House has backed up the committee and so far has resisted all pressure to increase the amounts recommended.

Mr. CASEY. The House has made a splendid beginning. We all hope the Senate will follow. But, Congress is not going to find the complete solution to this fiscal situation until the people of this country recognize the serious menace we are facing, until they understand the problems we are up against, and realize that something must be done to place America on a sound footing where she is not dependent upon gratuities, doles, and grants, but upon the sound earnings of her people.

Mr. CELLER. True enough. Congress is doing its part, but there must be better understanding throughout the country of these dangers and the realization must be brought to bear sufficiently in Washington to give necessary support to constructive forces. Unfortunately, heavy Federal spending has created vested interests in the continuance of such policy. Pressure groups are continually harassing Congress for more Federal funds, despite the fact that repeated polls show the majority of the people favor reduced spending.

Mr. CASEY. Federal appropriations are merely spending other people's money. There is no magic about liberality with this money. The Government has nothing to give to the people except what it takes from the people. There is no such thing as free money, and everyone pays for all Government service. The Federal Government takes the money from us and we don't get it all back. The Federal Government takes our shirt and gives us a little piece of the tail. Then we go back home waving it and shouting, "Look what Uncle Sam gave me."

Mr. CELLER. While I cannot go all the way with you on that statement, I do agree that our people should be impressed with the fact that our Government is spending their money—and that means every man and woman in the Nation. Those who clamor most loudly for economy in the abstract demand Federal spending on projects of immediate and direct benefit to themselves or to their community. And these pressure groups use every available means to further their demands.

Mr. CASEY. That is undoubtedly so. I know something about that pressure. Recently I examined the more than 6,000 petitions submitted to Congress during the last regular session. Of this number, 1,236 related to expenditures, and it is highly significant that 1,212 advocated further Federal expenditures, while only 24 recommended reduced spending.

Mr. CELLER. One incident will show how this practice grows. For years the Federal Government has subsidized agricultural college and vocational education. Now we have demands for Federal aid for general education, and a special committee appointed by the President recently proposed Federal grants for this purpose beginning with $72,000,000 this year and increasing the amounts progressively. The committee further stated: "It is probable that before the end of 1945 it will be desirable to plan for substantial increases in the amount of Federal aid." Of course, we all want to extend education throughout the land, but is not this a proper subject for State and not Federal aid, Professor Casey?

Mr. CASEY. Certainly. Nobody objects to improved educational facilities properly placed. In the report you have just quoted, except for grants for school buildings, the States would not be required to even match these Federal gifts. In the last session alone 47 petitions were filed in support of Federal grants for public-school aid. However, suppose we analyze the facts in the light of our past decade of sharply arrested economic life. Vast Government spending, at the expense of record taxes and increased public debt, should be examined in the light of our national aim toward a higher standard of living.

Mr. CELLER. Why not? Some day a start must be made to pay the national debt. Paying it will be painful, and our people are due for a rude awakening. The sooner we all realize this the better off we shall all be. There are places where expenditures can be reduced without causing hardship. We can certainly start now by cutting out those expenses. Any serious-minded individual realizes that the Budget cannot be balanced in 1 year. There must be a tapering off in the spending, a reduction in the deficit, and a gradual increase in tax receipts as business responds to the restoration of a sound fiscal policy.

Mr. CASEY. But we must begin. Government debt is a mortgage on the Nation. Interest on the Federal debt alone is now a real burden. This year it will reach a new high of $1,100,000,000, and will be the third ranking cost of government, exceeded only by the cost of relief and national defense. This represents spending that returns no benefit to anyone. There is a limit to the portion of industrial production which can be taken through taxation for Government purposes without causing a loss of jobs in private industry and a general lowering of living standards. In some instances we have already passed that limit. When enterprise is confronted by Government policies, which tend to make business unprofitable, then enterprise won't hire money or men.

Mr. CELLER. Government spending consists largely of low-powered money—relief payments—which are helpful in meeting emergencies. This spending does not contribute to the national income like a dollar earned in private enterprise. Private spending is high-powered money and turns over approximately 20 times. It causes business expansion, increased pay rolls, and real employment for those looking for jobs. If we can shift from this low-powered money to high-powered money we will be able to raise our national income to a figure that will return to the Government, in the form of reasonable taxes, enough money to form a real Budget balance. We cannot permanently keep the profit out of the profit system without making unemployment permanent, nor without bankrupting the Treasury.

Mr. CASEY. Right you are, Congressman CELLER. Government spending for recovery defeats itself. Government spending has retired this high-powered money, because it has removed the opportunity for safe investment. When the United States Government prints a bond it says in effect to the purchaser that the Government will tax the people of the United States to make it good. The purchaser, therefore, knows these bonds are sound, just so long as we do not issue too many of them and have inflation. Before the Government started spending several billion dollars more each year than it took in from taxes banks loaned their money for business uses at a rate of interest high enough to cover their expenses and pay the depositors 4 percent. The average yield on long-term Treasury bonds has dropped to about 2¼ percent, and that is why the banks are now paying us less than 2 percent on our deposits.

Mr. CELLER. In other words, if you own a savings-bank account you are paying right now for the increased national debt by getting less than one-half the interest you formerly received.

Mr. CASEY. Yes, Congressman CELLER.

Mr. CELLER. The same must be true of insurance policies—and one of every two persons in this country holds some form of insurance. Insurance funds, too, are invested in Government bonds, and their earnings thus reduced. This means it will take you longer to pay for your life insurance as the annual dividends are less and the premiums are more.

Mr. CASEY. Exactly. Latest financial statements show that in the case of some banks, more than 40 percent, and in the case of some insurance companies, more than 25 percent of their assets are invested in Government bonds. It may be a shock to many people to be told that their funds are used for this purpose. But it is a fact, Congressman CELLER, if they own a savings account or an insurance policy. Thus, possibly without their knowledge or consent, their money is financing directly the heavy Federal spending about which they complain.

Mr. CELLER. That brings us to the crux of the whole situation. If you believe in a sane approach to this problem, stop the pressure from back home for Federal liberality with other people's money. Crystallize the necessary sentiment to stop requests from your locality for Federal money. Stop the petitions before they start. Keep your State and local officials at home. Stop your chambers of commerce and civic groups from memorializing Congress with petitions for money to pay for various local projects, while at the same time demanding economy.

Mr. CASEY. That is timely advice, Congressman CELLER. Right now the Senate seems bent on wiping away all the savings so far effected by the House. Observe the recommendation just made by a Senate committee to pay to the farmers $300,000,000 additional cash out of Treasury funds collected from business taxes. It's merely another "farm grab" with sugar coating. Don't our citizens realize that the Federal debt is rapidly mounting to a point that may threaten the foundation of individual liberty? Public spending and public debt are inescapably tied up with our jobs, our savings, our opportunities, and our security. Higher debts mean more taxes and higher taxes—and more hard times. Debt and taxation are the twin enemies of a national prosperity. This country must be returned to fiscal sanity.

Mr. CELLER. Of course it is hard to pay bills as they come due. But the Government is no different from an individual; it can't spend all of the time any more than an individual can. There must come a pay day and that day seems to be close at hand. We are rapidly approaching the bottom of the money barrel. This may not be pleasant medicine to take, but it is the only way that national bankruptcy and financial collapse can be prevented.

Mr. CASEY. We just cannot afford to increase our debt. Potential wealth is a fine basis for boasting, but there never was a more pernicious fallacy than that a heavy national debt is desirable. It is sometimes justifiable, occasionally unavoidable, but never desirable. All economic evidence at hand indicates that the salvation of the country depends on a program to reduce this terrific spending—and to encourage, through sound tax policies, a resumption of private spending.

Regulation of Rates of Water Carriers

EXTENSION OF REMARKS

OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

RESOLUTION BY THE NEW YORK STATE WATERWAYS ASSOCIATION

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the thirtieth annual convention of the New York State Waterways Association, Albany, N. Y., October 20, 1939, in reference to S. 2009:

Whereas there is now pending in a conference committee of the House and Senate of the United States a bill, S. 2009, intended to amend the Interstate Commerce Act, and more particularly to provide for the regulation of the rates of water carriers; and

Whereas this measure passed the respective Houses of Congress in widely differing forms, throwing upon the conferees the obligation of practically drafting a new bill; and

Whereas the House inserted certain amendments designed to exempt from the operations of the proposed law certain types of water carriers, and to provide certain safeguards for the protection of the shippers who use the various transportation agencies; and

Whereas the great majority of the maritime interests, the shippers of the country, including great farm organizations and many of the responsible officials of the Government, including the Secretary of War, the Secretary of Agriculture, and the Chairman of the Maritime Commission, have expressed great concern and alarm over certain portions of this proposed legislation and have protested against its enactment; and

Whereas the availability of low-cost water transportation is of vital concern to nearly every part of this country in normal times, and much more so in this time of possibly emergency: Therefore be it

Resolved, That the said congressional conferees should include in whatever proposal they agree upon those House amendments exempting certain carriers and those providing some measure of protection for the shippers;

That no conference report on this matter, so technical and so fraught with danger for the water carriers and the shippers, should be acted upon in haste—but ample time should be allowed those primarily interested to study its provisions and attempt to forecast its effects;

That, particularly in view of the emergent nature of the present situation of this Nation, the conferees should exercise the utmost

care that nothing be proposed by them which would impede or interfere with this vitally important element of our transportation system;

That copies of this resolution be transmitted to all Members of the House of Representatives and the Senate of the United States.

Chain Stores and Farmers—Farmers Oppose Anti-Chain-Store Tax Bill

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. CELLER. Mr. Speaker, the Subcommittee on Ways and Means will conduct hearings, commencing March 27, on H. R. 1, the bill offered by our distinguished colleague from Texas, Representative WRIGHT PATMAN. This bill is of vast import to the farmers of the United States. It is designed to put out of business chain stores, which greatly increase the efficiency of distributing farm products from grower to consumer. This bill is aimed at destroying by punitive taxes one of the foremost auxiliaries to agriculture ever developed and one which offers great promise for the future—the modern chain store.

Through the introduction of mass-distribution methods the chain systems have unquestionably improved the efficiency and reduced the costs of getting fruits and vegetables from grower to consumer, according to the Department of Agriculture in the so-called Hoffman study. The chains can move many farm products with a minimum of lost motion, and in so doing increase consumption. They offer to the farmer the opportunity to profit by their efficiency, rather than have him handcuffed by outmoded inefficiency in distribution from which he cannot escape and which reacts to his harm, without his being able to do much about it. The chain store represents progress in distribution.

The farmers recognize the value of the chain-store companies and condemn attempts to interfere with their distributive efficiency. The Farm Bureau Federation on December 7, 1939, during its annual convention at Chicago, Ill., resolved as follows:

> We condemn discriminatory and punitive taxes of all types designed to favor or penalize a selected group. The enactment of such legislation results in further efforts by other groups to obtain special privileges. Such unnecessary taxes and restrictions have a damaging effect by increasing costs of distribution, increasing costs to consumers, reducing total consumption, and limiting production in agriculture as well as industry. We oppose all such tax proposals.

Many more farmers' organizations have passed similar resolutions. To show the mounting antagonism of farmers for discriminatory legislation of this nature a few of the expressions made by various farm groups, just since the first of this year, are reported as follows:

The Arizona Wool Growers Association (January 28, 1940):

> This association went on record as opposed to the Patman bill and other discriminatory taxes on chain stores.

Empire State Potato Club (annual convention, Utica, N. Y., January 5, 1940):

> We condemn all efforts to inflict punitive and discriminatory forms of taxation designed to affect chain stores.

Illinois Agricultural Association (annual convention, Chicago, February 1, 1940):

> We approve, without reservation, the resolutions of our national organization, the American Farm Bureau Federation, adopted at its recent annual meeting in Chicago.

The American Pomological Society (Annual Convention, Worcester, Mass., January 4, 1940):

> We condemn all types of discriminatory and punitive taxation designed to hamper or destroy any legitimate type of retail distribution.

Central Arizona Cattle Feeders Association (January 8, 1940):

> The Central Arizona Cattle Feeders Association does hereby condemn punitive and discriminatory taxation of types designed to favor or penalize a selected group, such as House Resolution No. 1, commonly known as the Patman bill.
>
> It is the position of this association that such taxes have a damaging effect by increasing cost of distribution, increasing cost to consumers and reducing total consumption, and limiting production in horticultural, agricultural, and livestock products.

Illinois Fruit Growers Exchange (February 23, 1940):

> Illinois apple growers should be especially pleased with the response and cooperation that are being given in the movement of Illinois apples by chain stores and other jobbers operating within the State. This is especially true of local chains working within the State. These retailers have been merchandising and carrying on apple sales campaigns in order to move Illinois apples.

Iowa Farm Bureau Federation (January 19, 1940):

> We reiterate our support of economical methods of distribution. We do not favor discriminatory and punitive taxes designed to unduly penalize any particular type of distribution.

Kansas State Board of Agriculture (annual meeting, Topeka, January 10–12, 1940):

> We are opposed to legislation, local, State, or National, which tends to increase the cost of distribution of agricultural products by imposing discriminatory taxation upon any legitimate form of business.

Kansas State Grange (annual convention, Neodesha, December 11–14, 1939):

> The unhampered and efficient distribution of the agricultural products is of vital concern to both producer and consumer. * * *
>
> The Kansas State Grange goes on record as opposed to any legislation that would impose unjust or discriminatory regulations or taxations upon any legitimate form or method of distribution.

Kentucky Farm Bureau Federation (annual convention, Louisville, January 12, 1940):

> The Kentucky Farm Bureau Federation reaffirmed the stand it took last year condemning discriminatory and punitive taxes of all types designed to favor or penalize a selected group.

Maryland Farm Bureau Federation (annual meeting, Baltimore, January 13, 1940):

> The Maryland Farm Bureau Federation reaffirmed the stand it took a year ago against the Patman bill and all similar proposals for State or local legislation.

Maryland Vegetable Growers Association (annual meeting, Baltimore, January 11, 1940):

> We condemn all descriminatory levies on retail distributors. * * * Such levies restrict farm markets and increase consumer costs.

Massachusetts Fruit Growers Association (annual convention, Worcester, January 5, 1940):

> We condemn any legislation patently and unjustly aimed at a particular group, any measure discriminatory in character, and any action likely to disrupt established channels of trade.

Massachusetts State Farm Bureau Federation (annual convention, Worcester, January 4, 1940):

> The Massachusetts State Farm Bureau Federation reaffirmed in a resolution its stand condemning the Patman bill.

J. A. McCormick (manager, Michigan Bonded Fruit Growers Association, January 15, 1940):

> The growers are getting more assistance from the chain organizations in Michigan than they were aware of. There are two reasons for this: One is that the chain stores do not court publicity in the many moves they make to help improve marketing conditions for produce raised in Michigan; the second reason is, chains are composed of wide-awake businessmen who fully realize in order that they may make money, the growers in the territory in which they operate must market their produce at a profitable price. They know that the agricultural industry of the State is the backbone of all business, and when the agriculturalists are marketing their produce at a profit, it reflects on other lines and helps to produce much better conditions.

Minnesota State Poultry Association (annual meeting, St. Paul, January 14, 1940):

> Unnecessary or excessive distribution cost cause the farmers to pay more for their supplies and receive less for their products.

We commend efficient distribution methods which are fair to the producer and result in lower costs to the consumer, and we condemn legislative and other efforts which are discriminatory and tend to hamper efficient and economical methods of distribution.

National Council of Farm Cooperatives (report, Washington, D. C., January 11, 1940):

We oppose discriminatory or punitive taxes designed to destroy or unduly obstruct any channels of distribution, with consequent increase of distribution costs, inflation of prices to consumers, and restriction of the flow of agricultural commodities into consumption.

National Wool Growers Association (annual meeting, Casper, Wyo., January 23–25, 1940):

We again oppose either State or Federal laws that will limit the outlet of our products through unfair taxation. No outlet of the commodities of this industry should be abridged or curtailed through unwise legislation.

New York State Vegetable Growers Association (annual convention, Utica, January 5, 1940):

We oppose all efforts to inflict punitive and discriminatory forms of taxation designed to cripple or even prohibit certain systems of distribution.

Sugaryam Growers, Inc. (Sumter, S. C., as reported in Manning (S. C.) Times, January 24, 1940):

The assistance of the chain stores was enlisted in a special sales effort to move the green stock surplus.

Recognition of this cooperation and the gratifying results was given in a resolution adopted at a recent meeting here of the executive committee of the Sugaryam Growers, Inc. The resolution expressed appreciation for the special sales efforts and stated that these efforts had assisted "materially in moving our surplus green stock which we did not have curing houses in which to store." The secretary of the committee was authorized to draft an appropriate letter conveying the thanks and appreciation of the growers for this "very worth-while work" by chain stores operating in this State.

Texas State Grange (annual convention, San Antonio, January 14, 1940):

The Texas State Grange opposes all legislation, taxes, and regulations that raise barriers to trade between States and industries, and we roundly condemn discriminatory and punitive tax legislation designed to destroy or unnecessarily burden any product, business, or method of distribution.

Virginia-Carolina Peanut Association (annual convention, Suffolk, Va., January 16, 1940):

The Patman chain-store bill would tax practically all of the chain stores out of existence. * * *

The chain-store organizations have always cooperated in every effort of the Virginia-Carolina Peanut Association to increase the sale of peanuts and peanut products. * * *

If the chain stores in the United States were forced to close their doors it would seriously cripple and handicap the distribution of peanuts and peanut products. * * *

The Virginia-Carolina Peanut Association is opposed to the passage by Congress of the Patman chain-store bill and respectfully petitions the Representatives and Senators of the State of Virginia to use their best efforts to prevent the passage of this bill.

On cause-and-effect grounds, the Department of Agriculture states in the Hoffman study of chain-store distribution of fruits and vegetables in the Northeastern States that:

Any reduction in the spread between grower and consumer resulting from large-scale distribution or from any other cause may be expected to benefit growers either through higher prices for the same supply or by enabling them to sell a large supply at the same price.

Not only in regular marketing of farm crops, but in other ways the chain stores aid the American farmer. In many notable instances, they have cooperated in disposing of surplus farm crops. The chain-store method of distribution is highly compact and well organized. In emergencies the whole weight of the organization can be thrown behind the farmer to prevent loss on his surplus crops. Outstanding records have been made by the chains in aiding farmers by campaigns to sell beef, lamb, grapefruit, peaches, turkeys, dried fruit, apples, beans, butter, rice, lettuce, peanuts, and many other farm products. Sales of these products have increased and higher prices to farmers have resulted as a consequence.

It has come to my attention that 134 chain-store companies operating 15,500 stores, selling cottons and allied products to the amount of $800,000,000 annually, are cooperating 100 percent in a special national drive to aid the cotton farmers. This campaign is going on right now and will be climaxed by a National Cotton Week from May 17 through May 28. Many chain-store companies dealing in lumber, auto accessories, restaurants, and candy, though not selling cotton products to any great extent are cooperating unselfishly in this campaign. The variety, general merchandise, drug, shoe, apparel, and miscellaneous chains are in the forefront of the campaign to help the cotton farmer.

I would like to conclude by saying that the farm groups of this country definitely are opposed to discriminatory taxation of any form of retailing, such as the chain stores, and I would like this to be made part of the record. To allow the chain stores to be destroyed with consequent disastrous effect upon the American farmers and consumers would be contrary to every right of property, of justice, and of common sense.

A United America—Part 7

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. THORKELSON. Mr. Speaker, I believe I can safely say that the people of this Nation have until recently held the Supreme Court in the highest esteem, a faith that was somewhat shaken when the President attempted to replace those he classified as suffering from senile degeneration with judges more in accord with his own regard for the Constitution of the United States. Two of the President's five appointees are, if nothing else, outstanding, for both are recorded in The Red Network, by Elizabeth Dilling, as members of the American Civil Liberties Union, a communistic organization. (See also CONGRESSIONAL RECORD, 69th Cong., 1st Sess., vol. 67, No. 2, Dec. 19, 1925, p. 1217 et seq., for further information.)

To form an opinion from recent Supreme Court decisions, one can only reach the conclusion that the Supreme Court does not understand the Constitution, or willfully ignores the document. In either case, the membership of the Court is subject to correction or dismissal, for all of them have taken an obligation "to preserve, to protect, and defend" the Constitution as it was given to them by our people.

I believe that majority opinion is expressed when I say that we, the people, have always relied upon our courts for fairness and justice, and this is particularly true of the Supreme Court, for it has always been considered to be composed of men who would not under any circumstances swerve from facts of the law.

Has the Supreme Court always adhered to facts as written into the Constitution? No; for divided opinions and the now so-called liberal interpretations have led us far afield from the actual meaning as expressed in the Constitution of the United States.

There has been a tendency for at least 25 years on the part of radicals to give undue weight to administrative decisions rendered by boards, commissions, and individual officials. This cult has been led by Frankfurter, who, nearly 20 years ago, became professor of administrative law at Harvard Law School. It has so far succeeded that it may be said that our Government is no longer "a government of laws and not of men."

In the early 1900's, with the growing powers of the Interstate Commerce Commission and other administrative bodies, while the Supreme Court was reluctant to retry the cases on the facts, largely because the burden of work would overwhelm the Court, it nevertheless held that a decision was arbitrary and would not constitute due process of law if there was no evidence to support a finding of fact on an essential element in the case. In this way the Supreme Court was able to prevent arbitrary administrative decisions.

Now, since the advent of the New Deal, Congress has so far abdicated its control over administrative bodies by assuming to grant power to administrative officials to make arbitrary decisions in violation of the due-process-of-law clause, that it is now hopeless to look for justice, particularly considering the present membership of the Court. In fact, very recent decisions indicate that the Court has accepted this unwarranted grant of power by Congress and is now stating in its own opinions that the remedy lies with Congress.

As a matter of fact, the Court should hold that many of these decisions are a denial of due process of law, which was confirmed by Daniel Webster as "A law which hears before it condemns, which proceeds upon inquiry, and renders judgment only after trial."—Black's Law Dictionary.

As the Supreme Court will not do this, the only hope for immediate relief is through Congress, as indicated by the Court, and the best solution is the passage of the Logan bill, which would make all of these administrative bodies subject to the same rules as the United States district court.

There can be no reasonable objection to this, particularly because many of these administrative decisions are rendered by the same persons who are the investigators, prosecutors, and triers of the facts, which at once indicates bias.

Presumptuous opinions in the press by department chiefs are infrequent today as compared with the past, yet it is difficult for some of them to desist from following the chronic habits of their leaders. It is not my desire to unduly criticize those to whom I have referred, for I realize as subservient appointees they, no doubt, listen to their master's voice and in sheer admiration forget their leaders are subservient to Congress and to the people.

I prefer to put the blame where it rightfully belongs, squarely upon the shoulders of Congress, for it is this branch of the Government that is in reality responsible for all unconstitutional laws, under the protection of which the communistic internationalist brazenly engages in sabotage of our Nation.

I realize, of course, that usage or established custom over a period of years is in itself looked upon as validating many unconstitutional laws. I take no issue with this legal assumption, although I declare it a fraud and a betrayal of the people's constitutional rights. The point to bear in mind is that it will eventually lead our Nation into regimentation, similar to that which now exists in other totalitarian governments. It is this danger that I, as a Member of Congress, have tried to reveal for "the common defense and the general welfare" of our own people.

I hope the people will realize that their fullest measure of liberty was enjoyed before extraconstitutional laws were enacted or—let me put it this way—on the day that the Bill of Rights was ratified, for it was then that the Constitution was the people's first line of defense. It is said, "Eternal vigilance is the price of liberty." We have not been vigilant, and we have not protected our rights. We have instead allowed our rights and liberties to be exploited by the international financiers, obnoxious and pernicious political machines, dishonest politicians, and other parasites who make their living upon the labor of industrious and law-abiding citizens. We, the people, are victims of too many laws, and if this orgy of legislation continues, nothing but complete loss of our cherished liberties and rights can be expected. No one can correct this except the people themselves, and it can only be accomplished by setting our Nation squarely upon the Constitution of the United States. It is upon that document that all will enjoy equal rights, and it is to that document that all Members of Congress, the President, and the Supreme Court should be required to subscribe, and, for violation, be removed from office.

While speaking on the danger of new legislation, let me at this point call your attention to the present squabble about the census enumeration. What does the Constitution say about this. Let me quote:

> The actual enumeration shall be made within 3 years after the first meeting of the Congress of the United States, and within every subsequent term of 10 years, in such manner as they shall by law direct.

This section states explicitly that the actual enumeration shall be made in 1790 and every 10 years thereafter. This should be plain, and Members of Congress should understand that they have no constitutional right to enact legislation that hounds, persecutes, and delves into the personal, private affairs of individuals.

In view of the fact that article I, section 8, paragraph 4, gives Congress the right to establish a uniform rule of naturalization, the right also exists in such delegation of power to determine enumeration, or tabulation, or counting, of races, which would reveal those who have attempted to obscure racial origin by change of name. The people should now ask Congress, Why has this important information been ignored in the present census, particularly in view of the fact that we know many are here on private visas, and others have gained illegal entrance into the United States?

Mr. Hopkins carelessly attacks Senator TOBEY for adhering to his obligation "to preserve, to protect, and defend" the people's rights. Mr. Hopkins may now read article I, section 2, section 8, paragraph 4, and section 9, paragraph 4, and he will find that nothing except enumeration is mentioned in the Constitution. In this enumeration it is the right of the people to be informed as to who they are, and that is why races should be counted and tabulated.

Mr. Hopkins also refers to the Constitution:

> "I feel it necessary, however, to call your attention to the fact that the patriots who gave us the Bill of Rights wrote into the Constitution a provision for the first and all subsequent censuses, and the same founding fathers made it mandatory upon the American people to answer census inquiries. This compulsion has existed for 150 years."
>
> Hopkins then reminded TOBEY of his oath as United States Senator to support the Constitution.

Mr. Hopkins is evidently confused about the Constitution, as is clearly evident after reading his statement in the Washington Post, March 17, 1940.

The spirit of the patriots who gave us the Constitution is still alive in the hearts of the American people, and they speak today as they spoke 151 years ago. The Constitution still belongs to the people as it did when it was drafted, and in the document they instruct the Government to "actually enumerate" or count all people or races within the United States. The fact that Congress in 1929 enacted legislation to do otherwise does not make it legal, because provision for changes in the Constitution may be found in article V, which I advise the Secretary of Commerce as well as Congress to read. It follows therefore that Senator TOBEY is not only within his rights, in his stand on the census question, but that he is actually conforming to his obligation "to preserve, to protect, and defend" the people's rights. I grant that the Secretary of Commerce and others, in spite of self-admitted importance, are not observing their obligations "to preserve, to protect, and defend" the people's rights, but are, on the contrary, engaged in usurpation of such rights.

The people, if they wish to adhere to their constitutional rights, are not obligated to answer any question except those pertaining to enumeration, and it strikes me that it may be difficult for the Government to convince a hundred and twenty million people that they have lost their constitutional rights, and are now actually under a Federal dictatorship. It is high time that the people assert their rights and demand that the Government respect the Constitution of the United States. This may be done in 1940 by making it obligatory upon each candidate elected to office that he faithfully obey the Constitution as it is written and not as interpreted by those who are engaged in sabotage of industry and destruction of the Government.

If it is the intention of Congress, the President, or Mr. Hopkins to insist on replies to silly questions, they should read amendment 9 for a better understanding of the people's rights:

> The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

In this amendment the people advise the whole Government of the United States that the written and unwritten

rights which they have reserved to themselves must not be treated disparagingly or lightly. This should be construed in the following manner by those who are elected to serve the people: We want you to count the inhabitants of the United States every 10 years so that we may be informed whether or not you, the Government, have conformed to our mandate as set forth in our document, the Constitution of the United States. We want to know if the Government has conformed to the naturalization and immigration laws, or have you made the United States a dumping ground for undesirable aliens? The people have said to the Government: We give you permission to count us every 10 years, but do not ignore our rights on the penalty of being removed from office. Do not meddle in our affairs, and do not stick your nose in our private business. It is this meaning that amendment 9 conveys, and it is high time for the American people to assert themselves and protect their own rights.

THE SUPREME COURT

The Supreme Court was instituted to protect the constitutional rights of the people, and this is clearly stated in article 3, section 2, which I now quote:

> The judicial power shall extend to all cases, in law and equity, rising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be party; to controversies between two or more States; between a State and a citizen of another State; between citizens of different States; between citizens of the same States claiming lands under grants of different States; and between a State, or the citizens thereof, and foreign states, citizens, or subjects.

This is perfectly plain and asserts that the judicial power of the Supreme Court shall extend to all cases—

> In law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made under their authority.

It is evident from this that all Supreme Court opinions upon law and facts must be based upon nothing else except the Constitution of the United States. There is much evidence to show that the Constitution has often been ignored by the Supreme Court in its decisions, as was done when it held the Gold Reserve Act constitutional.

The question may be asked: Should there be any difference in the penalties imposed upon a Supreme Court Justice or any other citizen who violates his oath of obligation? The answer is, "No"; and this is particularly true when we consider the fact that it is the people of this Nation who work and slave to pay the Justices of the Supreme Court $20,000 a year and, in addition to that, a pension of $20,000 a year upon retirement from active duty.

No one can deny that the people have the right to expect the same observance of the law from public officials as that which the laws demand from the people themselves, and to which they submissively subscribe. This is particularly true when we realize that many laws now in operation are unconstitutional, and therefore illegal. These laws are mostly coercive and restrictive, and are usually looked upon as regulatory in character.

Many of my statements may appear radical, but being one of the so-called common people, I address myself from the viewpoint of my own people, and for the protection of the rights they have reserved in the Constitution of the United States. For the people to submissively tolerate Federal usurpation of rights by a Government they have nourished for 152 years is incomprehensible to me. No one seems to realize that we are in the hands of the most efficient international wrecking crew that ever climbed over the side of a ship at night. No attempt is made to stay their hands of destruction. We sit instead in abject apathy to our fate.

Returning again to section 2, we find on perusal that the judicial power of the Supreme Court does not extend to controversies within the State, but only to controversies between the States or between citizens of different or foreign States. The limitation of judicial power is so clear that I shall refrain from discussion of it, and shall, instead, proceed to clarify State rights, quoting article I, section 8, paragraph 3:

> Congress shall have the power to regulate commerce with foreign nations and among the several States, and with the Indian tribes.

This is in line with the spirit of the Constitution, which is to maintain and protect the sovereign rights of the State, so that the United States may remain, as was intended, an indestructible union of many States. It is this that each branch of the Federal Government has obligated itself "to preserve, to protect, and defend," so that our Union may survive forever. I shall now quote the second paragraph of article III, section 2:

> In all cases affecting ambassadors, other public ministers, and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions and under such regulations as the Congress shall make.

This paragraph is also clear, for it states where the Supreme Court shall have original jurisdiction, and where it shall have only appellate jurisdiction, "both as to law and fact," under such regulations as Congress shall make. This also conforms to the spirit of the Constitution, for the Supreme Court is empowered to represent "foreign states, citizens or subjects," as provided for in article III, section 2.

The Constitution recognizes the Senate of the United States and the Supreme Court as international and national umpires in their respective fields and the President independent of both. This is as it should be, and has been upheld until recently by the Supreme Court itself.

> There is no liberty, if the power of judging be not separated from the legislative and executive powers.—Montesquieu.

In other words, Executive and congressional interference with the Supreme Court is a "kiss of death" to justice. It is precisely that condition which confronts us today, as we observe and study the present occupants of the Supreme Court. Not only do they appear to be under the influence of the executive department but some of them are inextricably united with other alien interests, which in itself is a bar to clear constitutional expression by those so involved.

As I read various publications on the Supreme Court of the United States, I cannot but come to the conclusion that the Supreme Court generally takes the position that legislation enacted by Congress is constitutional. This view is further evidenced by the few reversals on the constitutionality of legislation. This viewpoint in reality is responsible for the great centralization of power in the Federal Government, a power that the Constitution did not intend to give. It should be quite clear that such viewpoint will eventually deprive the people of their liberties and rights, unless they use the most extreme care in selecting members to Congress. No better evidence of this danger can be had than the mass of legislation that has been enacted in the past 8 years, which has provided Federal-owned private corporations in practically all fields of industry. Similar legislation has also provided the Gold Reserve Act, and the reorganization plan, which give the Executive most extraordinary and unusual powers. Surely this could never have happened had Members of Congress adhered strictly to the Constitution, for all of this legislation is clearly unconstitutional. The Supreme Court has the cart before the horse, for the Constitution was drafted by the people to protect the rights they reserve to themselves, and for protection against their own Government and the Supreme Court, should either fail to carry out the mandate of the people as set forth in the Constitution of the United States. The point to bear in mind is that it means exactly the same thing today as the day it was drafted.

The Court speaks of being liberal with interpretations of the Constitution which is another error on its part for the people do not want liberties taken with their rights and the Court should therefore hew strictly to the line.

In order that we may have a better understanding of the obligated duty of the judges on the Supreme Court, let me quote two paragraphs of article 6:

> This Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.
>
> The Senators and Representatives before mentioned, and the members of the several State legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

These two paragraphs should be quite convincing as to the document upon which the laws of the United States shall be made and upon which the judges of every State shall be bound. It should also be informative to other officials, as stated in this quotation. Let us not, however, make the mistake of confusing religions with foreign subversive philosophies, for they are not comparable in any sense whatsoever. Subversive philosophies may be assumed to include all teachings which are contrary to the principles set forth in the Constitution of the United States. Those who harbor such principles should never sit as judges on any court in the United States, or on any jury except among themselves or those who harbor similar radical philosophies.

The question may now be asked: How can those who teach sabotage of our industries and destruction of our Government be classified? Shall they be looked upon as friends or enemies of the United States? I do not believe anyone will disagree with me when I say that they can only be held as enemies of the United States, and therefore subject to article 3, section 3:

> Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

The question may now be asked: Is there anyone within the United States today who advocates sabotage of industries, radical changes, or destruction of our Government? The answer is "yes," and evidence may be found in their own publications. Who is responsible for failure in seeing that the Constitution is faithfully obeyed? Why is the Department of Justice indifferent to this threat upon the liberties of our people and the security of our Nation? Someone is guilty, for the law is clear on this point.

In conclusion, I shall quote a part of article III, section 1:

> The judges, both of the Supreme and inferior courts, shall hold their offices during good behaviour, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

The question may be asked: What is good behavior of a Justice of the Supreme Court? The answer which appears logical to me is that his behavior is good as long as he performs the duty of his office, which is to uphold the Constitution of the United States as written in the document itself, with due consideration for all rights written and unwritten that the people reserve to the States and to themselves. Failure to observe this is tantamount to bad behavior and, therefore, legitimate cause for dismissal from office.

It is within the power of the people to set this Nation right by taking active interest in all officials elected to office in the State and in the Congress of the United States. It is entirely within the power of the State to elect sound State governments. When such governments begin to function, they will by sheer power force the Federal Government to retrench, to perform the duty delegated to it in the Constitution—which is to represent the United States in international relations. When this is done, the wheels of industry will begin to turn, and the unemployed will return to work.

St. Lawrence-Great Lakes Proposed Treaty

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

EDITORIAL FROM THE GAELIC AMERICAN

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include a recent editorial from the Gaelic American on the subject of the proposed treaty between Canada and the United States affecting the St. Lawrence River and the Great Lakes, as follows:

[From the Gaelic American, New York, March 16, 1940]

DEFEAT ST. LAWRENCE WATERWAY TREATY

The St. Lawrence waterway scheme has been revived by the Washington administration and another treaty between the United States and Canada has been agreed on by the two Governments. Though a similar treaty was defeated by the United States Senate, on March 14, 1934, President Roosevelt has not paused in his efforts to push through the international canal. Soon after the rejection of the treaty by a vote of 46 to 42, the President renewed his efforts to get favorable action and negotiations for a new treaty were carried on with Canada. Hostility, on the grounds of cost, by Quebec and Ontario, was revealed and the President's pet plan was put in cold storage for several years. Now Canada is more favorable to the waterway, probably on the advice of England, and unless some unforeseen obstacle presents itself the President will send the revived and revamped treaty to the Senate for ratification before Congress adjourns.

President Roosevelt's persistence in pushing the international waterway is strange as the project is a hang-over from the Hoover administration which failed lamentably in all its negotiations and attempts to settle the affairs of the world. It failed to prevent Japan from absorbing Manchuria and the Stimson doctrine, which was hailed as a wonderful step to prevent aggression between the nations, has gone the way of the League of Nations and the Kellogg-Briand Pact, which its authors expected would outlaw war for all time. It was the Hoover administration which issued a moratorium on the payment of the war debts, principal and interest, due to the United States. This blunder resulted in paving the way for the practical repudiation of the war debts by the European debtors, including the "democracies" who try to make us believe that they are fighting for freedom of small nations and world peace. In his foreign policy Roosevelt has followed closely on the heels of Hoover and like him he considers himself the guardian of world peace and democracy. It need hardly be stated here that the Old World nations did not take Hoover seriously and they hardly pay any more attention to Roosevelt. Both Hoover and Roosevelt were elected to safeguard American interests and the electorate gave them no mandate to manage the affairs of the world.

The St. Lawrence waterway treaty would involve the expenditure of a fabulous sum at a time when Americans have to provide large sums for relief and public works. Besides the canal is controlled by Canada, and in case of disagreement between the United States and the Dominion, American ships could not enter the Gulf of St. Lawrence. Besides the St. Lawrence River is frozen for nearly 6 months of the year, and at best, it would be only a part-time canal. With these defects it is unwise for America to spend hundreds of millions of dollars in cutting a part-time and jointly controlled waterway.

It is also doubtful whether American produce could be shipped via the St. Lawrence canal more cheaply than by the existing rail, lake, and canal routes. The Canadian waterway would divert traffic from the railroads, and adversely affect the Atlantic seaports of Boston, New York, Philadelphia, and Baltimore. Montreal would automatically become the most important city in North America, and New York would take second place. Many vested interests would suffer losses, and thousands of men would lose their jobs. Why should the Government support any scheme that would prove detrimental to American interests?

Our foreign trade has been decreased rather than increased in the last decade. Even the temporary spurt in some industries, as a result of the European war, has not come up to expectations. At present the facilities for handling our exports are ample and more than ample. Why run the risk of losing hundreds of millions of dollars on a waterway that may turn out to be a white elephant?

Spokesmen of the Canal interests state that the proposed project would greatly lower the cost of light and power to millions of consumers. Already there is going to waste in this State water

power more than sufficient to supply New York and the Eastern States with cheap light and power. There is no reason why these facilities should not be availed of by the State. Why wait for the St. Lawrence development when there is so much water power available in New York State? The plea that cheap power from the St. Lawrence Waterway would build up many industries now languishing is far-fetched and unconvincing.

One of the main objections to the St. Lawrence waterway is that it would internationalize the Great Lakes and that the big cities of the Middle West would be liable to bombardment by hostile cruisers in case of a war between England and America. Some of our internationalists may say that such a war is unthinkable, but as long as human nature is what it is, there will always be wars between nations.

The St. Lawrence River is frozen for more than 6 months of the year. The ice sets in early and it is well into May before it is fit for navigation. There is no good American reason for the digging of the proposed canal, and the waterway Treaty should be defeated by the United States Senate, which has in the past put the quietus on many ill-considered pacts. As this scheme is likely to be submitted to the Senate before Congress adjourns, no time should be lost in interviewing your Senators. Up to the present it is believed that the opponents of the proposed waterway have votes enough to defeat it a second time.

Let's Be Fair With the Aged—Statements About Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. BECKWORTH. Mr. Speaker, some 5 years ago there were those who had the vision, foresight, and wisdom to acknowledge the fairness of trying to do something for the aged persons who have diligently and assiduously labored to make this land what it is—those in the evening or sunset of life.

The thought of $30 per month was held out to our old folks from the inception of old-age assistance. Many have been under the honest conception they would receive this amount. I say we should all unite in our efforts to pay the first $30 before creating additional false hope and faith in the minds of our aged. Blasted hopes—and many old people's hopes have been blasted—help no person and contribute nothing of a substantial nature to the cause of helping old people. It is my understanding that little more than $10 per month is the average now being paid by the States to old people, and, of course, this represents a $5 contribution by the State and a $5 contribution by the Federal Government. With this despicable and deplorable situation obtaining, each of the Members of Congress should dedicate his best efforts to remove and obviate such rank mockery.

One great fault which has characterized the pension system in our State and section—a characteristic I desire to see removed—is the fact that many of the most worthy citizens, worthy in the light of efforts hitherto made by them to assist themselves and families and State, have not been able to be added to the rolls on the weak and untenable pretexts and excuses that they are not in need because, first, a relative has an income sufficient to maintain the old person or couple; or, second, a piece of property is owned by the individual or couple.

These two provisions, which have attended in reality and, insofar as interpretation is concerned, the Texas law, have had the effect of unjustly precluding from receiving assistance certain worthy and needy persons. To illustrate the first allusion I have made, I am familiar with two old people who live with their son-in-law and daughter. Since the inception of old-age assistance this aged couple has sought assistance, but has been disallowed because of the contention that the son-in-law and daughter are able to support the couple. It has not been my purpose to ascertain the efficacy or lack of efficacy of the allegation, but one of the designs of old-age assistance, I am constrained to believe, is to remove the feeling of complete dependence which in many instances permeates the minds of poverty-stricken old people. These old people to whom I refer have no earthly possessions other than their clothes; they could not begin to keep house without buying furniture; they own nothing. Nothing would bring more joy to them than the opportunity to live their remaining days under a roof where the say-so of each is supreme, rather than to be compelled to adjust themselves to and adhere to the whims and fancies of others. The law and interpretations should, in my opinion, be modified to include these types of people.

That an old person who owns a piece of land or a house should be denied assistance for that reason only is ridiculous. Some aged individuals or couples in my vicinity—and I am sure my vicinity is not dissimilar to many others throughout the South and the Nation—happen to own 30 or 40 or 50 acres of land not worth, in a large number of cases, more than $500, $800, or $1,000 and, certainly, not more than $1,500. At best the cotton allotment—I allude to cotton because it is the chief money crop—on the 30, 40, or 50 acres would be no more than three, four, or six bales bringing only a total of $120, $160, or $240, respectively. The respective rents on these amounts of money would be not more than $30, $40, or $60—the share which the old individual or couples would receive. From some of these sums would be deducted taxes and property upkeep. To parallel the preceding case an aged individual or couple may own in town a house valued at $1,000, $1,500, or $2,000. The ownership of this house, attained by wise and frugal efforts, should not preclude the reception of aid by the individual or couple who owns it. Rather than the possession of it constituting a handicap, it should hasten the chance of the individual or couple to get aid because its possession is patent evidence of thrift, frugality, and genuine American resourcefulness. Is it fair, right, just, or reasonable to deny these types of individuals or couples social security for a few fleeting years, years in which though they have strength, "yet is their strength labor and sorrow, for it is soon cut off"? No; this policy is not condonable when we remember that by strong inference and overt action of the Congress in the case of W. P. A. laborers, not less than $300 per year is considered a bare subsistence income. Even the adequacy of $30 can be strongly questioned when we recall that the needs of old people are somewhat augmented by virtue of certain types of foods they need in conjunction with medicines, and so forth. It occurs to me that the existence of the three descriptions brought to your mind, when you remember that their situations often elicit unfavorable decisions as to their eligibility for aid, encourages future old people to be less diligent in their efforts to obtain property in their days of production and, although any son or daughter worthy of the name is happy to aid his or her mother or dad or both to the fullest degree, still that son or daughter can receive little encouragement to move forward financially visioning the foregoing examples.

But, you say, why discuss these facts? The real reason actuating and motivating me in this connection is because the States are constantly under the threat that the Federal Government will withhold its aid if the States become too liberal in their certification of eligibles. I cannot believe it is the honest motive of the membership of this Congress to interpret the meaning of the word "need" in a manner so rigid and restrictive that the worthy and needy aged, like I have described, would receive no help.

We have made much progress relative to helping old people, but, indeed, there is much to be done. The test of one's sincerity or the sincerity of any group of legislators is whether or not they are willing to raise the money to pay

that amount promised by them. We should try to aid our old people to a degree of at least $30 per month because heretofore this sum has been legislatively suggested. I do not contend even $30 is completely adequate, but this sum, it is obvious, would be such a pronounced improvement over the present situation.

The President's message to Congress states that the farmers are still not receiving their part of the national income. I think it is admitted that most of our farmers, considered from an agricultural-population standpoint, live in the South. The 10 lowest pension States are 10 Southern States, and they pay their old people from $6.05 per month to $10.46 per month. My own State of Texas pays on an average about $8 per month. Since this is true, it is readily discernible that the South is again suffering as it has in so many instances by virtue of the type of pension legislation now on the Federal statute books. A bill that I introduced January 25, 1940—H. R. 8148—which, in my opinion, incorporates the sentiment of many other Members of Congress, would require that the Federal Government match the States' contribution 4 to 1 up to an amount of $30—that which the old people now expect; and my bill harmonizes with the present law in that the State would have to match 50–50 the Federal contribution on any amount over $30 up to $40. Furthermore, the Beckworth bill reduces the cost of administration from 5 percent to 3 percent. I include this provision because I have always contended that too much of the money which is supposed to go to the old people has been spent for administration. This bill, I know, would do much to alleviate a great deal of misery and deprivation now characterizing the lives of many worthy and meritorious senior citizens. I urge each Member of Congress to carefully consider it.

Justice Pierce Butler

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ADDRESS OF CHIEF JUSTICE KIMBROUGH STONE OF THE UNITED STATES COURT OF APPEALS FOR THE EIGHTH CIRCUIT

Mr. COCHRAN. Mr. Speaker, recently in Kansas City, memorial services were held for the late Justice Pierce Butler of the United States Supreme Court by the United States Court of Appeals for the Eighth Circuit.

Chief Justice Kimbrough Stone of the Eighth Circuit Court of Appeals made the principal address.

Mr. Speaker, as part of my remarks I include Justice Stone's address. It follows:

Were this an occasion when those things which are essentially personal should be said, I would try to voice something of my estimate of this man for whom I held a genuine affection and whom it was my precious privilege to have had as a friend. However, I may say that as I deeply valued that friendship during his life, so shall the memory of that association be to me a benediction always. What I wish now is to try, from the more impersonal position of an American judge and citizen, to point out one meaning of his loss as a justice of our supreme tribunal.

The death of Justice Butler would have been a pronounced loss to the Nation at any time. It would have signified always the passing of a great man from important public service. But such loss is far accentuated by his passing when he did; and, therefore, his high worth is brought out in clearer outline. This arises from the situation in the Court at that time and his relation thereto.

The situation has to do with the attitudes of the members of the Court toward decisions involving social or economic matters coming before it. For convenience in stating these attitudes, I employ the indefinite and changeful terms of "conservative" and "liberal."

A few years after Justice Butler became a member of the Court, it came about that there were, as to decisions on social and economic matters, four members who might be regarded as conservative; two who were liberal; and three who were not definitely either. The result was, generally speaking, that such decisions of the Court were conservative, as that term is now understood. Shift in personnel exactly reversed that situation before Justice Butler died. There were then two conservatives, four liberals, and the same three intermediates.

It is from this changed attitude of the Court membership and from his place therein, that the additional significance of the passing from the Court of Justice Butler emerges. Not alone was he one of the only two conservatives then on the Court, but upon him fell most of the burden of formulating and expressing that viewpoint. His importance to the welfare of the country in such situation finds explanation in the way we function our form of democracy.

Our theory of democracy is based primarily upon rule by the people, but always without violating the fundamental liberties of the individual. This conception creates the ever-present conflict between the power of the majority and the liberties of the individual. Therefore, our method of realizing this theory is not simply by majority rule but by restrained majority rule. The Constitution declares those restrictions. The Supreme Court determines, finally, the definition of those constitutional restraints. Narrow definition of these restraints tends to limitation of individual liberty. Broad defintion tends to limitation of the power of the people to work out what, for the time, they deem their public welfare. Hence, it is of far-reaching consequence if the general attitude of the members of that Court be toward loosening or toward tightening those constitutional limitations.

To avoid too great a movement toward either danger, the best protection is in a balanced Court—at very least, in a minority ably represented. A representation, which, by discussion in conference of the Court and by pointing out the character and effect of majority opinions through dissenting opinions, will exercise the inevitable restraint upon extreme action which logic and patriotism exert on other honest and patriotic minds. That such effects are very real, judges know full well. They know that if extreme care is ever used in reaching a judicial conclusion and in stating the reasons therefor in an opinion, that care is present when such action is to be faced by a dissent from an able judge.

Is any thoughtful American not mindful of the dissents of the great liberal Holmes when the Court was conservative? Can any lawyer believe his views had no effect upon the deliberations of the Court in conference or upon the opinions to which he dissented? The American people sense, at least in part, his service in putting before them the danger signals, as he saw them, of too great a trend toward limitation of the power of the governments (National or State). Because of these services, his fame is secure. It does not rest upon the fact that he was a liberal. There is no sanctity either in liberalism or in conservatism. His fame is because he was a great liberal in the right place at the right time—because there was then the need of a great liberal on the Court and he met that need.

The Court changed, so that, before Justice Butler died, he was fulfilling a precisely similar public service on the Court. There was then need of a great conservative as a restraining influence on the liberal majority. There was need to have pointed out to the people the possible dangers to their liberties which might lurk in the views of the majority. A swing too far to the left may be as fateful as one too far to the right. Just as Justice Holmes placed his weight on the side of governmental power when a majority of the Court was inclined to broaden individual liberty, so Justice Butler put his weight on the side of individual liberty when the Court was inclined to broaden governmental power. The preservative effect of each was and will be the same: To prevent the beam from tipping too far out of true balance between the two opposed and vital components of democratic rule—governmental power and individual liberty.

Had Justice Butler been mediocre, the loss were different. No current is affected by a bending reed on river edge, but by the granite boulder in midstream. He stood immovable against the flow of what he saw as dangers to those liberties of the individual under our fundamental law. Of all the men I have known, none more perfectly typified strength. Massive and rugged in face and form, great in mind and pure in heart, lover of truth and basic things, he was strength in its best human personification.

He brought this superior strength into full use at a time when his country needed it. One result was that those efforts threw into bold relief the outlines of his noble character and of his fine ability where all who looked must see. His high place in the history of the Court and in the history of the Nation is secure. He was a great Justice and he was a great American.

Work Projects Administration

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. HOUSTON. Mr. Speaker, this Congress will soon be faced with the very important question of deciding how much money is actually needed for the W. P. A. program during the fiscal year commencing July 1, 1940, and how much we can afford to spend for that purpose. Upon our decision rests the welfare of millions of our needy citizens and of our communities throughout the country.

It has been conclusively proved that there is no economy in cutting expenditures for the W. P. A. without regard to actual needs, and that deficiency appropriations brought in because of original low estimates have only resulted in confusion in the work-relief program, with loss of efficiency and lowered morale of the workers.

There has already been proposed a reduction of about one-third in the W. P. A. appropriation for the coming fiscal year as compared with that of this year, although the $1,500,000,000 approved last year is falling far short of the amount needed.

I have just received advice from the Kansas State administrator that approximately 4,000 persons will be released this month, the State employment authorization for March being 25,680 as compared with 30,550 for February.

A report from Sedgwick County, Kans., shows the relief load jumped from $124,032 in January 1939 to $182,806 in February of this year, an increase of 47 percent. General assistance cases increased from 2,552 to 3,902 because of W. P. A. slashes and weather conditions.

We cannot escape the expenditure of public funds for our unemployed; if the Federal Government does not do its share the load falls on local governments which are utterly incapable of carrying new burdens.

At one time about 3,000,000 people were on the W. P. A. rolls which was less than one-third of the total unemployed, and only three-fourths of the total number certified as in need and eligible for W. P. A. employment. We have never given work to all of the needy employable people, and it is estimated that with $1,500,000,000 being spent for this purpose during this fiscal year, the number of workers may have to be cut to 1,500,000, or one-half of the number when W. P. A. employment was at its peak. Of the 2,300,000 workers now enrolled, about 800,000 will be released during the next 3 months, and if only $1,000,000,000 is appropriated for the coming fiscal year those 800,000 and perhaps an additional 150,000 will have no hope of reassignment.

Industrial production has dropped from the all-time high of 128 in December to an estimated 105 for March, and there is danger of a continued downward trend which means more unemployment. I regret to say that for a time we may reasonably expect more unemployment in this country rather than less.

There are some who would return relief to the States and counties and have the Federal Government make grants to States in an amount less than W. P. A. appropriations, but such a plan would end in a cash dole from which the public, other than the recipients, would get no benefit and which produces nothing but the keeping together of body and soul and the destruction of the moral fiber of those who accept it.

Under the W. P. A. program improvements of permanent value to the communities are obtained. It is estimated that 40 percent of all W. P. A. money is spent in the construction and improvement of highways, roads, and streets. The W. P. A. has constructed 3,985 new school buildings, 1,480 additions to school buildings, and improved and modernized 27,664 school buildings; constructed 156 new public hospitals, made 66 additions to existing hospitals, and renovated and improved 1,436 others; built sewer and water plants and numerous other types of projects of permanent value. The W. P. A. has created wealth for almost every community in the country and has enabled the unemployed to escape charity by actually earning money with which to support themselves and their families.

The accusations made by some that W. P. A. workers have refused jobs in private industry have, with rare exceptions, been found baseless by those who made real investigations and did not rely on hearsay.

Mr. Speaker, I am just as anxious as anyone to see the time when the W. P. A. can be abolished through the employment of all who seek it in private business, but that time is not here, and until it does come it is absolutely necessary that we provide jobs on public works to an extent compatible with the actual need for them.

An appropriation of only $1,000,000,000 for work relief during the coming fiscal year will be found woefully inadequate. We might as well face the facts of the situation, and it is my opinion that the work-relief bill should carry an appropriation which will permit the employment of 3,000,000 persons. We must not curtail the work-relief program to the point where its effectiveness in meeting a great part of the relief needs is destroyed; and the necessities of life and the opportunity to earn them by honest work must not be denied either the young or the older able-bodied people of this wealthiest of all nations.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ARTICLE BY WILLARD EDWARDS

Mr. ROUTZOHN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Willard Edwards, appearing in the Washington Times-Herald, March 18, 1940, under the title "Senator WAGNER Joins Demands for Drastic Shake-up of N. L. R. B.":

[From the Washington Times-Herald of March 18, 1940]

What's the matter with the National Labor Relations Board? Why has its administration of the Wagner Act attracted almost universal condemnation?

The verdict, "guilty of maladministration," was made practically unanimous last Wednesday when Senator ROBERT F. WAGNER (Democrat), of New York, fervent defender of the law he sponsored, admitted that the Smith investigating committee had brought forward evidence of "highly undesirable" conduct on the part of some of the Board's staff.

ONLY C. I. O. IS SATISFIED

Only John L. Lewis and his Congress of Industrial Organizations, persistently favored in Board decisions, remain unconvinced that a drastic clean-up in Board personnel is needed.

An explanation of the Board's bias, its seeming hatred for business and the American Federation of Labor, and its affection for the destructive methods of the C. I. O. can be found in an examination of the personal records, education, and social attitude of the eight-hundred-odd men and women who have been entrusted with the carrying out of the labor act.

Striking similarities are discovered in such a study. From Board member down to messenger boy, the Labor Board family is left-wing. This could hardly fail to be the case because, as the Smith investigating committee found, the "social philosophy" of job applicants is carefully ascertained before they are hired. The slightest suspicion of conservatism is an effective bar to approval of the application.

MANY VERY YOUTHFUL

Many of the staff lawyers are products of Harvard Law School, which has furnished some of President Roosevelt's leading radical advisers. Many are astonishingly young to render decisions affect-

ing all American industry and the fate of hundreds of thousands of employees.

The act is administered by a board of three members who receive $10,000 a year each. Twenty-two regions have been set up throughout the country. Each region has a director who receives from $5,000 to $7,000 a year and an attorney who receives an average of $3,500. Under each director are field examiners who receive $3,000 and up. The approximate yearly cost of the Administration is $3,200,000.

The spotlight should fall first upon two officials in the Washington office who wield immense power in an unobtrusive manner. They are Nathan Witt, $7,500 secretary to the Board, and David J. Saposs, $6,500 chief economist. Much of the Board's radicalism stems from these two individuals, in the opinion of most observers.

WITT'S VARIED CAREER

Nathan Witt was with the old Labor Board under the N. R. A. and with the present Board since its creation in 1935. He was born in New York City 37 years ago. He received his bachelor degree at New York University in 1927. The next 2 years he spent as a taxicab driver in New York City. Then he went to Harvard Law School, receiving his degree in 1932. With the advent of the New Deal, he immediately obtained a position with the legal staff of the Agricultural Adjustment Administration, going to the former Labor Board in 1934.

In the opinion of William M. Leiserson, appointed to the Board last June as a "trouble shooter" when the protests were most clamorous against the administration of the act, Witt is responsible for much of the criticism which the Board has attracted. Leiserson accused Witt of an arrogant assumption of authority and demanded his dismissal. The administration, however, apparently has no intention of discharging Witt, whose C. I. O. sympathies and radical viewpoint are well known in Washington.

Saposs was born in the Russian Ukraine in 1887. He was brought to the United States when he was 9 years old, and his parents settled in Milwaukee. He spent 10 years at the University of Wisconsin studying informally, and was an assistant to a professor there, although he never received a formal degree. He told the Smith committee that he had never been back to Russia, although he has spent much time in Europe, where he became well known as a radical and friend of Communists.

SAPOSS' STRATEGIC POST

Saposs was accused of communism before the Dies committee on un-American activities. He was confronted with an article which he had written for Labor Age in which he stated that the "Socialist movement must tell the people that capitalism cannot be stabilized and that the world cannot be saved by capitalist devices." He insisted he had merely been presenting the sentiments of others and denied he was a Communist.

As head of the economic division of the N. L. R. B., Saposs furnishes the Board with statistics and material to support its radical viewpoint.

J. Warren Madden, Chairman of the Board since August 1935, was born on an Illinois farm. He received his education at the University of Illinois and obtained a law degree from the University of Chicago Law School in 1914. He taught law at the University of Oklahoma, Ohio State, West Virginia, and Pittsburgh.

"I had no experience in labor work before I came to the Board," he admitted to the Smith committee.

MADDEN FULL OF THEORIES

Madden is a typical example of the college professor in the New Deal; brimming with theories and cures for industrial ills with a confessed lack of practical knowledge of labor relations.

Edwin S. Smith, the second member of the Board, graduated to his present position from a similar post on the N. R. A. Labor Board. Born in Massachusetts, he went to Harvard and was graduated in 1915. He was a newspaper reporter, worked for his father-in-law in the shoe-manufacturing business for a time, and was an assistant to the manager of the Filene department store in Boston from 1925 to 1931. He was commissioner of labor and industries in Massachusetts for 3 years before the New Deal snatched him up in 1934.

Smith, together with Donald W. Smith, the former member of the Board whose reappointment last year was prevented by Senate opposition, are credited with most of the pro-C. I. O. decisions which brought the Board into disrepute. He is an outstanding member of the left-wing corps of the New Deal.

LEISERSON SOUGHT CLEAN-UP

Leiserson, the new member, has had long experience in labor relations. A firm believer in the Wagner Act, he thinks a clean-up in the staff (especially the removal of Witt) will produce the needed reforms in administration. He was formerly president of the National Mediation Board, which administers the Railway Labor Act.

Madden is the only lawyer among the three members of the Board, which, under the law, acts in the capacity of judge, jury, prosecutor, and policeman. The Smith committee has criticized the Board for not adhering to legal rules of evidence in hearing cases.

Because the work of the Board is huge, much of the labor of digesting and analyzing evidence concerning charges of unfair labor practices has been delegated to subordinates. It is here that an astonishing development was uncovered by the Smith committee.

This highly important work of reviewing the hearings and the decisions of the directors and examiners in the field has been turned over to the "review section" in the Washington office. Chairman HOWARD W. SMITH (Democrat), of Virginia, of the Investigating committee termed it "a sort of appellate court."

FLEDGLINGS OF LAW

There are approximately 105 attorneys in the review section, of whom about 15 are women. The Smith committee summoned a score of these members of the "appellate court." It found, to its amazement, that the reviewers were, in the main, young and inexperienced fledglings of the law, who had never practiced in law courts, who had no practical knowledge of labor relations. They had one point in common. They all had the proper "social attitude." In other words, they were enthusiastic followers of the Corcoran-Cohen band of left wingers in the Capital.

The average age of these youngsters was 29 years. Yet they told proudly of reviewing cases involving the most important industries in the country. Scanning a 3,000-page transcript of lengthy hearings held in the field, at which experienced lawyers vied with each other, they decided what evidence was material and what was not. They drafted summaries and presented them to the Board verbally. Then the drew up decisions dictated by the Board upon the case as submitted by themselves.

These disclosures stunned the committee. Yet the Labor Board stoutly defended the work of the reviewers. They were young, it was admitted, and their experience was mostly limited to their law-school training. Yet they were smart, willing, and were doing a fine job, the Board insisted.

REVIEW ATTORNEYS' RECORDS

The records of some of these review attorneys follow:

Miss Anne Freeling, 29 years old, business school and law night-school training; never practiced law; list of cases handled included Ford Motor Co., Cleveland Worsted Mills, Mackay Telegraph & Radio, Columbia Broadcasting, and American Radiator cases.

Margaret Bennett Porter, Vassar and Columbia Law School; recommended by Lee Pressman, general counsel of the C. I. O.; never practiced; handled important cases comparable to Miss Freeling's.

Carolyn Agger Fortas, wife of general counsel of Bituminous Coal Commission; Yale University Law School graduate, 1938; employed by the Board even before she was admitted to the bar.

Fannie M. Boyls, graduated University of Texas Law School, 1929; previously attorney for Home Owners' Loan Corporation.

Margaret McDuff Farmer, Wellesley and Columbia Law School graduate, 1937; accepted as review attorney before being admitted to bar.

Ann Landy Wolf, born in Hungary; graduate Western Reserve University, 1937; testified that Saposs helped her in drafting a decision.

PROTÉGÉ OF BEN COHEN

The committee was particularly interested in the record of Bernard W. Freund, 27 years old, who obtained a job on the "appellate court" through the sponsorship of Benjamin V. Cohen, radical adviser to the President.

A regional director reported that Freund was totally inexperienced in law or labor problems and not worth more than the $50 a month he had been eking out as a law clerk. But he was hired at $2,400 a year, shortly received a raise, and joined in the reviewing of cases involving great industries.

The Case Against the Administration's Trade Treaty Program

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

EXTRACTS FROM MINORITY REPORT OF REPUBLICAN MEMBERS OF WAYS AND MEANS COMMITTEE IN OPPOSITION TO HOUSE JOINT RESOLUTION 407, EXTENDING THE TRADE TREATY ACT FOR 3 ADDITIONAL YEARS

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks, I include the following statement of the position of the Republican Members of the Ways and Means Committee regarding the administration's trade treaty program, made up of extracts from the report filed in opposition to the joint resolution to extend the present program for another 3-year period:

JOINT RESOLUTION UNDER CONSIDERATION WOULD EXTEND TRADE TREATY ACT

The joint resolution under consideration would extend without change, for 3 additional years, the discretionary authority previously delegated to the Executive to enter into binding foreign-trade

treaties in behalf of the United States without the formality of Senate ratification, and to reduce this country's tariff duties in accordance with the terms of such treaties without specific congressional approval, and without regard to any legislative standards for rate making.

This authority was originally delegated in 1934 for a period of 3 years, and in 1937 was extended for a similar period. It will expire on June 12 of this year unless again extended. The joint resolution under consideration would continue the authority for a third 3-year period.

ACT IN ITS PRESENT FORM SHOULD NOT BE EXTENDED

For the reasons hereinafter stated, we of the Republican minority are opposed to the extension of the act in its present form and as now administered by the State Department.

In fact, we question whether it is advisable for this Nation to tie its hands by entering into binding trade treaties of any kind during the present unsettled state of world affairs.

REPUBLICANS NOT OPPOSED TO GENUINE TARIFF RECIPROCITY

Our criticism of the present trade-treaty program is not to be interpreted as meaning that we would oppose a proper policy of reciprocity under more normal conditions. To the contrary, we wish to state that we continue to adhere to our previously expressed views in favor of genuine tariff reciprocity with foreign nations, along constitutional lines and in keeping with the true purpose of such a policy as laid down by President William McKinley, its greatest exponent. Said McKinley:

"The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves and which do not involve any loss of labor to our own people but tend rather to increase their employment."

We favor reciprocity of the kind advocated by McKinley, which goes hand in hand with and supplements rather than supplants the traditional American protective tariff policy with respect to competitive imports.

Unlike the present so-called reciprocity program, it does not involve the granting of concessions on foreign products which we do not need and which directly compete with and displace our own—at least where the domestic product is available in commercial quantities at a cost not economically prohibitive, and where the existing duty thereon does not exceed the minimum of protection necessary to give the American producer an equal opportunity with low-cost foreign producers in competing for the home market.

The fundamental purpose for which this or any other nation carries on foreign trade is to sell abroad what it is able, and to buy from abroad the things which it must import to supply domestic needs. A reciprocity program, to be of any net benefit to this country, must be consistent with this fundamental purpose of foreign trade; in other words, it must be employed to further the sale abroad of the commodities we do not need in exchange for the commodities we do need but do not now produce.

SUMMARY OF OBJECTIONS TO PRESENT TRADE-TREATY PROGRAM

Having outlined our views respecting the general policy of reciprocity, we proceed to a discussion of our objections and criticisms of the present trade-treaty program. They may be summarized as follows:

Failed to expand exports

1. The Trade Treaty Act has failed to achieve its expressed purpose of expanding the export markets for the products of the United States.

(a) The American farmer was assured that he was to be the chief beneficiary of the program, but agricultural exports have declined over $104,000,000 since the treaty program has been in effect. Imports of competitive farm products, on the other hand, have increased by $68,000,000 during the same period (fiscal years 1934–39).

(b) By the end of 1934, before the treaty program was in operation, our export trade had increased 32 percent from the low point of 1932, or at the rate of 16 percent per year, whereas since it has been in operation the average rate of increase in export trade has been only 13 percent per year.

(c) Excluding trade with nations which were involved in war or were the victims of aggression, our exports between 1934 and 1938 increased by a slightly larger percentage to nontreaty countries than to treaty countries (60.8 percent as against 58.1 percent). Statistics presented by the State Department purporting to show a different picture do not provide a fair comparison between treaty and nontreaty countries, since the large decline in exports to aggressor nations and their victims drags down the otherwise favorable showing of the nontreaty group. In many instances exports to individual nontreaty countries increased to a far greater percentage than to contiguous or similarly situated countries with which we have trade treaties.

Failed to promote peace

2. The Trade Treaty Act has wholly failed to achieve its unexpressed but officially declared secondary objective of contributing to world peace.

(a) While, of course, in no way attributable to the trade-treaty program, wars and aggressions have been constantly on the increase during the whole period it has been in effect.

(b) Trade restrictions have not been the cause of any recent war or aggression.

(c) Other nations of the world have not been following our lead in reducing tariffs and import restrictions or in extending trade-treaty concessions on an unconditional most-favored-nation basis.

Based on false premise

3. The act is based upon the false premise that the protective-tariff policy of this country during the twenties brought about the worldwide depression, and, indeed, even the present war in Europe, and that the only way prosperity and peace can be restored is through the leveling of our tariff rates. The premise being false, it follows that the trade-treaty program as now being administered cannot possibly accomplish the results indicated.

Administration of program inconsistent with purpose of reciprocity

4. The trade-treaty program has been administered in a manner inconsistent with the true purpose of reciprocity and with the national interest, in that drastic reductions in duty have been made on foreign products of farm, factory, mine, and forest that directly compete with and displace our own.

(a) There is no advantage in taking in exchange for our exports foreign commodities the like of which we already produce for ourselves in abundance.

(b) It is unfair to strike down one group of domestic producers in an effort to expand the export trade of another group.

(c) Reductions in our tariff duties have not been confined to alleged "excessive" rates. Proof of this is found in the fact that some 166 strictly farm tariffs have been reduced by as much as 50 percent, despite the following statement made by the President during the 1932 election campaign:

"I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered."

(d) Even if it be conceded that we must import foreign goods if we expect to sell our own goods abroad, it does not follow that we must import foreign goods which we do not need but which compete with and displace our own. Neither is it true that our existing tariffs shut out foreign imports of competitive commodities. Furthermore, the fact must not be overlooked that two-thirds of our imports (consisting almost entirely of noncompetitive products) enjoy free entry into our market.

Program used to bring about a general tariff revision

5. The authority conferred by the act has been used not so much for the purpose of advantageous bargaining for foreign markets as to bring about, in a backhanded and unconstitutional manner, a downward general tariff revision, involving the reduction of over 1,000 rates (affecting 42 percent of our dutiable imports) by an average of 39 percent. The great number of reductions made thus far, plus the fact that they have been extended to all nations, has largely deprived us of anything with which to bargain in connection with possible future trade treaties.

Not reciprocal

6. The trade-treaty program has not been administered on a truly reciprocal basis, in that the concessions which this country has made under individual treaties have been extended gratuitously to the whole world (save Germany alone) without requiring the extension of equivalent concessions to us. This has been done in disregard of the known fact that practically every country which is given the benefit of our lowered rates of duty actively and openly discriminates against American commerce.

Program inconsistent with domestic recovery

7. The trade-treaty program has been administered in a manner inconsistent with the domestic recovery program, in that lowered tariffs on competitive foreign imports tend to (a) increase American farm surpluses and depress farm prices; (b) deprive American workingmen of jobs and undermine American wage standards; and (c) retard industrial recovery by making it more difficult for American manufacturers, who are already burdened with increased production costs resulting from recent social and regulatory legislation, to compete in the home market against low-cost foreign producers.

Act is unconstitutional

8. The act in its present form involves an unconstitutional delegation to the executive branch of the tariff-making and treaty-making powers of Congress and furthers the unwholesome trend toward the centralization of all governmental authority in the President.

(a) To be valid as Executive agreements such as do not require subsequent approval by either branch of the Congress, the trade pacts negotiated under the act must not have the effect of setting aside or changing statutory law. Those entered into under the present act do have that effect, however, since the Congress neither specifies the articles nor fixes the concessions in rates which the President may use as a basis for reciprocal negotiation with foreign countries, nor does it lay down in the act any rate-making formula by which the Executive is bound. He exercises discretionary legislative authority, contrary to the Constitution.

(b) Not being valid as Executive agreements, the trade pacts negotiated under the act must therefore be regarded as treaties in the strict sense. As such they are also invalid, not having been ratified by the Senate, as required by the Constitution.

(c) Most foreign countries regard the trade pacts as treaties which must be ratified by legislative action. The determination of what constitutes a treaty under our Constitution is to a large extent influenced by international law and usage.

Act places dictatorial authority in hands of one man

9. The act places in the hands of one individual the absolute power of life and death over every branch of domestic agriculture and industry dependent upon tariff protection, which, as Secretary of State Hull once said, is "too much power for a bad man to have or for a good man to want."

Act contains no safeguards against harmful rate reductions

10. The act contains no limitations (other than the general 50-percent limitation) and lays down no standards to prevent indiscriminate and harmful reductions in tariff duties. The Executive, and those to whom he in turn delegates his authority under the act, may adopt any arbitrary basis they choose in making concessions to foreign countries and are free to reduce duties in complete disregard of differences in American and foreign production costs, wage levels, and working and living standards.

No hearings on completed treaties

11. The act denies to American producers who may be adversely affected an opportunity to be heard on the terms of the treaties after they have been negotiated. Such hearings as are provided are held only before the treaty negotiations are begun, and they are conducted by a different group than the one which carries on the negotiations in secret with representatives of foreign countries, and whose identity is never disclosed.

Act denies access to courts

12. The act, contrary to sound public policy and the fundamental principles of justice and equity, specifically takes away from American producers the right which they would otherwise have under section 516 (b) of the Tariff Act of 1930 to litigate in the courts matters arising out of the trade treaties, including the question of constitutionality. The contention that the denial of this right is necessary to prevent undue delay no longer obtains, by reason of the amendment of section 516 (b) made by section 17 (a) of the Customs Administrative Act of 1938, providing that final entries of goods shall not be suspended pending the outcome of litigation instituted thereunder.

Denies Congress right to approve treaties

13. The act denies to the elected representatives of the people in Congress an opportunity to approve or reject the trade treaties, although most foreign legislative bodies reserve this right.

Permits President to tie hands of Congress

14. The act permits the Executive to bind the hands of Congress by "freezing," without its specific consent, the existing tariff or excise treatment of articles with respect to which the Congress may, in the future, in the exercise of its constitutional responsibilities and duties, find it wise and necessary to legislate.

Authority exceeded in case of import excise taxes

15. Those in charge of the administration of the act have gone beyond the true congressional intent by bringing within the scope of trade treaties the excise taxes on certain imports imposed by section 601 (c) of the Revenue Act of 1932, as amended, and the processing taxes on certain oils imposed by section 602½ of the Revenue Act of 1934.

Future treaties must be with agricultural countries

16. In view of the fact that trade treaties have now been entered into with most of the leading industrial nations, it is obvious that any future treaties must be with agricultural countries and involve further tariff concessions to such countries and the world on farm commodities of which we as a nation already have a surplus.

TRADE TREATIES OF ANY KIND NOT ADVISABLE AT THIS TIME

Before discussing in detail our views with respect to the joint resolution under consideration, we desire to raise a question which we consider to be of more immediate and far-reaching importance than any differences which may exist as to the proper kind of trade-treaty program this country should have. That question is, Should this Nation tie its hands by entering into binding trade treaties of any kind during the present unsettled state of world affairs?

* * * * * * *

RESTORATION OF WORLD PEACE WILL BRING FLOOD OF IMPORTS

We of the Republican minority are greatly concerned about what is going to happen when peace comes to Europe and the Orient, and the tens of millions of men now under arms return to their regular occupations. The administration apparently again closes its eyes to the teachings of history.

Events following the last war are not so remote that we should have forgotten what happened then under similar circumstances. That experience should warn us of what will occur again.

Beginning in 1913 we had a Democratic free-trade tariff (Underwood-Simmons Act) in effect, but the outbreak of the World War in 1914 resulted in a virtual cessation of imports from European countries, and the consequences which might otherwise have resulted therefrom were not immediately felt. However, when peace came, the immediate result was a flooding of the domestic market with surplus war supplies, including food and clothing and other competitive articles, at prices which were ruinous to American agriculture, industry, and labor. This influx of competitive foreign products continued as foreign agriculture and industry resumed normal operations and as the millions of men who had been under arms returned to their labors. A Republican Congress in 1920 was forced to hurriedly enact an emergency tariff to stem the flow of these imports, which had contributed to the sharp decline in farm prices and to the stagnation of industry and had added millions to the ranks of our unemployed. While the measure was vetoed by President Wilson, it was reenacted in 1921 just after the Harding administration came into power, and in 1922 was succeeded by the general tariff act of that year.

TREATY REDUCTIONS HAVE PAVED WAY FOR POST-WAR INVASION OF UNITED STATES MARKET

Those in charge of the trade-treaty program have already paved the way for another flooding of the domestic market when peace is restored. We refer to the drastic reductions in tariff duties made under the 22 trade treaties entered into to date, the benefits of which have been gratuitously extended to all nations of the world with the sole exception of Germany.

Over a thousand reductions have been made in all, affecting 42 percent of our dutiable imports, which, of course, constitute those which compete with and displace like products of our own workers and our own farms, factories, mines, and forests. The average reduction in duty has been 39 percent. Four-fifths of these reduced rates are now below the level of the comparable rates of the Tariff Act of 1922. About one-third of the reductions were of the full 50 percent permitted by the act.

But we have not yet begun to feel the full impact of the reductions, due to the fact that during the period the treaty program has been in operation most of the leading nations have been engaged in war or preparation for war, thus diverting their energies from normal production and trade.

In our opinion, it would be dangerous to continue this program of indiscriminate tariff reductions at this time and further expose our home market to the ravages of post-war foreign competition.

TREATY PROGRAM PLACES NATION IN ECONOMIC STRAIT JACKET

The lesson of recent history makes plain that the trade-treaty program, instead of arming us to deal with the problems of reconstruction when peace comes to the world, is really disarming us. It is placing our country in an economic strait jacket from which we may find it difficult to extricate ourselves.

After the last war we were free to protect our own market from the dumping of cheap foreign goods. Should the trade-treaty program still be in effect when the present war ends, our hands will be tied.

Present trade treaties as a rule run for a period of 3 years, after which they are terminable upon 6 months' notice. While they can, of course, be modified at any time by mutual consent, we could hardly expect to obtain the assent of the foreign country adversely affected should future circumstances make it desirable for us to withdraw any of our concessions or to impose higher duties for protective or revenue purposes. Resort to so-called escape clauses might be unavailing because of their limited application.

WE SHOULD RETAIN FREEDOM OF ACTION

We of the Republican minority are of the opinion that the only safe course to pursue at present is to retain our freedom to move in the direction the national interest dictates. We should not bind ourselves by entering into trade treaties involving drastic reductions in our tariffs on competitive foreign imports and the "freezing" of articles at present rates of duty or on the free list for a period of 3 years.

Under present conditions, no prudent businessman would enter into a contract binding himself for that period, and it is unwise for us as a nation to limit our freedom of action by any kind of a trade-treaty program at this time.

* * * * * * *

PRESENT PROGRAM SHOULD BE ALLOWED TO LAPSE, BUT STUDY SHOULD BE MADE TO DETERMINE BEST METHOD OF DEALING WITH RECIPROCITY AND TARIFF QUESTIONS

Without prejudice to our views in favor of tariff reciprocity as a matter of principle, we recommend that the joint resolution under consideration be defeated and that the present trade-treaty program be allowed to lapse.

However, we feel that the question of post-war trade readjustments and the preservation of the normal channels of commerce are of vital importance, and that we as a nation should consider setting up a truly flexible trade authority which would be able to deal with these problems as and when they arise. The present Trade Treaty Act does not provide a satisfactory method of dealing with all the possible problems with which we may have to cope. For example, it is not adapted to meeting any requirement for increased tariff protection that may, and probably will, arise in the future. Moreover, with its administration in the hands of the State Department, economic considerations are frequently ignored in favor of international political objectives.

We believe that the Congress should immediately authorize an investigation of the whole question with a view to working out a combined tariff and reciprocity policy (1) that protects our vital interests, (2) that is truly flexible, and (3) that is geared to deal with foreign trade upon a realistic basis along constitutional lines. Consideration should be given to the creation of some independent agency to deal with both matters.

* * * * * * *

CONCLUSIONS AND RECOMMENDATIONS

Having carefully considered the trade-treaty program in all its aspects we conclude:

1. That it has not been successful in accomplishing its primary purpose of expanding the foreign markets for the products of the United States or its unstated but officially declared secondary purpose of promoting world peace.

2 That it has not been administered in the national interest.

3. That it should not be extended in its present form, and as now being administered, particularly in the face of present and prospective world conditions.

We accordingly recommend:

1. That the present act be allowed to lapse.

2. That a study be made with a view to setting up a substitute foreign trade program (a) that protects our vital interests, (b) that is truly flexible, and (c) that is geared to deal with foreign trade upon a realistic basis along constitutional lines.

3. That if the present act is extended, it at least should be modified to provide for congressional approval of trade treaties before they become operative.

4. That the following additional amendments are also desirable:

(a) Before generalizing our treaty concessions to any country, require an affirmative finding by the Tariff Commission that the foreign country does not discriminate against American commerce or pursue acts or policies inconsistent with the purposes of the trade-treaty program.

(b) Set up a rate-making formula in the act by which trade-treaty negotiators would be bound in making concessions, such formula to be so worded as to prevent reductions in rates below an amount reasonably necessary to give American producers at least an equal opportunity with low-cost foreign producers in competing for the home market.

(c) Provide that no reductions be permitted on foreign farm products when the price of the competitive American product is below parity.

(d) Exclude from the scope of the trade-treaty program the import taxes imposed by section 601 (c) of the Revenue Act of 1932, as amended, and the processing taxes on certain foreign vegetable oils imposed by section 602½ of the Revenue Act of 1934.

(e) Restore to American producers the right to litigate matters arising out of the trade treaties, particularly the question of constitutionality.

False Economy Program—W. P. A. Reductions, C. C. C. Discontinued—No Support for Harrison-Colmer Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. PITTENGER. Mr. Speaker, Congress has been in session 2½ months and there is a great indication that the administration intends to practice economy in certain directions where I believe the administration should not discontinue the existing programs. Announcement was made by the President last December that there would be a drastic reduction in the W. P. A. program and that expenditures would be curtailed, and that in other ways the Government would start to balance the Budget. We all realize the necessity of balancing the Budget but with unemployment still facing us and with young people looking for jobs when none are available, I think it a false economy to do away with worth-while projects.

W. P. A. REDUCTIONS

Information comes to my office indicating that a large number of people employed by the Work Projects Administration will be dismissed as of April 1. In my opinion, there should be no reduction in the number of people employed at this time because private industry is not able to offer employment to people seeking work. Until such time as private industry can furnish jobs, I think it the duty of the administration officials to carry on the program of the W. P. A. and start new projects which are worth while and needed, so that men who are out of work and want a chance to earn a living, may have that opportunity. It is a false economy to do otherwise. People who are dismissed from the various W. P. A. projects, and especially those with families will be forced on relief, and the burden on the various local communities will become increasingly complicated and heavy. It is my hope that consideration will be given this problem and that the administration will change its attitude in reference to discontinuing employees on W. P. A., where they are engaged in worth-while projects.

C. C. C. CAMPS DISCONTINUED

On many occasions I have indicated that the Civilian Conservation Corps was doing a fine work and that its program should be continued. So far as I know, all of these C. C. C. camps are engaged in constructive programs, and their work is of lasting benefit to the community. Consequently, when opportunity is offered young men to enlist in the C. C. C. and to earn money, it is apparent to all of us that the money is well spent and an opportunity offered young people to be trained in citizenship and kept away from idleness in the cities. Of course, if private industry could function and offer jobs, there would be no occasion to carry on the C. C. C. program. Again I say that it is a false economy to reduce the Budget for this type of work and, in my opinion, the administration should not cut down on appropriations but, on the other hand, the activities of the C. C. C. should be continued. Camps located in northern Minnesota are all serving a worth-while purpose. In this area, work being done under the United States Forest Service direction is helping reduce the fire hazard which always exists in cut-over and timber regions. The program that is being carried on in these camps reduces the fire hazards and thereby insures the United States Forest Service that timber belonging to the United States is not being destroyed by forest fires. I think it a false economy to reduce by several millions of dollars the money that is being expended for these purposes, and I urge the administration to reconsider its attitude in this matter.

HARRISON-COLMER BILL—SENATE 1717, H. R. 4833

Not only should the administration carry on constructive measures in connection with programs to help the unemployed, but there are many other problems, some local and some national in character which will require the expenditures of money. I have in mind the Harrison-Colmer bill, which has been pending for many months. This proposed legislation will remedy a situation of which the Government cannot be proud. It has been a policy of the Government for years to acquire lands from private owners, take these lands off the tax rolls, and thereby reduce the revenue which the local municipalities had for carrying on educational and municipal governmental functions. This situation exists all over the United States, but particularly in those areas where the United States Forest Service operates and where there are United States forests. In many districts the United States Forest Service has acquired thousands of acres of land, removed it from the tax rolls and left the local municipalities without revenue with which to carry on the functions of local government. This injustice ought to be corrected. The injustice exists in counties in northern Minnesota, and as I have indicated, it exists in other sections of the United States with equal seriousness. The purpose of the Harrison-Colmer legislation is to have the Federal Government contribute to the different local municipalities sums of money which will in effect take the place of the taxes which provided revenue paid to the municipalities before the Federal Government acquired these lands. The legislation is fair. It is needed. It ought to have the support of the administration and of the Bureau of the Budget, and of administration leaders. There is no valid reason why the Federal Government should avoid its responsibilities to the local governmental agencies. I hope that before Congress adjourns this fact will be recognized and steps taken to have hearings on the Harrison-Colmer bill and to get a favorable report out of the committees and secure passage of this legislation by the House and the Senate.

Flood Control

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ADDRESS BY HON. CLYDE T. ELLIS, OF ARKANSAS

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Rivers and Harbors Congress Friday morning, March 15, 1940:

Mr. Chairman, distinguished guests, and delegates to the National Rivers and Harbors Congress it is a sad story that this year in particular, it appears that the Director of the Budget, the President, and the Appropriations Committee have relegated unto themselves the right to legislate—it amounts to that—on one of the Nation's most far-reaching programs, and which has already been written into law—that of flood control and its correlated developments. Apparently it meant nothing to the Budget, nor to the President, nor to the Appropriations Committee that the Army engineers reported a few weeks ago that they could profitably expend for the fiscal year 1941 in this program $206,624,000, for the Budget and the President and the Appropriations Committee arbitrarily struck the figure off at $70,000,000 and reported that figure in the bill to the House. Had they reported the figure at the full $206,624,000, it is my opinion that because of public sentiment throughout the Nation and because of the thorough knowledge on the part of all Members of the great benefits that would have accrued therefrom, the bill would have met far greater favor in the House.

Gentlemen of this Congress, it appears to me that there has never been a time in the 35 years of the existence of this great organization when its work has been more seriously needed and when its efforts could be more quickly and more profitably felt than now. The 1941 bill has passed the House and is pending in the Senate. We have great hope that the Senate will increase the amount which was so arbitrarily set into the measure by the House committee, upon the recommendation of the Budget and the President.

I call to your attention, gentlemen, the fact that the authorization bills of 1936, 1937, and 1938 carried a total authorization of $698,877,000. This is not the figure for the completion of all the projects authorized. For instance, the 1938 bill authorized six projects on the White River system in Arkansas and Missouri. But it authorized a total appropriation of only $25,000,000. It will require more than $100,000,000 to complete the six projects. What is true of the White River is true of the rivers generally. The total projects authorized to date would cost $1,148,877,000 to construct. And I call your attention to the fact that many of the choice projects have not as yet been authorized. For instance, on the White River all of the six authorized are on the tributaries. The Army engineers are just now about ready to report on two of the three projects heretofore surveyed on the main stem of the White. We are hoping to get Wild Cat Shoals, which will hereafter be known as Bull Shoals, in Arkansas, the Table Rock in Missouri, included in the authorization bill on which hearings are to start next week. There are two more that we hope for next, but on which there are no reports as yet—Beaver on the main stem and one on the upper Buffalo.

Last year, gentlemen, you will recall, the Army Engineers advised the Budget and the President and the Congress that they could profitably expend for the fiscal year 1940 the sum of $195,500,000. The Budget and the President and the Appropriations Committee at that time recommended $110,000,000. The Nation and the Congress were not satisfied. They increased the figure $23,000,000, making the total $133,000,000.

Now let me give you these percentages for they tell a big story. Last year the Budget and the President recommended the expenditure of 56 percent of what the engineers said they could profitably expend. This year the Budget and the President recommended only 33.8 percent of what the engineers said they could profitably expend. Last year the Congress gave to the engineers 68 percent of what they said they could profitably expend. If we should raise this $70,000,000 figure by $50,000,000—and we could do it easily and still be far under the President's total budget recommendations and I think we could even throw in farm parity also and still be under—I say, if we should increase the $70,000,000 by $50,000,000, we would still be giving them only 58 percent of what they say they could use as compared with the 68 percent we gave them last year.

Do we need the increase? At the rate of $70,000,000 not a single new project can be begun for 3 years. Norfolk in my district is considered begun but all others would be assigned to the waiting list.

I submit that we are in danger of wrecking this whole flood-control program before we get it started. In my State of Arkansas not a foot of dirt has been turned yet under the program. The people may finally get tired of this hopeful waiting.

THE WHITE RIVER

In Arkansas and Missouri there is a great river, a great tributary of the Mississippi, about which little has been said and which is little known to the world, because nothing has been done to take advantage of its great possibilities. The White River rises in the Boston range of the Ozark Mountains in Arkansas and flows northeast more than 100 miles into Missouri, then east and then south again into Arkansas, cuts its way through the high mountains of the Ozarks, crosses almost the entire State, and enters the Mississippi just above the mouth of the Arkansas, a total distance of 690 miles. It has a total drainage area of 28,000 square miles, only 12,000 less than the celebrated Tennessee. Seven thousand square miles of its basin are in the alluvial plains. Its average fall above the mountains—which are at about the halfway point—is 4 feet per mile. The average fall below the mountains is barely one-third of a foot per mile. A little imagination can picture that horrible ordeal which we have to endure every time the floods come in those lowlands. In the 1927 flood, the White River discharged 440,000 cubic feet of water per second at its confluence with the Mississippi or approximately one-fifth of the entire floodwaters of the Mississippi below the mouth of the White. This meant that it was adding one-fifth of the floodwaters that were spreading out over a large part of the 50,000 square miles of alluvial plains in the Mississippi below the mouth of the White.

The Army engineers have told us that these floods can be completely controlled by an integrated system of dams on the headwaters, and for a total cost of not to exceed the losses in three or four of these floods—not to mention the lives that are lost in each of them.

The generations of tomorrow will either reward us for doing our duty or will condemn us for liquidating the Nation's greatest resources, the soil and the fuels, and for destroying our waterways without regard for the welfare of our children.

NAVIGATION

Today the White is navigable for some 200 miles, but it is rapidly filling up with sand and gravel. Once it was navigable for more than 300 miles. You and I and those who tilled the land before us built the floods. We built them by clearing away the fields, by failing to control erosion, by permitting the topsoil, which is a sponge for water absorption, to be washed away. The Soil Conservation Service tells us that 200 forty-acre farms flow down these rivers and are dumped into the oceans every 24 hours. They tell us that annually enough soil goes down these rivers and is dumped into the oceans to fill enough freight cars which, set end to end, would wind around this old earth 18 times. The Army engineers tell us that the White can be made navigable by this system of dams for 300 miles, and that navigation is essential to the proper development.

POWER

The Army engineers also tell us that on the White River there are 2,000,000,000 kilowatt-hours of electricity possible of production each year. Our people both in the cities and the rural areas are begging for this cheap power. The Ozark Mountains are filled with hardwoods and minerals, the development of which is largely dependent upon cheap power. Our lead and zinc deposits are practically untapped. Our marble, phosphate and manganese, our limestone and sandstone and silica deposits are yet practically untouched. Every time a kilowatt-hour of this power goes to waste, either the Nation is failing to advance as it could or enough coal or oil or gas is being consumed somewhere else that could easily be saved for generations yet unborn and which in practical effect are being wasted. This whole development will pay for itself with the electricity alone that could and must be developed, not to mention the savings from flood losses, the value of navigation, the development of recreational centers, the public work that would come from its construction, the irrigation possibilities, and the benefits for national defense. Every farmer and every businessman in the White River Basin and for many miles around will be materially benefited immediately once this program is under way.

CAPITAL INVESTMENT

I submit to you, gentlemen, that even assuming that expenditures for flood control would not pay for themselves many times over in direct benefits, all funds expended to improve the rivers and protect property and aid navigation and develop water power and to save resources are in themselves a capital investment that adds to the total wealth of the Nation.

NORFORK

I am grateful indeed that we were able to get last year an appropriation for the Norfork Dam in my district. Even the $70,000,000 includes an item of $2,300,000 this year for Norfork. It will be in

the heart of the Ozark Mountains, the largest project of its kind in the Middle West—a concrete dam 225 feet high, with 1,748,000 acre-feet of storage, 743,000 of which will be flood control. There will be an approximate annual maximum power production of 218,000,000 kilowatt-hours. The designs are now being completed. We are hoping that the contract will be let before midsummer.

CONCLUSION

In conclusion, gentlemen, I hope you will do two things: First, assist the Missouri and Arkansas delegations in getting Table Rock and Wild Cat Shoals authorized this year with adequate surveys for the other sites; and, second, build this into a more militant organization to fight this year for an adequate appropriation for flood control, water-power development, and all other correlated developments—this year and the years to come.

New Deal Saber Rattlers

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. SHAFER of Michigan. Mr. Speaker, the Honorable Louis Johnson, Assistant Secretary of War, made a speech before the Engineering Society of Western Pennsylvania at Pittsburgh, Pa., on Monday evening, February 19, last. This speech was broadcast over the blue network of the NBC.

There were, however, some statements and assertions in this broadcast address of the Assistant Secretary of War that I cannot let pass without comment, because I believe they are the type and character of public statement by presumably responsible public officials that ought not to be allowed to go unchallenged.

It is with no intent to reflect personally upon the Assistant Secretary of War that I take up his address, paragraph by paragraph, so to speak, and voice my doubts as to whether or not some of his statements were entirely accurate, and my very grave misgivings as to whether or not the whole speech was in the best interests of the Nation.

Now, in order properly to evaluate what the Assistant Secretary of War said at Pittsburgh, it is necessary to keep your perspective and to study this speech against a background over a period of many months of saber-rattling and war talk. This speech, and others like it, can be interpreted in this country in the light in which they are bound to be interpreted in countries abroad—in the light of the quarantine speeches and the defense of Canada speeches, and the lecturing of other peoples about the kind of rulers they have, and the advice to other peoples to rebel against their governments and their rulers, and these emergencies, crises, and so forth, that we hear about, the feverish rush to build the most extensive and expensive national defense this country ever dreamed of—all of these activities and circumstances form the background against which we must look at these latest expressions. Whether it has been intended so or not—and I am frank to say that I think it has been intended—there has been a barrage of propaganda laid down that certainly resembles a planned effort either to frighten this country over the prospects of war or so to arouse the emotions of the people that we could be led into war.

Let me say in advance, in order to be fair about this whole thing, that I am against our going into war under any circumstances, except where some foreign enemy attempts aggressions against us. I do not believe that we can contribute anything to the peace of the world by getting into these foreign wars ourselves. I do not believe that if, as, and when peace comes we will be able to contribute anything to peace unless we are, in this country, back on the road to prosperity.

Our domestic issues are such that if we are not careful the depression, which all economists agree will inevitably follow the ending of this present war, will superimpose upon our present depression an added load that we will not be able to stagger under. There is danger that chaos may ensue. There is danger that enough of our people may become so discontented with the hardships and privations of unemployment and partial employment, and of apprehension for the future and of financial insecurity, that they might listen with sympathetic ear to the blandishments of those who preach foreign "isms" and promise to our people social and financial security in a land of chaos and decay.

With that preface I want to address myself more particularly to the remarks of Assistant Secretary of War Johnson.

After telling his audience that it had been just 6 months since he previously appeared in Pittsburgh, and commenting on the changes that have taken place in the world in that intervening period, the Assistant Secretary of War pointed out that "Here in America they—the changes—all have been for the better."

He then pointed out that industrial production in Pittsburgh had increased, that trade had improved, that employment had risen. Then he went on to point out further that in Europe and Asia all ordinary business activities have ceased; that production has turned almost wholly to munitions; that trade is at a standstill; that all human energy is devoted to more efficient killing of men, more proficient destruction of goods; and more diabolical dispersion of misery. Then he expressed the pious hope that—

> These internecine struggles may never spread to our American shores. And they will not, so long as we adhere to a policy of adequate national defense.

Now those words seem innocent enough until we hook them up in their proper context with the wild and excited cries of the administration for feverish haste in the building of a great national defense. The whole emphasis has been placed by this administration on what it claims is a danger that this Nation will be overwhelmed by some foreign enemy unless we literally drop everything and vote millions and billions of dollars to the frantic building of a national defense.

It would be very illuminating, indeed, if the Assistant Secretary of War would just point out, specifically, what nation or combination of nations he expects may actually carry these "internecine struggles" to our shores and when he expects this to happen.

His next statement was:

> When I was here in August, I advised you that America was arming because of necessity. I pointed out that in the world of today a nation which cannot resist aggression may face subjection. I called your attention to the nonpartisan national defense program which the President, supported by Congress, had launched. I tried to convince you that our peace—and I shall have more to say about peace—and our prosperity could be assured only if that program were fully enacted.
>
> When I was here in August, I advised you that America was arming because of necessity.

What necessity? Who was preparing to sail their ships to the shores of America and unload an army on our shores to "subject" us, or even to subjugate us, which is what I think the Assistant Secretary of War meant.

What nation, or what combination of nations, are going to subjugate the United States of America? Why, Mr. Speaker, Abraham Lincoln's assertion is just as true today as it was the day he made it when he said:

> At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow? Never! All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth [our own excepted] in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years.

Some of our ablest military authorities have, within the last few weeks, in almost those identical words, confirmed as of today what Abraham Lincoln said in his day.

These are just plain alarmist statements, these assertions of the Assistant Secretary of War that if we cannot resist aggression we may face subjection.

> I tried to convince you that our peace * * * our prosperity could be assured only if that [defense] program were fully enacted.

What program? I venture the assertion here today that there is not any man in the Army, or in the War Department, or in the Navy Department, or in any other department of the executive branch of the Government who can come before a committee of this House and show us any program of defense. They have not any program. Nobody knows that better than the Assistant Secretary of War. We are spending these billions of the people's money on the most haphazard, catch-as-catch-can system of building a national defense that has ever been conceived in this Nation. Our peace and our prosperity can be assured only if that program is fully enacted, wails The Assistant Secretary of War. What nation, or what combination of nations, will the gentleman please tell us, is going to invade our peace and rob us of our prosperity—and why—and when?

Our peace and our prosperity lie in our finding a prompt solution for some of our very grave domestic problems, such as getting our unemployed back to work, such as putting a stop to these recurring annual deficits; such as reducing the Federal debt instead of driving it out the roof with political squandering and spending; such as reducing taxes which today are breaking the backs of the American people; such as lightening some of the consumer taxes, the taxes on the poor man least able to pay—taxes which are now comprising more than 60 percent of the Federal Government's total revenue. Our big hazard against our peace and prosperity does not lie across the seas in some mythical hostile hordes, my colleagues, the hazard lies at home if we do not solve these domestic problems.

Today—

Says Assistant Secretary of War Johnson—

I am happy to report that our modest defense program is well on the way.

What does he mean, "modest"?

I recall that when Mr. Roosevelt was a candidate for President in 1932 he was going up and down the country shouting at the top of his lungs that the people must be delivered from the burden of a national defense, the cost of which was rapidly approaching a billion dollars a year. Modest defense program. The only thing that is wrong with those words is that the program is not modest from a standpoint of the cost to the taxpayers, and it is not a program—I am not even so sure that it is a defense program. It is rapidly reaching the point where it could be used as an offense program. Outside of that, I assume the term is correct.

Thanks to the hearty cooperation both of management and of labor, we are breaking one bottle neck after another in the production of munitions.

I am going to pass that statement over, although I confess to some sense of disquiet over that term "breaking the bottle neck."

But the Assistant Secretary of War goes on to say in that paragraph:

We are proceeding in an orderly manner toward the manufacture and delivery of fighting equipment.

Now, I have just recently returned from a trip of 25,000 miles, looking into these questions, and I am here to say to you that we are not proceeding in an orderly manner toward the manufacture and delivery of our fighting equipment. If you want to know something about that question look into our supply of Garand rifles.

We are selling implements of war abroad in accordance with our neutrality law—

Said Mr. Johnson.

That statement is open to discussion, and certainly the whole of Europe knows why an extraordinary session of Congress was called to change the neutrality law. It was not to carry out neutrality, it was to make possible our taking sides in Europe's quarrels, while, at the same time, taking advantage of a technicality which we had created in order to pretend that we were being neutral. Is there anybody here who believes that Europe is fooled about our attitude? Is there anybody here who believes these warring countries of Europe do not know which side we favor?

I now come to a statement which provides, I think, the highlight of humor in this speech of the Assistant Secretary of War. He said:

Thanks to the happy camaraderie that exists between the members of the military and naval forces, each of us is making splendid progress along the munitions front, without interfering with the projects of the other.

What surprising news that will be to the Army and Navy. It will be very interesting, indeed, for the House Committees on Military and Naval Affairs in the future to remind these military and naval gentlemen of this happy camaraderie that exists between them.

Now, let us look at the next statement that our genial and distinguished Assistant Secretary of War gives out to the people of America:

Within the Army itself a splendid esprit de corps prevails.

One must assume, of course, that this esprit de corps begins at the top and goes clear to the bottom.

The ill feeling that once seemed to pit the men in the air against those on the ground has disappeared.

Marvelous!

Cooperative peace hovers over the War Department and the American people are reaping the benefits in a far-sighted, well-balanced national-defense program.

Remarkable, if true. I may say, amazing.

Now, I want to point out the grave dangers that exist in the sort of propaganda that is contained in the next paragraph of the Assistant Secretary of War's speech. He said:

In any national-defense program, Pittsburgh must play a vital role. In the World War of yesterday, in the defense program of today, and in the industrial mobilization that may come at some tomorrow, steel, as always, will be the basic element in munitions; and where in the world could the Government or the munitions industry find a better market in which to get this essential supply?

Here is a plain effort, whether conscious or not, to dangle before the wage earners and the industrialists and the manufacturing centers of the United States the reemployment that will come, the new jobs at high wages that will be procurable, the fat profits that will flow into the coffers of the industrial treasuries if and when this Nation gets into war.

There is just one fatal flaw in this alluring argument held out by the Assistant Secretary of War to induce people into a more favorable frame of mind concerning our being taken into war; that flaw is this. After the World War there came a depression, exactly as there has come a depression after every war in which the United States has engaged. I call upon the wage earners and the producers in the steel industry to study for just a moment what happened to steel after the war was over, after the manpower of Europe was blasted into mincemeat, after the purchasing power of Europe was blown up by bombs. What happened to it? Why it hit the cellar and stayed there for years. It is outrageous for any responsible official of this Government to hold out such an allurement to the people, and the manufacturers of this country in order to condition the mind of America for war.

The Assistant Secretary of War then pointed out that during the World War 80 percent of all the munitions steel came from the mills in the Pittsburgh district. Heavy machinery, electrical apparatus, piping and pipe equipment, tool steel and refractories, were some of the significant items that, he said, the War Department obtained from the Pittsburgh area. Thus, he went on, for paragraph after paragraph, to show that in the armament program of today, and in the war of tomorrow in which we are to take part, the Army and the Navy would once more look to the Pittsburgh district for their supplies.

He said:

In a grave emergency the War Department will depend on the Pittsburgh district for a wide variety of munitions.

Then he pointed out that glass factories, testing instruments, machine tools, gas-defense equipment, troop barges,

and innumerable kinds of supplies would be manufactured in Pittsburgh.

This speech cannot be regarded by any fair-minded person as other than a direct bid to the people of Pittsburgh to favor the entrance of the United States into war in order to produce a temporary and artificial prosperity in Pittsburgh. They were being invited to accept blood money.

Mr. Johnson insisted that—

> Unfortunately, there is very little that can be done to accelerate the completion of this program [of national defense].

Well, it certainly is true that until they get a program that is worthy of the name, not much can be done to accelerate it. But there is a very great deal that can be done to speed up the actual preparation for national defense, and no one knows that any better than the Assistant Secretary of War. I shall not, today, attempt to go into details as to what is needed to speed up the production of needed equipment for the Army and the Navy, but I dare say there is not an officer in either branch of the armed services who does not know what I mean, and I dare say that the Assistant Secretary of War will know very well what I mean, too.

Gen. George Marshall, Chief of Staff of the United States Army, in a public address some time ago, made a statement which, to this hour, has never been denied, to the effect that the military forces are not more than 25-percent efficient in equipment.

Now, if it has taken all the billions we have put into this business, and all the time we have been at it, to bring the Army to a 25-percent state of efficiency in its equipment, how long do you suppose it will take, and where will the Government be able to find, the billions necessary to make our military forces 100-percent efficient in their equipment?

After going on to relate in some detail the mountains of raw material that we must acquire and store in this country, at a cost of presumably billions of dollars, and after, by implication, criticizing the Congress for not shoveling out the money faster, the Assistant Secretary of War moves majestically on to the declaration that they have worked out a very fine and effective mobilization plan for industry, to be made effective upon the declaration of war.

I know something about that plan. In fact, I have made remarks concerning it on divers occasions. It is called the industrial mobilization plan. It ought to be named the citizens' mobilization plan. There are parts of that plan that the administration simply does not dare let the general public know about, because, if the public did know how thoroughly and completely and ruthlessly every man, woman, and child in this Nation is to be regimented and put under orders of the military, directly or indirectly, in event of a national emergency due to the imminence of war, the citizens would rise up in their wrath and demand that the Congress go into this matter more fully and find out what the administration is planning.

Not only does the New Deal administration, of which the Assistant Secretary of War is a part, plan this regimentation of industry, of capital, of labor, of agriculture, and of the peopl, men, women, and children, during the period of the war emergency, but the 1939 mobilization plan specifically provides for plans to be drawn to continue this military dictatorship after the war is over until such time as the President—who would be military dictator—decides that he wants to yield back his war powers to the Congress. Now, if there is anybody here who does not believe that statement, I hope they will challenge it now.

The Assistant Secretary of War had another very significant paragraph in his speech. It was as follows:

> Another problem which deserves special consideration is that of practical assistance to the other nations of the Western Hemisphere in their procurement of munitions. Although practically a State Department matter, it is something that the armed forces, too, must consider. Now that we definitely have asserted our policy of hemisphere defense, we should be prepared to carry it into effect.

I want you, my colleagues, to note very carefully the sentence:

> Now that we definitely have asserted our policy of hemisphere defense, we should be prepared to carry it into effect.

So, then, it would appear that we have decided that, when necessary, we will send our boys to Mexico, or Brazil, or Argentina, or any other South or Central American country to defend and protect those countries. It is to be presumed, in the light of a speech made by the President himself concerning the defense of Canada, that we also include the Dominion of Canada in this new hemisphere-defense policy. It occurs to me that somebody is covering a good deal of territory without consulting the Congress very much about it. It also occurs to me that the American people are going to have something to say about this policy. As though conscious of the breadth of his assertion, the Assistant Secretary of War immediately said:

> It contemplates not a defense of the Western Hemisphere by the United States, but by the united efforts of all of the American republics.

Bosh!

Now here is another one of those highly humorous passages in Mr. Johnson's speech:

> Finally, our supply policy should include adequate plans for the prompt and effective mobilization of industry upon the declaration of war to meet full wartime requirements. Toward that end, we have worked out an industrial-mobilization program in the spirit of our American democratic traditions.

Well, now, this mobilization plan may be worked out in the spirit of Democratic traditions, but it certainly is not worked out in the spirit of Republican traditions, and it is not worked out in the spirit of the Bill of Rights traditions. I want to read to this House one of the provisions of the industrial-mobilization program that is so in keeping with the spirit of our American democratic traditions.

Title II, under the heading of "Industrial Management Provisions," reads as follows:

> This title authorizes a draft of industrial management. When in the opinion of the President the successful prosecution of the war requires it, he may establish rules and regulations for the registration of all persons in the management or control of industry. This is intended to apply to persons in executive positions who are unwilling to cooperate in the industrial war effort. In the discretion of the President, registered persons of any industrial plant or industry may be brought into the service of the Government for the duration of the war and shall be subject to the jurisdiction of the War Department. However, the Secretary of War is not to interfere with the internal management of the industries. He may, in the public interest, transfer registrants to any civilian service within the jurisdiction of the War Department. The compensation of such industrially drafted persons will be paid by the Government, at rates to be fixed by the President, and they may not accept any other compensation from any plant in which they render services during the war. Rules and regulations for the administration of this title would be made by the President, and penalties are provided in the bill for violations of such rules and regulations.

I think this needs no more comment. We can all see that such a provision as this is fully in keeping with our American democratic traditions and that it is almost the essence of the Bill of Rights.

I want to make one more reference, before closing, to the strange reasoning processes of the Assistant Secretary of War in this speech. He said:

> We have learned by bitter experience that peace comes not from mechanics, or even from a staggering preponderance of power. It comes from the spiritual desires of peoples.

Now, that far his words sound plausible. But listen to what follows:

> We know that there must be a very great ability to use force, if necessary, for defense. We also know that that alone does not assure a peaceful ordering of affairs. There has to be a combination of the power of self-defense with a policy of peaceful arrangement of affairs, and only then can peace be attained.

That sounds suspiciously like a foreign policy of force—that might makes right.

It seems not to have occurred to this responsible spokesman of the New Deal administration that the age-old, time-tried, historic policy of tending to our own business and of treating our neighbors fairly is the way to assure peace for ourselves.

Mr. Speaker, you know and I know that it is preposterous, it is an insult to the intelligence of the American people, it is a deliberate attempt at fraud and deceit, to try to persuade our citizens that some nation, or some combination of nations, is merely awaiting a sunny day at sea to come across

3,000 miles of ocean and subjugate this country. If it were not so tragic and so dangerous, it would be funny. But it is dangerous and it is tragic. Dangerous because it is by inculcating fears and suspicions and hatreds in the minds of our people that we prepare them to condone or to favor taking this Nation into wars which do not concern it, and into wars in which we have no business to mix, and into wars in which we can contribute nothing to the peace or the prosperity of other countries and other peoples, or our own Nation and ourselves.

The Assistant Secretary of War knows—or he ought to know, if any man should—that it is just pure nonsense to try to lead the American people to believe that we face imminent war unless we feverishly and frantically build up a vast national defense. There is not a word of it true. No nation, and no combination of nations abroad, wants to undertake to come across the seas and try to subjugate this Nation, and I challenge the Assistant Secretary of War now to tell us what nation even contemplates such a thing.

No; it is just another one of those New Deal saber-rattling appeals to the fears, hatreds, and prejudices of our people, and I cannot escape the conviction in my mind that these efforts are not the result of chance, that behind these appeals to the fears, prejudices, and hatreds of our people, behind these speeches which tend to condition the mind of America for war, there is a definite plan, if you please, to break down in this country our determination not to be dragged in.

America must stay out of war. Let us keep the blood of our boys and the money of our Treasury at home. Let us solve our domestic problems. Let us put our unemployed back to work at decent wages in private industry. Let us reduce the debts and the deficits, protect the home market for American labor, American industry, and American agriculture, and let the nations of Europe and the Far East work out their own problems.

In the meantime let us stand by, ready with a helping hand, strong because our manhood has not been desolated by war, strong because our material possessions have not been destroyed by war, to reach out and help when those other nations come to their senses and get ready for peace.

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ARTICLE BY GEORGE R. HAY, OF PATAGONIA, ARIZ.

Mr. COFFEE of Washington. Mr. Speaker, I have been in correspondence with citizens throughout the entire United States on a rather widespread scale. It has been my good fortune thus to become well acquainted with thoughtful and intelligent and patriotic Americans who are gravely concerned at the trends now evident in the National Capital. These people are disgusted at the apathy or downright unwillingness of the majority of Congress to recognize the truth about our national situation and their failure, likewise, to pass legislation which would lead America out of her pecuniary and economic dilemmas. One such thinker is George R. Hay, of Patagonia, Ariz., who has written a unique, odd, and arresting article entitled "Capital Circus," which has many grains of wisdom permeating its passages. I attach it herewith as a provocative challenge to those who fail to see the light or are unwilling to heed the messages blazoned on every billboard on the highways of our country:

CAPITAL CIRCUS—BIGGEST SHOW ON EARTH

(By George R. Hay, of Patagonia, Ariz.)

"Well," I says to Uncle Sam this morning, "Unc, let's go to the big show," and Unc says, "All right, Bub; I hear they got so many new shenanigans that some calls it a New Deal; but, I dunno, we'll see."

So, Unc and me bailed into the old jaloppy and went; and the first thing we see was a barker at the sideshow, barking:

"Step right up, folks; maybe you've got 'em; there's three kinds, and maybe you've got 'em all.

"Folks, I don't want to scare you, but any one of the three is misery, and all three is calamitous.

"Step up, folks; just one thin dime to see Doc Sneeze, world famous specialist on probably what you got. That's right, folks; old Doc Sneeze can tell if you got 'em, quicker than a wink; what with his new patented G-scope and patriotical-ray."

So, Uncle Sam got a couple of tickets, and in we went; and Unc says, "Well, Bub, maybe we've got 'em; anyhow, I ain't feelin' so perky this morning, and I guess we hadn't best take any chances."

While I was a-lookin' at all of the doodads that Doc Sneeze had stacked around to help him tell whether we had 'em or not, Unc sat down on the edge of the operatin' table, and Doc Sneeze says:

"You have them, my good man; I can see symptoms without my special patented equipment. I believe you have them. Yes; there's a sign on your nose, my good man—Ah! Ha!—I thought so; eruption, and—"

"But," Unc says, "Well, Doc, you might tell me what is this here painful malady, so's I can know what you be talkin' about." And Doc says:

"My good man, this is a new horrific germ that I have discovered with the aid of my new patented G-scope and patriotical-ray. That causes painful eruptions, and internal convulsions and a helluva lot of trouble; and I have named the disease (and reserved all rights) 'subversivebitus'; of which there are three kinds—communy, fasci, and nazi; and, on my word, let me look at your hand. Ah! Ha! as I suspected, a fasci wart; and here, turn around; as I live, a nazi wen on your neck.

"You've got 'em all, my good man; and now I will let you see for yourself through my new patented G-scope. Look at the communy pimple on your nose."

And then, Unc, he took a look and says, "Thunderation, Doc; it looks like Pikes Peak." Then he took a look at the fasci wart and says, "Goshalmighty; that looks like what the Good Book says, the wrath of God; and, Doc, I don't think I can stand a look at the Nazi wen. It's all to horrific; and, what do you charge for this here operation, Doc?"

And Doc says: "My good man, my modest fee is $50,000, marked away down, and I know that is just chicken feed for you."

And then Unc, he says: "Yes; as you say, that is just chicken feed for me, Doc; but since I quit lookin' through your new patent G-scope, that there pimple, wart, and wen don't seem so bad; but, what sure hurts me, Doc, I got crashed up in a jam awhile back and had both arms and legs broke, and both eyes blacked, and darn near broke my neck; and my livers and lights and kidneys got all crossed up, till I don't know whether I'm acomin' or agoin'; so I guess the best thing I can do is to call up the old horsenbuggy doctor and get straightened around.

"So long, Doc.

"Come on, Bub. I guess I'll just squeeze that communy pimple and pare the fasci wart, and, well, I guess I'll just let the nasty wen go."

Plea for Ample Appropriation to Fight Venereal Diseases

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

Mr. LUDLOW. Mr. Speaker, I have received a letter from the president of the American Neisserian Medical Society, which presents very convincing arguments in favor of an appropriation of $7,000,000 to fight venereal diseases during the fiscal year 1941, the full amount of the authorization under the La Follette-Bulwinkle Act. Because of the clarity of reasoning and wealth of facts contained in this letter, I submit it for publication in the RECORD, as follows:

THE AMERICAN NEISSERIAN MEDICAL SOCIETY,
Boston, Mass., March 15, 1940.

Hon. LOUIS LUDLOW,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: We understand that the Budget now before the Congress does not provide $7,000,000 for the control of gonorrhea and syphilis, as proposed by the La Follette-Bulwinkle Act.

In 1936 Surgeon General Parran revived a long dormant public interest in the control of the genitoinfections, to a degree never before attained by any public-health program. The passage of the La Follette-Bulwinkle Act made it possible to convert this interest into action. Every State has now established at least minimal

syphilis-control service, some of the more wealthy have provided more generous services, and several have began to do something toward the control of gonorrhea. The public wholeheartedly approves.

The majority of the States cannot maintain even minimal diagnostic and treatment services without financial assistance. The funds thus far appropriated have provided only for a beginning. The Congress recognized that to be a fact when it provided for increasing annual appropriations.

If the Congress now indicates that it is losing interest, the failure of leadership and the withdrawal of support will result, as it did after the last war, in the collapse of the program. Leadership cannot blow hot and cold and expect that those who follow will go steadfastly forward. Personnel trained for a highly specialized job cannot be hired and fired and rehired at will. Regular and adequate treatment cannot be provided if clinics, now open, must be closed. The infected should not be invited to use services this year if they must be told next year that those services no longer exist. The machinery which has been built for a long-range job cannot be alternately oiled up and scrapped if anything worth while is to be accomplished with it.

The last war taught us that the Army and Navy can be no more healthy than the population from which soldiers and sailors are drawn. There is at present a general demand for an adequate national-defense program. It would seem to be a wise expenditure of a small fraction of the cost of one battleship to promote the control of gonorrhea and syphilis as a national-defense measure.

It is hard to believe that the people will either understand or cheerfully accept a reversal now on the part of a Congress which only 2 years ago placed itself on record in approval of a forward-moving genitoinfectious-disease-control program. It would be tragic if the State and local health agencies should be forced to follow the Congress in the execution of such a rightabout-face. May we urge, therefore, that you insist upon the restoration of the full $7,000,000 to the Budget?

Respectfully yours,

N. A. NELSON, *President.*

Another New Deal Fallacy Exposed

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

LETTER FROM A WELL-KNOWN LUMBER COMPANY

Mr. KNUTSON. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I desire to submit for publication a letter received from a small, well-known lumber company operating in north central Minnesota. The reason that I do not give the name of this company is that I fear it may bring upon its officials the wrath of the New Deal. We all know it is possible for the administration to use its vast powers to punish any individual or organization that refuses to go along with the program that is slowly putting such a company out of business. Their books are subject to inspection by the income-tax people, by the wage and hour people, by the social-security people, and other governmental agencies who could, and undoubtedly would, make it warm for them. The letter follows:

MARCH 14, 1940.

We are confronted with the problem of adjusting our business to the provisions of the wage and hour law, and we are appealing to you for your assistance in supporting any legislation that will provide relief from its provisions as it affects the lumber industry, and us, in this State.

If the wage and hour law is to be administered according to the views and opinions of the various officials who are in charge of this phase, frankly we may have to go out of business. We have been trying, and without success to secure some data on which to arrive at some basis to conduct our business. We understand the difference as defined by the act between interstate and intrastate trade, and we have always been under the opinion that our firm was not engaged in any interstate traffic.

Most of our products are sold locally to the lumber yards in this vicinity, and the mining companies, at least 90 percent of our product is used within a 100-mile radius and at least none of our sales are made to anyone except Minnesota firms. We have turned down business from outside the State because we did not want to become involved under the act, but according to the latest opinion a railroad tie sold to a railroad company for their own maintenance use is to be construed as being in interstate trade because that tie may be put in their track outside of the State. We have reference to our ties which are sold to the Northern Pacific Railroad for delivery at their treating plant at * * *. These ties are stored for a year and then treated and shipped to where they are to be used. This appears to be a very technical construction inasmuch as ties are not purchased by a railroad company for sale, but for maintenance use. However, if this is upheld it places just another obligation on an industry which already has more than it can stand.

So that you will have an idea of our particular problem, and which problem is applicable to the entire history, herewith are a few facts as concern us:

Our business was started in 1930, right after the crash of 1929, and we have continued in operation up to the present date.

When we started we gave employment to about 30 men, and these men worked steady; during 1934 and 1935 about 200 men were employed; and along came the social-security, unemployment, and additional gas taxes, and to effect an off-set, employment had to be reduced, until now we are back to where we started, a pay roll of 30 men. During the past 10 years, despite the fact that we have not made any money, nor paid any dividends (our surplus as of December 31, 1939, was $126.45 O. D.), yet we have paid out close to half a million dollars in wages to this small community and at least kept a few people off the relief rolls. And we feel justly proud of this accomplishment in doing some service to our country, even though we haven't made any money ourselves.

Not only the social-security and unemployment taxes caused us to retrench in the employment of labor but the compensation-insurance cost and regulations became so rigid and inflexible that our operating costs simply would not permit.

Of course, if we had been able to obtain a better price for our products all would have been fine, we could have met these additional labor costs, but such was not the case. Timber prices declined and in fact are declining yet, and no doubt will continue so long as we are faced with the Canadian competition where taxes on pay rolls are not in effect.

Our real-estate and personal property taxes for last year amounted to 2¼ percent of our gross sales, and all in all the tax burden increases at every turn. However, even in the face of these disheartening conditions and without the benefit of any advance in price for our products we have managed to keep going and now the climax, in our opinion at least, comes, the cruel provisions of the wage and hour law which permits no adjustment to local conditions, takes into no consideration of any competitions from a foreign country and says that regardless of how we can do it we must employ labor for a short period of time per day, and regardless of whether or not this will decrease production insists that we must do so, and that if we are forced to go out of business it cannot be helped. In our instance 30 men would probably have to go on the relief rolls as there is no other industry here that could absorb them.

You understand, of course, that the logging and lumber manufacturing conditions in this State in no way compare with conditions on the west coast. In fact we and others are trying to run an industry and furnish employment to hundreds of men in this State with a class of timber that was discarded by the huge producers years ago as being almost worthless or at least would not bring in enough revenue to support their type of operations.

Also the type of mill that we have and others also, is not like the large mill that is on the west coast. We have more breakdowns, etc., because our operations will not permit us to use the newer type of equipment.

The problem as confronts us: Shall we try to stay in business by putting in all labor saving machinery devices, thus throwing out of steady employment at least one-half of our force, or go out of business? We prefer to stay in business and hence our reason for writing you, to secure your assistance in repealing this vicious legislation which is throttling American industry, and which instead of decreasing the relief rolls is increasing them.

We feel sure, Mr. KNUTSON, that this is a subject which is very dear to your heart, and that you love Minnesota as well as we do, and knowing your type of Americanism we feel sure that you will render us all possible assistance. We know that you have already fought against this program and will continue to do so, and am writing this letter with the hope that it will assist you in your further endeavors.

Thanking you very much, we are,

Yours very truly,

(Signed) ——— ———.

Government Regulation Versus Private Enterprise

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ADDRESS BY ERNEST T. WEIR

Mr. ALLEN of Pennsylvania. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish

to include a notable address before the Economic Club of New York by Mr. Ernest T. Weir. Mr. Weir has effectively covered a problem which must be settled by the American people without further delay. Our economic system of free enterprise, subject to reasonable Government regulation, is slowly being strangled by Federal control and red tape. It is inconceivable that the American system can function within a Socialist or semi-Socialist framework. The time has come when we must fish or cut bait; we must be one thing or the other. Wise men will ponder long before they cast themselves loose from time-tested moorings. American business and labor are suffocating today under the smothering weight of Federal bureaucracy. The pressure must be relieved before real prosperity will return to 130,000,000 American people.

Mr. Willkie, Secretary Ickes, ladies and gentlemen, if by "regulation" were meant the exercise by Government of its undoubted right to police industry, to referee its activities, to see that it does not violate the laws of the land or that it pays the penalty for such violation, this discussion need not have taken place. No one in private enterprise can justly object to such functioning of government. That is government's duty.

But some of the legislation of the past 7 years and the conduct of boards, commissions, authorities, and whatnots created by that legislation, show that to some New Dealers "regulation" means "control." That is the real point at issue. Thus, a more accurately descriptive title for this discussion would be "Government Control versus Private Enterprise." And it is this present-day control of business by government and the definite, increasing trend in that direction which is stifling private enterprise and preventing genuine recovery.

I believe the evidence is conclusive that American enterprise—which historically is a very new thing in man's experience—provides, by any standard of measurement, by far the best conditions of life for the overwhelming majority of people. It is clearly superior—and again I say for the overwhelming majority of people—to any system of government control that preceded it and any modern type of government control. And I believe also that the evidence is now conclusive that the Government control of enterprise that has so far developed in the United States does not, will not, and cannot produce and sustain improving standards of life for the American people.

Mistakes have been made under private enterprise. Of course, they have. After all, there are mistakes in every activity of human beings. Irrespective of political statements to the contrary, private enterprise makes no more or greater mistakes, commits no more or greater wrongs, inadvertent or intentional, than are found in government, politics, religion, or any other form of human activity. I will go further and say that in private enterprise there is at least as much, if not more, honesty in purpose and performance than in government.

And there is not a mistake nor a fault of private enterprise that cannot be corrected either by and within itself or by proper governmental regulation. But what we have today is not this proper relationship of government to enterprise. We have the definite attempt on the part of government to operate enterprise through a multitude of controls administered by political appointees—men who, in most cases, lack practical knowledge and experience, who bear no personal responsibility for the consequences of their actions, and who have made themselves a law unto themselves.

To an alarming extent these governmental agents have taken into their own hands functions of management that are vital to successful operation of great branches of enterprise on which millions of people are dependent for livelihood. It is the greatest misfortune that so few Americans are in a position to know by personal experience what this is costing the country. Let us consider a few specific examples of what is happening as a result of Government control.

Just a few weeks ago the Securities and Exchange Commission made a startling ruling. The Consumers Power Co., a Michigan utility, applied for permission to issue $28,000,000 in 3-percent bonds; $18,000,000 to refund bonds bearing a higher interest rate, and $10,000,000 for new capital. The Commission denied approval, saying, in effect: "You can issue bonds to refund other bonds if you wish, but if you want new money you must issue common stock."

Now think what this means. By express provision of the Securities and Exchange Act, the Commission does not bear any responsibility for the merits of securities it approves. Furthermore, neither the Commission nor anyone else can be sure that tomorrow or next week some branch of Government will not act to depreciate the value of the stock, even to the extent of making it worthless. Furthermore, under present conditions, the company would have to sell the stock at a price which would make it cost about 8 percent per year as against 3 percent for the bonds. Despite all this the Commission presumes—against the will of the company and against its best interests—to wrest from its hands a vital and long-recognized function of management. That's not regulation; that's control.

The Commission's ruling in this matter has its rediculous side because it is the very actions of these Commissions and Boards which have made it virtually impossible for industry to sell common stocks during the 1930's. No one denies the right of Government to see that issuers of securities tell the truth about those securities or its right to provide and enforce penalties for fraud and misrepresentation. But even a commission of supermen cannot sit in Washington and decide on the economic advisability of business actions throughout industry. All it can properly decide is whether any particular action conforms to the law. That is its proper function—not control of business. And the Consumers Power case is unmistakably an attempt to control.

Let us turn to another field. A few years ago the administration set out to save the soft-coal industry with the Guffey Bituminous Coal Act. The country was told that a board in Washington would be able to remedy the ills of that sick industry. Well, the ills existed all right. And they still do. After years of delay, after the expenditure of millions of public funds in investigations and hearings, after attempts at redistricting and establishment of price classifications—the industry is now, if anything, in a worse situation than before.

A few political appointees in Washington tried to write a formula that would solve the problems of this gigantic industry. The results have been the futile bungling that might have been expected. In the Appalachian field alone the administration plans to establish thousands upon thousands of different prices. The attempt is being made to settle prices for the entire industry. When these prices are settled, if they ever are, you will hear bitter wailing from the concerns that will lose markets or be put out of business, from miners who will have their employment reduced or lose their jobs entirely, and from consumers whose costs will be increased. Establishment of prices is not regulation; it is usurpation of another vital function of management; it is control. And the whole aim of the Guffey Act is Government control of the coal business.

In this connection I wish to quote a recent statement: "The Guffey Act must be amended or the bituminous-coal industry as a free institution will disappear. In recent years we in America have fed too much private enterprise into the maw of bureaucracy. Government functionaries have tasted blood and like it. They are already roaring for more. The deadline has been reached, and we cannot yield another inch."

That statement, gentlemen, was not made by a coal operator nor by any other businessman. It was made by a Democratic Congressman from the heart of the coal region.

Let us examine still another failure of government in its attempt to run industry—the Labor Board. No one could justly object to a statute which secured to employees the right of collective bargaining and protected them in that right. But instead of doing that the Wagner Act, an unfair instrument to begin with, in the hands of the Labor Board has been an ugly spectacle of unchecked power run wild. It has been used as a club with which men, who had no experience with industry but many preconceived antipathies against it, established a virtual despotism over labor relations.

The Board has taken away from employees the very right the act was supposed to give them. It has assumed the right to decide what kind of a labor organization it believes shall prevail. It attempts to say who should be hired or discharged. It presumes to read the mind of an employer and decide which one of the half-dozen possible reasons was the real cause of an employee's discharge. It limits the exercise by the employer of the constitutional right of free speech as was exemplified in the Board's decision that Henry Ford could not express a personal opinion to his own employees. It tries to dictate the kind of agreement that shall exist between an employer and his employees.

The Board has deprived the employer of the reasonable authority over his working force that is necessary to insure efficiency and discipline. These things cannot be called the making and enforcing of rules by which business must guide itself. It is an attempt to run business. Men like Madden and Edwin Smith were never notable for success in running any business enterprise. I see no reason to suppose that they can settle all the labor relations of the country better than the management and employees of business.

In the field of public utilities, where limitation of earnings and other reasonable regulations have long been recognized as proper functions of government, this administration has exceeded the bounds both of regulation and control. It has resorted to ownership. Under the pretexts of establishing flood control and a "yardstick" for rates, it has taken over the operation of utilities. It has ruthlessly forced the sale of competing properties at sacrifice prices. As results, investors have lost millions, taxpayers have been forced to subsidize power users, State and local governments have lost millions in taxes, the investing public has been scared away from similar investments, other utilities have declined further expansion in fear of Government expropriation. This is control of business achieved by the threat of a purge of property which is not far removed in principle from human purges of the German and Russian type.

Let us consider just one more example of control—agriculture. Through subsidies, penalties, and just plain bull-dozing, the Government tells farmers what to plant, how much to plant, how much they shall be paid for what they grow, and for what they do not grow. When one man in Washington has power to reward farmers who do as they are told and punish those who prefer their own judgment, then that man in Washington runs the farms of this country, not the millions who do the actual planting. Through its attempts to solve certain agricultural problems, the administration has dislocated practically the entire farming

structure. The administration started with control over 7 commodities. In the name of adjustment, conservation, the ever-normal granary, and by other devices it has spread that control over about 40 commodities. The net result of this Government control over agriculture has been that Government holds the power; and the public, including many farmers, holds the bag.

The efforts of some New Dealers to control industry have not been confined to commissions and boards. Indirect methods of control have been resorted to repeatedly. The taxing statutes have been used to control dividend action and to compel capital readjustments. They have been used as punitive weapons. We have recently discovered an unholy alliance between the N. L. R. B. and the R. F. C. where coercion has been used on business firms in need of money. The Robinson-Patman Act is an attempt to control business practices of industry.

Certainly these examples—and many more that could be given—do not reveal government as an impartial umpire in the affairs of its people. They show government has its hand on those affairs—the heavy hand of control.

Mr. Ickes may call it regulation. I call it control. And Mr. Roosevelt, perhaps unwittingly, confessed it was control when he said: "We have built up new instruments of public power. In the hands of a people's government this is wholesome and proper. But in the hands of political puppets of an economic autocracy such power would provide shackles for the liberties of the people."

In the first place, no man has the moral right to build up powers which, under any conceivable circumstances, could provide "shackles for the liberties of the people," for, even if he trusts himself with such powers, even if he is willing, at great personal sacrifice, to stay in office indefinitely to insure proper use of those powers, he must remember that he, too, is mortal; and, like all mortals, he must some day pass away, and then those powers must fall into other and possibly less trustworthy hands.

But since these powers now exist this is not the point. The point is whether, as Mr. Roosevelt says, they are "wholesome and proper." In my opinion, the answer is an emphatic "No!" Such powers are decidedly unwholesome and improper in his or any other hands, for we all know that he who holds such powers holds control.

So long as these powers remain in any hands, we will not have in this country the aggressive confident business activity which built American industry to world preeminence. It has been the creation of these powers and their delegation to a horde of Government functionaries that has transformed the United States from a government of law into a government of men. Free enterprise and a government of men cannot exist in the same country at the same time.

Under a government of law the power of government over business is fixed and limited, and the legal limits are defined with reasonable clarity. A businessman knows where he stands. He is free to take any business action that does not conflict with specific provisions of law. He is free to pursue his opportunities as far as his ingenuity and enterprise will take him, subject, of course, to those economic restraints that are inherent in a competitive system.

Under a government of men, on the other hand, government power is neither fixed nor limited. The law may be anything that some board, commission, or bureau says it is. And the law of tomorrow may be a very different thing from the law of today. It is this situation, more than any other single thing, that is responsible for the depressed and depressing state of business and employment in the United States. Free enterprise cannot operate on a basis of conjecture and suspicion.

Some new dealers say that private enterprise did not solve the problems of unemployment and a more equitable distribution of income. They say that government, therefore, must act to correct economic and social abuses and to solve economic and social problems. This has been their excuse for extending Government control over industry.

American enterprise has not entirely solved the problems of unemployment and distribution of income. But it has gone further in that direction than any other economic system in any country at any time in history. And if it is allowed to be free, it will approach as closely to the solution of these problems as is possible to human ability. It certainly holds far more promise than any system of Government control. Why, in heaven's name, should we junk a system of life in which the lot of our people has been the best in mankind's whole history and go to a system which, wherever it has been tried, has inexorably reduced all save a few to semi-poverty and serfdom?

What quality or virtue does mere appointment to a governmental agency give a man that makes him able, in effect, to run a whole industry from the Nation's Capital better than men who have spent their lives in that industry can run one company? The usual answer is that he is not affected by self-interest. As a matter of fact, usually he is deeply affected by the wrong kind of self-interest. He must be interested in votes for the party which gave him his job. His conduct is determined by consideration of what is politically popular, not by what is economically right.

The self-interest of the private enterpriser is related to but one thing—the successful operation of his business. Continued lack of success means bankruptcy if he is an owner, removal from office if he is a hired manager. Every businessman knows this. He stakes everything on his ability to succeed. His authority is balanced by responsibility. With the Government functionary, on the other hand, power is unrestrained by any responsibility for the industry he controls. The mistakes of a private enterpriser can affect but one company. Mistakes of a Government functionary can affect an entire industry or even all industry, and nothing can be done about it.

Today we have a peculiar situation. Recently some branches of business reached 1929 levels, and lots of people shouted, "Hurrah." Yet if we were really coming out of depression, activity would have gone away beyond previous high levels, as it did following every other depression. Why hasn't it? In my opinion, here are the principal reasons. There are two groups of people who must be spark plugs in any movement that can generate and sustain momentum. These are the enterprisers—the people who must make the decisions to expand existing and start new enterprise—and the investors, the people who venture their savings in expanded and new enterprise.

Government control has made it impossible for these groups to function. Government functionaries have taken away from the enterpriser control over too many vital elements that enter into his decisions. He cannot make free use of his own judgment, experience, and ability. Therefore he acts guardedly, if at all. The same governmental action has increased the risks of business, reduced its profits, and heavily taxed remaining profits. Therefore investors seek the safety and guaranteed low return of corporate and Government bonds rather than the substantial gains formerly possible in a common-stock venture.

As a result, billions of idle dollars cannot, dare not, be put to constructive use, and by the same token, millions of idle men walk the streets in search of legitimate employment. Enterprisers would like to use these idle dollars and idle men. If we had conditions in which the free judgment and experience of management could prevail, there would be plenty of opportunity for both men and money.

Let me illustrate. A prominent utility man told me recently that his company had, on drafting boards, plans for a power unit that would cost $10,000,000. He estimates that 70 percent of the cost of materials delivered to the job would go to labor. The project would provide 2,100 men with steady jobs for 15 months, and at its peak, 4,300 men would be employed.

Now our chairman, Mr. Willkie, stated sometime ago that, in a period of 2 years, the electric power industry would spend $2,000,000,000 on additions to plant and for other purposes, if governmental restrictions and threats were removed. Multiply the example I have given by 200 and you have an idea of the contribution this industry, alone, could make to business activity and employment—if only Government would let it.

And the same thing may be found throughout American industry. I know personally of a company, for instance, which would like to expend approximately $25,000,000 on expansion and improvements that would create both immediate and continuing employment. But today this company could not sell common stock except at sacrifice prices which the company cannot afford.

Make no mistake about it. What is being attempted is not Government regulation. It is definitely Government control. And it is killing the venturesome spirit of business because that spirit lives only with the freedom which is the lifeblood of American enterprise. Let this continue and there is danger that the native aggressiveness, self-reliance, and courage of the American enterpriser will descend to the level you might expect to find on a chain gang.

This country was built by venturesome men and venturesome money. It can be made better and greater by the same combination. I have every confidence in America and Americans. I believe we can pass frontiers of general well-being as far ahead of today's as the airplane is ahead of the oxcart. But I do not believe we will do it if Government control is allowed to crush the freedom which is the animating spark of American enterprise.

What does enterprise ask of government? It does not ask government "to let it alone." It does not deny the right and necessity of government to police and referee business activity. It asks government to stop trying to run business—it asks government to stop its competition, its restrictions, and its threats—it asks understanding of the economic necessities of business; it asks administration that has respect for commonplace legal safeguards. Enterprise says to the country that progress can come again only with these changes in Government attitude.

All that business asks is the application in the field of enterprise of that principle which the founders of this country regarded as the keystone of its liberty. That is the principle of government by law—not men.

War Horses Is Right

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

ARTICLE BY DR. L. A. MERILLAT

Mr. GILLIE. Mr. Speaker, I wish to bring to the attention of Members of the House and Senate, particularly the World War veterans, an interesting and able article on the impor-

tant role played by the Veterinary Corps in winning the war. The author of this article, which appeared in the February issue of the American Legion magazine, is Dr. L. A. Merillat, executive secretary of the American Veterinary Medical Association.

Dr. Merillat is admirably qualified to tell this story, because he was in the thick of the fight and directed the activities of American veterinarians overseas. And he tells it well. As a member of the veterinary profession, I commend it to your attention:

[From the February issue of the American Legion magazine]

WAR HORSES IS RIGHT

(By Dr. L. A. Merillat)

The Veterinary Corps won the war. I know that ever since the First Army was halted along the Meuse by an armistice some 20 years ago, sundry divisions, departments, and services have claimed that distinction. So don't be astonished if someone stakes out another claim in that champ d'honneur.

Anyhow, the 2,200 officers and 23,000 enlisted men comprising the Veterinary Corps of the World War never "made" the Legion magazine in all these years. Perhaps they have lacked a press agent. Like their peacetime colleagues, they worked unknown and unseen at a task few men really understand.

I know also that the first six words of this literary convulsion will amuse the legionnaires of Argonne fame, except for a few outside of the corps itself who may have noticed just what the Veterinary Corps meant to them. Visions of exhausted horses and mules tugging in vain at heavy guns mired in the forbidden terrain must have more deeply impressed the mind of the Argonne soldier than the fact that contemporaries of these overworked brutes hauled out most of the food and ammunition and brought back the sick and the wounded with unfailing precision.

Except for a day or two around Montfaucon while the engineers were working madly to build roads over the shell-torn ground, there was never a shortage of rations during that historic, decisive engagement.

If the artillery brigades were sometimes short of ammunition, the fault was the meager allowance, not a lack of animal transportation to bring out the allocated quota.

As my contact with animal transportation was close and continuous throughout the Meuse-Argonne operation, I am sure the records of G–4 will confirm my personal observations. One heard a lot about the shortage and waste of ammunition and the wrecking of 75's by reckless firing. One shouldn't blame the horses and mules for that.

The Veterinary Corps was more important during the Meuse-Argonne fray than in any battle of modern times because there were practically no animal replacements available. In his My Experiences in the World War, General Pershing writes feelingly about the shortage of animals. We had about 500,000 horses and mules in the remount depots at home but no means of bringing them to France. It is not generally known that the 100,000 animals of the First Army—the army that fought that battle—were procured from the French and British Armies and a few were purchased in Spain.

There were practically no American horses in the entire A. E. F., and although animals were promised us by the French for the tremendous operations that were to follow the struggle on the Marne in July 1918, the number obtained was not sufficient to carry out the orderly evacuation, hospitalization, and replacement of animals in obedience to the modern rules of large-scale warfare.

We had to make what we had do the job, and as a consequence the treatment of the sick and injured as long as they could carry on became the necessary objective. To those who know the terrors of contagious diseases and privation among horses and mules exposed to the vicissitudes of a protracted military operation, the preservation of these 100,000 animals is one of the miracles of the World War, thanks to the support given to the chief remount officer and chief veterinarian of the first army by Generals Pershing and Liggett.

The chief remount officer was Victor C. Mather, owner of the famous Brandywine Farm near Philadelphia, a horseman and executive of the top bracket. My training as a veterinarian came from a long-time experience with the ailments of animals at the Chicago Stock Yards.

When we had won the confidence of the staff, we were given carte blanche in the handling of the animal situation, probably because every other staff officer had trouble of his own and therefore had no time to find fault with our lack of true military training. Neither Mather nor I could have taken a squad in order across the street and what we did not know about so-called paper work was plenty. Yet before the show was half over the adjutant general told a subordinate: "Go down to the 'horse doctor's' office and learn how to keep records."

Good office management was not foreign to us, you see.

The divisions were supposed to have over 6,000 animals each, but they had less than half that number. One horse had to do the work of two, and none of them could have made much of a record in a pulling contest. We took only the totally disabled away from the distressed colonels and filled in with such replacements as we could comb out of the depleted remount depots and disease-ridden hospitals. Floyd Gibbons, of the Chicago Tribune, and Julian Wood, of the Chicago Daily News, two mud-soaked tramps of the battlefield, complimented us on the good work we were doing under such extreme difficulties.

When hostilities ended we had 54,000 animals for the 9 divisions hurriedly equipped to full strength for the march to the Rhine—23,000 had been evacuated and entrained for the hospitals of the S. O. S. The rest, about 19,000, marched back to the training zone around Bar-sur-Aube where the First Army, after a period of rest, proudly exhibited its animals at a series of horse shows. Restoring these 19,000 culls to horse-show condition was one of the marvels of A. E. F. horsemanship for which the corps and division commanders deserve a lot of credit. For without their keen interest in their animals and the moral support they gave to the remount and veterinary services, most of these animals would have perished.

But what has this to do with "Who won the war?" Just this. Soldiers must have food and it takes animals to bring it to them. Animals did that during the World War and animals will do the same thing in future wars fought against stubborn enemy resistance. I know the pundits of peacetime extol mechanized equipment and say it's the only thing, but mechanization doesn't change the ground and the ceiling where men fight battles.

J. E. B. Seely, in his Fear and Be Slain, puts it this way: "In peacetime it is thought that armies and guns will move quicker and quicker; guns shall be smaller and swifter; mechanical contrivances shall become more and more important. But real war armies move slower and slower, guns become bigger and bigger and slower and slower, and all mechanical devices after the first 36 hours fail and are scrapped in favor of the only means of transport that really survives the front line in war. * * *

"War is a rough-and-tumble business, a case of making things do. All the elaborate arrangements dependent upon gasoline supply may give one a good start, but nothing more. In moving warfare, as before, the infantryman will walk on his feet and carry his rifle and only horses can keep him alive in most countries. * * * Woe to the country which trusts solely to a mechanized army." The Veterinary-Military History of the United States by this writer and a junior author says, "The country that goes to war without horses and mules is licked from the word go."

This is not an essay on Mechanical versus Animal Transportation. I am willing to leave the decision to the General Staff, charged with the responsibility of making up tables of organization suitable for the defense of our country. My plea is for the Veterinary Corps, which has other things to do besides keeping the animals fit enough to bring out the rations. The Veterinary Corps also assures that the rations brought out are wholesome.

This is perhaps news, also, to the Argonne legionnaires. There was no embalmed-beef scandal during the World War, and that was not an accident. The hurriedly made Veterinary Corps of 1918 inspected all of the fresh meat and canned goods that came out to the kitchens. Trained veterinary meat inspectors passed a total of 1,779,848,621 pounds of meat and rejected 10,956,408 pounds during the war and period of demobilization, and the civilian meat inspection service composed of veterinarians inspected also enormous quantities of meat and meat products for foreign governments in our abattoirs.

The low incidence of digestive troubles among our fighting troops may be confirmed by turning to the pages of the official report of the Medical Department, the department under which the Veterinary Corps functions. How many Argonne legionnaires know that there was a division meat inspector with each division who worked under the direction of the division veterinarians and who prevented any embalmed beef, bloated cans of corn willy, or any other unwholesome food from going out to the troops?

The answer is, few indeed. So the way the Veterinary Corps won the war was not only by keeping alive the animals that brought out the rations but also by keeping the food brought out from killing the men after it arrived.

The 2,000 veterinary officers of the World War who traded juicy clienteles for shoulder straps are now fighting a greater battle than any war ever fulminated—the battle against the diseases of domestic animals. These men will not be startled by the statement in the preceding paragraph. They know how little their work was understod in the Argonne and how little it is understood in times of peace by the average man of the street. Even among the most thoughtful of Americans few know that animal production always has been and obviously always will be the Nation's main force, just as it has been for all of the successful nations since the curtain of this civilization was lifted.

The United States has grown and prospered and become powerful in a short stretch of time—historically speaking, in a click of the shutter. But the part played by domestic animals is not generally studied. Owing, no doubt, to our allegedly inexhaustible resources neither private citizen nor public functionary as a whole has surveyed thoughtfully the role played by animals in the making of our wealth, comfort, and social security in peace and war.

What I mean to say is that the good folks of the United States have been too busy arguing over details to bother about such a prosaic enterprise as the husbandry of animals and what animals have meant in the march of man. Boundless acres of fertile land and favorable climate made possible the development of our tremendous livestock industry, and a veterinary service established shortly after the Civil War provided protection against the sweeping plagues which can any day reduce our country to an impecunious fourth-rate nation.

The fifth plague of Egypt was not a Biblical myth. It was an outbreak of anthrax from which Egypt never recovered. But that was 34 centuries ago, you'll say, and it can't happen now. Don't be so cocksure. Cocksureness is what I am trying to have

the American people avoid, for many other nations besides Egypt went the same way from the same cause and ours in 1940 can be no exception.

If the outbreak of anthrax in South Dakota 2 years ago, which spread into Iowa and Minnesota, had not been fought by the veterinary service like firemen fight conflagration it would have been only a question of years before domestic animals would have been annihilated and perhaps, as once happened in Ireland, the human population would soon be fleeing to the sea to save their lives. Wolf? No; only those who do not understand the terror of infections among gregarious animals discount such ugly scareheads.

The military side of this question is that there are only 12,000 veterinarians in the United States. If we became embroiled in a great war and drafted a large percentage of them into the military service for a number of years, almost anything could happen to the food supply of our country and leave us prey to more resourceful enemies.

Our domestic animal holding is the largest item on the Nation's balance sheet. But the dollar-and-cents value is not the point. It is the contribution of animals to human welfare in times of peace and the security they furnish when war breaks out that count. Without domestic animals, the Indians lived a life of poverty; with them a great Nation was built. Without animal-drawn vehicles, Mayan civilization vanished. Cortez, with a handful of mounted soldiers, terrified the legions of Montezuma and captured Mexico.

The early American colonials failed, starved, many of them perished, and some returned in disgrace. Their backers had lacked the foresight of sending a reasonable ratio of animals with the expeditions they financed. When, in later years, animals were imported, the making of the Americas became possible. Until then our adventurous forefathers groped and suffered in their quest for gold or freedom or liberty or something. But one can't eat gold, or freedom, or liberty. It requires animals to furnish food and to build shelters.

It is now over 300 years since Jamestown and Plymouth, but human needs have not changed, can never change. We must still eat and wear clothes and keep roofs over our heads. No mechanical contrivance can supply all this. Our horses, mules, cattle, sheep, swine, and poultry are what keep the Nation going. My hope, born of a short but highly revealing military experience, is that these basic facts will not be overlooked in the peacetime political arena. In peace the wise prepare for war and are not swept off their feet by propaganda for unworkable theories.

Were this a lesson in anthropology, one could go on explaining that the mammalian species named man took over the captaincy of the world only as fast as he learned to domesticate the tractable animals filing before his eyes, and that tribes and nations developed parallel to their achievements in the husbandry of them. The same is true of the nations of this day. No nation can survive a perishing animal industry and no army can subsist without food of animal origin. In the matter of transportation too much fuss is made over abolishing the cavalry, as if that arm were the only one requiring animal transportation to carry on. Whether the cavalry is archaic or not is for the military scholar to say. What Argonne experience has taught, however, is that an infantry division (World War strength) can use to good advantage 6,000 to 7,000 animals for what we civilians call cartage purpose over ground no mechanical contraptions save an airplane can ever hope to cross, least of all train after train of them, day after day, where a push of a few miles per week is called a victory in the communiques.

I am well aware that for our present military set-up a large number of transport animals are not needed, but when these organizations mobilize and take to the field against enemy resistance, they will need animals aplenty. Unhappily, the soldiers will know little about their care. So, without seeming unreasonable, one may urge the retention of the cavalry arm for the purpose of training officers and soldiers in the dying art of horsemanship.

Yes, the Veterinary Corps won the war and it will win all future wars, because with its colleagues in civil life it prevents waste, chaos, hunger, lost morale and perhaps the exhaustion of the world's supply of food. Stop, look, and listen but don't forget that "War horses is right."

Federal Legislation and Our Exploited Natural Resources

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1940

EDITORIAL BY M. J. ROBINSON

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial written by Mr. M. J. Robinson in connection with his bill I have heretofore introduced and which is pending in the Congress. This measure is known as the natural resources bill, H. R. 3121, and has been endorsed by the people's lobby. Favorable references to it have come from every State in the Union.

The editorial is as follows:

THE COFFEE BILL ON NATURAL RESOURCES

(An editorial)

The basic function of government in any country is to provide the highest standard of living obtainable from the resources available for the greatest number of citizens of that country. This is fundamentally true and generally admitted.

The United States has some of the most valuable natural resources of any nation on the earth. One of the few mistakes the founding fathers made was to leave open to private ownership, waste, and exploitation the Nation's water-power and underground wealth. It would have been easy to have kept our coal, oil, gas, and minerals in a common pool for all of us at the time the Constitution was made. Now it is going to be difficult to get them back. But get them back we must if we expect to build a civilization where each citizen will have his just and equal share in these resources.

The peaceful and fair solution of this problem is of vital concern to every man, woman, and child in America. Nothing can be gained by delay, but much more can be lost. The Nation's timber has been wantonly wasted. Millions of dollars' worth of oil and gas have been wasted. Our coal has been mined for profit only with little thought of efficiency or future generations. Our valuable mineral deposits have been exploited for immediate profits or bottled up and frozen for future profits, with no thought of the common people, to whom they rightfully belong.

Despite the wrong done and the loss incurred, we still have natural wealth left which can be saved if we act in time.

Thank God we still have the right to vote in America. We still have the right to talk. We still have the right to tell our representatives in Congress how we want them to vote. If the voice of the American people is loud enough, it will be heard above the clamor of entrenched greed, and we can save what is left of our heritage.

The way to do this is provided in the natural resources bill, H. R. 3121. Tell your Senators and Representatives that you want this bill passed at this session of Congress.

Social and Economic America

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech by the Senator from New Hampshire [Mr. BRIDGES] at a luncheon meeting of the Wilmington Rotary Club, Hotel Du Pont, Wilmington, Del., Thursday afternoon, March 14, 1940.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

March 4, just 10 days ago, marked the seventh anniversary of the inauguration of the New Deal. Much was said at the time, both in praise and denunciation of its record. Much more will be said between now and the time the American people go to the polls this November.

No longer can even the most unobserving and unthinking citizen regard the National Government as something far away, affecting his life but indirectly or occasionally. Seven years have brought about the greatest change in the relationship of the citizen and his government ever witnessed in the history of our country. The Government in Washington, extending its control ever further and further, has become a dominating force in the life of every citizen.

This invasion of our social and economic lives still continues. On March 4, the United States Circuit Court of Appeals for the District of Columbia reversed the decision of the local Federal District Court, and proclaimed that medicine, for the first time in history, was to be classified as a trade. This verdict, if carried to the new Supreme Court and upheld, provides an opening wedge not only for Federal regulation of medicine, but for the invasion of other professions. Add to this the Wagner health bill, which will undoubtedly be revived if there is a third term for the New Deal—whether it be under President Roosevelt or another—and the first steps have been taken toward socialized medicine.

Are you in the insurance business? The investigation of the Temporary National Economics Committee, under the direction of the Securities and Exchange Commission, has paved the way for the regulation of insurance funds by that body, and for the adoption of one of several plans that have been proposed for the entrance of the Government into the insurance business.

Are you connected with a utility? The Securities and Exchange Commission has begun to enforce the death sentence of the Holding Company Act. No one knows just how far it will go. Tommy Corcoran, one of the writers of the act, believes that the Government will own and operate all utilities within the next 20 years.

Under the powers granted to him in the Reorganization Act the President transferred the Bituminous Coal Commission to the Interior Department. Secretary Ickes has become virtual czar of the soft-coal industry and is preparing to exercise the vast and autocratic powers bestowed by the Guffey Coal Act. Not only is he authorized to control trade practices and competition within the industry, but he may dictate the prices of coal. Moreover, he has the authority to manipulate freight charges as they affect the transportation of coal, and thus has a double power over the price of coal to Americans in every part of the Nation. All this he may do under the law, unless the attempt of Representative ALLEN of Pennsylvania succeeds in modifying the Guffey Coal Act.

The new Supreme Court has demonstrated that it will not curb any of the fifty-odd New Deal agencies unless they actually violate the almost limitless powers bestowed upon them by the Congress; that they may select at whim whatever evidence they choose upon which a case is to rest. More recently it has supported the right of the National Labor Relations Board to invalidate a contract between employer and employee on the basis of the evidence the Board chooses to give it that the union with which the contract has been made was company-dominated.

These New Deal boards and bureaus, vested with arbitrary powers never before granted to a people's government, now have a stranglehold upon our economic system. They have paralyzed private initiative, shut off the life stream of investment, and cut off opportunities for expansion and employment through Government competition with the citizen.

Add to the uncertainty as to what these virtual dictators of our economy will choose to do, next the burden of taxation which has been levied upon private enterprise, and the wonder becomes that our economic system has survived as well as it has.

Let me cite but one example. According to the report of the income-tax division of the State of Wisconsin, the 961 corporations doing business both in the State of Wisconsin and elsewhere showed a net gain of only 1.1 percent of their assets during the year 1938. The 6,845 corporations doing business only in Wisconsin operated at a deficit. Here is but one more proof that New Deal taxation hits the little man harder than it does the large and well-established corporation. Together, all the corporations operating in Wisconsin paid total taxes to Federal, State, and local Governments amounting to over $112,000,000, leaving a loss of over twenty and one-half million dollars. These corporations paid over $426,000,000 in wages to over 355,000 employees. In other words, their taxes amounted to 26 percent of their pay roll. The average wage was within a few cents of $1,200 a year. At that wage the money eaten in taxes would have provided work for nearly 98,000 employees. There is but one word for such taxation—it is confiscation—it is confiscation not only from business itself but from the workers who are employed and their dependents, from the unemployed who are seeking jobs in vain, and from all those who are dependent upon the purchasing power of the worker for a livelihood.

The result of these policies has been a politically prolonged depression and economic stagnation. In 1938, on the basis of private productive purchasing power, we had returned to the scale of living of 1901. It has declined 25 percent since 1929, with a loss of one hundred and twenty-nine billions in purchasing power alone, or $1,226 for each man, woman, and child in the country.

During the years 1921 through 1929 we added thirty-four billion to private capital, which meant expanding economy and greater employment, and a higher standard of living for all. In the 9 years, 1930 through 1938, we consumed thirteen and one-half billion dollars of private capital more than was created. The average annual expenditures for new private capital goods since 1929 has been more than 45 percent below the 1925–29 level. We have been contracting rather than expanding; we have been hibernating instead of growing.

In the 3 years, 1926 through 1928, an average of four and six-tenths billion dollars went into new corporate enterprises. In 1937, one of the best New Deal years, only one and two-tenths billion dollars were so spent.

Is it any wonder that we still have over 9,000,000 unemployed? According to figures made public recently by the National Industrial Conference Board, the number of unemployed rose 889,000 in January over the number in December, making a total of 9,296,000. It estimated that the number of employed workers declined to less than forty-five and one-half million, or a drop of 831,000 from December to January. Colonel Harrington of the W. P. A. has frankly admitted that the increased unemployment was "substantially greater than seasonal increase," and that the gains made since last August had been wiped out. The W. P. A. and the C. C. C. were forced to increase their rolls during January by 118,000—or approximately 13 percent of those who were thrown out of work.

The result, however, has been more than unemployment and the heartache and privation it has caused, together with the tremendous burden of billions that have been poured out of the Federal Treasury in an effort to alleviate suffering. The situation is further reflected in the ham-and-eggs plan in California, and other similar proposals. It is reflected in the alarming growth of pressure groups demanding more and more money from Congress each year. These schemes, which could lead only to bankruptcy economically and socially as well as financially, these drains upon our national wealth will continue so long as our economy is stagnant and millions of people must depend upon the Federal Government for food and clothing and shelter.

As long as our economy remains stagnant, crackpot schemes which would wreck our Government and our economy will win adherents and demands for raids upon the Federal Treasury will continue. The greater the demands and the pressure, the more the Government extends its control and its subsidies, the further we shall be from a reestablishment of a genuinely free and expanding economy and the harder it will be to achieve it.

And yet, ironically, New Deal reforms and experiments upon economic America have been conducted in the name of social America. Yet they have failed to raise the standard of living of our needy beyond the subsistence level. New dealers talk of the billions spent for relief and subsidies to the needy as though these were the measure of their humanitarianism instead of the measure of their failure to bring about reemployment in private industry for those without work and a healthy balance between agriculture and industry together with expanding markets for the farmer.

The New Deal has failed to achieve its announced objectives for social America for several specific reasons.

First, it has sought to achieve its social objectives by reversing the very economic principles upon which our system of private economy is based and under which we became the greatest nation on earth. That system is based upon an expanding economy of ever-increasing plenty, accompanied by increased distribution at a constantly decreasing price. Human genius constantly strives for new ways to produce more wealth with less effort and at less cost, thus making the luxuries of today the necessities of tomorrow by bringing them within the reach of an ever-greater number, thus assuring a higher standard of living for all. The New Deal has persisted in a policy of restriction and scarcity in production and of high prices without regard to economic conditions, thus resulting not only in less work and less wealth, but in decreasing purchasing power for the wealth we now have. Obviously the only way to improve the lot of the ill-fed, ill-housed, and ill-clad is to create more food, more clothing, and more shelter on one hand, and on the other to see to it that those in need are put to work creating more wealth and earning enough to buy the necessities and comforts of life in an economy of abundance.

Instead of the traditional American policy of thrift and economy, the New Deal has set an example of profligacy unexcelled in history. It has constantly preached that while private debt and extravagance are evils, public debt and spending are the key to prosperity. Billions have been squandered in futile attempts to prime the pump. It has assumed that purchasing power could be increased, not by adding to it, but merely by Government redistribution. If this were true, of course, the more the Government borrowed and spent and the greater the public debt, the better. A national public debt of ninety billions would make us twice as prosperous as a public debt of nearly forty-five billions. The truth of the matter is that the New Deal, assuming that the American people are chronically crippled, has given them a $65,000,000,000 crutch, at the same time adding a $40,000,000,000 tax bill and a $25,000,000,000 deficit to their backs, thus making it impossible for them to walk of their own accord, and crippling their backs for years to come.

The whole theory of New Deal pump priming and artificial work has been to compensate those hardest hit by the depression for the loss of private investment and employment which it has believed could never be fully recaptured. Instead of seeking every possible means to revive private investment and employment, it has offered only the substitute of Government spending and Government jobs. More and more clearly those who have received such meager compensations as the Government has been able to provide are realizing that these are no substitute for all that they have lost. They are demanding real jobs at real wages such as only the revival of a prosperous economy can provide. They do not want a Government crutch. They want to be able to walk of themselves as free men.

Thus, the New Deal has failed of its social objectives because it has tried to substitute a free economy with an economic system blue printed by the planners in Washington. It has sought not merely the correction of evils which arise within the economic system which must be overcome if we are to go forward, but the substitution of an economy controlled by the Government. It promised to destroy the private monopoly of economic royalists, and instead it has substituted the public monopoly of political royalists. It took the opportunity for manipulation away from the financiers only to place it in the hands of one man; and today no foreign dictator enjoys a greater control over the currency of a nation. Here, as in the case of spending, what is evil in private hands becomes a virtue in the hands of political bureaucrats wielding a thousandfold more power than any private individual could hope to exert. Government competition has entered field after field of private endeavor. These acts speak more eloquently than volumes of protestations to the contrary the lack of faith of New Dealers in our system of private economy. The Federal Government has become the greatest and most powerful restrainer of trade in our history.

The New Deal has fallen short of its avowed social objectives because it has put the cart before the horse. It has assumed that social uplift could be accomplished by Government decree regardless of economic progress; that it could increase wages without regard to economic conditions; and raise farm prices artificially and keep

them there, regardless of the number of unemployed or the purchasing power of the rest of the Nation. It has completely ignored the fact that social conditions improve not before economic conditions or in spite of them, but because of them. They are the result and not the cause of economic progress. The Government may spend itself into bankruptcy and inflation but it cannot improve social conditions without a healthy economy in which new wealth is constantly created and earned.

The American standard of living, which is still the envy of the rest of the world, was not created by the government decree of officials with noble desires and grandiose schemes for bettering the lot of the underprivileged. It was not created by any division of the wealth of those in high office. Rather it was the result of the unceasing labors of generation after generation of a people endowed with initiative, a capacity for hard work, endless energy, and particular talents under a government which assured them the freedom and opportunity to develop to the fullest extent their productive powers. It was won by the sweat of the brow of men with undaunted courage in the face of discouragement, faith in themselves and in their ability to succeed, and a vision of what together they might achieve.

A people's government has, indeed, social obligations. We must provide for those who are unable to care for themselves. But our greatest social duty to every citizen who is able in mind and body is to assure an economy in which he is free to labor for himself and his loved ones, to reap the fruits of his talents and his toil, and to rise as high as he is fairly able.

If there is anything that discourages and annoys me, it is the expression "surplus labor" and similar phrases. How can there be a surplus of labor when there is so much to be done? We speak of the high level of production in 1929. We talk of $100,000,000,000 national income as a goal. The 1929 production level is insufficient for our 130,000,000 people today, for we have added 9,000,000 to our population since that time. It has been estimated that our facilities in 1929, operating at capacity, could not have produced a national income of $96,000,000,000. We have 5,000,000 new workers—and that is the equivalent of the total number of gainfully employed workers in Canada—who need facilities for work. It would be difficult to estimate the amount it would cost to make necessary replacements which have been impossible during the last 10 years and to build up our industrial plants to provide a decent standard of living for all of our people. To produce what the Department of Agriculture calls a reasonable diet for all of our people would require the American farmers to produce nearly twice what they did in 1929. It would require 40,000,000 more acres than were planted in 1933.

To care for the ill-housed we need to build 4,000,000 modern homes within the next 5 years, to say nothing of repairing another three and a half million. This would mean building at the rate of 900,000 houses a year, which would exceed the highest building peak in our history, which we reached in 1925.

This is a titanic task. It can and must be done if our dreams for social America are to become reality. We have neither sufficient wealth nor the facilities to do it today. But we can create them by uniting our manpower, our idle savings, and the technological improvements which are today awaiting use in a resurgence of our system of free economy. It cannot be achieved through coercion or decree but only by voluntary cooperation.

A private economy must be based upon four things: Freedom, opportunity, incentive, and confidence. There must be freedom from crushing taxation, from coercion, whatever the source, and from every unnecessary restriction or restraint, whether public or private, and from the arbitrary decree of political bureaucrats. The road of opportunity must be kept open by preventing the invasion of Government investment, operation, and employment wherever private investment, operation, and employment can best serve the public interest and welfare. There must be the incentive of a just reward for one's efforts. There must be confidence in a government which will encourage the citizen in his work so long as he does not infringe upon the equal rights of others. It must be a government which serves as the instrument of preserving the freedom and opportunity of the individual, which adopts such regulations as are necessary to this end.

In no other way can the energies and powers of our people be released. In no other way can idle savings be encouraged to invest in productive enterprise, can the advances of science and research be developed and brought to the greatest possible number of our people.

The evils of monopoly, of concentration of power, exploitation, and unfair competition are not abolished by taking them from those who do not hold public office and transferring them to those who do. That is the road which leads to dictatorship. The duty of the Government is to eradicate these evils, not to take them over.

As our lives become more complex, as new legislation becomes necessary, as public interest requires that the Government assume new duties, the function and the purpose must remain the same—to make the Government the servant of the people rather than their ruler, to preserve an economy in which men are free to go forward rather than to plan their destinies.

Such a philosophy is based on the belief, not only that men are able to go forward if given the freedom and opportunity, but that they possess certain spiritual qualities which will guide them in the use of this freedom and this opportunity. Such a system cannot succeed without mutual faith, tolerance, respect, and cooperation between men.

Such a system places a tremendous responsibility upon each and every citizen. For it is a system not only of getting wealth, but of creating it for all men. It is a system of the best possible service to others as the best possible way of self-advancement. It applies to doctor, to lawyer, to manufacturer, to businessman, to worker and farmer, to every citizen, whatever his contribution may be to his fellowmen. These are the responsibilities of men under a free economy as well as under a free government. They are the basis of the democratic way of life.

We need to recognize the responsibility of each and every citizen anew. We need a rededication to the ideal of service. We need a renewal of our faith in our fellowmen, of mutual tolerance and respect, and of the will to go forward together—a united people.

If we can bring about a rebirth of this spirit—and it is the spirit that has made America the greatest Nation on earth—our dreams for social America will be more than realized. We shall continue our march onward and upward to a richer and happier life than we of today dare dream.

The Farm Problem

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

ARTICLES BY ROGER W. BABSON AND MRS. BEN OHNSTAD

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD a recent article dated Savannah, Ga., February 23, 1940, by Mr. Roger W. Babson, entitled "Instead of Handouts, United States Should Encourage Families to Move to Farms." In discussing this suggestion, Mr. Babson very correctly states that it would take the pioneer spirit of those who had the will to tackle the lands for a livelihood.

Also, I submit for publication in the Appendix an article from Liberty magazine, issue of March 9, entitled "Anyone Can Go Back to Eden," which I desire to be printed in connection with Mr. Babson's article.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

INSTEAD OF HANDOUTS, UNITED STATES SHOULD ENCOURAGE FAMILIES TO MOVE TO FARMS—BUT IT TAKES PIONEER SPIRIT, ECONOMIST AGREES

(By Roger W. Babson)

SAVANNAH, GA., February 23.—Naturally I get many letters from readers of this column. Just recently I received a most interesting letter from G. C. Konkler, of Mena, Ark., telling of his personal experiences. He had lost his city job during the depression and had to decide between going back to the land or going onto relief. He chose the former and drifted to the enterprising town of Mena, in the Ouachita Mountains, just a stone's throw from the Oklahoma line. There he and his family started again with absolutely nothing—just as did the Pilgrims when they landed on the shores of Massachusetts Bay in 1620.

Of course, the family had no money for movies, radio, or gasoline. They built their own hut out of cast-off boxes and other waste material on the outskirts of the town. He got a job for $1 a day and the family lived upon it and saved money from the first week. They lived on oatmeal, milk, tough meat, and greens. They slept on straw and made their own furniture, but they were healthy and happy. The children made their own clothes and went to school. When spring came they planted a garden, in which they all worked.

Then the father decided to rent a cheap vacant store—to sell goods when the chain stores were closed and the other merchants were at the movies. I will not go into more details, but in view of all the sensational and sentimental publicity being focused on tenant farmers as a result of John Steinbeck's Grapes of Wrath, Mr. Konkler's story interested me very much. Hence I wrote three leading people in Mena to see if what Mr. Konkler wrote to me were true. They replied that every word was true.

I then asked Mr. Konkler to expand his ideas. Both he and I believe that the small farm offers a real opportunity to thousands now working on relief jobs. Developing and working the land would bring them more happiness, health, good living, and sound security than most of them will ever achieve in any other way. Today too many families are just one pay check better off than they were several years ago. Surely any thinking person must know that something more durable must be tried to remedy conditions. All, so far, have been merely shots in the arm to relieve the pain.

RELIEF KILLED MOVEMENT

In 1932 Mr. Konkler drove a $150 Ford 500 miles into the mountains of Arkansas. He found thousands of people out of jobs. Families, however, with just a little money left, were going back to farms, making new lives for themselves, and liking it. They were blotting themselves from charity rolls and improving the general situation. Yet most of such efforts collapsed when Uncle Sam opened his relief purse. Today hundreds of homes lie desolate and abandoned. Meanwhile their former tenants purchase with their relief pittance quantities of products such as those acres could have produced.

It is Mr. Konkler's contention that farm development built this country in the first place. Therefore he believes that only the development of our idle acres will today solve our relief problems. New pioneers on subsistence farms would not jump farm production much, would not add to farm surpluses. It would stimulate business and trade in scattered areas, as these 1940 pioneers would have to buy every kind of farm tool and necessity. Best of all, this development would not skyrocket the national debt.

I am not referring to resettlement projects of the type the Government has tried in spots—setting people down with highfalutin' homes, giving them all modern conveniences, launching them with a hopeless debt. Let them begin just as their forefathers did, if they can do no better. What our country needs right now is the man with a will. We need more men, more families, with the will to shun Government help, with the will to take hold wherever they can, with the will to do their best with what they have to do with! Personal initiative was what made this country great, and only personal initiative will solve its present problems! Let me quote Mr. Konkler:

LEADERS ARE AFRAID

"Our leaders, as a rule, are just plain afraid to suggest, even faintly, that individuals who are in need of help should help themselves. They fear to recommend the old-fashioned virtues and the personal advantages of going back to constructive work. I am not an idealist. I know all the loafers can never be converted to the advantage of hard work. But I do feel sure that a national drive along such lines, using plain talk instead of taffy, would greatly increase the percentage of those trying to help themselves.

"Farm relief measures have been political footballs; each candidate trying to increase the 'benefits' to the voting farmers back home. Instead of these handouts, we should encourage individual families to move back to farms. The men of these families would go to war to save their country. Wouldn't it be much more pleasant to go back to the land and save themselves as well as their country—starting as farmhands or renters, then on up to ownership and security, just as people used to do? Think of the happy days—as they gained self-respect and independence, inch by inch. I know because I have been through it. Nothing else will ever bring them more happiness, satisfaction, or security!"

I do not need to add to Mr. Konkler's comments. He has summed up the situation concisely and emphasized a very fundamental principle.

[From Liberty magazine for March 9, 1940]

ANYONE CAN GO BACK TO EDEN

I just read How to Retire on $500. But Clark Richardson doesn't know the half of it. I, too, am a pioneer, but I have learned all the answers and can still wear my hat.

I am a barber's wife, with three boys. Finished high school when I was 16; taught country schools until I was 19. Married a tramp barber from Chicago and went to North Dakota to prove up a homestead. No money, no judgment, no common horse sense, but lots of enthusiasm and an inborn love of Mother Nature that has altered our entire lives.

After muddling along for 10 years in about 10 different States, we arrived in Minneapolis one morning just as the sun was rising—the first big city the boys and myself had ever been in. A thrill, let me tell you, and just as big a thrill this morning, 10 years later, when I watched the sun rise over Happy Hills, our 28-acre poultry farm.

I am inclosing a picture of our place, Mr. Macfadden, for you like little farms, too, where folks raise what they eat and eat what they raise and like it.

My garden is grand. All the fresh vegetables we can eat and enough canned to feed a dozen families like ours all winter. We "eat all we can," you know, and "what we can't we can." It's all you need to beat the depression, unemployment, high prices, low wages, and all the other evils that are turning dark heads white, blue eyes red, and upsetting the equilibrium of the world in general.

I feel almost guilty at times when I hear of the real suffering and want going on around us. It's so unnecessary when, with a strong back and a lot of elbow grease, anyone can take a good cow—we have six—a garden, a flock of chickens, an orchard, a berry patch, a few pigs, a few turkeys, a few geese, a few ducks—and have everything a man needs to ride to heaven in high and enter by the front door.

Our boys are grown now. One has finished the University of Minnesota and is a full-fledged mining engineer with a job with a future. Terry is taking dentistry—has had 4 years and has 3 more to go. He told me the other day, "Mom, do you know 'success is doing the thing you like best to the best of your ability'?"

I like that definition. It defines happiness and peace of mind and all the other things that I have found at Happy Hills just as adequately.

Bob, our baby, doesn't care about studying. His passion is automobiles and he dreams of the day when he'll own the biggest garage in Minneapolis, with airplanes and everything. More power to him and to me, too.

I have 500 White Leghorn pullets. Raised them myself, so I know they are good. They are State-inspected, blood-tested, and from trap-nested ancestors that lay between 325 to 350 eggs per hen per year.

I know, chickens don't pay—everybody is going out of the poultry business. Neither does a garden pay. You can buy all you can eat for 50 cents, and cows, pigs, turkeys—nothing pays but to go on relief. The world owes us a living, anyway, so why work your head off?

Well, Mr. Macfadden, I guess that's all. I learned a lot of it from your editorials. Thank you. I love them all, except the ones where you shoot it into Roosevelt. In my estimation, he is 200 percent, and I'll go to the mat any day for him and his "charm hour."

Roosevelt for 1940! Give him time and he'll lick them yet!

MRS. BEN OHNSTAD.

Western Freight Rates

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

ARTICLE FROM FORTUNE MAGAZINE

Mr. SCHWELLENBACH. Mr. President, we in the West, as a vital part of our economic problem, have long been confronted with the handicap of the expense of the transportation of our products to the markets of the East.

In the February number of Fortune magazine there was a clear and interesting explanation of that problem. I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Fortune magazine for February 1940]

FREIGHT RATES HANDICAP DEVELOPMENT OF THE FAR WEST—FORTUNE MAGAZINE ARTICLE REVIEWS SITUATION—NEED OF SETTLEMENT SHOWN—DISTRICT RICH IN POTENTIAL RESOURCES

Just as the far West appears to be the least integrated of the regions, so the 250,000 square miles of Washington, Oregon, and Idaho are perhaps more closely unified than any other part of the United States. Although the Pacific Northwest was explored by Lewis and Clark around 1805, its intensive settlement did not begin until the Northern Pacific linked Chicago with Seattle in 1883. Today it is closer to the frontier—topographically and economically—than the rest of the West, and, as of the census of 1930, less than half the population was native to the region.

The population today amounts to 3,200,000, or 2.5 percent of the Nation's total, whereas the Pacific Northwest has 8.3 percent of the United States land, with a high ratio of resources to population. It has, for example, about 40 percent of all United States potential water power, mostly accounted for by the Columbia River system. Yet this power is for the most part incidental to irrigation and water-conservation projects, because about 60 percent of the region lies to the east of the Cascades, which block the rains from the Pacific. The mountains make for fogs and forests on the western slope, but semiarid areas inland. Thus the whole economy of the Pacific Northwest revolves around the problem of bringing water to the land, and it is laced together by the branches of the Columbia, the main source of water. Today only a quarter of the 160,000,000 acres is in farms, and almost two-thirds of this land is suitable only for grazing. Here, and throughout the West generally, a good deal of the soil is potentially arable provided it can be watered, and the region looks forward to a conservative increase in productive farm acreage as the existing water supply is put to use. Grand Coulee alone will provide water for more than a million acres.

On the land that it currently farms the region grows over a fifth of the Nation's apples, a quarter of the cherries, nearly a third of the pears, a tenth or more of the potatoes, onions, strawberries, green peas, and dry beans. It also accounts for close to an eighth of the wheat, over 10 percent of the wool, and a slightly lower percentage of sheep and lambs. Mineral resources thus far have been scarcely touched, but even so the region mines large amounts of zinc, lead, and silver. However, its greatest source of wealth is the forest that covers the western slopes of the Cascades, representing about half the standing saw timber in the United States and producing roughly 40 percent of the Nation's output of softwood lumber. Over 50 percent of all wage earners

in Pacific Northwest manufacturing are employed in lumber industries. Currently the annual cut of slightly under 10,000,000,000 board feet runs ahead of the new growth by 2 or 2½ to 1, and the region is becoming pocketed with stranded communities decaying in the devastated cut-over areas similar to those in northern Wisconsin, Minnesota, and Michigan. There is much talk of bringing the cut and the growth into balance, but so far few effective steps have been taken. Safe from destruction are 70,000-odd square miles of forest standing in three great national parks and on other United States Government land—land that amounts to a phenomenal 48 percent of the region's total and an incredible 58 percent of the area of Idaho.

The region is in competition with practically every part of the country. Its lumber competes with southeastern lumber, its wheat with the Middle West and Plains States, its orchards with those of the Northeast, its potatoes with Maine, its sheep and wool with the Southwest, and so on. Virtually its only noncompetitive export is the Columbia River salmon catch—and even that has Alaskan competition.

Meanwhile, with manufacturing accounting for only 16 percent of its income, the Pacific Northwest must import nearly all finished goods, as well as oil, sugar, and other commodities. Ostensibly the heavy raw-material exports would balance the imports for an overall profit, but a catch exists in the form of freight rates. The region's markets are thousands of miles away—the fruit is shipped to New York, for example—and freight eats up from a quarter to a half of the farmer's wholesale price in the East, whereas the local growers have no such handicap. The result is that the Washington farmer, to compete with the easterner, must be content to receive far less in net cash. While middle-western wheat growers were complaining about 54-cent wheat, Pacific Northwest farmers growing the same wheat were realizing only 30 cents per bushel for their crop.

Conversely, the region is squeezed when it buys eastern manufactured goods. An Allis-Chalmers tractor delivered in Spokane would cost between 20 and 30 percent more than the same tractor unloaded in Ohio. In effect the Pacific Northwest produces raw materials, pays a stiff price to get them out of the region, pays again to bring in its manufactured goods. Consequently, next to irrigation and power development, the freight-rate squeeze is the region's chief preoccupation, and few conversations go on very long without the city of Chicago being mentioned with infinite loathing.

However, these are familiar troubles in a pioneer economy, and the region will unquestionably outgrow them. For it has plenty of room, abundant resources, tremendous power, and perhaps more usable land. Cheap power is certain to lead to the creation of regional industries, and already Portland has begun an expansion that may make it the leading industrial city of the north coast. Seattle is a little San Francisco, economically and in spirit, with shipping and lumber to sustain it and Alaska acknowledging it as an "unofficial capital." Posters in the State of Washington announce that such-and-such is the "fastest-selling" article of its kind on the Pacific Northwest and Alaska. The northern United States outpost, which seems so remote to the rest of the country, comes close to being a part of the Pacific Northwest region.

The Silver Purchase Act

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE NEW YORK JOURNAL OF COMMERCE OF MARCH 19, 1940

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the New York Journal of Commerce of March 19, 1940, relative to the Silver Purchase Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Journal of Commerce of March 19, 1940]

THE SILVER PURCHASE ACT

A subcommittee of the Senate Banking and Currency Committee has voted to approve an immediate cessation of the buying of foreign silver by the Treasury. The full Banking and Currency Committee has failed to endorse this proposal, however, because of apparent pressure from the administration. Secretary of the Treasury Morgenthau is scheduled to testify on this question before it today.

Unless the full Banking and Currency Committee makes a favorable report on the Townsend bill, the foreign silver-buying program will be continued indefinitely. This would be quite unfortunate for several reasons.

Possessing already some 3,000,000,000 ounces of silver in its monetary stock, the Treasury has no earthly use for additional white metal. The silver is being used as the basis for the issuance of additional silver certificates, which displace a perfectly satisfactory currency—Federal Reserve notes with a rigid and entirely unsatisfactory type of paper money. The chief beneficiary of the silver-purchase program is Mexico, the country which has shown less respect for American property rights and less interest in expanding her trade with this country than any other in Latin America.

The argument that we should maintain our purchases of silver from Mexico to enable her to buy our goods falls down on two scores. In the first place, Mexican purchases from this country are far smaller than they were in the 20's, when we were not buying her silver, but the investment of American capital in the country was being encouraged. Secondly, if we must buy large amounts of foreign silver to maintain our exports, then serious question may be raised as to whether these exports are worth while. Since the further expansion of our monetary silver stocks would do us no conceivable good, would it not be just as sensible to ship goods to Mexico without taking any payment at all, merely to maintain our exports?

The Treasury purchases of foreign silver constitute an undisguised subsidy to the countries from which we buy the white metal. When these countries, as in the case of Mexico, utilize this subsidy to mitigate the ill effects of their confiscation of American property within the country, it is high time for this country to abandon such folly. Congress should not allow itself to be induced to keep the Silver Purchase Act of 1934 on the statute books, regardless of any new sophisms that may be advanced to justify its retention.

Britain's Demands

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

ARTICLE BY WILLIAM PHILIP SIMMS

Mr. REYNOLDS. Mr. President, on March 11, 1940, the British Government announced certain drastic regulations affecting countries trading with England, and demanded that purchases made in England by these countries must be paid in United States dollars. It is evident this is one of the most detrimental war measures against the interest of the United States ever inaugurated by a foreign power. In effect, it makes England the master of international commerce, and at the expense of the United States. By this regulation England deals a most severe blow to our world markets and trade, and in effect makes these markets available to the United States only with the consent of England.

This destructive blow at American foreign trade could be quickly overcome if the United States Congress should demand that the Secretary of Treasury immediately adopt suitable retaliatory measures so as to offset this strangling of American commerce. This could easily be done by the United States demanding that foreign countries pay us in British sterling for American purchases.

I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD an article in this connection from the pen of William Philip Simms entitled "Britain's Demands."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITAIN'S DEMANDS

(By Wm. Philip Simms)

WASHINGTON, March 12.—Despite the Neutrality Act and our 300-mile no-war belt, backlashes from the European conflict continue to take the skin off our hides with exasperating frequency.

These backlashes are not all accidental or even incidental. Some are the result of deliberate policy. To date one of the chief offenders is Great Britain, on whose side public opinion in this country has been rooting from the outset.

Her latest is to cut the ground from under American trade in Latin America by insisting on being paid in dollars for certain

British commodities imported by the Latin nations, thus reducing a supply already far too small to take care of American imports.

A short time ago I was in Lima, Peru. An American mission was down there for the purpose of modernizing Peru's naval establishment. The plans called for expenditure of several million dollars for electrical equipment and other machinery—American machinery. But the whole thing had to be sidetracked and partly abandoned because Peru simply could not get hold of enough dollar exchange.

To a greater or lesser degree the same thing is true in each of the 20 republics below the Rio Grande. There is a big demand for American goods, especially manufactured goods, throughout that area. But nowhere is there enough exchange.

Now Great Britain has acted to complicate the situation still further. A new order stipulates that on and after March 25 all exporters in the United Kingdom, when selling rubber, tin, jute, whisky, and a whole list of things to the Americas must demand payment in dollars. Presumably payment could also be made in Swiss francs, belgas, or other free currencies, but these exist in Latin America only in dribbles. Dollars will have to bear the brunt.

If Senor Don Antonio of Rio de Janeiro wants to buy a large order of American automobiles, typewriters, and agricultural implements, also some rubber, jute, and tin from British dealers, he now faces the necessity of canceling or reducing his American purchases. He cannot find enough dollar exchange to pay for both.

In some cases American holders of South American bonds are not being paid either interest or principal for similar reasons.

The purpose of the dragnet now being thrown out to haul in the dollars is twofold. First, Britain needs all the sound money she can get to fight the war. Second, she intends to keep her peacetime trade going as near normal as possible.

Oddly enough, the British Laborites, even more than the Tories, are pushing the Government in this direction. During the first World War it was chiefly British big business that coined the slogan "Business as usual." There was some criticism. Today it is labor. Labor demanded that Prime Minister Chamberlain create a sort of "superminister" to head a ministry of economics. He refused to go all the way, but he did set up under the board of trade a council of experts "to assist in organizing the country's export efforts." Now he is being lambasted for merely taking what some are calling "half measures."

This is not the first time Britain's trade measures have hurt the United States. One of her first acts was to cut down imports of American tobacco, seriously crippling the growers of this country, in order to buy more from Turkey. Similarly, she is buying more cotton from Brazil. Fruit and other American products have been hit.

The United States is subsidizing the British war effort by numerous indirections. Washington buys all the gold offered by the British Empire at $35 an ounce. Meanwhile, the Bank of England still carries her stock at $20.67 an ounce, and the cost of producing it averages far below that. South Africa and Canada produce a large part of the world output. The profit is colossal.

While American sympathy is overwhelmingly pro-Ally, it could turn sour under sufficient provocation.

The Census

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19 (legislative day of Monday, March 4), 1940

NEWSPAPER ARTICLES, EDITORIAL, AND LETTER

Mr. TOBEY. Mr. President I ask unanimous consent to have inserted in the RECORD several newspaper articles, an editorial, and a letter bearing on the census matter.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Schenectady Union-Star of March 16, 1940]

THIS WAY ROSE HITLER TO POWER

Word was sent out by the indisposed Mr. Roosevelt via his faithful Achates, Secretary Early, that, were he feeling better, he would register strong endorsement of the census questions over which such violent protests have been made; furthermore, that he was astonished that a United States Senator would advise people to defy the law in refusing to answer the questions.

Well, that is interesting.

It is interesting, in the first place, because the President of the United States found it necessary to make any comment whatever on so trifling a detail as a few questions on the sheets of the census collectors. It already had been announced that Harry Hopkins, Secretary of Commerce, had attended to that detail by arranging that John H. Public might take the offensive questions to one side and answer them anonymously, placing the blank thereafter in a sealed envelope, which the census man would forthwith deposit in one of Jim Farley's letter boxes under a Government frank.

But the most interesting part of the President's comment as it came to the public through his fidus Achates is his astonishment at the lawbreaking proclivities of a United States Senator who should advise anybody to refuse to answer the impertinent and offensive questions. Obviously, it was Senator TOBEY, of New Hampshire, to whom he alluded.

As one of the newspapers which earnestly counseled the public to conform to a certain obnoxious amendment to the Constitution which since has been repealed, we feel at liberty to comment. While we are law observing and abhor lawbreaking, it must be plain to anybody who has read history that defiance of tyranny is one of the ways in which the American people—and all democratic peoples—always have acted when an obnoxious procedure interfered with their personal liberty.

This Nation began in declaring independence of restrictions which tyranny had imposed upon the subjects of a harsh King. Under provocation, those subjects declared that "when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty to throw off such government," and they did.

That is precisely the difference between democracy and dictatorship, that one may protest against irksome regulations in a democracy while, under a dictatorship, there are secret police to hide under the table and pry into a man's personal affairs, with a concentration camp and a firing squad as the accompaniment. When the time comes that the American people cannot protest against infringement of their liberty, there won't be any liberty.

P. S.—It is thrilling to find that Senator TOBEY answered back true to the best traditions of tyranny defiers throughout history in a telegram to Mr. Roosevelt, which read: "If it is your position that an unauthorized ruling of a departmental bureau constitutes a law of the United States, then it is important that the people recall that such were the tactics used by Hitler in gaining powers never sanctioned by the people."

[From the New York Times of March 19, 1940]

IN THE NATION—IT SHOULD BE A HOT SPRING IN THE CAPITAL

(By Arthur Krock)

WASHINGTON, March 18.—Senator SMITH, of South Carolina, who survived the Presidential "purge," exclaimed in the Senate today that if he were Governor of Georgia "there would be another secession call." The Senator and others were indignant over the order of a Federal court in that State to arrest Governor Rivers for ignoring its injunction.

Now, if some important Government official assails Mr. SMITH as an inciter of rebellion and civil war, it will be typical of the temperature of affairs in Washington today. It will be in line with the President's charge that Senator TOBEY has preached disobedience to the census "law"; Secretary Hopkins' loyal follow-up by calling the Senator's attitude "un-American," and the personalities which have entered a recent discussion of unemployment statistics. The explanation for all this heat in debates which clearly have two sides is the imminence of the Presidential election. If it continues, the Washington spring may be as hot as the usual Washington summer.

Senator TOBEY responded by asking the President "what law" it is to which he has counseled disobedience. The Senate Commerce Committee majority has already voted that the two income questions of the census which are the heart of the controversy were unauthorized by the congressional statute ordering a census of population, housing, and unemployment. Its chairman, Senator BAILEY, who has a great legal reputation, recently wrote the following to Under Secretary of Commerce Noble, who had said he does not believe "anyone can conceive of any way in which Congress could more clearly have expressed its intention to impose on the Director of the Census * * * the duty of determining the questions that are to be asked * * *":

"I can conceive of several ways in which the Congress would have more clearly expressed itself. Certainly the Congress said nothing about income. Certainly the subject matter of the inquiries was stated and income was not predicated in the subject matter. * * * In event of a criminal prosecution for failure to answer a question as to income it might be held that income was not in contemplation. * * * If the Congress had intended a broad construction of inquiries relative to population it would not have been necessary to say anything about distribution or agriculture or anything else, since inquiries relative to population would include everything."

So Senator TOBEY has important legal support when he asks "what law?" And the recent back-down of Mr. Hopkins, the new regulation which permits answers to be sealed and unsigned, does not alter the basic argument set forth by Mr. Bailey.

The same attitude—that it is inimical to public welfare to incite a national debate on the reliability of Government opinions—greeted the publication here and elsewhere of statistics and conclusions tending to show that unemployment may be much less than has been supposed. Because the statistical sources submitted their figures in confidence, it was argued they must be moved only by political considerations. And because some of these figures and conclusions tallied with those of one statistician who works for Republican industrialists, it was contended that they are mere propaganda.

It happens that these particular Republicans run a very successful series of industrial operations, partly because they look closely into all facts affecting business. If they permit their political views and wishes to affect their statistical attitude, they will lose money. But, on the contrary, they have steadily made it before and since the advent of the New Deal. This should insure respectful attention to whatever figures they collect and whatever conclusions they draw. This correspondent, before offering them for whatever they are worth, checked them with other business statisticians in four great industrial centers, and the local data all pointed in the same direction. One of these checkers was recently entrusted by the President with one of his most important assignments.

Despite the heat of the repudiations, the Government, the public and the political opposition will come more quickly to the facts of unemployment if all sources are examined coldly. It doesn't get the administration side anywhere to shout "Du Ponts" and accept without questions the compilations of the National Industrial Conference Board and the pure estimate that, of the population increase since 1929 of ten millions, at least 63 percent were additions to the labor market. It doesn't get the private statisticians anywhere to deny the possibility that they may have erred by a couple of millions since unemployment is not clearly defined, and they also have only estimates to support their position. And it is a pity that their fear of Government and name-callers has prevented them from defending in the open an important contribution to a major mystery.

Some Democratic politicians believe that hopeful unemployment figures will put them deeper in the hole on the Budget and spending, and, since the brighter statistics cannot be proved and a new drive for relief funds impends, they think them an insecure ladder to grasp. But the President may see things more clearly, for he is quoted as having said that the optimists are "barking up the right tree."

[From the New York Times of March 17, 1940]

The same process was followed by Secretary Hopkins to circumvent the attacks on certain questions listed in the census. These are known as Nos. 32 and 33 and are a part of the census on unemployment. They require, under penalty, a detailed statement of money wages and earnings from persons who made under $5,000 for the year, and other income data. The Senate Commerce Committee, after hearings on Senator TOBEY's protest resolution, decided that Congress had not authorized these questions in ordering an unemployment census, that they are not germane to it, and are wholly illegal.

INVASIONS OF PRIVACY

Other attacks are based on charges that these and other questions are discriminatory, an invasion of constitutional guaranties of privacy, and that they are being sought by an improper method—through enumerators, who may be neighbors or political employees, and therefore are insecure guarantors of the confidential status.

It was also pointed out that, since the Census Bureau had by regulation reduced the general application of question 32 (excusing from detailed reply persons with incomes of over $5,000), it was running beyond congressional authority at all points and could, by the same exercise of authority, discriminate further without any legal warrant.

Led by Senator TOBEY and Senator CLARK of Missouri, both of whom said they would not answer questions they believed illegally proposed, thousands of citizens protested. The administration decided to attempt a superficial concession to substitute for the admission of a major mistake, thus to persuade the Senate not to pass the embarrassing Tobey resolution. Mr. Hopkins, again using the legislative-regulation method, ruled that any citizen might write the detailed income answers on a slip provided by the enumerator, put it in a sealed envelope without signature, and be assured it would be forwarded to headquarters.

Here again a major issue and change were evaded, even at the possible expense of that very section of the census which the administration has been at such pains to erect and defend. The questions of legality, discrimination, rights to privacy, and legislation by bureaus instead of by Congress were not met at all in this effort to avoid a real concession to effective criticism. The device may be successful so far as Congress is concerned. But though the official claim is that the information sought is both legal and vital, it was deemed better to damage its value by indirection than to admit a fundamental mistake.

A STAR-SPANGLED GESTAPO?—PROTEST AGAINST CERTAIN CENSUS QUESTIONS REVEALS POPULAR DISTRUST

To the New York Herald Tribune:

The very widespead and intense feeling of protest against the inclusion of certain questions—particularly those about income and sources of income—in the impending census questionnaire is an astonishing demonstration of the popular attitude toward the New Deal. It has not often been reflected by politicians or editorial writers. The latter fulminate against wastefulness, against the irresponsible borrowing policy, against paternalism, against centralization of power, against the abuse of authority by a swollen bureaucracy, against promotion of class hatred and the bulldozing of business for political purposes, and so on through a long list of offenses against American traditions. It is not often, however, that the critics of the Roosevelt administration who break into print suggest that this Government is an unscrupulous enemy of the Nation; but that is very clearly suggested in scores of letters that have lately appeared in various periodicals.

When Mr. Wendell Willkie writes, in criticism of the centralization of power, that the only difference between a benevolent despotism and a vicious one (or words to that effect) is a matter of time, the implication is that the worst we are immediately threatened with is a benevolent despotism that does not mean to abuse its powers. But the citizen, who is unwilling to tell the census man this or that item of information about his personal affairs or private life, does not hesitate for a second to say that what he is afraid of is the unscrupulous use that the present Roosevelt organization, or some local branch of it, may make of that information. He is sure that if a breach of confidence seemed politically expedient to a New Deal henchman, he would not hesitate to violate a secret. Having been a witness to the ruthlessly vindictive methods by which the New Deal has sought to crush or silence its great and powerful critics, he is certain that no information which might be used to coerce an humble opponent into acceptance of New Deal's mastery would be safe with Mr. Roosevelt's following. We have come to a strange pass, haven't we, when large bodies of the citizenry are convinced that the Government of the United States is a potential enemy, capable of using the material in confidential files for improper purposes.

That this is the sentiment behind the protest there can be no doubt whatever. It has been pointed out, by one writer on one subject after another, that many of the individual protests are against questions that have been asked and answered decade after decade, without arousing suspicion or resentment in any person with a clear conscience. It has also been pointed out that the questions about income, which are under heaviest fire, call for much less explicit information and explanation than all income-tax payers furnish the Treasury year after year. If the most productive elements in the population have to turn themselves inside out every year for the Treasury Department's close scrutiny, it is innocently asked, Why should not the rest of the people come through once in 10 years with information that would be extremely useful to the statisticians?

There would be some sense in this question if the rest of the people were doing the objecting—possibly because of a fear that the census returns would be used as a guide in the taxation of low incomes. But they are not. The persons who do their best to tell the Treasury all about their earnings year after year are the very ones who are the most vociferously opposed to giving the census man a résumé of the same information.

And why is this? It is because of the general belief that the collectors of internal revenue have no more interest in the politics of a taxpayer than they have in his race, color, or previous condition of servitude, and that if his statement does not challenge their suspicions and his check is honored by the bank, they will protect their sanity by forgetting his name and every fact associated with it 10 seconds after they have passed his statement for acceptance. Yet the idea of the census man getting the same information infuriates them because they have no such confidence in his forgetfulness.

They take it for granted that he is going to be political hanger-on of the current administration's local hanger-on-in-chief. The local hanger-on will not necessarily be a highly productive pillar of the community, with a sterling character. He takes the job because he needs it; and he gets it because he, or his father or uncle, is somehow useful to the hanger-on-in-chief. In return for his job he is not likely to refuse to make some notes on the returns from all those persons in whom the hanger-on-in-chief is interested—particularly "those in opposition camps, or those in his own party who are rebellious against his leadership. The possibility of such misuse of census information has been inherent in the system since 1790, and has grown as the information demanded has become more explicit and intimate; but the suspicion that it might be used on a national scale, as working material for the operations of something like an Ogpu or a Gestapo for an American dictatorship is a thought as new as it is Nation-wide.

It is not spontaneous, of course. It is inspired. And, contrary to the feeble efforts of New Deal spokesmen to suggest that it is inspired by Republicans in the Congress for political purposes, it is inspired by the conduct over a period of 7 years of Franklin D. Roosevelt, his Cabinet, his bureaus, and his political highbinders.

Bearing in mind the old proverbial phrase "Like master, like man," how is the citizen supposed to keep his mind off of the local hanger-on-in-chief, and the use he may now be encouraged from above to make of confidential information when the little hanger-on smirks his way in.

Some of the faithful, who cannot understand why anyone should think such hard thoughts of F. D. R. and his legions of ministering angels, will want to know how any element in the citizenry could possibly get into such a poisonous state of mind, how we can be so unjust to such a choice aggregation of sweet and lovely persons. It is hard to respond to such a challenge. Shock after shock has dulled our sensibilities and memories. When it comes to thinking up what F. D. R. and the New Deal have done to our political morality, we find ourselves punch drunk. But let's pick a few out of the fog at random.

Do you remember how the expert publicity staff, which F. D. R. still has with him, set out to "smear Hoover," without the slightest regard for truth or justice?

Do you remember the fury with which F. D. R. assailed the Supreme Court when its concern for the Constitution thwarted some

of his plays to the gallery? Do you remember how he told a congressional committee not to be influenced by thought of the unconstitutionality of a bill drafted by his pet young radicals?

Do you remember how he went out into the highways and byways of the Nation in an effort to discredit and purge the members of his own party who had dared to defend the Constitution and the Supreme Court against his vindictive slashes at both?

Have you forgotten how President Roosevelt blessed the launching of the C. I. O., preached class warfare while it was being organized with expert "red" help, and turned his face to the wall while the sit-down strikers were shaking such recovery as there was down into the mire of anarchy?

Have you ever thought how he has rewarded Murphy for neglecting his duty to the public in that situation and how he has consoled him for the electorate's chastisement of him; or how he has rewarded Professor Frankfurter for supplying him with his most adroit advisers?

Do you remember the campaign book stick-up of 1936?

Do you happen to remember the potato-planting plebiscites, with which Mark Sullivan and Herald Tribune editorial writers had so much fun, when the Department of Agriculture deliberately and officially interpreted the returns as mendaciously as Stalin ever construed a Soviet election?

Have you been watching lately the Congressional inquiries into the methods of the Federal Labor Relations Board and wondering what F. D. R. thinks of them? If you have you will have noted that his reaction to the most conclusive evidence of abuse of power by the extra-constitutional clique, which has strenuously subverted all American traditions of fair play, has drawn a dead silence from the master and bitter opposition to reform from all the minions.

But this could go on for a hundred newspaper columns without adding up to anything more than the common knowledge that the New Deal has never shied away from dirty doings in its pursuit of an objective. The responsibility for this state of things is Mr. Roosevelt's to just that extent that power over his organization has been his. This power over his following and his influence in the Nation has been nearly absolute. No one in American history, since George Washington's retirement, has enjoyed greater power than Franklin D. Roosevelt; so no one's responsibility for the use of it is more strictly personal than his. If the proletariat, the peasantry, and the small bourgeoisie now see a threat to their privacy, and thence to their liberties, in a census questionnaire, who is responsible for this un-American suspicion that a small-caliber census snooper may be the agent of an American Gestapo? I ask you.

HEPTISAX.

NEW YORK, *March 15, 1940.*

The National Resources Board—Planning for Future Development of the Pacific Northwest—Bonneville and Grand Coulee

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. SMITH of Washington. Mr. Speaker, the Pacific Northwest is frequently referred to as this Nation's "last frontier." This statement is true, so far as opportunity for development is concerned, and because our section abounds with natural resources we are making every effort to make sure that we develop the use of these gifts of Nature wisely, so as to provide not only for our citizens today but also for our children and their children.

The National Resources Planning Board is one of the agencies of the Federal Government which is helping us to make our plans for today and for the future. Assisting in this important task is Hon. George F. Yantis, prominent citizen of Olympia, Wash., in my district, who is serving as regional chairman. At the request of President Roosevelt, the Board is at present conducting a study in the Pacific Northwest States to aid us in determining the opportunities for land development, industrial development, and how to obtain the best return and value from the Government's investments in the Bonneville and Grand Coulee projects.

President Roosevelt, in a radio address on the night of January 19, 1940, in connection with the White House Conference on Children in a Democracy, said:

Last April * * * I referred to our concern for the children of the migratory families who have no settled place of abode. I spoke casually to the press today about a study I am making. Up in the State of Washington we are spending a great many millions to harness the Columbia River, to put a great dam up there which will pump the water up onto a huge area of land capable of providing a living for 500,000 people—irrigated land, today a desert—which can be made a garden with the process of modern science. Who ought to go there? Are we going to treat that 2 years from now just as we treat the average irrigation project? Will it be a contract with the Government to pay out the loan over a period of years on the basis first come first served?

I have read a book; it is called Grapes of Wrath; and there are 500,000 Americans that live in the covers of that book. I would like to see the Columbia Basin devoted to the care of 500,000 people represented in Grapes of Wrath.

Migratory families, the situation of their children—children who have no homes—families who can put down no roots, cannot live in a community—that calls for special consideration. But I am being practical. I am trying to find a place for them to go. This means, in its simplest terms, a program for the permanent resettlement of at least 1,000,000 people in the Columbia Basin and a lot of other places. And remember that the money spent on it, after careful planning, is going to be returned to the United States Government many times over in a relatively short time.

I also desire to quote from the statement of Hon. Charles W. Eliot, Director of the National Resources Planning Board, before the Senate Committee on Appropriations on January 25, 1940, as follows:

In every large organization, private and public, someone or some group has to clarify objectives and secure the cooperation of all the parts of the organization in attaining agreed goals. That is generally recognized as the job of the executive. It is what we call planning.

Almost every large problem which the Federal Government faces involves not one but many agencies and departments, not only in the Federal Government but in the State and local governments. Solutions can't be found for these problems without the assistance of business, labor, farm, and citizen groups—in brief without mobilizing the best information and best help we can get.

The work of the National Resources Planning Board is to mobilize that intelligence to meet specific problems, to clarify objectives and policies and to seek the cooperation of all the agencies concerned in appropriate steps toward agreed objectives—for example here are a few cases:

REGIONAL PLANNING PROBLEMS

1. The Pacific Northwest: How is the Nation going to get the maximum return and value from its huge investments in the Bonneville and Grand Coulee projects? The prudent investor is concerned with management and operating plans. The Board is responsible for a study of opportunities for land settlement and industrial development in that region. It is putting together knowledge and materials from the four States, the Departments of War, Agriculture, and Interior, and the Federal Works Agency through the active participation of those agencies in the Pacific Northwest Regional Planning Commission and its subcommittees. They are all cooperating in the production of a program to care for the thousands of families who have or will migrate to this "last frontier." A statement of objectives, program of public works, and related policies should be ready by June 1941 for consideration by the legislative bodies that make the decisions.

The Effect of Concentration of Economic Power Upon Maintenance of the Competitive System

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. PATMAN. Mr. Speaker, the history of business enterprise during the past 40 years has been marked by the apparently anomalous situation in which the population has steadily increased while the number of individual and private manufacturing concerns has steadily decreased. Normally it would seem that as consumer demand increased with a growing population the number of manufacturing concerns producing articles necessary to satisfy that demand would increase correspondingly. Such a result would be inevitable under a system of free competitive enterprise. A brief glance at statistics, however, shows an opposite trend.

POPULATION INCREASE, NUMBER BUSINESS CONCERNS DECREASE

The population of the United States increased from 75,000,000 in 1900 to 137,000,000 in 1940, an increase of 62,000,000. In 1900 there were approximately 15,000 manufacturers of tobacco products; today there are approximately 850. In 1900 there were 28,000 manufacturers of lumber products; today there are less than 8,000. In 1900 there were more than 700 manufacturers of agricultural equipment; today there are 260. In 1900 there were more than 2,000 manufacturers of boots and shoes; today there are less than 1,100. Even in industries where several hundred manufacturers exist, a very few companies control from 75 to 85 percent of the entire business.

Every census of industries of the United States shows a steady decline in the number of operating establishments in practically all industries and an equally constant increase in the size of the average establishment. Considering all manufacturing industries as a whole, the value of the product of the average single establishment has increased nearly 400 percent in the last 25 years, or from $77,000 value of product per establishment in 1915 to $365,000 in 1940. Certain industries show an even more pronounced increase. For example, agricultural implements have increased in terms of average output per establishment 850 percent in the past 25 years. Chemicals have increased nearly 400 percent; glass factories, 550 percent; petroleum refining, 335 percent; tobacco manufactures, 5,600 percent.

Even these figures are deceptive, since most industries are dominated by a comparatively few large concerns. In the cigarette industry, for example, which is the most important of tobacco products, six companies in 1937 had total assets in excess of $734,000,000. The three largest of these six companies had assets amounting to more than $640,000,000, or an average of more than $200,000,000 per establishment. The sales of these three companies amount approximately to $800,000,000, or approximately $263,000,000 per establishment. These three companies represent 80 percent of the output of cigarettes in the United States. Obviously, entry of a successful competitor in the cigarette field would require a capital outlay of at least $25,000,000. The profits of the few tobacco companies are more per annum than the total amount paid to the farmers for tobacco.

The Standard Oil Co. of New Jersey alone had total assets in 1937 exceeding $2,000,000,000. The United States Steel Corporation owned assets of approximately $1,920,000,000. The Texas Corporation, another oil company, had assets of $615,000,000; Gulf Oil had assets of $560,000,000; Allied Chemical & Dye Corporation had assets of nearly $400,000,000; American Radiator, in the plumbing field, $166,000,000; International Paper & Power, in the paper industry, $258,000,000; and Crown-Zellerbach, $104,000,000.

Expressed in different form, figures presented before the Temporary National Economic Committee indicate that less than 6 percent of the number of companies producing tobacco products owned 92 percent of the assets of the entire tobacco industry; in the chemical industry, 2.7 percent of the companies engaged in business owned 86 percent of the assets; in rubber products, 4.3 percent of the companies owned 80 percent of the assets; in metal products, 2 percent of the companies owned 74 percent of the assets; in the pulp and paper industry, 3.5 percent of the companies owned 62 percent of the assets.

Even in the field of food products, widely scattered though they are, 1.2 percent of the producing companies owned 60 percent of the assets.

FEW LARGE CONCERNS DOMINATE DISTRIBUTION

The figures set out above refer primarily to manufacturing establishments. The economic picture presents no less a discouraging outlook from the point of view of new enterprise in the field of distribution. The distribution of food products will serve as an illustration. While there are thousands of retail grocery stores located throughout the country, this field is being dominated more and more by a few large concerns. In 1938 the net sales of any five of the large grocery chains amounted to more than $1,700,000,000. One chain alone enjoyed sales of approximately $880,000,000. The average sales for the five chains was more than $340,000,000 each. The invested capital required to conduct the business of five chains was approximately $322,000,000, or an average of approximately $65,000,000 per chain. One chain had invested capital of approximately $160,000,000.

WET BLANKET THROWN OVER UNITED STATES

One of the serious problems resulting from this concentration of volume of business in a few chains lies in the fact that to a great extent one chain does not overlap in the territory of another. The net result is that they throw a wet blanket over the entire United States in the form of thousands of individual units in every community. This stifles local enterprise. A generation ago anyone could start a corner grocery store with little capital. Today, with the chains located on the best corners, it is suicide to attempt competition.

NO NEW LOCAL THEATERS

The same hazards beset an individual desiring to establish a local motion-picture theater. Twenty-five years ago, hundreds of ambitious young men started the exhibition of motion pictures on small capital in local neighborhoods, charging 5, 10, and 15 cents admission. Today, with chain theaters occupying preferred positions, with their vast buying power and ability to dictate terms, clearance, and even admission prices of competitors, individual attempts at competition merely invite early bankruptcy. There is no more certain way to lose $50,000 than to build an independent local motion-picture theater.

COMPLETE ELIMINATION OF COMPETITION IN FEW YEARS

Whatever economic theory one may hold, the future must be judged by experience of the past. If the trend of the last 40 years continues for another generation, there will be a complete elimination of competition in all major industries. The management of the industrial life of the Nation will be vested in the hands of corporal's guard of businessmen, which will not be responsible to any democratic check, and whose chief aim will be multiplied profits.

ANTITRUST SUITS

New techniques must be developed with the instruments at hand; namely the antitrust laws, if such laws are to be given a fair test. The giant corporations of today have created problems of administration and enforcement which would never have been possible had the control of corporate organization been widespread rather than concentrated in the hands of a few. A few pointed illustrations from the case book of the Antitrust Division of the Department of Justice will illustrate the difficulties inherent in restoring some semblance of competition.

ALUMINUM MONOPOLY

At the present time, the Government is engaged in prosecuting the Aluminum Co. of America. That corporation owns 99 percent of the products of virgin aluminum and sells approximately 100 percent of the aluminum products offered for sale in American markets. This monopoly was built up by the purchase of plants abroad, by cartel agreements with foreign producers, and by restrictive contracts, oppressive tactics, and discriminatory prices practiced against competitors in the industry by the aluminum giant. The Government in its suit seeks, among other things, dissolution of the Aluminum Co. of America. This in itself presents difficult problems. Who will purchase the component parts of the Aluminum Co. of America in the event the Government is successful? Whole communities have been built up around certain plants of the Aluminum Co. of America. Transportation facilities have been built around these communities. Dissolution might change the entire economic picture of a whole section of the country. On the other hand, continuation of the present monopoly permits a single corporate management to dictate in perpetuity the prices to be paid by the American public for aluminum products which are necessary and essential to the life of ordinary citizens.

MOTION-PICTURE INDUSTRY

Another suit brought by the Government involves the motion-picture industry. There the eight largest producers of motion pictures own their own theaters and distribute their own product. The theaters owned by these eight chains are so located as not to compete directly with one another. The country has been districted so to speak, one chain operating in one section, another chain in another, and so forth. Independent exhibitors find it impossible to compete with the chain theaters on an equal basis due to lack of chain-buying power.

POWER OF GENERAL MOTORS

The antitrust suit now pending on appeal against the General Motors Corporation demonstrates the power of a large automobile manufacturing concern over 15,000 independent sales outlets. The control exercised by the manufacturer is such that the business of these 15,000 independent sales outlets is controlled in all its details by the manufacturer.

DIFFICULTY OF HANDLING LARGE CASES

The difficulty of handling a case of the size of that involved in aluminum is illustrated by a brief calendar history. The case was under investigation for approximately 3 years prior to the filing of the petition on April 23, 1937. On June 28–29, 1937, the issue was presented as to whether or not the defendant, Aluminum, Ltd., was transacting business, and "found" in the southern district of New York on July 16, 1937, opinion by the district judge denying motion of Aluminum, Ltd., to quash service of process; on March 2, 1938, the Government filed an application for leave to file interrogatories, on April 19, 1938, argument was had on motion to quash subpena duces tecum directed to defendant; on April 25, 1938, argument on motion of Aluminum, Ltd., objecting to portion of interrogatories; April 28, 1938, court sustained interrogatories; April 29, 1938, agents representing British, Swiss, and French aluminum companies obtained orders to show cause why subpenas duces tecum addressed to them should not be quashed; May 2–5, 1938, argument on subpenas duces tecum continued; May 5, 1938, Government moved to amend petition; May 10, 1938, court granted same; May 31, 1938, motion from one of defendants to dismiss petition; June 1, 1938, trial commenced, and is still in progress at this date, namely, March 7, 1940. Indications are that the trial will last another 6 months. After this the case will probably be carried through the circuit court of appeals on up to the United States Supreme Court.

WHO CAN COPE WITH THESE LARGE CONCERNS?

Certain concerns have become so large that an individual or another corporation cannot cope with them in a court of justice. Too much money required to try a case, too many delays. Takes too long to get justice.

Even the Government does not have the money available in the Department of Justice to handle more than a few large cases each year. It is highly desirable that a large appropriation be made to enforce antitrust laws.

NEW YORK BANKS HAVE ONE-THIRD BANK DEPOSITS OF THE ENTIRE NATION

The report of December 30, 1939, discloses that the New York City banks have deposits aggregating $20,221,262,369. This was an increase during the 12 months by the huge figure $2,887,355,469.

The ratio of deposits to capital funds in these banks was, on December 30, 1939, 9.35 to 1.

In addition, these banks have approximately $4,000,000,000 in excess reserves. This is two-thirds of the excess reserves held by all the banks in the entire country. The banks in the country are privileged to make loans equal to an average of 7 to 1 on excess reserves. There are sufficient excess reserves in this one city alone to authorize the issuance of sufficient money or credit to absolutely buy the remainder of all money-making business properties throughout the Nation that are not now owned or controlled by a few people, who own and control a few banks in this one city.

A FEW MEN CONTROLLING A FEW BANKS CONTROL THE CORPORATE WEALTH OF THE NATION

Mr. John A. Hartford, one of the principal owners of the A. & P. Co., which operates in about 40 of the 48 States, is also a director in the Guaranty Trust Co. of New York. The resources of this one bank—Guaranty Trust Co.—exceeds the resources of all the 1,455 banks in Texas, Arkansas, and Oklahoma, the population of these 3 States being approximately 11,000,000 people. There are interlocking directorates between the Guaranty Trust Co. of New York, the Chase National of New York, the Bankers Trust Co. of New York, the Chemical Bank & Trust Co. of New York, the J. P. Morgan & Co. of New York, and the New York Trust Co. The total resources of these six banks, according to the Comptroller's report for December 31, 1936, aggregate $7,409,904,000, and their total resources December 30, 1939, were $8,233,765,859. The resources of these six banks, which are closely related through interlocking directorates, one of the directors being Mr. John A. Hartford, are a billion dollars in excess of the resources of all the 3,710 banks in the 13 Southern States.

There are 24 banks in the United States, 13 of them being in New York City, that have resources equal to approximately one-third of the total resources of all the banks—16,000—in the United States. The 6 heretofore named are in this group of 24. There are close interlocking directorates between these 24 banks and the 175 nonfinancial corporations that own 58 percent of the corporate wealth of the Nation. Considerable time and thought was given to a study of this question. This study was placed in the CONGRESSIONAL RECORD June 15, 1937, and is contained in bound volumes for the first session of the Seventy-fifth Congress, pages 5777 to 5785, inclusive.

Banks under our present system as heretofore pointed out can create through their own bookkeeping systems and loan to their customers $7 for every $1 that they have as a reserve. Using this tremendous power and influence, these few banks can create sufficient money practically to control this country, and that is what they have been doing and what they are now doing.

The question is: What chance will the people, young and old, of the future have in this great country of ours if we continue to permit a few people to control so much of our country's wealth and foreclose to our people so many privileges and opportunities that they should rightfully enjoy?

A drive is now being made to legalize branch and chain banking across State lines. Mr. Hartford's Guaranty Trust of New York wants to do banking business over the entire Nation.

Tools of Democracy

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

RADIO ADDRESS BY HON. J. WILLIAM DITTER

Mr. MARTIN of Massachusetts. Mr. Speaker, I ask unanimous consent to insert in the RECORD an address of Hon. J. WILLIAM DITTER, delivered on Friday night, March 15, 1940, over the coast-to-coast blue network of the National Broadcasting Co. from station WMAL, in Washington, D. C.:

As I listened a week ago to the appeal of the President for the support, and someone has said for the forgiveness of the farmers of America, his phrase "tools of democracy" impressed me.

It carried me back to the old home—the home I loved as a boy. It wasn't pretentious. It was plain, but substantial—the kind of home you are glad to get to when you are cold and hungry and tired. Warmth and affection were to be found there always, and a welcome was assured to the wayfarer, too. The latchstring was on the outside. What it lacked in conveniences was made up for in contentment. And the beauty of that home was that father and mother made it by working for it—working from sunup until long after sundown—working together—weathering together the storms of panics and depressions with a faith unshaken and a courage undaunted.

The ring of an anvil was familiar to me as a boy, for dad was a master mechanic. He knew the strength of iron. He knew the

fineness of steel. And he knew the use—yes, and the value of tools. When I heard the President use that expression, I remembered that father told me over and over again as I watched him at his work, "Son, if you want to do a good job you must get the right tools to do it."

That was sound advice—a good rule to follow. The more I have seen of workmen, the more convinced I am that he was right. And the more I have seen of the operations of government, the more certain I am that the same rule applies to this task, just as surely as it does to every other field of endeavor. Makeshift tools make a makeshift mechanic, and makeshift methods of democracy make a makeshift government. It cannot be otherwise.

As you and I look back over the last 7 years, as we recall the devices that have been tried, the gadgets that have been used, the contrivances that have been resorted to, I am afraid that we must admit that they have been makeshift methods. Instead of being tools they have been stopgaps. Most of the time and effort has been spent in learning the tricks of the trade instead of setting ourselves to the task of learning the trade itself. We've been so busy hunting around for new tools—tools that others have discarded—tools that others have found dangerous and ineffective—tools that have disrupted production and have spoiled goods in process—tools that have turned out to be tools of despotism wherever they have been used—I say, we have been so busy looking for new tools that we have had little if any time left to go to the workbench and pick out the tools that have been tested by time and experience as safe and effective ones for freemen to use.

That, it seems to me, is where the mistake has been made. We've forgotten about the plumb lines and the levels with which we have been accustomed to build and have sought other tools to take their places. As a matter of fact, I believe, and I think you believe that the most important task that should be done, the task that you and I and every American who loves liberty and hates despotism should set himself to doing, is to size up the tools that we are to use in this job of governing ourselves. You know as well as I do that you can't lay bricks by pounding them together with a sledge hammer. And you can't build the walls of democracy by crushing them under the weight of unrestrained power. In a nutshell, you can't use the tools that every dictator has found helpful in establishing a despotism and shape a structure of freedom with them. It can't be done, for the one set will inevitably build a tyranny, the other an independence.

This task of selecting the tools with which we are to work brings us face to face with a very fundamental question—What is our political future to be? Is the unrestrained will of the majority more desirable than the limitations of tried and tested rules of procedure? Are arbitrary decisions safer than fundamental principles? Is the possibility of political confusion more inviting than the certainty of constitutional order? Are wild experiments more secure than matured experience? Is the sovereignty of the citizen to be surrendered for the supremacy of the state? I have not overstated the seriousness of the decision that must be made. Before any work can be done, before the iron can be heated or any worthwhile hammering done on the anvil, we must know what we intend to make. If we decide that our destiny depends upon the self-restraints established by recognized rules limiting the power of a man, a mob, or a majority, and protecting at all times with patient tolerance the rights of the minority, one type of tools may be used. That will mean the opportunities of freedom. On the other hand, if we are persuaded that our future rests upon the substitution of novel and attractive expedients which merit attention only because they are impulsive and impractical innovations, then entirely different tools will be needed. And that will mean the security of despotism.

Much has been made of a mandate from the people. But it should never be forgotten that the people themselves have advocated principles and established institutions of government to protect themselves against their own impulsive actions—safeguards against their own hasty conclusions and also bulwarks against the ambitions of a man or the appeal of his benevolences. Let it be remembered that a Napoleon with a mandate did not give freedom to France. Popular will cannot safely express itself directly through a mob or a master.

But in making the decision of what our destiny is to be, you and I—yes, everyone should realize that wherever substitutions, such as I have mentioned, have been made, the patient hope of a people has been turned into a fearful despair. As a matter of fact, we should be practical enough to know that we cannot hitchhike our way to happiness, nor can we thumb a ride to any Utopia. That does not mean that we would adopt a "policy of rural neglect," to quote the President's words, nor national neglect either, but that we will be sensible enough to see what will be at the end of the road.

As you heard the phrase, "tools of democracy," last Friday night, you probably remembered, as I did, another expression used by the President to illustrate the methods which he felt represented the new philosophy of government here in America. You will recall that in his annual message to the Congress in 1936, the President boasted that "new instruments of public power" had been built. You are aware, as I am aware, that as instruments of public power increase, the rights of the citizen must inevitably give way. Instruments of public power of the kind that the President referred to—instruments, that on a wider and broader scope than had ever been imagined possible, chisel away at the rights of the individual; such instruments, I say, and tools of democracy do not go together on the same workbench.

It is interesting to recall that the President, at the time he spoke of these "new instruments of public power," sounded the warning that they could become what he termed "shackles for the liberties of the people." I want to tell you in very, very simple language tonight that whether these new powers are wielded by economic autocrats, such as the President feared they might be, or by political puppets, such as they have been, the same results follow; shackles will be forged which will turn out to be "shackles for the liberties of the people." It could not be otherwise, for these "instruments of public power" become very naturally what Justice Cardozo so aptly described as "unconfined and vagrant" powers, overreaching more and more into the intimate and purely personal affairs of the citizen, and wandering around like a gypsy without any sense of restriction. You can't use a steam shovel to cultivate a flower bed no matter how efficient that shovel may be or how kind-hearted the operator. The shovel and the operator may not be harmed, but there will be little left of the roots and no hope whatever for any buds or blossom.

As we review the events of the last 7 years, it seems to me that "instruments of public power," rather than "tools of democracy," more aptly describes the program that has been followed. There were reasons for resorting to such methods. Competition was keen. Every ambitious bureaucrat had his pet hobby. Every bright brain truster had his favored theory. Instruments had to be created for them to play with.

Then, again, another reason for creating these instruments was that that which was sought to be done could not be accomplished unless powers were piled upon powers. The more regulations you want in your home the more power you will need to enforce those regulations.

It's difficult to henpeck a husband successfully unless you have the power to keep him under your thumb. And you can't browbeat a wife with safety unless you have the power to keep her subdued. Once a henpecked husband gets loose or a browbeaten wife gets independent, the honeymoon of compulsion is over. That's the great trouble with trying to start henpecking or browbeating; sooner or later come heartaches and shattered hopes. And, by the way, there are a lot of people who believe the fear of an ended honeymoon is prompting the boosters of a third-term movement.

The one dominant note here in Washington during the last 7 years has been regulation. Our salvation was to come not by faith, not by works, not by repentance or regeneration or absolution—it was to come by regulation. A philosophy of failure and futility was proclaimed which demanded not the recovery of America but its remaking.

And the more regulation that was called for the more power that was demanded for enforcement. Obviously the rights of the citizen—your rights and the rights of millions of others like you—had to give way. Did you ever stop to realize that seven times as many regulatory bodies were created during the last 7 years as had been created prior to that time? That means seven times as much power, seven times as many instruments of power, seven times the danger that tools of democracy will be discarded.

Ours is the privilege to choose today between "instruments of power" and "tools of democracy." Between these two there is no middle ground, rigid regulation, or a fuller freedom. The one, regulation, is the road to reaction; the other, freedom, is the way of liberty.

E. C. "Took" Gathings, a New Member of Congress

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. SPARKMAN. Mr. Speaker, every Member of this body had to pass through the period of being a neophyte Congressman. Every one of you had that experience during the first 2 years of service in which the new Member has very little opportunity to accomplish a great deal for his district, State, or for the Nation. Certainly he is not given any place of leadership, regardless of the qualifications he may possess. No new Member can be expected to do more than acquaint himself with the various tasks with which he is confronted and to learn the work of representing the constituents who sent him here.

Mr. Speaker, I wish to bring to the attention of this House a young man who came here for the first time only last year and who, since that time, has won the admiration, esteem, and respect of this body. I refer to the gentleman from Arkansas,

E. C. "TOOK" GATHINGS. It was my pleasure to be associated with him in college during my senior year when he entered the school as a freshman, and I have closely observed him since that time, particularly since he has been a Member of the House. He has the distinct honor of serving on five important committees—World War Veterans' Legislation, Census, Irrigation and Reclamation, Immigration and Naturalization, and Claims. There are only a very few Members who serve on as many committees. This is testimony of his willingness and desire to work. I am told by the chairmen under whom he serves that he is faithful in his attendance at the meetings of his committees, and has cheerfully performed all work assigned him to do.

I am not fully acquainted with his record with respect to his local activities in his district. I am aware of the fact that during his tenure of office here he has obtained the allocation of funds for the erection of two new post-office buildings in his district. He sponsored in the House of Representatives a bill which authorized the construction of a bridge across the Mississippi River at Helena, Ark., and assisted in the passage of legislation authorizing another river bridge at West Memphis, Ark., both bills having been enacted into law. He has urged the extension of T. V. A. lines across the Mississippi River into Arkansas; many times he has discussed this matter with me—since I am a member of the Committee on Military Affairs—and I am fully aware of his diligence in this respect. He obtained the passage through the House of legislation to commence work on the construction of a new fish hatchery in his district. He assisted in the passage of road legislation that provided more than $500,000 for the State of Arkansas in return for freeing of certain toll bridges in the State. Let me say that he also has worked zealously for legislation providing funds for parity payments and other agricultural benefits to farmers and for flood-control projects. He has constantly urged adequate benefits for veterans of the World War, their widows, orphans, and dependents.

These are a few of the things of which I have knowledge that he has effected. All and all he has accomplished a great deal in the length of time he has served his people.

I am proud, indeed, to have the opportunity of bringing these points before this body with reference to the gentleman from Arkansas, E. C. "TOOK" GATHINGS in order to illustrate the fact that even though a new arrival in Congress is restricted and circumscribed, still, if tactful and industrious, he will find it a medium through which many things flow and in which he can make himself felt and appreciated while his character and personality will be quite amply reflected.

In 1916 Champ Clark stated to this body:

THE MAKING OF A REPRESENTATIVE

REMARKS OF CHAMP CLARK AT THE WASHINGTON PRESS CLUB RECEPTION THURSDAY, MARCH 16, 1916

(Printed in the CONGRESSIONAL RECORD, March 17, 1916)

It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.

"Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

The old Charlotte district in Virginia knew this and kept John Randolph, of Roanoke, in the House till he became a great national figure. Then the Old Dominion sent him to the Senate, and General Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the "top-notchers."

Take the present House and see how long the men who hold the high places have served. I cannot name all, but a few as samples. Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker 8 years; only one man, Henry Clay, having been Speaker longer.

I am serving my twenty-second year; Minority Leader Mann is serving his twentieth year; Mr. Kitchin, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Flood, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. Slayden, chairman of the Library, his twentieth; Mr. Henry, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth; and Mr. Sparkman, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old timers. The same thing holds good with reference to members of the minority. As an illustration, Messrs. Gillette and Cooper, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress, they keep him in the harness.

The Member of longest consecutive service is called "the father of the House." Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When General Bingham announced the death of General Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairmanship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them.

One other thing: I do not know what committee assignments you new Members secured. If they are good, you are to be congratulated. If bad, do not be cast down. No congressional tenderfoot ever had poorer assignments than I had—Claims and Old Pensions—but I never complained or kicked. I went to work as though those committees suited me exactly. Here is an illustration of what may happen and how luck plays an important part. I was next to top Democrat on both Foreign Affairs and Patents for 8 years—never advanced a peg so far as committees went. Just when, at the beginning of the ninth year on those two committees, I was about to become top Democrat on Foreign Affairs, Hon. John Sharp Williams, then minority leader, assigned me to the foot of Ways and Means, and at the end of 4 years through the happenings of politics in five different States I jumped from the foot to the head of the Democratic minority on Ways and Means. So it may be with you. Events over which you have no control may advance you more rapidly than you dream of or hope for. My advice is this: "Whatever your hand finds to do, do it with your might."

What was stated in 1916 by that sterling Democrat Hon. Champ Clark holds good to this day and the present case of the gentleman from Arkansas, E. C. "TOOK" GATHINGS, should be a challenge and a promise to those arriving for the first time to become a part of the Congress of the United States of America.

Buying Power Needed to Put the Idle Millions Back to Work

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. LANDIS. Mr. Speaker, national recovery in the United States is entirely dependent upon an adequate and sustained purchasing power available to the American people. If business and industry are to be assured of the steady production of goods, with commensurate profits, and if labor is to be assured stable and sufficient employment, with living wages, purchasing power must be on a par with production.

Economic stability depends entirely upon the expansion of demand. With adequate purchasing power available, demand for commodities and services will come naturally, and this demand will force increased production, and, in turn, stabilize employment and make more work available.

The machine age is liberating employees from work. In this age it is almost impossible for a man to get a job after he reaches the age of 60. I know that over 90 percent of our people past 60 years of age have led decent, honest, and thrifty lives.

The industries of the country are running short-handed and on part time because our people do not have the money to make purchases. Millions who are buying are buying only the barest necessities of life. We need important market builders in America to supply themselves liberally with the material things that go toward the making of a comfortable existence. Those who cannot actively engage in the production of wealth should not be deprived of the opportunity to create and maintain the market on which the welfare of all the rest of us depends.

How often have we seen men and women alike stripped of their savings? Family sickness, costly operations, the necessity of relatives, investment failures, business-agent betrayals, fires, and many other kinds of misfortunes have taken away their life's savings.

The present condition of our old folks is not due to their fault, for they are the victims of an industrial system for which they are not responsible. When the wage earner has toiled for 40 years or more he and she should be retired with a pension that will enable them to live in comfort the rest of their days. The United States, for years, has been conserving land, forests, oil, minerals, and wild game. I believe it is time we were conserving human beings. We owe a duty to our old folks and we can perform this duty on a pay-as-you-go basis.

Economists, industrialists, and statisticians have been pointing out that if sufficient money could be made available to the people, enough to force a demand for goods, the depression would be at an end. A 2-percent gross income tax, as proposed by the Townsend national recovery plan, will take care of our old folks and their buying power will put the younger people back to work. This tax can be collected by the Internal Revenue Department and no new bureaus or commissions will be needed.

Everyone should be willing to pay 2 percent of their gross incomes toward insuring the security of this country, the stability of their jobs, and the welfare of our people.

We now have a tax on gasoline. This tax creates a business cycle. The gas tax builds roads. Good roads increase the sale of automobiles. The sale of automobiles increases the sale of gasoline. The automobile, oil, and road-building industries have created a great demand for labor in America.

The Townsend plan is a pay-as-you-go plan. You do not have to borrow a single cent to start it. It is a plan that plays no favorites. Its benefits are available to all. Benefits to the elders will be determined by the number of eligible citizens divided into the amount of money produced by the 2-percent tax. No one knows what this amount will be. We know it will increase as business increases.

The elders receiving the annuities must buy American-made and American-grown products. The greatest contribution which we can make toward stabilizing our economic life would be to preserve the American market for the American farmer.

These elderly people will be able to buy better food, more and better clothing, good housing, new furniture, medical and dental care, automobiles, and many other things which Americans require. Their purchases would result in an immediate speed-up of industry and a demand for farm products. Men, long unemployed, would be called back to shop and office.

When the old folks over 60 years of age are removed from competition for jobs and when a steady market is provided for business, the demand for labor will increase. Our old folks will build or remodel their homes, which will create a demand for skilled labor.

In 1917 and 1918 we loaned billions of dollars to foreign nations, and while we never got this money back, it did create a velocity of spending in this country which gave us an era of great prosperity. Today we are loaning money to foreign nations to buy our goods. Why should we give this money to foreign nations? We should put the money in the hands of our old people and let them put the money in circulation, which will give us the much-needed buying power.

The present administration has piled up a huge public debt by borrowing vast sums of money in an attempt to stimulate trade for a temporary recovery. We have tried this plan and it has failed. We should be willing to try the Townsend plan out for 1 year. We need a plan that will give us a permanent recovery.

The Townsend plan is now pending in Congress. Every American who seeks the protection of his State and the welfare of his people, should support this plan.

The first feature of the Townsend movement is the absolute sincerity of the club members and the supporters of the plan. At the national convention last year, the delegates gave one the impression of being honest, God-fearing American citizens, intent upon a great cause. Of course, the delegates were older than the delegates in attendance at an average convention.

In this convention, every seat was filled at the start of the morning session and the delegates remained in their seats until the session had ended. There is sincerity of purpose in such conduct, just as there is sincerity of purpose in the hearts of the thousands of Townsend members.

The greatest feature of the Townsend movement is Americanism. At the present time, there are many subversive forces at work in this country, boring from within to undermine the foundations of our Republic. The agents of these foreign "isms" associate themselves with every movement that promises to gain some popularity. Once on the inside, they get themselves appointed or elected to official positions. Then, all of a sudden, unknown to the rank and file, they use the influence of the organization to promote their own schemes.

It is to the everlasting credit of the Townsend clubs and their leadership that there has been none of this in the Townsend organization.

Few organizations in the last decade have escaped these parasites who bore from within to promote their foreign "isms."

There has never been the slightest indication of it in the speech of any Townsend club member or speaker with whom I have come in contact. This fact has received much favorable comment among speakers and writers who are not connected with the Townsend movement. We should always be alert and keep it so.

The Remarkable Tergiversation of the Honorable William Clark

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1940

Mr. HART. Mr. Speaker, on Thursday of last week the House had under consideration H. R. 7079, a bill providing for the appointment of additional district and circuit court judges. Included in the bill was a provision for an additional district judge for the district of New Jersey, and also, a proviso that the first vacancy occurring in the office of district judge in each of the districts affected by the bill should not be filled.

My able colleague from New Jersey [Mr. KEAN] offered an amendment striking from the bill the additional judgeship for the New Jersey district, which amendment I successfully opposed.

In support of his position, my able colleague stated that Hon. William Clark, of the circuit court of appeals, who had been for 13 years a judge of the district court in New Jersey, was opposed to the provision of the bill under debate which he was seeking to delete. The gentleman from New Jersey also inserted in the RECORD as part of his remarks a letter addressed by Judge Clark to my good friend and distinguished colleague from New Jersey, Hon. FRED A. HARTLEY, Jr., under date of January 19, 1940, wherein that unpredictable gentleman laboriously discussed the subject matter of the bill. The following is the closing paragraph of Judge Clark's letter:

> I conclude from these recitals that the district of New Jersey has never and does not now need more than four judges, and that to add a fifth judge in a district where there has been a vacancy for 17 months would be unwise and utterly impossible of any public explanation.

Now, Mr. Speaker, my colleague who had offered the amendment to strike from the bill the provision for an additional judge in the New Jersey district, cited Judge Clark's opposition to that provision in perfect good faith. Judge Clark's letter to the gentleman from New Jersey, Congressman HARTLEY, was inserted in the RECORD by him in utter good faith. He was relying in part upon what he believed in good faith was Judge Clark's opposition to the pending provision. But did Judge Clark deal with him as one gentleman should deal with another? Did Judge Clark manifest the same good faith that is characteristic of the gentleman from New Jersey? Let us see.

At the very time that the gentleman from New Jersey [Mr. KEAN] was using Judge Clark's opposition to the pertinent section of the bill as a reason for its defeat, the senior Senator from New Jersey, Hon WILLIAM H. SMATHERS, was in possession of a letter from the quasi-eminent jurist, in which he stated—

> I might say that although I have been opposed, as you know, to the appointment of an additional judge, very recent circumstances indicate that such an appointment is justifiable if made on a temporary basis.

These "very recent circumstances" he explained as being not only the "long delay in Judge Walker's appointment," but not omitting the rancor so widely attributed to him by so many of his acquaintances, he also charged that the health of one of the sitting judges, whose name he mentioned, but who shall be nameless here, "precludes his taking his full share of the trial work in the district." Had not the long delay in Judge Walker's appointment taken place before the date of Judge Clark's letter to the gentleman from New Jersey, Congressman HARTLEY? If the eminent judge to whom he referred in his letter to Senator SMATHERS is unable to properly perform his work now because of physical infirmity, was his health any better in January last, when he wrote to the gentleman from New Jersey, Congressman HARTLEY? Yet Judge Clark stated in January that "New Jersey has never and does not now need more than four judges." The circumstances being no different in March than they were in January, he yet advised Senator SMATHERS last week as I have quoted him. What a remarkable tergiversation on the part of Judge Clark. In the language of the man on the street, which of course, Judge Clark, looking down from his Olympian heights and from the citadel of wealth wherein he dwells would not understand, the judge "took a run-out powder."

But the mean thing he did consisted in his failing to advise my colleague, whose amendment was under debate, of his change of position, though on the very day when his name was being used—without any potent effect, I might say—in support of the amendment referred to, he found time to so advise a Member of the Senate which had long ago passed a bill providing for the extra judgeship.

A survey of Judge Clark's antics on and off the bench for many years makes us wonder sometimes whether he does not often use a pinwheel for a pen and a squirrel cage for a writing table. Certainly the recent statement of Senator Edge that his sponsorship of Judge Clark was one of his political errors will be widely regarded as an indisputable truth.

What I said about Judge Clark on the floor last week told only a fraction of the story of his conduct in New Jersey. He has too often shown a tendency to meddle in politics and other matters which do not concern him. It would be better if he would devote more of his time to his judicial duties and less to criticism of his judicial colleagues and others. I think it would be a good thing if a congressional committee would investigate Judge Clark's extrajudicial statements and activities. I do not think the record would show that he has enhanced the prestige of our courts or that the bench has gained anything admirable or desirable by his occupancy of it. A judge who has political ambitions, however pitiable or laughable they may be, should resign from the bench and give full attention to them openly instead of under cover of his judicial position.

W. P. A. Appropriation Should Be Increased

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1940

ARTICLE BY ERNEST K. LINDLEY

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the appropriation for the Work Projects Administration.

Mr. Ernest Lindley, newspaperman and able student of our national affairs, presents facts which are of vital importance to every American citizen:

ERNEST LINDLEY SAYS W. P. A. APPROPRIATION SHOULD BE INCREASED

The President almost certainly will be forced, by economic conditions, to ask for more Work Projects Administration money for next year than he tentatively made room for in his Budget. If he does not ask for more, someone else will have to ask for it. For the $1,000,000,000 suggested in the Budget will not be anywhere near enough, in the light of present business prospects, to take care of the relief burden for the next fiscal year.

One billion dollars would cut almost one-third from the Work Projects Administration appropriation for the current fiscal year. The appropriation for this year was inadequate.

In brief, these are the main facts about Work Projects Administration and unemployment at the present time: About 2,300,000 workers are now enrolled. To keep within the present appropriation, 800,000 of these will have to be dropped between now and June 30. If the appropriation for next year is cut to $1,000,000,000,

an additional 600,000 will have to be dropped between July 1 and November.

This is a total reduction of 1,400,000 in the Work Projects Administration rolls. In addition, at the present time more than 1,000,000 persons are certified as in need of aid and eligible for Work Projects Administration, but cannot be given work because the funds are insufficient. Here is a total of 2,400,000 workers who need aid, but will not be able to get it by midsummer if the Work Projects Administration appropriation is held to $1,000,000,000.

This figure must be reduced, of course, by the number who obtain private employment in the meantime. Outdoor work in the spring and summer will take care of some of them. A general pick-up in business would take care of some others.

NO ECONOMIC PICK-UP IN PROSPECT

But there is not in prospect at the present time an economic improvement which would provide private jobs for 2,400,000 persons who are now on W. P. A. or are eligible for W. P. A., but won't be able to get W. P. A. jobs on a $1,000,000,000 appropriation.

There is not in prospect at the present time an economic pick-up which would create 2,400,000 additional jobs for unemployed workers of all kinds. As business picks up, workers who have been unemployed for the shortest periods usually go back to work first. There are several millions of these before you get down to the people on W. P. A. and local relief.

Last December, when the index of industrial production was the highest in our entire history—128—we still had about 9,000,000 unemployed. Six million or more of these were accounted for by the net increase in the working population since the previous high peak of production in 1929. The rest are accounted for by technological and managerial improvements, and by what might be called normal unemployment of 2,000,000 or more persons.

Now industrial production is running around 110 or a little lower. Most of the Government economists expect it to move up soon, but not sharply. An average of about 125 for the year is above the expectations of most of them.

Conservatively, it is estimated that unemployment during the fiscal year 1941 will average around 9,000,000. Every year the total working population is increasing by 500,000 or 600,000. Work must be found for these additional workers before a dent can be made in the total unemployment figure as it stood before they came onto the labor market.

COMPARISONS SHOW SEVERITY OF CUTS

The severity of the cuts already imposed upon W. P. A. and implicit in a $1,000,000,000 appropriation for next year is indicated by the following comparisons:

From 1936 through 1939 W. P. A. employed an average of 25 percent of the unemployed. (During most of this period the Federal Government also had a big P. W. A. program, providing employment by subsidizing local public works of larger size.) Now W. P. A. is employing about 22 percent of the unemployed. In July, if the appropriation is held to $1,000,000,000, W. P. A. will be employing about 16 percent of the unemployed.

On $1,000,000,000 W. P. A. can hire an average of 1,350,000 workers during the next fiscal year. The monthly expense of W. P. A. per worker employed is, on the average, about $62. This is distributed as follows: $54.25 for wages to project workers; $5.75 for materials; and $2.00 for administration.

In order to take care relatively of the greater need in the winter months, the W. P. A. rolls would have to be trimmed to less than 1,000,000 during the coming summer. To take care of the same percentage of the unemployed that it took care of during the years 1936–39, W. P. A. would need probably about $1,750,000,000 for the next fiscal year.

For political reasons, its chances of getting so much for next year are almost nil. It probably would have trouble in getting even $1,477,000,000, the sum it is spending this year. But at least that much is needed if suffering among the needy unemployed is not to become more acute or if the burden of relief on the cities and counties is not to be increased.

BILLION-DOLLAR FIGURE INHUMANLY INADEQUATE

By any reasonable reckoning, the $1,000,000,000 earmarked in the January Budget message is inhumanly inadequate, unless it is made available for spending as rapidly as needed, with the expectation of a supplementary appropriation next January.

The $1,000,000,000 figure was put down in December, when production was at a now all-time peak, and a few people thought it would go even higher during the early part of 1940. Now it is obvious that the crest of the first war boom has passed. There may be another later, if the war is fought on a greater scale. But nothing approaching a boom of great magnitude is now in sight.

Fortunately, in his January Budget message, the President left an "out." He wrote:

"Relief expenditures should be closely geared to actual needs. If conditions fail to meet our hopes, additional funds may be necessary. I may, therefore, submit revised estimates later in the session."

It is now clear that a revised estimate is imperative. Whether the President will submit it, or how large the revision will be, remains undecided. He may leave it up to the committees of Congress. They can get the figures from Colonel Harrington, W. P. A. Administrator, and other authorities. The figures, as they now stand, are impressive enough to shake the determination of the coldest-hearted advocates of economy-no-matter-what-the-consequence.

A United America—Part 8

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. THORKELSON. Mr. Speaker, in this, my eighth discourse on A United America, I desire to call attention to a statement I made in previous remarks on this same subject. I said, "The Constitution of the United States is a basic or fundamental law, in which the people provide a government to represent and administrate the United States in international relations and the States themselves nationally. The Constitution is, therefore, a basic law provided by the people to protect themselves against usurpation of liberties and rights from the three branches and from all departments of the Federal Government."

Our Government, the Republic of these United States, is unique in that the people provide their own laws and elect a government of their own choice to administrate these United States according to the power delegated by the people. In this plan the 48 States assume the most important position, for each of them is represented in the Senate, which, together with the House, exercises the chief powers in the Government of these United States.

It is this fundamental principle in our Government that was abolished when the seventeenth amendment was adopted, and that has been, since 1913, the actual cause for deterioration and disintegration of the Government of the United States. I cannot urge too strongly that this be corrected by repeal of the seventeenth amendment, and to emphasize the importance of repeal I shall quote from the Supreme Court of the United States, by Chief Justice Hughes:

"The Constitution, in all its provisions," said Chief Justice Chase in *Texas* v. *White* (1869), "looks to an indestructible Union, composed of indestructible States." The only restriction at present on the power of amending the Constitution is that no State without its consent shall be deprived of its equal suffrage in the Senate. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people (p. 118).

Those who have followed my remarks in "A United America" may recall that I have raised a serious question of constitutionality and proper legal procedure in the adoption of the seventeenth amendment. This amendment was ratified by 36 States, which is the usual procedure for ratification. The seventeenth amendment is entirely different, because it has destroyed the fundamental principles of this Republic, and that cannot be destroyed except in revolution or by the unanimous consent of the 48 States. The quotation to which I have just referred is in direct line with the opinion I have expressed.

I grant that the present Supreme Court is composed of a personnel which holds little or no regard for the Constitution and which bases its interpretations entirely upon a liberal withdrawal of rights and usurpation of power, which the people never intended to give the Supreme Court, and for which there is no provision in the Constitution of the United States. This statement is upheld by the present Chief Justice of the Supreme Court, in the book above referred to:

Congress had undertaken to prohibit the transportation in interstate commerce of goods made in a factory in which, within 30 days prior to the removal of the goods, children of a certain age had been employed. It was found that the goods in question were of themselves entirely harmless; their production in the factory was not commerce, and the power of Congress did not extend to that production. It was decided, against strong dissent, that Congress was endeavoring to control production within the State under the guise of regulating commerce among the States. Justice Day, in giving the opinion of the Court (*Hammer* v. *Dagenhart* (1918), 247 U. S. 251, 276), indicated the far-reaching result of a contrary view by pointing out that if Congress could thus regulate matters entrusted to local authority, by the prohibition of the movement of articles in interstate commerce, the power of the

States over local matters would be eliminated and our system of government would practically be destroyed (p. 156).

It was in this opinion (*Boyd* v. *United States* (1888), 116 U. S. 616) that Justice Bradley sounded his eloquent warning against permitting invasions of constitutional rights because they were of a relatively mild and but slightly offensive character; "illegitimate and unconstitutional practices get their first footing in that way, namely, by silent approaches and slight deviations from legal modes of procedure. This can only be obviated by adhering to the rule that constitutional provisions for the security of person and property should be liberally construed. A close and literal construction deprives them of half of their efficacy and leads to gradual depreciation of the right, as if it consisted more in sound than in substance. It is the duty of the courts to be watchful for the constitutional rights of the citizen, and against any stealthy encroachments thereon. Their motto should be obsta principiis" (pp. 169–170).

Much of the criticism of the Court deals with what is occasional rather than typical. In looking to the future the fundamental questions are these: Are we ready to give up a written constitution with its definition of powers? Do we desire to abandon our dual system and to confer upon a single legislature the supreme authority of the people through a completely centralized government? If we maintain our dual system and a written constitution, with the limitations essential to such a plan, do we wish to attempt to define more specifically in the Constitution the division of authority as, for example, in relation to interstate commerce? Is it likely that we could make a success of such a plan? If we prefer to retain the dual system and limited governmental powers, are we ready to give to Congress the final determination whether the States exceed the powers retained by them or whether Congress transcends the limitations of its own powers? If not, what substitute is there to suggest for the Supreme Court? Do we desire constitutional questions, if such there are to be, to be determined by political assemblies and by partisan divisions? Is there any better plan, whatever imperfections our present one may have, for securing a reasonably continuous, nonpartisan and philosophical exposition of the Constitution than by regarding it as the supreme law of the land to be applied in actual cases and controversies through the exercise of the judicial power? These are the questions which must be considered in discussing the value of the work of the Supreme Court which in a practical and systematic way enables us to draw upon our resources of reason in maintaining the balance of rights which is characteristic of the Republic (Ibid., pp. 236–237).

Charles Evans Hughes wrote a book in 1928 entitled "The Supreme Court of the United States." The above quotations, when compared with his recent opinions, show how he has surrendered vital principles of American constitutional law. The Supreme Court is no more, for 30 years of liberalism has laid it low as Caesar's ghost.

Much of the legislation that now appears before Congress is drafted upon the insufficient knowledge of disorganized and ill-balanced persons, graduates under the auspices of Felix Frankfurter, and instead of being an expression of sane law, it is simply a dream after overindulgence in liberalism such as that which is now commonly referred to as communism.

It is this sort of legislation which the Justices of the Supreme Court, in a complete about-face to all legal precepts, hold constitutional to please the New Deal. Can this be called good behavior on the part of the Supreme Court or on the part of the President of the United States? I do not think so, for the first duty of both branches is "to preserve, to protect, and defend the Constitution of the United States," and the people's rights, as so clearly set forth in that document. Article III provides:

> The Judges, both of the Supreme and inferior courts, shall hold their offices during good behaviour.

No one can deny that total departure from the Constitution is bad "behaviour," and that is cause for dismissal, not only of judges but of all public officials, including the President of the United States.

If this Nation were blessed with a Congress imbued with full responsibility of obligated duty to the people of this Nation, it would impeach each offender, one by one, until the Government was entirely free of faithless public officials.

WHAT IS A CONSTITUTION?

Justice Paterson stated the American doctrine in these words: "* * * In America the case is widely different: Every State in the Union has its constitution reduced to written exactitude and precision. What is a constitution? It is the form of government, delineated by the mighty hand of the people, in which certain first principles of fundamental laws are established. * * * The constitution fixes limits to the exercise of legislative authority, and prescribes the orbit within which it must move." Referring to the provisions of the declaration of rights of the constitution of Pennsylvania, Justice Paterson continues: "Could the legislature have annulled these articles, respecting religion, the rights of conscience, and elections by ballot? Surely no. As to these points there was no devolution of power; the authority was purposely withheld, and reserved by the people to themselves. If the legislature had passed an act declaring that, in future, there should be no trial by jury, would it have been obligatory? No. It would have been void for want of jurisdiction, or constitution extent of power. The right of trial by jury is a fundamental law, made sacred by the Constitution and cannot be legislated away. * * * I take it to be a clear position; that if a legislative act oppugns a constitutional principle, the former must give way, and be rejected on the score of repugnance. I hold it to be a position equally clear and sound, that, in such case, it will be the duty of the Court to adhere to the Constitution, and to declare the act null and void." Ibid, pages 81–82.

It is refreshing to read this paragraph, for it unequivocally upholds the people's rights as expressed in the Constitution, and it sustains public ownership in the following words:

> It is the form of government, delineated by the mighty hand of the people, in which certain first principles of fundamental laws are established.

It is now up to the Supreme Court to state why it is not adhering to these cardinal and fundamental principles, which are so ably and clearly expressed in this book written by the Chief Justice of the Supreme Court.

Mr. Speaker, it is astonishing to see the manner in which the Bill of Rights is used as a cloak for the radical and a blanket to cover and protect all groups, the radical Communist and his brother, the goyim dupes, who are now engaged in the sabotage of our industries and in the destruction of the Government of the United States. I fear an ever-increasing influx of these undesirables, for I am reasonably well-informed that the radical Socialist or Communist is not only persona non grata in several European countries but is actually looked upon as an undesirable citizen and therefore on his way out. I believe the American people object to the admission of these people, for it is their radicalism that is in reality responsible for dissension and hatreds in the United States. They appear to be unwilling to conform to the same laws that govern the majority and even ask for special legislation which is for no other purpose than to grant them greater rights than those of the majority. For example:

CIVIL REMEDIES

> Whoever shall send or transmit, or shall cause to be sent or transmitted, in interstate or foreign commerce or through the mails any written, printed, or oral communication which is defamatory of any religious, racial, national, fraternal, industrial, commercial, labor, or any other group of persons subject to the jurisdiction of the United States shall be liable for damages to members of such group. A civil action to recover such damages may be brought by any member or members of such group in behalf of all. Other members of such group shall have the right to intervene as parties plaintiff in such action. The pendency of one such action shall constitute a bar to any other action in respect to the same communication unless it appears that such pending action is not being prosecuted diligently, efficiently, or in good faith. The proceeds of any recovery in such action shall be distributed under the direction and control of the court as follows: The plaintiff or plaintiffs who incurred or contributed to the expenses of the suit shall first be recompensed for all their disbursements and the balance shall be distributed pro rata among the plaintiffs who instituted such action or intervened therein. In any such action the defenses of truth and privilege shall be available to the extent to which they are available in a civil action for libel or slander. The courts of the United States shall have jurisdiction of any action under this act.

The question which should be asked is, What particular group of people wants this legislation? Is it the Scandinavian, the English, the Irish, the German, or Italian? Certainly not. It is no one except those who are unwilling to conform to the laws of this Nation. Yes; laws to which the majority of the American people have subscribed for over a period of 151 years. Shall we, to please this alien minority, provide special legislation for them? This should be an interesting subject to the 20,000,000 of our people who are now either unemployed or on part-time employment. Members of Congress should bear in mind that legislation that grants extra legal rights to a minority is an instrument that has always been used to destroy the majority. It is the wedge that breaches the wall of sound government, and this Trojan

horse is now foot-loose and free in the United States. To enact legislation which gives a minority the legal right, under the pretense of intolerance, to persecute those who object to the destruction of our Government, is, if nothing else, a tragic betrayal of those who subscribe to the fundamental principles of this Republic.

We have already enacted laws under the pretense of censorship to control broadcasting, and Congress no doubt will be requested to enact more of this kind of legislation. Is anyone of this minority that asks for special legislation unemployed? Certainly not. They are all fully employed from the top to the bottom, yet they are not satisfied. They own the gold and control the banks which give them the privilege to use all deposit money in any manner they please. They own the national and international press. They own the moving-picture industry and the radio. Nothing except what is pleasing to them appears before the public, either in print, in pictures, or over the air. They even have sufficient power in the Government of the United States to destroy a few small publications that have had the courage to print the truth.

This same group of international financiers owns practically all of our Nation's private business and industry, including chain banks and chain stores. With the use of the people's money, they have entrenched themselves in our Nation to such extent that they can and are strangling our Nation's industries into submission. Their own people head subversive charitable and philanthropic organizations, and others are leaders in radical and destructive groups. In all these activities, their own people are employed in preference to anyone else. It is these people who are constantly shouting for help and for special legislation to protect what they call their rights, and we, like fools, provide the legislation for them.

Members of Congress should realize that when any minority asks for special legislation to protect presumptive rights, that that minority then and there serves notice on the majority that it intends to destroy the rights and privileges of the majority, and it is that situation which now confronts all of the American people.

It is this group that cuts down the American flag with a sickle and uses the Bill of Rights for a shield. They shout for the freedom of the press and for freedom of speech, a privilege which they deny to the great majority of the American people. Are the press and the radio free and fearless in telling the truth to the American people? They are not, and the people know it. There is no free expression for the great majority of our people, for we are investigated by the Justice Department and denied the very rights which the Constitution grants to all the people. This year is the time to correct this evil, by electing those to office who will "preserve, protect, and defend" all the people's rights as set forth in the Constitution.

THE BILL OF RIGHTS

I shall now discuss the Bill of Rights from the viewpoint of the people, and as it is written in the Constitution.

ARTICLE I. Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

There is little to be said as to religious rights and the free exercise thereof, for that issue has never been raised in the United States. A church which confines itself to sacred teachings and the spiritual welfare of the people is an asset in any community and should, of course, be left free to spread the word of God.

Speaking for myself and from opinions expressed by others, one of our problems is to set those right who innocently allow their names to be used as a shield or front, for people who are engaged in dissemination of racial antagonisms and hatreds. These dupes should not be deceived, for no one except liberals, socialistic radicals, and Communists would ask for sponsorship, for it is only to lend decency and respect to suspicious and questionable activities.

Fraternal orders, such as the Elks, the Odd Fellows, the Masons, Knights of Columbus, and the B'nai B'rith, do not need or ask for sponsors to provide respectability for their organizations. It is only when members of these and other organizations depart from the principles of their own groups and engage in illegal or subversive activities that sponsorship by someone who is clothed in respectability is needed. It does not matter whether such aid is given for compensation or gratuitously. The point is that it would not be required if those who ask for such protection were not engaged in un-American or subversive activities.

Those who allow their names to be used as sponsors, on letterheads or other publications, should always bear in mind that they are, if not radicals themselves, lending their names to protect those who in the end may prove their nemesis. It will also be found that when they have served the purpose of those who engaged them, they will, like others before them, be relegated into oblivion, only to be buried in their own infamy. The strangest part of it all is that in this group the names of professors and clergymen prevail, not only as sponsors, but also on the list of committees, yet not even one of them ever becomes the treasurer of the organization he faithfully serves.

FREEDOM OF SPEECH AND PEACEFUL ASSEMBLY

The people of this great Nation provided restriction of public speech and assembly in the precepts set forth in the Constitution of the United States. This is applicable to all people and includes those who are in public service, no matter whether it be in Congress or any other branch of the Government of the United States. To make this clear: I, as a Member of Congress, have the constitutional right to speak on all topics except those that would defame or destroy the character of my fellowman. I have no right under the Constitution to advocate changes or engage in dissemination of doctrines which are in conflict with those principles set forth in the Constitution of the United States. I have no right to engage in activities which have for their purpose the destruction of the Government of the United States. No assembly can ever be considered peaceful that advocates radical ideologies destructive to our Government, but must instead be considered a seditious assembly composed of revolutionaries.

All citizens have the constitutional right to denounce publicly and in assembly anyone, from the highest official to the plainest citizen, when he advocates and upholds radical doctrines that are contrary to constitutional laws. In other words, the people have a perfect right to protect themselves and their own Government from destruction, no matter whether such destructive philosophies are harbored by the highest official in the Government.

The fact that Congress has enacted legislation which may protect those who are engaged in dissemination of radical doctrines does not debar any citizen from expressing his disapproval of such laws, but he should also, to protect his own rights, denounce those who enacted such legislation. That is the right of every citizen in the United States. The fact that the people are the supreme power in this Nation gives them the right to denounce all public officials who violate their obligation "to preserve, to protect, and defend the Constitution of the United States." It is this power that gives the people the right to criticize the President of the United States, when he fails in his duty to this Nation, as severely as they would criticize a local officer in failure to protect their homes.

THE PRESS

The press should dedicate itself to the service of our people, upon whom it relies for sustenance. The press is loyal to this Nation only when it is nationalistic, and by the same token it is subversive and unpatriotic when it sells its pages to the internationalist. The press has no more right to ridicule, defame, and destroy character under the guise of a free press than an individual has to revile his fellow man and destroy the character of another under the pretense of free speech. Both should be subject to the same penalty.

The most severe penalties should be charged against those who, for reasons best known to themselves, engage in vilification, vituperation, defamation, and character assassination in order to be smart and to please those who gloat over such filth.

In concluding this discourse, I cannot refrain from expressing the hope that we will in the near future be served by a real, patriotic American press, that will expound the fundamental principles of this Government from the viewpoint of those forgotten men, the great mass of American people, who are now marking time waiting for Congress to restore sanity in the Government and security to their homes.

The Water Pollution Bill

EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. HARTER of Ohio. Mr. Speaker, many of us are interested in the ultimate passage and approval of the water pollution bill, S. 685, which passed this House on March 1. We are hopeful that the Senate will concur in the changes and amendments made by the House. It happens that the largest single chapter in point of membership in the Izaak Walton League of America is the one in my home city of Akron, Ohio. Our local chapter, as well as other Waltonians, sportsmen, and nature lovers the country over are interested in this legislation and the remedial effects it will have on water pollution in the United States. All of us feel that we have taken a step forward in the preservation of the natural resources of our country. In fact, I know of no subject of deeper concern to us as citizens of this fertile part of the world known as the United States of America than the husbanding of our natural resources and life.

I quote now the views of the Izaak Walton League of America upon this problem of conservation:

CONSERVATION AND THE IZAAK WALTON LEAGUE

"Intelligent conservation of natural resources is the most important long-time problem before the Nation today. Front-page news heads, such as war scares, labor wars, industrial depression, and the deplorable condition of the Budget may be more immediately pressing, but next year or 10 years hence they will be history, while the problem of intelligent management of natural resources will still be with us—and don't forget that they are the source of all wealth," said Kenneth A. Reid, general manager, Izaak Walton League.

Yes; the problem of properly budgeting our natural resources will be with us tomorrow, next year, next century, and on into infinity. We cannot long endure by a mere balancing of that artificial budget symbolized by money. Money, a symbol of wealth, is ultimately worth no more than its collateral—the natural resources.

Floods, droughts, and dust storms have been news features in recent years, yet the general public accepts such news as manifestations of nature, rather than of man's own folly in lack of planning a conservation budget. We have decimated vast forest areas, leaving the stumps and slash as tinder to feed great fires which not only burned the visual surface, but gnawed deep into the vitals of the earth, leaving a desolate waste, open to erosion which has, within a few decades, destroyed the major portion of our forest resources—that most reliable of all flood and drought-control guaranties. Even today, the average forest-fire loss represents a figure of $75,000,000, or sufficient lumber to build a five-room house every 100 feet on both sides of the road from New York to Chicago. This figure does not include inestimable damage to related biological values such as stream flow, animal and aquatic life, and recreation.

We have conquered the West, given its rich grasses over to the plow, only to see whole farms blown away, to be deposited, perhaps, in the Atlantic Ocean. The Sahara and Gobi deserts were once at least the equal of Kansas and Oklahoma in fertility. Have we profited by this knowledge? Under the guise of reclamation, we have drained great swamp areas which nature bestowed upon us for maintenance of water tables and valuable wildlife. The professed motive for such drainage projects has been that of producing additional farm lands, though careful scrutiny will usually show that the only gain accrued to the conservation predator (usually in the form of an unscrupulous syndicate) sponsoring the program. The invariable result has been to produce just one more desert which continues to encroach upon what was previously productive land.

Perhaps the most pitiful exploitation of all has been that of our waters. Visualize, if you can, our rivers in their pristine purity, teeming with aquatic life at the time our forefathers first set foot on this continent. Then go and look at the monstrosity which flows through the civilized section in which you live. The silver horde of salmon no longer ascends the Connecticut; the immense runs of shad now shun the Delaware; the oyster beds of Hampton Roads are fast disappearing, and 50 percent of the remainder are condemned for human use because of the disease germ which this so-called civilization has placed there. Municipalities excuse their pollution on the grounds of lack of funds with which to provide adequate treatment works, yet their administrations are perpetually sponsoring "Smith Parkways," "Brown Memorials," or some similar spectacular project of doubtful value, as memorials to the genius of the political administration in power.

Industry excuses its pollution on the grounds of "economic necessity," and pays no heed to the suggestion that waste treatment should be considered as a legitimate part of manufacturing cost which the public would be glad to repay in return for clean streams. Then comes the argument of competitive disadvantage to the industry of such States as adopted enforceable antipollution laws. The answer is obvious. Streams flow by gravity with utter disregard for artificial political boundaries, delivering their ever-increasing pollution cargo to the next user, all charges collect. For the sake of uniformity, their uses must be nationalized.

To some of us, wildlife may appear in the form of a luxury, either material or aesthetic. Nothing could be further from the truth. Wildlife, either terrestrial or aquatic, is a rather definite barometer of the fitness of land or water to sustain human life. This is not sentiment. It is a grim, scientific fact. The social, economic, aesthetic, and recreational value of wildlife is incalculable. Water incapable of supporting the higher forms of aquatic life is unfit for man or beast. The average depredations of insects represent an annual loss of $3,000,000,000 to the Nation. No control measures yet devised can even approach that of our native birds. Let's have more of them. The recreational value of wildlife alone is estimated at $1,000,000,000 per annum.

Every community, every citizen, should get behind this program of conserving and restoring our natural renewable resources, the keynote of which is to develop a national appreciation of wildlife, and a united pledge to assist in creating its greatest need—environment—in order that we ourselves may lead a fuller life and feel secure in the knowledge that we have helped lay the foundation of a more abundant America for future generations. * * * That is the program of the Izaak Walton League of America.

Federal Bureau of Investigation

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. COLMER. Mr. Speaker and Members of the House, one of the outstanding achievements of the Federal Government in the past decade, in my opinion, has been the work of the Federal Bureau of Investigation. I believe that the country, as a whole, appreciates the very fine work that this Department of our Federal Government has done; but we all realize that regardless of the achievements of human beings there are always those other human beings who are prone to criticize. And in this connection considerable ill-founded and ill-advised criticism has been made in the past few weeks of the activities of the Federal Bureau of Investigation. It was to me most gratifying to learn that the inquiry made by the Attorney General of the United States clearly and completely absolves the Federal Bureau of Investigation from even any basis of suspicion of improper action. In the full spirit of fair play, I think that we, the representatives of the people, should be just as vigorous in defending the right as in attacking what is wrong, and if an unjust attack is made, we should be

just as alert to rectify an injustice based upon misinformation as we would be to criticize when the facts warrant. For this reason, I should like to call attention to the splendid record of the Federal Bureau of Investigation under its most efficient and courageous leader and director, John Edgar Hoover.

My information leads me to the belief that the special agents of the F. B. I. would not personally, or officially, do those things in the way of brutality, third degree, and duress, with which they were charged. This is due to the fact that Director Hoover has established a high standard of qualification for the men he admits into this organization. They are lawyers, and necessarily hold to high standards of ethics, or they could not have been appointed into the service. They have been investigated thoroughly before their appointment, and only those of the highest character, reputation, and integrity are admitted to the service. These men are then trained in the high standards and ethics of the profession of law enforcement. The F. B. I. has, in fact, established these high standards by first establishing the principles of ethical law enforcement, believing in those principles, and then practicing them.

The F. B. I. trains police of cities, counties, and States in these same high standards and they, therefore, charge themselves as instructors with setting a proper example for all law-enforcement officials. The F. B. I., more than any other organization in the history of law enforcement, is professionalizing the service. They establish codes of conduct and canons of ethics for peace officers. They take oath that they will engage in no third-degree practices, duress, brutality, or similar outmoded action. They have a standing rule of giving all persons in their custody a physical examination each 24 hours. They will not tolerate any illegal or unethical practices on the part of any of their men. They believe, first, in the right type of men of courage, character, and intelligence, and then training those men in the high standards of law enforcement. In the field of law there are standards of ethics, and in the field of medicine Hippocrates prepared an oath which regulates the professional conduct of physicians. In the field of law enforcement the Federal Bureau of Investigation has prepared an oath which embodies a high standard and code of ethics in the field of law enforcement.

Developing Our Rivers For Navigation, Flood Control, Conservation, Reforestation, and Hydroelectric Power

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

ADDRESS BY HON. JOHN E. RANKIN, OF MISSISSIPPI

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD I insert an address which I delivered before the National Rivers and Harbors Congress in the Mayflower Hotel here in Washington on last Friday, March 15.

Mr. Chairman, members of the Rivers and Harbors Congress, as an ardent advocate of the development of our inland waterways, I want to urge that we do it in such a way as to bring the greatest good to the greatest number.

It should be done in such a way as to provide flood control, soil conservation, forest preservation, and the development of hydroelectric power. This power should be generated and distributed to the people throughout the country at the lowest possible rates, or at rates based upon the cost of generation, transmission, and distribution. In that way the masses of the American people who contribute the taxes for these expenditures would derive their just proportion of the benefits—whether they live in cities, in towns, in villages, or on the farm.

The hydroelectric power in our navigable streams and their tributaries is public property. It is national wealth that belongs to all the American people, and it should be used for the benefit of all. It is the greatest natural resource in all the world outside of the soil from which we live, and one that we as public servants have no right to give away or surrender to private interests.

Whoever controls the water power of this country in the years to come will control the Nation. If we lose it now it will probably be gone forever.

There is enough hydroelectric power in our navigable streams and their tributaries to electrify every home in America, including every farm home, as well as every commercial establishment, throughout the land, and then have enough left to supply a large part, if not all, of the Nation's industries.

It is one of the birthrights of the American people, and one that we must forever preserve and protect.

By developing our hydroelectric energy in this way, we will be conserving instead of exhausting a great natural resource. In that way we can develop the streams of this country so as to make them serve every possible purpose—navigation, flood control, power production, soil conservation, and the protection of our growing forests, upon which future generations must depend for their timber supply.

One of the greatest services I have ever rendered as a humble Representative in the Congress of the United States was in helping to create and promote the Tennessee Valley Authority, the greatest single development of ancient or modern times; one that serves all the purposes I have mentioned, and one that has provided the Nation with a yardstick showing what electricity should cost the ultimate consumers, which has helped to force reductions in light and power rates to the ultimate consumers of this country by more than $600,000,000.

This great enterprise is paying for itself out of the revenues derived from the sale of electric energy. At the rate we are now going, in less than 50 years the T. V. A. will have paid back to the Government with interest every single dollar invested, for this purpose, as well as all operating expenses and replacement costs, and at the same time set aside a sufficient amount to take care of all depreciations. It will never be a burden upon the taxpayers of this country for the reason that it is self-liquidating. It has demonstrated to the country what electricity should cost the man who pays the bill, and in that way has brought about rate reductions in every State in the Union; yes, in every nook and corner of this Republic, amounting, as I said, all told, to more than $600,000,000 a year.

On the other hand, let's look at a neighboring stream, the Ohio River, where we were prevented from building high dams that would have enabled us to develop its hydroelectric power and control floods, as well as improve navigation. Instead, the powers in control of this Government at that time insisted on a system of low dams that prevented the use of this stream for hydroelectric purposes, and increased rather than diminished the flood menace in that area to such an extent that losses from flood damages in the last few years have run up into the hundreds of millions of dollars.

As I have said before, electricity is the life-blood of our advancing civilization. The lower the rates, the more freely it flows, and the more freely it flows, the greater are its benefits to mankind.

It is the greatest servant the world has ever seen and the only one the man or woman of ordinary means can afford. We have enough of it going to waste in our navigable streams and their tributaries, literally running wanton to the sea, to electrify every home in America, as well as every commercial establishment, and, as I said, have enough left to supply a large portion of the Nation's industries.

This power should be developed and distributed at the minimum rates, especially to the residential consumers, whether in the cities, in the towns, in the villages, or on the farm, in order to bring light and life and comfort and hope and joy and relief from drudgery to the millions of men and women throughout the length and breadth of the land.

Instead of being socialism, as some people contend, this program is the very opposite of socialism. It is the greatest program for home building and the development of individualism upon which this Nation could embark.

It will improve the navigation of every stream to its highest degree; it will give us flood control that will save our people from those periodical disasters that recur from year to year; it will reclaim millions of acres of our richest farm lands, conserve its soil, rebuild it, and retain its productivity for the generations that are to come.

It will make America a richer, a brighter, and a better place in which to live. [Applause.]

Fish Industry of Maine

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

LETTER BY HON. RALPH O. BREWSTER, OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

MARCH 19, 1940.

NATHAN W. THOMPSON, Esq.,
85 Exchange Street, Portland, Maine.

DEAR NATE: I am very glad to know of the meeting you plan at the statehouse in Augusta on Thursday afternoon, March 28, to organize those interested in the fish industry along the coast of Maine.

In the recent hearing here in Washington to consider the best method of saving New England fishermen from being ruined by a flood of duty-free fish from Newfoundland I was very much impressed by the extent to which the Massachusetts fishing interests were organized to cope with the situation. This meant immediate and vigorous cooperation from all concerned. Representatives of fishery interests from Massachusetts joined with associations from the Great Lakes and Florida and even the Pacific Coast in urging action to save the fish industry not only of New England but of the country from this utterly unfair and subsidized competition from Newfoundland.

Maine was represented by its congressional delegation and we led the battle but it would have been most helpful if there had been a Maine fisheries association to join with us in the fight that must be made if our great fishing industry is to be saved.

I shall look forward to being with you at Augusta on Thursday afternoon, March 28, and I feel sure there will be a most representative gathering from all along the Maine coast to join hands in building up an association that may well mean much to Maine.

Cordially yours,

RALPH O. BREWSTER,
Member of Congress.

Relief of Unemployed

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

NEWS RELEASE FROM DAVID LASSER, PRESIDENT OF THE WORKERS ALLIANCE, AND A REPLY FROM N. S. ECCLES, GOVERNOR OF THE FEDERAL RESERVE BOARD

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I have reproduced here a news release from David Lasser, president of the Workers Alliance, in reference to a letter he has written to Governor Eccles of the Federal Reserve Board. Also the answer to the letter referred to in Mr. Lasser's press release. From this it is clear that we can do much more for the unemployed than is now being done. This without raising the debt limit.

WORKERS ALLIANCE OF AMERICA,
NATIONAL HEADQUARTERS,
Washington, D. C., March 13, 1940.

HON. LEE E. GEYER,
House of Representatives, Washington, D. C.

DEAR MR. GEYER: There is enclosed herewith the material about which we spoke with you yesterday. This material includes the text of Mr. Marriner Eccles' communication to Mr. Lasser, a statement of our organization on the matter, and a statement sent to Secretary of the Treasury Morgenthau by Mr. Lasser.

Mr. Eccles' letter provides indisputable evidence that nearly $5,000,000,000 could be available for much needed social legislation, without raising the debt limit or taxes.

Without taking into consideration all the useful purposes for which this money could be used, the impending 800,000 W. P. A. lay-offs could most easily be avoided.

We would greatly appreciate your inserting into the CONGRESSIONAL RECORD as much of this material as you deem fit, together with a statement of your own, calling attention to the irony of a situation where there is money, available to avert a speedily oncoming recession, which is lying absolutely idle.

Very sincerely yours,

FRANK INGRAM,
General Secretary-Treasurer.

[Enclosure]

NEWS FROM WORKERS ALLIANCE OF AMERICA

WASHINGTON, D. C.

"With nearly $5,000,000,000 additional available without raising debt limit or new taxes," as confirmed by Secretary of Treasury Morgenthau, "the debt-limit excuse can no longer be used to cut aid to the unemployed, farmers, youth, and other needy groups," declared David Lasser, president of the Workers Alliance of America, in a telegram sent to Mr. Morgenthau from Cincinnati.

Following the release of a statement by Mr. Lasser on Monday (see attached release) pointing out that there were $5,000,000,000 in funds available for relief and other social services, Secretary of the Treasury Morgenthau, when asked concerning the validity of Mr. Lasser's statement, confirmed it.

Mr. Lasser is now on tour in the Midwestern States assisting organizations in many cities with their preparations for National "End Unemployment" Day rallies on March 23.

Mr. Lasser's telegram to Secretary of the Treasury Morgenthau, and Mr. Lasser's statement of last Monday concerning the $5,000,000,000 in additional funds follow:

"Hon. HENRY MORGENTHAU,
"Secretary of the Treasury,
"Washington, D. C.:

"Cincinnati newspaper quotes you confirming my Monday public statement and letter to me from Governor Eccles, of Federal Reserve Board, that Government has nearly $5,000,000,000 additional funds available without raising debt limit or new taxes. Obviously the debt-limit excuse can no longer be used to cut aid to unemployed, farmers, youth, and other needy groups. With new recession advancing swiftly on the Nation, it behooves those who gave President Roosevelt over-optimistic business forecasts to now admit their blunders. They should now propose use of some of the great cash resources available to increase purchasing power, provide useful work, aid farmers, youth, merchants. By enabling people to buy up some of the swollen inventories we can turn back the tides of the recession.

"DAVID LASSER,
"President, Workers Alliance of America."

In a letter from Marriner S. Eccles to David Lasser, national president of the Workers Alliance of America, released today by Mr. Lasser, it was revealed that the Federal Government has cash resources of $4,850,000,000 available for meeting current expenses without increasing taxes or the Federal-debt limit.

Mr. Eccles' letter was in response to a query from Mr. Lasser asking specifically about funds available in the gold-stabilization fund, silver funds, and the Treasury working balance.

The available funds are listed by Mr. Lasser, from Mr. Eccles' letter as follows:

Gold-stabilization fund	$2,000,000,000
Silver profits	1,500,000,000
Excess Treasury working balance	1,350,000,000
Total	4,850,000,000

Mr. Lasser, in a statement releasing the letter today declared: "This letter from the chairman of the Board of Governors of the Federal Reserve Board clearly reveals that the issue of the debt limit, as an excuse for not appropriating sufficient funds for our social needs is a lot of sound and fury signifying nothing. Mr. Eccles' letter clearly indicates that there are three immediate sources of funds, without touching the power of the administration to issue large sums of new currency. With regard to the goid-stabilization fund I have been informed that the amount available is about $2,000,000,000 without endangering our own currency one bit. 'This together with the silver fund and excess Treasury working balances makes nearly $5,000,000,000 available to hurl back the tides of new recession advancing on us; and to give purchasing power and work to needy unemployed, youth, and farmers. Knowing these facts no responsible officials or statesmen can hoard these funds or throw up his hands in helplessness allowing this new recession with its suffering and misery to engulf us."

The text of the letter from Mr. Eccles follows:

"I have your letter of February 5 in which you inquire as to cash resources available to the administration, without further legislative authority. You mention specifically the stabilization fund, the power to issue silver certificates, and the Treasury's working balance.

"Under the Gold Reserve Act the stabilization fund is available for expenditure under the direction of the Secretary of the Treasury 'for any purpose in connection with carrying out the provisions of this section, including the investment and reinvestment in direct obligations of the United States of any portions of the fund which the Secretary of the Treasury, with the approval of the President, may from time to time determine are not currently required for stabilizing the exchange value of the dollar.' I am advised, however, that it would require legislation to apply the fund to meet current expenditures.

"As to silver, I am informed that approximately $1,500,000,000 would be available by monetizing the difference between what has been paid by the Treasury for the silver and the official price of $1.29, and that this would not require legislation.

"The Treasury's working balance as of today is approximately $1,600,000,000. Tentative estimates made in our statistical division indicate that without any new financing the balance will not fall to less than $1,000,000,000 at the end of the present fiscal year and may be somewhat more than that if sales of so-called baby bonds continue at the volume at which they have been selling of late. I understand that prior to the advent of the present administration, it was not customary to keep working balances in excess of $250,000,000 or $300,000,000. In addition, as you point out, there is the unused authority, under the Thomas amendment, which provides that up to $3,000,000,000 of currency may be 'issued only for the purpose of meeting maturing Federal obligations.'

"Finally, you ask what the economic effects would be using such funds for increasing work and consumer buying power. The Government can spend only what Congress authorizes and appropriates. To the extent that these funds were used to meet such expenditures, it would avoid an increase in the public debt but consumer buying power in the hands of the low-income groups would not be increased thereby unless increased expenditures were voted by Congress.

"Very truly yours,

"M. S. ECCLES, *Chairman.*"

Appropriation for National Youth Administration

EXTENSION OF REMARKS
OF
HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1940

Mr. HENDRICKS. Mr. Speaker, and Members of the House, I wish to submit for the RECORD a letter from Dr. John J. Tigert, president of the University of Florida, president of the National Association of State Universities, and former United States Commissioner of Education, in regard to the proposed cuts in the appropriation for the National Youth Administration. Dr. Tigert certainly should be familiar with the educational problems of this Nation, and I think that his letter sets forth clearly the reasons why the appropriation for the National Youth Administration should not be cut below the nearly $12,000,000 which has been requested by Mr. Aubrey Williams, Administrator.

The letter follows:

NATIONAL ASSOCIATION OF STATE UNIVERSITIES,
Gainesville, Fla., March 7, 1940.

Hon. JOE HENDRICKS,
House Office Building, Washington, D. C.

DEAR MR. HENDRICKS: I am writing to you and asking that you support restoration of Federal funds which pay part of the expenses of some college students under the National Youth Administration. A cut of 15 percent was planned on the N. Y. A. budget, and this item was cut 32.4 percent, much more than any other program in the N. Y. A. budget. I appealed to the presidents of the colleges, and they were practically unanimous in their desire to have this program maintained.

Mr. Aubrey Williams has revised his budget and made the cut in the college program similar to the cut in the other programs in his department. He is now proposing a cut of 16.6 percent on the out-of-school work program, school work program, and college and graduate work program. He has made very little reduction in the administrative costs of his department.

Those of us in the colleges and universities cite the following reasons for supporting the N. Y. A. scholarships in the colleges and universities:

1. This is a good investment or insurance by the Government for providing good citizenship and will guard against some of the social evils we are now trying to correct.

2. There are a good many more students asking for this aid than can be helped. The scholarship of this group of students is considerably higher than the average in all the institutions from which we have reports.

3. Appointments for N. Y. A. scholarships are made on a basis of need, character, and scholarship. The appointments are on the principle of merit and are nonpolitical.

4. If these scholarships are not continued, reports to us indicate that most of these students will have to drop out of college. They will either join the ranks of the unemployed or they will displace adult labor in the market.

5. The Government pays on the average less than $100 per student on these scholarships, and yet this keeps the student in school. The States spend a good deal more on them than the Government.

6. If the Federal support of these scholarships is to be reduced, it should be done gradually. A student who in is his junior or senior year should be allowed to finish.

7. The Government has to pay the entire expense of enrollees in C. C. C. camps. We believe heartily in that program, but the cost will run from $500 to $1,000 per enrollee.

8. We also believe in old-age pensions, but the investment that the Government is making in old-age pensions will not yield the return of the investment in these young students, who are to be the citizens and leaders of tomorrow.

The total allotment for college and graduate work for the academic year 1939–40 amounts to $14,038,268. Mr. Williams in his estimates cut this to approximately $9,100,000, or a reduction of 32.4 percent, while other programs in his budget remained with much smaller reductions. He has now revised his budget so that nearly $12,000,000 will be available for the college work. We are certainly glad that we are not being discriminated against now, but we hope to maintain the present appropriation, without asking for any additional funds from outside. In Florida there are 15 colleges and universities receiving assistance, with a total student quota of 1,026.

Your cooperation in maintaining this very important program will be greatly appreciated.

Cordially yours,

JNO. J. TIGERT, *President.*

I also wish to call to the attention of the Members of this House a letter written to me by Dr. W. S. Allen, former vice president of Baylor University of Texas and now president of John B. Stetson University in my home town of De Land, Fla., and a recognized educator throughout the Southern States, concerning this same problem. I, of course, have observed the work of the National Youth Administration and do not believe that there is a more deserving agency for which we are making appropriations. The National Youth Administration has done splendid work, and I, for one, intend to support them in a reasonable appropriation at this time and continue to support them in the future. We can either assist the young people of this Nation to become good citizens now or permit them to go on relief or become criminals in the future.

JOHN B. STETSON UNIVERSITY,
De Land, Fla., March 11, 1940.

Hon. JOE HENDRICKS,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN HENDRICKS: Information has come to me that Congress is considering reducing the amount now being appropriated for the aid of high-school and college students. In my opinion, the aid being furnished young men and women who are worthy but who are unable to pay all their educational expenses is one of the most constructive pieces of work being done by the administration. Thousands of students over the country could not be in college today except for this help.

I am writing to urge that you use your influence to keep the N. Y. A. quota at the present level. I am for economy in government, but I do not believe economy should begin at the expense of the education of our citizens.

Every good wish.

Sincerely,

W. S. ALLEN, *President.*

Government by a Minority is Un-American

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1940

RADIO ADDRESS BY HON. LEE E. GEYER OF CALIFORNIA

Mr. GEYER of California. Mr. Speaker, on March 13 I made a speech over a national radio network explaining how

the poll tax affects our democratic institutions. Letters have poured into my office asking that the text of that speech be provided to every Member of Congress and to the public, and I am, therefore, including this address under the permission granted me to extend my remarks:

My friends, I am grateful to the National Broadcasting Co. for this opportunity. Sometime ago, Walter Winchell, both over the air and through his columns, complimented this speaker for the stand he takes on real Americanism. Tonight, I am going to discuss Americanism. I am going to discuss a certain institution that I believe to be most un-American in its effects.

In our American democracy, no political right is so sacred to us as the right to vote and thus take our part in the affairs of government. It is through the use of the ballot that we attempt to right our wrongs. That is the American way. When a large group of people are denied the use of the vote to correct existing evils, it is then that their thoughts naturally fly to other means of getting justice. Someone has said, I believe it was Jefferson, that so long as freedom of expression, followed by unrestricted suffrage is allowed, the people will never turn from the democratic way.

POLL TAX POLITICS

What is this un-American institution of which I speak? It is the use of the poll tax as a prerequisite to voting. While this tax on the privilege of voting is a relic of Roman serfdom, it exists today in no place in the world except Turkey, Persia, China, and eight Southern States in the United States, so far as I have been able to determine. The States that still cling to this outmoded system of suffrage restriction are: Alabama, Arkansas, Georgia, Mississippi, South Carolina, Texas, Tennessee, and Virginia. All are Southern States, and are within the section of the country that the President has called America's No. 1 economic problem.

In these eight States a fee is charged before the qualified voter is permitted to exercise his franchise. This tax ranges from $1 to $3. In some States—Alabama, for example—it is cumulative; that is, if one has not paid for several years—say, 10—he must pay $15 before he can vote, which is $1.50 for every year missed. Is it any wonder that so few people in the section of the country which contains our lowest income groups find it possible to exercise their American privilege of voting? Let us cite a few figures.

ELECTION BY A MINORITY

The number of people who actually vote, compared to the total population of voting age, gives us a fair measure of democracy at work. For the Nation as a whole, at the time of the last census, this figured out to 61½ percent; that is, 61½ percent of our adult citizens actually took part in the elections—a clear majority deciding the affairs of our Nation. This is democracy—majority rule. Now take the 11 States that then voted under the poll-tax system—divide the sheep from the goats. What do we find? Instead of 61½ percent in these States, only 35 percent voted. But in the other 37 States the voting strength was 70 percent—70 percent for the non-poll-tax States as against 36 percent for the poll-tax States. My friends, that is government by the minority—not by the majority. That is un-American.

The percentages I have just given take the 1930 census figures and the 1932 elections. Between 1932 and 1936 two States abolished the poll tax as a voting requirement—Pennsylvania in 1933 and Louisiana in 1934. What does the 1936 election show? Still a minority voting in the nine poll-tax States and a substantial majority in the non-poll-tax States—24 percent for the poll-tax States against 72 percent in the other States. In 1938 the Legislature of Florida abolished the poll tax. Now there are but eight States where that antiquated voting system remains.

Let us look further. In the 1936 election, in Virginia, a poll-tax State, 25.7 percent voted, while in a bordering State, West Virginia, 92 percent of all adults went to the polls. New Mexico, a non-poll-tax State, voted 94 percent of its eligibles, while its neighbor, Texas, a poll-tax State, voted but 26.2 percent. Can it be said truthfully that these people live in a democracy?

OF NATIONAL CONCERN

You ask perhaps why the National Congress should concern itself with purely local conditions. Why not allow each State to correct its own election laws? There are two very simple answers to this. The first is economic—with modern methods of transportation and communication, no section of the country can live to itself. What affects one section adversely must be reflected in other parts of the country. If the cotton crop of the South should fail, for instance, the Nation would suffer because of the shortage. If the tractor drives the Joads out of Oklahoma, California's relief load grows proportionately. The second reason is political. If some sections send Representatives to the National Congress who feel no responsibility toward the submerged third, because this third may neither reward nor punish them at the next election, it will naturally become very difficult to put through the Congress Federal legislation for the benefit of these groups.

A SOUTHERN STATESMAN BEARS WITNESS

This difficulty was ably exposed by that outstanding southerner, my colleague, Senator CLAUDE PEPPER, in a speech in the Senate on August 5, last. The Senator from Florida accused certain Democratic Party politicians of joining in an alliance with the Republican Party to wreck the New Deal. I quote a few paragraphs from that memorable speech. These are his words:

"I accuse that designing alliance with a deliberate attempt to sabotage the first real effort ever made in this Nation to secure for the workers of America industrial democracy and economic emancipation.

"I accuse that intriguing alliance of trying to strike down by emasculation and assassination the Fair Labor Standards Act, to preserve intact the unhampered power of the unconscionable employers who would sweat their fortunes out of the nonresisting bodies of men, women, and children, and wring their dirty dividends from the misery of their fellow citizens, even in their own communities.

"I accuse this pharisaical alliance with hypocritical lip service to the cause of constitutional government, while they used the lives, the fortunes, and the future of the men, women, and children of America as a pawn in a vicious game of petty, personal, partisan politics.

"I accuse this alliance for profit, with having sacrificed the best interests of their States, their regions, their businesses, professions, and their country in order to kill this administration and carve up its corpse for personal, political aggrandizement. I accuse them of undermining their Government from within, of trying to throttle the democratic process to defeat the will of the people, and perpetuate the dictatorship of a privileged class."

POLL TAX ENDANGERS SOCIAL LEGISLATION

There is a startling story to be told in this connection, but I must leave that to others. It is no uncommon occurrence for a Member of Congress from the poll-tax States to be elected with as few votes as 5,000, yet these 5,000 people have as much to say in Government affairs as the 150,000 who send their Representative from some non-poll-tax district. The vote of their Representative counts just as much. In fact, the influence of the poll-tax Representative is usually greater, for his tenure of office is much longer on the average. It is easy to service with satisfaction a special class, such as the great plantation owners and their hangers-on, who might make up a majority of those able to pay the poll tax. Seniority means much in the Halls of Congress.

Anticipation of possibilities such as these prompted our forefathers to include in the Federal Constitution article IV, section 4: "The United States shall guarantee to every State in the Union a republican form of government." I say to you that before the Congress of this Nation, of which I am a Member, can put on the statute books and retain there legislation protecting the rights of labor, the small-business man, the farmer, the different racial groups, the unemployed, our young people, and our aged, the poll tax must be done away with in those States where it now exists. The politician who need not take these groups into account on election day need pay no attention to their cries of distress during a session of the Congress.

THEY NEED A HELPING HAND

As to leaving the matter to the States themselves, shall we tell the disfranchised majority they must make bricks without straw? The majority in those States have no vote. Will we give them a helping hand or will we tell them to pull themselves up by their bootstraps? Is there a more fertile ground in which the seeds of un-Americanism can thrive than in a section of the country where 63 percent of the white population and 98 percent of the colored are denied the privilege of voting, of righting their wrongs in the democratic way? And are we to tell them that the American system of government affords them no relief? Are we to make of States' rights a doctrine of sedition? Are we to leave 10,000,000 adult American citizens hanging on the horns of this dilemma, saying, on the one hand, "right your wrongs by the vote," while on the other hand saying, "the majority shall not vote"? No, friends; such an interpretation of the States' rights doctrine is trickery. The people of these poll-tax States, caught in this vicious circle, look to the Federal Government for a way out. We must not turn our backs on them. We must not tell them to pull themselves up by their bootstraps. We must give them a helping hand now that they extend their hand to us for help. Otherwise we should not be surprised if some day they are goaded into using other methods to right their wrongs. In the history of the world, what class of overlord has voluntarily surrendered either economic or political power? If the disfranchised majority in the eight poll-tax States are to be freed from their political and economic shackles, and if this is to be done in an orderly and democratic way, they must have help from the outside. They have a right to look to a higher power than their immediate political masters. They have a right to look to the Federal Congress.

SOUTHERN INITIATIVE

At the request of the Southern Conference for Human Welfare, I have introduced into the Congress H. R. 7534, to abolish the poll tax in Federal elections. Note that the present bill deals only with the Federal elections. This bill is now being heard before a subcommittee of the House Judiciary Committee. This move already has the endorsement of the American Federation of Labor, the Congress of Industrial Organizations, some of the railway brotherhoods, the League of Women Voters groups in several Southern States, the National Negro Congress, and a number of other Nation-wide and southern State organizations.

You individuals throughout the Nation who are anxious to do something for the cause of Americanism have a chance here to really get busy. You organizations that mean what you say when you pledge allegiance to the flag—and I'm sure you do—can now do something to really make Americanism a reality. To all of you I say write individual letters and pass resolutions urging the adoption of the Geyer anti-poll-tax bill. Send these to your Representatives in Congress. Urge that this tax—the tax imposed on

Joseph and Mary at the time of the birth of the Saviour—be repealed. Now, as never before in these dark days, the people must scrutinize closely the action and votes of those elected to serve them.

Write a personal letter or a postal card this minute asking that your Congressman support the Geyer anti-poll-tax bill.

Unemployment

EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

STATEMENT BY HON. EDWARD J. NOBLE

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Edward J. Noble, Under Secretary of Commerce:

It is ironic to find newspaper columnists, business and labor statisticians, and Government officials at such variance over the facts of unemployment. As a matter of fact this country never has had an accurate and thorough picture of its unemployed. Probably one of the major reasons for this statistical void is that we never have been able to define unemployment sharply.

Following the debacle of 1929, the unemployment problem rose to major importance. Because of this, in planning the 1940 census questions, the Census Bureau, with the counsel of experts in and out of Government, devised a list of questions which would produce the most complete and comprehensive statistics on unemployment and employment ever gathered by a democracy.

Most important of the census queries aimed to resolve our uncertainty over the facts of unemployment are the two questions on income. These apply particularly to the lower brackets where unemployment is most acute. To the statistical story evolved from other questions, the income queries will add the effect of unemployment and under employment upon our national economy. They will measure the several million part-time and in-and-out workers as the degree of under employment.

Other census queries will show the number of nonworkers seeking jobs, the number of public emergency workers, the number of nonworkers not seeking jobs, new workers; the number of weeks each worker was employed during the past year; duration of unemployment of those seeking work as well as those assigned to emergency work; present occupation, industry and class of worker of all persons employed either privately or at emergency work; and previous work experience of all unemployed.

The inquiries on unemployment will even show four classifications of the nonworkers who are not seeking work, as follows: (a) in home housework, (b) in school, (c) unable to work, and (d) "other," such as retired.

The census will reveal the complete characteristics of the entire potential labor force of the Nation, now probably in excess of 50,000,000. The census of 1930 showed over 49,000,000 "gainful workers" but this classification as used in previous censuses did not show "new workers" because new workers could not report occupations.

The inquiries relating to employment and unemployment will be asked of all of the estimated 98,000,000 persons aged 14 and over.

The Farmers Are Fed Up on the New Deal

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. CLEVENGER. Mr. Speaker, the real dirt farmers of America are breaking away from the New Deal. They are tired of the waste, extravagance, and propaganda of the advocates of "the more abundant life." They begin to realize that there are a hundred thousand who are "farming the farmer" by being directly on the pay roll, to say nothing of the thousands who are "farming the farmer" indirectly.

They also know that farmers in most places are in just as bad a financial condition as they were in 1933. The farmers know that even in the Southern States like South Carolina and Mississippi there is a delinquency in Federal land-bank loans of 33 to 35 percent and in commissioner loans of 36 to 48 percent, while millions of dollars from the United States Treasury have been poured into these Southern States:

Even with subsidies of amounts equal to one-third of the assessed valuation of their farms, these Southern States are still crying for bigger and better handouts.

The following editorial from the Wausau (Wis.) Record-Herald, under date of March 16, 1940, shows the sentiment of the large percentage of the farmers of this country:

ONE BRANCH OF FARMING

Crop control is not making many converts among stock breeders, judging from the poll of 200,000 stockmen by the Breeder's Gazette, their trade publication. Replies to 200,000 questionnaires by the magazine revealed the following answers and comments by this leading publication in the field:

	Percent	
	Yes	No
Should production be controlled?	26	74
Should payments be made for soil conservation?	27	73
Should United States make parity payments to farmers?	22	78
Would you give up all farm benefit payments in the interest of a balanced Budget?	77	23

"The livestock farmers of America stand 3 to 1 in favor of an independent agriculture. They voted in that ratio against controlled production. They want a free farming enterprise.

"They stand 3 to 1 against taking pay for conserving their soil. Animal husbandmen are bent on improving their soils, anyhow, and will take their reward from the increased productivity of their acres.

"Stockmen record their opinions a little stronger than 3 to 1 as not wanting to be on the parity dole. The so-called farmers' tariff is a delusion.

"Our farmers, 3 to 1, would give up all subsidies whatsoever if that billion were entered in the national ledger as agriculture's contribution to a balanced Budget. Replies to the questionnaire express a stout faith in the future of agriculture and of America. The stock farmer has faith in his business and in himself to institute adequate recovery."

They also realize that their per capita share of the accumulated national deficit is greater than the total farm debt, onerous and crushing as that farm debt is. Certainly, getting us further in debt is not solving the problems of the American farmer. The New Deal agricultural programs are continually asking for more and more money for hand-outs, but never spend 1 minute on a program to help the farmer get a better price for what he raises.

Our National Defense

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

RADIO ADDRESS BY HON. RALPH E. CHURCH, OF ILLINOIS

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I delivered recently over the radio from Washington:

It is my privilege to address you tonight as a member of the Naval Affairs Committee of the House of Representatives, and as a member of the Republican conference committee on national defense.

Just last Monday the Republican conference in the House adopted the report of its committee on national defense. And just last Tuesday the House passed a $655,000,000 naval expansion bill, reported by the Naval Affairs Committee.

World conditions being as they are, the creation and maintenance of an adequate national defense is, of necessity, one of our major considerations. A large part of my work in Congress having been devoted to this problem, I naturally would like to discuss it with you tonight. It is understood, of course, that I am not acting as official spokesman of these committees on which I serve.

Let me say at the outset—and I cannot emphasize it too strongly—this question of national defense is in no sense a partisan issue. That does not mean we should never question the wisdom of any given policy. Nor does it mean we should submerge all honest differences of opinion on various features of our defense mechanism. On the contrary, conscientious disagreements invariably make for an improved defense and not infrequently have prevented the adoption of unwise policies. But at no time must we allow purely political considerations to influence our judgment. We must be guided solely by the dictates of enlightened and informed patriotic responsibility.

It is impossible to disassociate any scheme of national defense from principles of foreign policy. The size, nature, and extent of our armaments must necessarily be dependent upon the foreign policy they are to sustain. Armaments which would be wholly adequate for the defense of the Western Hemisphere would prove wholly inadequate for a policy of foreign intervention. Armaments which would be wholly adequate for the enforcement of the Monroe Doctrine of "America for Americans" would prove sadly insufficient for a foreign policy based on the doctrine of collective security.

The American people fervently desire that we keep out of war and that we have an impregnable defense. It is the people who in war make the supreme sacrifice. They send their sons to the battlefields. They carry the burden of war costs. As to the objective there cannot be the slightest doubt—peace and security. And it becomes the responsibility of statesmanship to pursue a policy which will best guarantee continued peace and security.

Let me pause here long enough to say that when in Europe last summer as a delegate of the United States Congress to the Interparliamentary Union Conference at Oslo, Norway, I was deeply moved by the general desire among the people of all countries to have peace. But their hopes and prayers were not fulfilled because a few men were more interested in their personal ambitions than in the desires of their people. That must never happen in America.

What, in general, should be the basic principles to follow in order to live in peace and security? First, there must be no entangling alliances, no interference, and no intervention in the affairs of other nations. In other words, we must observe a scrupulous governmental neutrality. The security and welfare of the American people here at home must at all times be our first consideration.

But more than neutrality legislation is necessary to keep us out of the present wars. It is essential that we have a calm, stable, even-tempered national leadership to give balance to public emotions—a leadership solely interested in making democracy safe here at home rather than in making "the world safe for democracy"—a leadership willing to sacrifice for the people's security all personal political advantage.

Frankly, we have not had that kind of leadership. Rather than restraint there have been reckless and ill-advised remarks. There have been threats of "quarantine" and threats of "methods short of war." There has been a willingness to take chances and to run unnecessary risks.

The second basic principle to be followed in complying with the people's demand for peace and security is the enforcement of the Monroe Doctrine against any foreign aggression. Our security lies solely in the Western Hemisphere, and our defense must be designed solely for the protection of this hemisphere.

Other guiding principles may be suggested. But these two—strict neutrality and the Monroe Doctrine—are the primary principles to which all others are corollary.

Having thus determined our foreign policy, let us proceed to an examination of elements of national defense necessary to sustain the policy. It is perfectly clear that the aim of our armament program must be solely for the defense of this hemisphere and not for participation in the power politics of Europe. At all times we must make certain that the increased armaments are designed solely for our defense and security and not for dangerous interventions in foreign affairs. For my part, I advocate the doctrine of "millions for necessary defense but not one cent for foreign aggression."

Our Republican conference committee has been making a constant dispassionate study of this problem of national defense. Our purpose is to obtain a maximum of efficiency and economy through the sound integration of the land, naval, air, and industrial segments of the Nation's armament program. We wish to make certain there is not a single weakness in our defense mechanism. At the same time we wish to make certain our expenditures for instruments of war do not go beyond our actual needs.

Appropriations for the Army and Navy constitute one of the largest items in our National Budget. It is ominous to note that expenditures for wholly unproductive instruments of war are rapidly approaching $2,000,000,000 annually. The people will willingly bear this economic burden if satisfied every dollar spent is essential to make this country secure. But we must guard against a spendthrift administration taking advantage of our natural feeling of uncertainty in a period of world crisis simply to spend money, whatever our actual defense needs.

Our Republican conference committee on national defense has submitted two reports—one adopted in February of 1939 and the other adopted by the Republican conference last Monday. Time does not permit a detailed discussion of each of these reports. But a distinct major conclusion of each of them merits emphasis.

Before this Nation can have a truly sound defense program we must, first of all, determine the area of defense. This is essential. It is the only way we can direct our whole program to the maintenance of an impregnable line of defense in both the Atlantic and Pacific through which no enemy or group of enemies can possibly penetrate. We certainly do not intend to police the world and defend the seven seas.

After a most painstaking study of the whole question, we Republicans determined our outposts and drew the defense line. It was not an arbitrary determination but rather based on practical considerations of technique in warfare and the technical aspects of military and naval strategy. In the Pacific, for instance, we found that the defense line should roughly follow the one hundred and eightieth meridian, commencing at the Aleutian Islands, passing somewhat westward of Hawaii, and thence generally southeastward to include and cover the Panama Canal. And having determined the line, we then decided what additions, to our armament strength, were necessary for that particular task.

But the present administration seems to believe that this line of defense should be deep in foreign waters. As you know, it sought to fortify the Island of Guam, 5,400 miles from our shores, and practically next door to Japan. As a member of the Committee on Naval Affairs, it was my duty to lead the fight against this extremely dangerous and wholly unnecessary step. The House supported us in our position. Admiral Hepburn, himself, had stated at the committee hearings that fortification of the island was not necessary for our defense. I have never been able to understand why the administration would take the risks fortification of Guam involved, when it was admitted on the best naval authority that it was not necessary. But the House expressed the will of the great mass of American people—our defense lies in this hemisphere, and not in foreign waters or on foreign soil.

In our second report adopted last Monday we emphasized, among other things, a factor in our national defense which has been too generally overlooked. It is not only important that we have an adequate number of soldiers and sailors, battleships and tanks, and modern equipment. It is also important—indeed, of primary importance—that we have a sound national credit.

When we entered the World War in April of 1917 our national debt stood at $1,100,000,000. In the 18 months of our participation we spent in excess of $35,000,000,000. Today our national debt approaches $44,000,000,000. Reflect for a moment on what our position would be were we today called upon to finance a war against those who might attack us. Undoubtedly we would be victorious on the military and naval fronts. Our people have the capacity and courage for untold suffering in defending their country. But we would experience defeat in victory. There would necessarily be almost unbearable taxation. There would be inflation. There would be confiscation. While successful in our defense against outside aggressors, the existing debt would make us practically helpless in defending our free institutions from the enemy of bankruptcy and chaos.

We cannot too strongly emphasize that national credit is just as much a factor in national defense as the size of the Army and Navy.

When Congress opened in January the administration asked that a 6-year, long-range program of naval expansion, involving a cost of $1,596,411,277, be authorized. It recommended a bill which would give the President and the Department virtually blanket discretion in determining the nature of the program. The Secretary of the Navy also proposed a bill that would, in effect, make the President commander in chief over all our factories and materials in peacetime.

I could not accept such recommendations. As a member of the Committee on Naval Affairs, I offered every opposition to them. As you know, the committee eliminated the discretion from the bill, reduced the 6-year program of $1,600,000,000 to a 2-year program of around $655,000,000. That amended bill received Republican support. We supported it because, as amended by the committee, it embodied essentials for our national defense, and no more.

While I cannot speak for the entire Committee on Naval Affairs, I feel confident it will never report the bill to give the President wartime powers in peacetime.

National defense is not a partisan issue. The American people are united in their desire to have an adequate national defense and to keep out of wars abroad. We must be calm but constantly vigilant. We are determined to live in peace and security, continuing to enjoy the blessings of liberty to ourselves and our posterity.

Wheeler-Lea Railroad Bill Appeals to the Farmer

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. VAN ZANDT. Mr. Speaker, within the near future the membership of this House will consider the conference report on S. 2009—the Wheeler-Lea railroad bill.

For the information of my colleagues, I have compiled facts from authentic sources which very definitely place the farmer on record as supporting this important legislation.

It is important to observe that practically every farm group in the United States favors the regulation by the Interstate Commerce Commission of the Inland Waterways.

The American Farm Bureau Federation at its annual meeting at New Orleans, December 1938, revealed their attitude by the adoption of the following resolution:

To accomplish this end requires immediate readjustment of governmental policies to provide relative treatment of different types of transportation without limiting any natural advantages accruing to any particular type where such advantages are being reflected to the public interest.

Another large organization representing the farmer—the Farmers' Union—went on record in the early part of 1939 at their convention favoring the regulation of inland waterways when they took the following position:

So far as the regulation of traffic on the river is concerned, there is no more reason why traffic thereon should not be regulated than as applied to railroads. In any important branch of our industry bad practices, such as discrimination, rates, rebates, preferences, or what not, can only be minimized through governmental regulation.

It should be further noted that various State grange organizations have favored regulation of inland waterways. For example, the Indiana State Grange, at Goshen, Ind., on October 20, 1938, declared:

Corresponding regulation of rates and service should extend to all other agencies, water, highway, and air, to the extent that they are competitive with railroads.

The Virginia State Grange, at Marion, Va., October 26, 1938, declared:

We favor a national transportation policy which will treat all agencies of transportation fairly and impartially.

The Iowa State Grange, at their 1938 convention held at Newton, Iowa, declared that:

Federal regulation of rates and service should be extended to truck lines, waterways, and pipe lines.

The Nebraska State Grange, at their 1938 convention, at its annual meeting at Broken Bow, Nebr., October 13, 1938, declared that:

The railways and all other agencies of transportation should be treated fairly and impartially.

The Ohio State Grange on Thursday, December 15, 1938, recommended:

Equality and fairness in regulation of rates and service.

Continuing this endorsement of regulation of inland waterways by organized agriculture, the following State farm bureaus are quoted:

The North Carolina Farm Bureau at Wilson, N. C., August 31, 1938, declared that—

A reasonable element of competition should be retained between railroads themselves. Corresponding regulation of rates and service should extend to all other agencies, water, highway, and air, to the extent that they are competitive with railroads and for that reason. Competition as to every agency should be fair.

The Montana State Farm Bureau on November 15, 1938, declared that—

Regulation of rates and service should apply fairly to all agencies engaged in the business of transportation for hire and competing for the same traffic, and with ample protection to shippers and the public, should leave management the necessary freedom to seek out every practical possibility for improved service and lower costs and to make required adjustments to meet changing conditions.

The Arkansas Farm Bureau at Little Rock on November 17, 1938, declared that:

We believe that the regulation of all forms of transportation—railways, waterways, highways, pipe lines, and airways—should be under one Government agency.

The California Farm Bureau at Sacramento on November 17, 1938, declared that:

The public interest demands that, in order to preserve an adequate rail transportation system, helpful legislation must be enacted relative to the rate-making power of the railroads; land-grant rates repealed; increased tolls established for inland waterways.

The Ohio Farm Bureau at Columbus, Ohio, November 17, 1938, declared that:

Equality and fairness of treatment in regulation of rates and service and in taxation among all competing forms of commercial transportation agencies—air, highway, pipe line, rail, and water.

The Mississippi Farm Bureau at Jackson, Miss., on December 3, 1938, declared that:

Regulation of rates and service should be extended to all forms of transportation alike and safety to life and property be required and assured by all transportation agencies.

The Nebraska Farm Bureau, on December 6, 1938, declared that:

We favor regulation of all types of transportation only so far as is necessary to prevent discrimination between shippers and safeguard the public interest.

The Wisconsin Farm Bureau, on December 6, 1938, at Madison, Wis., declared that:

We may establish a sound policy of transportation legislation, which will give a fair chance for each form of transportation to compete in that field of service.

The Nevada State Farm Bureau, at Reno, Nev., February 3, 1939, declared that:

Regulation of rates and service of competing agencies that is fair to all and with ample protection to shippers and the public.

The Minnesota Farm Bureau in the fall of 1938 declared that:

Equality in the matters of regulation, taxation, for general governmental purposes.

At the seventy-first fruit growers and farmers convention at Ventura, Calif., December 5 and 6, 1938, that group joined organized agriculture in support of the Wheeler-Lea railroad bill when they declared they were in favor of "regulation of water transportation."

The North Dakota Farmers' Grain Dealers Association at their national convention at Devils Lake, N. Dak., February 8, 1938, took the following position:

A reasonable element of competition should be retained between railroads themselves. Each method of transportation, if regulated, should be regulated with two things in mind—service and actual cost—in order that each kind of transportation should stand on its own feet.

The endorsement of the Wheeler-Lea bill by organized agriculture represents one of the fairest studies that have been made of this important legislation to date, emphasizing the fact that each method of transportation should be regulated by the Interstate Commerce Commission in order that each kind of transportation should stand on its own feet.

"Americans All," the Slogan

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

EDITORIAL FROM THE MICHIGAN STATE DIGEST OF DECEMBER 14, 1939

Mr. NICHOLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Michigan State Digest of December 14, 1939:

[From the Michigan State Digest of December 14, 1939]

"AMERICANS ALL" THE SLOGAN

The personal noun "American" has taken on new meaning within the past few years—even in the thinking of intelligent citizens of the United States of America—demanding a new definition of the term; calling for a concrete answer to the very pertinent question, "What, or who, is an American?"

Disregarding the rather childish discussions about the "red man," now generally accepted as merely one of the older immigrant stocks, a broad application of the term might include practically all those

persons living between the fifteenth and one hundred and seventieth meridians west of Greenwich.

This would be both a little too broad and a little too narrow, in geography as well as in fact. Geographically it would take in most of Iceland and snick a sliver off the extreme western edge of Africa, while it would leave out most of the Aleutian Islands that extend westward from Alaska.

In fact, there are many Americans living beyond those limits, and many of those living within them who are not Americans in any sense, but who continue to be Europeans, Asiatics, Africans, Oceanians, or something else not American.

With the rise of a newly generalized concept of continental Americanism that includes North America, South America, Central America, and the Antilles or West Indies, the phrase "I am an American" has come to mean little, as a matter of definition, to anyone except the user himself, thus limiting its usefulness to the broader sense or to autoconversation—which is fast becoming fashionable among those who are choosy as to the persons with whom they want to converse.

Since more than three-fourths of Cuba's exports go to the United States and more than four-fifths of her imports come from there, Cuba's prosperity, or her lack of it, is always a close reflection of economic conditions in the United States.

Economically Cuba is as much bound to the United States as if she were 1 of the 48. In that case Cuba ranks in tenth place as to area, population, and economic importance, but much higher in foreign trade if she holds her present volume.

Air, rail, and water connections put Cuba nearer New York and Atlanta than is most of the Mississippi Valley. Her trade with the United States is greater than that of France or Germany and is only exceeded by that of Canada (four times Cuba's), United Kingdom (three times Cuba's), and Japan (twice Cuba's). It is one-third as great as that of all South America and more than twice that of all Central America and the other West Indies combined.

Most public officials and a vast majority of the people of the two countries fail to realize these facts. Therefore they find it hard to understand why the United States Government should pay so much attention to the affairs of "one of those little republics."

Cuba's economy is largely up to the United States.

If her politics seem messy to those who live in the United States, it is mainly because of misinformation and refusal to make fair comparisons with the home-grown product.

Largely, again, it is because Cuba is making desperate efforts to sprint up from far behind the field, to catch up with or pass the leaders, dashing forward from the backward conditions of a repressed Spanish colony of 40 years ago to something approximately the ideal American democracy which the United States still is so far from having achieved after 150 years of independence.

Cuban politicians—statesmen, when out of office—like others of their kind the world around, see every act of a government, to which they are not bound by a pay roll, as a gross mistake, an act of bad faith or worse.

Their views make news. They are sensational. They hint or charge mysterious crimes, abuses, and the approach to catastrophic changes. News agency reporters and special correspondents grab for such views, spice them up, and dash to the cables with them, each trying to make his own story a little hotter than the other fellow's in the hope of getting the play.

Views or rebuttals offered by the other side are treated as propaganda and are handled so as to make the previous tale stand up. This system, combined with the public's tendency to believe the worst about others and feel self-righteous, produces a public attitude seldom justified by the facts. This also applies to many things besides news about Cuba.

A large part of Cuba's bad political habits can be traced directly to Spanish misrule. But another large share of them can be laid on the shoulders of Governors General sent by the United States to teach Cuba democracy during each of the periods of Cuban occupation by the United States. Or they can be tossed straight into the laps of United States Ambassadors who have exerted tremendous pressure, not always helpful, on the political and economic life of the young Republic, at whose birth Uncle Sam served as midwife and to which he still stands as stepfather.

Cubans use up a large part of their credulity on certain apocryphal "saints" whom their own church refuses to recognize. As a result, when foster-papa Uncle Sam takes a notion to spank Cuba for thumb sucking or some such childish habit, Cuba is inclined to do a bit of keyhole peeking and then indulge in self-pity.

If Cuba is not yet grown up politically, it at least is as near to being an adult nation as the United States' apron-string policy has permitted. It is high time Cuba got a chance to live her own life for a while to learn the facts of life for herself.

This does not mean she should be suddenly "put out in the snow" as in the East Lynn tradition. She should, however, be treated as a full-fledged national personality with rights and privileges, as well as duties and obligations.

In view of the fact that the resentment and distrust found throughout Spanish America toward United States economic and political influence is largely the result of the acts of certain large and very powerful United States corporations, often backed up too crudely by the armed might of their country or too brusquely by its diplomacy, less aggressive policies have been adopted during the past 20 years.

The rather sudden change from iron fist to silk glove has not been wholly convincing, nor are Spanish Americans quite sure that the results—which are what they are interested in—are very different.

There seems no good reason why the Government of the United States should not cooperate with the governments of these countries in seeing that United States business concerns operating throughout Spanish America show proper respect for the needs and feeling of these peoples.

Just as certain restraints exercised by the United States Government against flagrant abuses against competitors and consumers in the domestic field have reduced public resentment against large combinations of business and increased the total profits of such businesses, so the extension of some similar control over the actions of United States business in the Spanish American countries would break down many reserves and suspicions.

Until these countries have been thoroughly convinced they can trust United States policy and business for a fair deal, dreams of a united America cannot be made into reality.

Industry Earned Average Rate of 8.4 Percent in 1939

EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

ARTICLE BY ROBERT P. VANDERPOEL

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert P. Vanderpoel published under date of March 6, 1940, in the Chicago Evening American:

[From the Chicago Evening American of March 6, 1940]

INDUSTRY EARNED AVERAGE RATE OF 8.4 PERCENT IN 1939

(Robert P. Vanderpoel, Financial Editor)

The first 960 representative manufacturing corporations to report 1939 incomes showed that they earned an average net profit, after all charges, including depreciation, interest, taxes, and reserves, equivalent to 8.4 percent on net worth, according to a compilation of the National City Bank of New York.

These corporations last year earned an aggregate net profit of $1,281,479,000. The total net worth on January 1, 1939, was $15,181,145,000.

Within the various groups earnings ranged from 19.2 percent down to 2.4 percent. The range of the individual corporations, of course, would be larger.

A LUCRATIVE RETURN

Once more these earnings figures prove definitely that despite the high burden of taxation, despite certain other difficulties, the large American manufacturing corporations have been able to earn very lucrative returns on invested capital.

It is true that this compilation takes in only a relatively few corporations, but it should be emphasized that these corporations comprise approximately one-half of the industrial wealth and earning power of the Nation. Consequently, while they are not representative of the smaller corporations, they are representative of industry as it exists in the United States today.

FOUR-YEAR AVERAGE EIGHT AND ONE-THIRD PERCENT

This profit of 8.4 percent on net worth contrasts with 4.2 percent in the preceding year for these same corporations, or a previously reported 4.4 percent for a slightly larger group, and with an average of 8.3 percent for the 3 years, 1936, 1937, and 1938, inclusive.

In other words, for the last 4 years American industry, as represented by the upper half, has earned an average net return of slightly more than 8⅓ percent.

These figures, compiled by the National City Bank of New York, definitely disprove the assertion so frequently encountered that capital has not gone into productive enterprise because of lack of profit opportunities. Almost never in the history of this country has there been a period of 4 consecutive years in which industry has earned as lucrative a return as this.

CAPITAL SHOULD RUSH

As contrasted with the low interest rates prevailing and the enormous quantities of idle capital drawing no return at all, this profit return exceeds anything ever before witnessed.

Under the classical theory of economics capital should have rushed into industry during this period. Industrial leaders, we believe, should explain why this has not taken place. The American system of private, competitive enterprise falls down when it does not function according to this classical theory.

Organizations such as the United States Chamber of Commerce, the National Association of Manufacturers and others should be concentrating their efforts on finding why excess capital has not flown into profitable endeavor.

Concerns engaged in the drug business last year, for example, earned 19.2 percent on their invested capital. Why has there not been a rush of stagnant capital into this business?

IN HIGH BRACKETS

Concerns manufacturing household equipment earned an average of 16.7 percent. Automobile manufacturers earned an average of 16.5 percent; producers of soft drinks, 17.9; brewers, 16.9; distillers, 13.7; chemical companies, 13.8 percent.

The American banks have billions of idle funds which they are anxious to loan at rates of 2, 3, and 4 percent. Why has not some of this money been absorbed by industries able to make profits at the rate of 13 to 19 percent?

American investors have more billions which they have been putting into life-insurance trusts, savings banks, and what not, earning from 1 to around 3 percent. Why does this money not flow into industry capable of earning an average return of 8⅓ percent over the last 4 years?

Cuba's Vast Importance to the United States

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

EDITORIAL FROM THE MICHIGAN STATE DIGEST OF DECEMBER 14, 1939

Mr. NICHOLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Michigan State Digest of December 14, 1939:

[From the Michigan State Digest of December 14, 1939]

CUBA'S VAST IMPORTANCE TO THE UNITED STATES

To the average citizen of the United States Cuba is just one of a flock of "banana republics" lying to the south, generally lumped as South America or Latin America.

There are special factors that make Cuba especially important, economically and politically. Mr. Average Citizen should know a lot more than he does about Cuba. Here are a few facts:

Cuba is the largest, steadiest, closest-at-home, and most profitable customer the United States has among the Spanish-American nations, and is its largest source of supplies among them. These supplies are being produced in Cuba with United States capital, the profits going to United States investors, whose more than $1,000,000,000 of investment have produced better returns than have their smaller investments in any of the others; better than average investments within the United States itself.

Despite depressions and political disturbances of the past 20 years Cuba has merited the title of "Finland of America" in honoring of her obligations. Few countries equal her record for the post-war period or before.

If the Americas are to realize certain aspirations that they become a social, political, economic, and defensive unit to perpetuate the democratic principles that imbued the founders of the United States and inspired the liberators of the Spanish American republics, Cuba is cast for an important role in that unification by reason of having a large body of educated men whose close contacts with the United States—educational, professional, political, technical, and commercial—qualify them for understanding the viewpoints of the United States, and of the Spanish-American countries; to serve as interpreters, as well as modifiers of tendencies liable to impede mutual understanding.

There are a few United States citizens with similar qualifications—a very few, and almost none of them being utilized for such purposes—and each of the other nations has a few, but Cuba has more such men than the United States and all Spanish-American countries together.

United States policy toward Cuba has alternated between violent intervention in Cuban affairs and a hands-off attitude; the latter in cases which Cubans felt had their origins in United States action, and should have been straightened out by a continuance of such action.

Cuba's economy is so completely bound up with that of the United States that economic measures adopted, with more or less adequate attempts to buffer the effects of change in the domestic field, often catch Cuba unawares and produce dislocations for the lack of similar buffers.

Such unexpected changes often cause more or less justified protests that react harmfully in the rest of Spanish America, creating distrust of policies tending to link the national economies of the other countries with those of the United States.

Educationally, Cuba is one of the most literate nations of America. Steadily she has produced a succession of first-class minds in science and philosophy, medicine, and international law. Of the native white population reaching graduation age each year, about 15 percent obtain bachelor degrees with fully half of these going on to get higher degrees as doctors, engineers, or masters from Habana University, or the universities of the United States, England, France, or other countries.

United States universities now have scores of professors who were born in Cuba, while other Cubans hold important teaching posts in other great universities abroad.

Far from liberalizing the legal set-up in Cuba, the United States occupational governments, through their military orders and measures aimed at simplifying the enforcement of such orders, had the effect of crystallizing codes suitable to colonial administration policies, but not tending to develop citizenship, civic responsibility, nor respect by governing organisms for civil rights copied into the Constitution of Cuba from that of the United States.

All this was stamped and sealed into a sort of "sacred cow" arrangement that was considered untouchable until the Platt amendment bogey was killed 5 years ago.

With the breaking of this dam, there came a flood of equally unjust decrees, laws, dispositions, codes, and measures of a so-called social or economic nature.

Many of these soon were disregarded or modified as unworkable in their original forms. New politicians, anxious to win reputations as popular legislators with radical measures, have found that the great mass of Cuban voters are not half as radical as politicians had thought.

The new feeling that Cuba should welcome foreign capital to help develop the country's natural resources, mineral and agricultural; to build more roads, extend sanitary services, establish industries to provide for local needs and give jobs to greater numbers of Cubans. Lacking experience in the control of prices and profits on such investments, and realizing that large profits on large investments going abroad to foreign investors would keep the national economy drained, many measures have been taken that directly discourage the investment that is so badly needed.

This has brought about conflict between two general groups; those who would make it impossible for foreign investors to make profits or take them out; and those who feel that all control measures should be removed to entice new capital in.

Lacking an effective income tax, Cuba has had to depend on customs revenue for the greater part of government income.

Lacking any sort of internal bonds for investment of local capital and to serve as a basis for a national currency, Cubans who make money are limited in their choice to mortgages, buildings, a few highly promotional projects, or foreign investments. The currency is backed only by silver coins of the weight and fineness of the United States dollar, with no alternative of Government bonds or gold.

With a per capita foreign trade far greater than that of the United States—most of the products of Cuba going to the United States for the direct account of the United States companies producing them—Cuba's export balance, apparently very favorable, is limited to the amounts returned to Cuba to pay for labor performed by Cubans. This limits the payable importations to the total value of such labor.

Profits and capital accumulations, by Cubans and foreigners, go abroad along with capital withdrawals and dollar funds required for paying Government bond interest and amortization, creating a constant demand for United States dollars in exchange for Cuban pesos. This enforces a depreciation in the market price of Cuban money which further weakens Cuba's economy.

These are all problems that are subject to adjustment to the mutual benefit of Cuba and the United States, and which must be adjusted in a cooperative way before the close ties between the two countries can cease to be galling at times.

They must be adjusted effectively before the relationship between Cuba and the United States can be offered as a sample of similar ties to be established between the United States and other Spanish American countries.

How Many Unemployed?—Average Figure Is 10,000,000

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. VOORHIS of California. Mr. Speaker, the New Deal has accomplished much in bringing about reemployment. In 1933 there were some 15,000,000 people out of work, and since that year a total of some 4,200,000 young people have been added to the working force of our Nation. Today there are probably numbers around 10,000,000 out of work. That

means that some 9,200,000 new jobs have been found or developed in the last 9 years. That is the first important fact.

Alongside it, however, must be placed the corresponding and far less encouraging fact, namely, a nation that sorely needs the things they would produce if they were employed.

There has been some dispute about the number of people who are at present unemployed. Therefore I have taken the trouble to collect from a wide variety of sources the best figures on the subject I could find. These follow the estimates of the volume of unemployment on the dates indicated as made by the organizations named:

National Industrial Conference Board (December 1939)	8,428,000
Alexander Hamilton Institute (December 1939)	9,282,000
Department of Commerce (unofficial, January 1940)	10,937,000
American Federation of Labor (Jan. 15, 1940)	10,381,000
Congress of Industrial Organizations (January 1940)	11,936,000

The average of these figures—some from business, some from labor, some from Government sources—is 10,192,800.

What does this mean? It means unemployment is still America's No. 1 problem. It means its solution is the first duty of the Congress. It means that we have no business at this time to abandon the P. W. A. or to cut some 800,000 people off the W. P. A., as will be necessary on the Budget figure, or to discharge 55,000 C. C. C. boys, or reduce the N. Y. A.—not unless we have another and better program to put in their places. It means that before this Congress adjourns to go home and fight political battles, each Member should search his mind for the best answer he can find for this great problem. For the first question his people will rightly ask him will be this: "What answer have you to offer to the problem of unemployment in America?"

The editor of the Los Angeles Daily News, in his daily column entitled "Views of the News" for February 10, 1940, wrote as follows:

VIEWS OF THE NEWS

(By Manchester Boddy)

Our Government observes about every safeguard organized society can conceive in her effort to secure healthy, standardized, sound, normal, intelligent men for West Point and Annapolis. To qualify for either institution is in itself an outstanding distinction.

Col. F. C. Harrington, now Work Projects Commissioner (Washington, D. C.), is a graduate of West Point, with years of practical experience added to what he learned there. He has become as hard-headed, practical, impartial, and nonpolitical as any man I know.

I make this elaborate introduction in order that you may read the following news item with the doors to your mind wide open. You have nothing to gain by ignoring the implications plainly written into this straightforward statement on the grounds that it is concerned with a New Deal institution.

Here are highlights of Colonel Harrington's report:

"While industrial activity during December reached the highest level on record—even above that in the 'prosperity' period of 1929—there was no corresponding abatement in the pressure of the relief and unemployment problems. * * * In the face of a rise in industrial production to a level above the peak in 1929, with national income payments equaling those achieved during the 1937 recovery period, the high level of unemployment remained unchanged during the month. There was, further, an intensification of the pressure upon local relief and W. P. A. offices for assistance to the destitute and unemployed.

"Since 1929 over 6,000,000 have been added to the Nation's working force. But, because population continues to grow in the working-age brackets, more and more persons are seeking jobs each year. Unemployment remains a staggering problem.

"The relation between production and employment is steadily widening. Fewer and fewer men are needed to produce the same quantity of goods as were required a decade, or even 5 years ago. Mechanization is steadily reducing the demand for manpower per unit of output. Shorter hours of work only partially compensate for the increased efficiency.

"A great many of those currently employed are employed on a part-time basis. Hence the set-up in production which has been in evidence for the last several months has meant, to an important degree, the return of workers already employed to fulltime schedules rather than the employment of any great numbers of new workers.

"These factors are necessary to an understanding of our paradox: Why relief needs do not decline as much as business activity improves. They lead to the inevitable conclusion that we must continue a substantial program of aid to the unemployed until such time as domestic activity increases to levels above any heretofore seen.

"The labor turn-over on W. P. A. projects remained fairly even during December. The number of persons leaving the rolls in that month was 181,678, or 9.4 percent of the total employed at the beginning of the month. Of this number, 63,847 left voluntarily, the majority to accept private employment. Of the 298,955 added to the rolls in December, 66,696 came on W. P. A. for the first time."

In short, ladies and gentlemen, a competent man in a key position whence he can observe what is going on supplies valuable evidence that there is no turning back to conditions as they were, say, even a decade ago.

We are in the midst of change. Our job is to accomplish the transition as smoothly and efficiently as possible.

Legislation Pending Before Congress

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. ELLENDER. Mr. President, I ask unanimous consent to place in the RECORD a radio address delivered by the junior Senator from New York [Mr. MEAD] over station WIBX on March 17, 1940, on legislation pending before Congress, developments affecting the Mohawk Valley area, and other topics of interest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a source of deep pleasure for me to again visit Utica and to enjoy this opportunity of discussing briefly some of the legislative highlights engaging my attention at the Capitol in Washington.

You are particularly interested, of course, in developments at Washington which directly affect the beautiful Mohawk Valley area.

I have been interesting myself in the apparent necessity for a long-range, carefully worked out, remedial program of flood control along the banks of the Mohawk River and its tributaries.

In this regard a public hearing was conducted by the War Department engineers at Albany a few weeks ago * * * to determine the extent of the flood threat to this section.

Representatives of urban and rural communities appeared at that hearing and urged the need for a survey by the Government of conditions along the Mohawk which, if not corrected by remedial works, may constitute a growing menace in the future.

I am thoroughly in accord with the idea that these conditions should be made the object of a comprehensive survey, pointing to the eventual appliance of corrective measures.

To move into another field of vast local concern, I believe many of you are familiar with the technical studies and detailed work that has been already accomplished looking forward to the future establishment of an Adirondack National Park. The potential value of such a development to the Mohawk area can be immediately recognized.

Last week I discussed with the President and with other high authorities at Washington the possibility of the establishment of a national park recreational area in the Adirondacks. These conferences have so encouraged me with respect to the subject that I intend to introduce a bill for this purpose within the very near future.

There are few national-park developments in Northeastern United States, and our Adirondacks offer an ideal locale for such an undertaking.

Certainly we can depend upon widespread endorsement of a national highway system which would serve to link together the picturesque mountains of Pennsylvania, New York, New Hampshire, Vermont, and Canada. Such a parkway plan would open up the Adirondacks to its full use as a recreational area. It would be of inestimable value to this particular area.

Whether I shall press for a national park or for a national highway parkway, or for both remains at present a matter for additional judgment and study. However, I believe I shall present a national park bill so that it may be subjected to the scrutiny and counsel of all interested and affected groups. This is not a matter that is going to be adopted overnight, but it appeals to me to be eminently deserving of prompt and thorough consideration.

To dwell for a moment on another subject in which you and I are keenly concerned. * * * I wish to mention the sustained efforts that are being put forth for extension of the food-stamp plan into this section.

Most of us are acquainted with the successful operation of the Federal food-stamp program at Rochester.

Very briefly, the food-stamp plan provides an efficient, economical, and dignified method for the distribution of surplus-food commodities to our needy. Instead of going to a warehouse and accepting such foods as the welfare service may be able to provide, the needy are able, under the stamp plan, to go to their neighborhood merchant and purchase with stamps the food they feel they need. The result is a happy one for the needy, the retail merchant, and the taxpayer.

New York State, with 13,000,000 people and many large urban centers, will find the extension of the stamp plan into additional communities most beneficial. Utica, particularly, has demonstrated an active interest in the adoption of the program. I hope that it will be extended and that Utica and other cities in the State will have an opportunity to participate in its benefits.

In this connection, I might add that I have been an ardent advocate of the adoption of a plan, patterned after the successful operation of the food-stamp program, for the distribution of cotton-textile goods to our needy. I am happy to report that such a program will soon be inaugurated on an experimental basis. If it proves successful, as I am confident it will, its operation will be extended into several States. The reemployment in our textile plants as well as the relief which will be afforded to our surplus cotton, makes this plan a practical and an appealing one.

As one additional thought, I would mention, too, that I can see possibilities for the distribution of milk to our needy via the food-stamp-plan program. In this regard I have been soliciting the counsel and advice of dairy leaders in up-State New York. I am referring their suggestions to the proper officials at Washington and, if the plan develops increased interest and merit, it may be attempted on an experimental basis. Without disturbing milk prices, the increased city consumption of milk by those who need it the most, suggests itself as a commendable proposition.

As a further subject in which you are interested, I wish to mention a proposal I am sponsoring in the Senate which envisions the construction, equipment, repair, alteration, extension, and improvement of hospitals, water and sewage systems, and works for the reduction of pollution in our streams.

This bill will permit the Federal Government to make loans but no grants to public bodies and, in the case of hospitals, to privately owned, nonprofit institutions such as those operated by religious, fraternal, and educational organizations. Every cent of the money to be loaned will be repaid to the Treasury.

In view of the essential requirements of hundreds of municipalities which are not in a position to finance such projects themselves, in view of the growing realization that the Nation's health is of major contemporary concern, in view of the need for long-term, low-interest financing in instances where private financing institutions cannot assume the task, in view of employment requirements both in the skilled and unskilled fields, and in view of the imminent liquidation of the P. W. A. program which will throw additional hundreds of thousands out of gainful employment, this legislation seems to me to be both practical and timely.

I am afraid that I am dipping into too many subjects in this brief chat, but in the few moments remaining, I wish to call to your attention my bill for the aid of small-business enterprise; I consider it the most vital subject now under consideration.

It is my conviction that the small-business man has been a sadly neglected individual insofar as legislative assistance has been concerned. He is the mainstay of the Nation, the backbone of every community, large or small. If he fails in business, the result adds to unemployment and burdens the relief rolls. Widespread failure of small business and the steady growth of monopoly and big business is not going to have a wholesome effect on the Nation's economy.

Today, the average small-business man is in a desperate plight. After 10 years of credit famine, low earnings, and intensifying competition, he is not in a position to participate in the current upward industrial swing. His inventories are low; his surplus funds are negligible; his machinery is antiquated; he needs long-term capital and credit in order to purchase supplies, to meet pay rolls, to buy new equipment, to modernize and improve his plant production, to solicit new orders, and to meet his big-business competitor in the price field.

In urging the provision of means for the extension to little business of ample long-term, low-interest-rate credit, I am not placing the entire blame on the local, commercial banker who is showing a most sympathetic consideration for the "little fellow."

However, I strongly believe that immediate steps should be taken to supplement the present efforts of commercial banks to extend loans to industry.

I believe the little-business man prefers to obtain his credit locally at his own bank. He should not be forced to undergo the slow, uncertain, and expensive method of applying to the R. F. C. at Washington. Besides, the R. F. C. has not been widely helpful to small business and often proves no more liberal in its requirements than the local bank.

My small-business credit bill provides a convenient, economical, and decentralized method whereby legitimate long-term loans can be extended to small business.

I am proposing that the existing authority of the Federal Reserve banks to make loans to industry and to make commitments to banks on such loans be liberalized. I simply seek to expand the existing lending authority which was provided in 1934 by an amendment to the Federal Reserve Act offered by Senator CARTER GLASS. It is a modest, conservative plan which will not cost the Government one penny and will permit our local banks to extend loans to small business which they cannot extend today. I am talking, of course, about legitimate loans and loans for which there is reasonable assurance of repayment.

I must conclude now, but, in parting, I wish to emphasize that I am pressing forward on all fronts to provide this needed aid to small business. It is a common-sense program that deserves immediate adoption. The fate of small business is at stake.

Work of Work Projects Administration

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

ADDRESS BY COL. F. C. HARRINGTON

Mr. SCHWARTZ. Mr. President, on March 17, Col. F. C. Harrington, Commissioner of the Work Projects Administration of the Federal Works Agency, delivered an address over the Columbia Broadcasting System. The address gives valuable information concerning the amount and character of the work performed by the W. P. A. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Work Projects Administration has just finished taking an inventory of all the work it has done during the first 4½ years of its existence, that is, from July 1, 1935, up to January 1, 1940.

There are two obvious reasons why we keep a regular record of our completed work of all kinds. First, we wish to see, from year to year, what types of projects are being selected by communities. We wish to know, in terms of money expended, whether we are increasing our output of benefits for communities to the fullest extent possible. Our job is not only to spend the money appropriated to us by Congress in setting the needy unemployed to work, but to conduct those work operations in such a way as to bring the best results to our communities. I am glad to say that our records show a continual increase over the whole country in the community benefits that are being secured by the use of W. P. A. projects.

The other reason for keeping such a record is to enable us to report to the American people what results have been secured by the expenditure of their money. The inventory which we have just completed, showing accomplishments during the whole period of the existence of the W. P. A., is one which should answer many questions that the public has a right to ask. This inventory shows, first of all, what has been done in the country as a whole. Then it shows what has been done in each State. And for each State it shows what has been done in each county. The American public is entitled to this information, and it is given very specifically by this inventory.

To summarize the inventory over the radio this evening would obviously be impossible. The W. P. A. has operated some 250,000 separate projects, distributed over the whole country. The W. P. A. field of operations is far more complex than that of any private business in existence anywhere in the world. Not only do we construct roads and bridges, schools and hospitals, parks and airports, and perform various kinds of conservation work, but we also conduct classes in literacy and naturalization; we produce clothes for families on the relief rolls; we carry on traffic surveys; we aid in research work in State universities; we help communities in doing public-health work of every kind; and we cook and serve school lunches for the children of needy families. This is a brief selection of items from the list. The whole list of our different W. P. A. activities, and the figures showing our accomplishments in each branch of activity, would take up more than the radio time at my disposal this evening. Besides, it is well known to all of us that statistics, to be appreciated, should be seen and not heard.

For this reason, therefore, we are making our W. P. A. inventory report available to the press of the Nation so that the American people can see for themselves what the W. P. A. has done. This report will be sent to the press during the coming week—first the national figures, and then the State and county figures. With the cooperation of the press, there will be available to every citizen a detailed answer to the question of what we have got in return for the money spent on W. P. A. work for the unemployed.

In advance of this report I wish to speak briefly of what those figures indicate. One of the very largest of the activities in which the W. P. A. has been engaged is the construction and improvement of highways, roads, and streets. About 40 percent of all W. P. A. money has been spent on this kind of work. The total W. P. A. road construction and improvement during this 4½-year period

is 457,000 miles. I might tell you how many times so many miles would go around the world, but I think it will be more helpful if I point out that out of this total mileage of new and improved roads a very large proportion—well over 350,000 miles—is secondary, rural, and farm-to-market roads.

We are inclined to think of roads in terms of tourist traffic, and we have neglected until recently our secondary road system. Before the W. P. A. entered the picture there were numerous rural sections where roads were practically impassable to automobile traffic for weeks and even months out of the year. At such times it was difficult for children to go to school, for doctors to visit their patients, and for farmers to get their produce to market. The W. P. A., in "pulling the farmer out of the mud," has done a work of very great economic and social value.

I should like also to dwell for a moment on the significance of the figures showing how many schools have been built and improved by the W. P. A. School construction in this country was allowed to lapse during the World War, and we had not yet caught up with our needs when the depression came. In 1935 a survey by the National Education Association showed that 700,000 of our children were going to school in buildings which had been condemned as unsafe and insanitary—many of them actually fire traps. Many buildings were obsolete, many more in urgent need of repairs, and a very large number were badly overcrowded. So great were the needs that it is not surprising that there has been a widespread demand for W. P. A. projects, both for new-school construction and for the improvement and modernization of old schools. Our inventory shows that the W. P. A. has constructed 4,000 new school buildings and 1,500 additions, besides improving and modernizing 28,000 other school buildings.

Another field of community needs is that of public health. Services for the prevention and control of sickness are lacking in rural areas and are grossly inadequate in many smaller cities. While hospital beds in private rooms stand empty, thousands of people with low incomes do not receive the hospital services they need. Forty percent of the counties in the United States have no registered general hospitals. Institutions for tuberculosis and mental disease are overcrowded and inadequately supported. Every year 2,000,000 cases of serious illness go entirely without medical treatment, and hundreds of thousands of people die of preventable illnesses. There is a need for more public hospitals, more urban clinics and rural health centers, and more sanitation work.

The figures in our inventory, which show the public health activities of the W. P. A., should be read against that background. The W. P. A. has constructed 156 new public hospitals, made 66 additions to existing hospitals, and has renovated and improved 1,436 hospitals. W. P. A. workers, in an average 2-week period, administer some 250,000 general medical and dental examinations, including treatments in clinics, schools, and homes; and 80,000 special tests for specific diseases.

Examples of W. P. A. health work would fill many volumes. One such volume would be filled with the emergency health work done by the W. P. A. immediately after every one of our great disasters of flood, drought, or hurricane. Another volume would be filled with the sanitary work done by the W. P. A. The Surgeon General of the United States Public Health Service has stated that by our sanitary work in the South we have advanced malaria control by 20 years.

As a part of our assistance to community sanitation, the W. P. A. has constructed one and three-quarter million sanitary privies, most of them in what used to be called the "typhoid belt" in the rural South. Some people have laughed at this kind of work but the fact remains that since it began the typhoid death rate has been cut in half in one State after another. The same kind of sanitary work is producing good results in the fight against dysentery and hookworm. Public health authorities everywhere in the United States have praised the W. P. A. for the assistance it has given them.

Those are all the figures that I will cite this evening. I wish to turn now for a few minutes to the W. P. A. workers themselves. I want to point out that the value of the work they do is not dependent on them alone. It is to a very large extent dependent on the way projects have been planned by the communities. In general it is true that where projects are well planned, W. P. A. workers do good work.

There are some disadvantages inherent in W. P. A. work, as compared with private industry. Our work has to be done when workers are laid off from private industry, and this means that a good deal of it is done in the seasons of the year least favorable to efficient work. Also, unlike private employers, we cannot keep our workers steadily on the job until the work is done—we have to let our workers go as soon as private employment is available for them. They are glad to take private employment because the wages are higher than W. P. A. wages; but they have no choice in the matter under the law, nor have we—they must take private employment when it is available or be cut off the W. P. A. rolls. And on this point I wish to say that we have investigated thousands of reports of alleged job refusals by W. P. A. workers, and have almost invariably found that they were based on hearsay and were completely false in fact.

The conditions under which we operate are obviously different from those of private industry, and are in some respects, as I have said, very disadvantageous. Nevertheless, I am glad to say that the efficiency of our program has been steadily increasing. In view of the complexity of the W. P. A. program, and the fact that it has been operating for only 4½ years—a very short time for any large program of operations—I think we can be gratified by the progress that we have made. I note with pleasure that the word "boondoggle" is being dropped from the American vocabulary, as applied to W. P. A. work.

I think the American people are just beginning to realize how much valuable work is being accomplished for their benefit through the W. P. A. And this realization, I believe, is changing the public attitude toward the W. P. A. It has been thought of in the past by many people as a necessary evil. We knew that something had to be done about unemployment, and the W. P. A. seemed to be a stop-gap. It is when we look at the other side of the picture, and see the great community need for the kind of work that W. P. A. workers have been doing, that we realize the lack of wisdom of such a view of the W. P. A.

It is unjust for anybody to think of W. P. A. workers as recipients of public charity. They earn the money by which they support themselves and their families. They are engaged in creating wealth for our towns and counties. They are helping to build up the Nation.

Like everyone else, I would like to see America's unemployed back at work in private jobs. But there are no sound reasons to believe that this can occur within the near future.

There is still much work that needs to be done for the benefit of our communities all over the United States. We shall have unemployed workers for some time to come. It seems only reasonable that we should continue to bring the workers and the work together, and continue to make America a better place to live in. That, I believe, is and will remain our American way of dealing with the situation.

Two X's of Housing

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

ARTICLE BY MRS. DOROTHY ROSENMAN

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very interesting and thoughtful analysis of the low-cost housing problem, entitled "Two X's of Housing," by Mrs. Dorothy Rosenman, which appeared in the New York Times magazine on February 11, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine, February 11, 1940]

TWO X'S OF HOUSING—UNKNOWN QUANTITIES OF THE CITY'S SLUM-CLEARING PROBLEM ARE (1) FORGOTTEN FAMILIES AND (2) BLIGHTED NEIGHBORHOODS

(By Dorothy Rosenman)

Of New York City's 7,500,000 people, about 1,800,000, or nearly 1 in 4, live in antiquated tenements or other houses that authorities call "substandard." These below-par dwellings are scattered throughout many parts of the city, often appearing isolated, like a beggar at a feast, in the midst of modern apartments and hotels. But by far the largest number of them are in well-defined areas that would come under the statutory definition of slum.

In these areas, as the definition runs, "dwellings predominate which by reason of dilapidation, overcrowding, faulty arrangement or design, lack of ventilation, light, or sanitation facilities, or any combination of these factors, are detrimental to safety, health, or morals." The city planning commission recently marked out 32 sections of the city containing the greatest concentrations of such substandard areas. It is estimated that at least two-thirds of the 1,800,000 ill-housed people live in the antiquated houses of these sections—enough men, women, and children to fill any city in America except the 5 greatest.

How to rehouse these people in better homes is now a foremost problem. Questions like these arise: How much rent can the present slum dwellers pay? Can new homes be built to rent for that? And where, if so, should these homes be constructed?

As to rents, in the city there are five different income levels of concern to real-estate, investment, labor, and construction interests. Their family rent-paying abilities are:

RENT PER ROOM PER MONTH

Lowest income, 0 to $8.

Low income, $8 to $10.50.

Medium income, $10.50 to $14.50 (with an average maximum room rent of $12.50).

High income, $14.50 to $20.

Highest income, $20 and above.

The people living in substandard areas in the mapped sections belong not only to the first of these five groups, as is commonly

supposed, but to the next two as well. Although there are exceptions, they live there because they cannot find any better housing at prices they can afford to pay.

The plight of the second and third groups—those of low and medium income—is especially acute. They see Government agencies making a start toward erecting new housing for the lowest income group, and they see private interests providing houses for the two highest income groups. They alone remain outside the field of either Government or large-scale private building activity. They are the forgotten men—and women and children—of housing.

These forgotten people of housing may live in the better houses of the areas, in remodeled, gadget-equipped "old-law" tenements, or in the steam-heated "new-law" tenements of early vintage, constructed when daylight was a phenomenon disregarded by architects and builders. However, they live in blighted neighborhoods. Some of them might be able to pay a higher rent than they now do, but there is a very limited supply of accommodations for them in better sections, or in sections that are accessible to their places of work.

Let us visit one of the blighted areas in which these people are caught. Here are streets swarming with children who have no other playground. Vacant lots are filled with the neighborhood rubbish and debris. The area abounds with boarded-up structures that the owner has closed rather than make the alterations required by law for the tenants' safety and health. No amount of police vigilance keeps the vandal, the criminal, the prostitute, the adventuring child from prying a way into such boarded-up buildings, which thus become fire, accident, and moral hazards to the entire neighborhood.

Amid the down-at-heel tenements of the area the eye lights with some relief upon a freshly painted house front. Here, one thinks at first, is rehabilitation amid squalor. But on entering the house one finds dark, narrow, damp halls and dark, unventilated apartments that have windows in only one of their three rooms.

The house next door has no coat of paint, no fire-retarding treatment of hall and cellar ceilings. It even has the dangerous vertical-ladder fire escapes, illegal since 1934. Children, sick or well; men and women, disease ridden or infected, share common toilets in dark halls. Across the narrow street one sees conditions duplicated.

Most of the houses are unheated. They are noisome with human odors—of people living in crowded, unhealthful surroundings, in which a ray of sunshine is asked to travel too far. There are, scattered here and there, some better buildings, but the atmosphere of decay so permeates the neighborhood that it stamps them, too.

To understand the present condition of such neighborhoods it is necessary to understand their past.

The truth is that from earliest time New York's way of providing living facilities has been almost wholly unplanned. Men built only when and where they thought they could make a good profit. When waves of immigration began to sweep New York and continued into the twentieth century, landowners in the present slum areas divided and subdivided their acreage. Overingenious architects tried to use every inch of ground on which to build cheap dwellings for rental. In many cases if tenements did not cover 90 percent of a plot, the "error" was corrected by erecting rear tenements.

As time passed and the occupants of these buildings became able to move on to new neighborhoods with better living conditions, there were always others to move into the amazingly wretched houses. But no one bothered about the neighborhood as a whole. No one thought of planning to rebuild the outworn neighborhoods. The owner of the property, the mortgagee, the city itself—each worried only about its own individual problem. The city worried only about collection of taxes. The mortgagee worried only about collecting his interest. The owner was concerned only with immediate rental. He was under no compulsion to improve his property and until recent years he could still make a large profit with little or no outlay, except for taxes based on increasing city assessments.

New York, about the turn of the century, began to take inventory of the manner of its life and discard some of its earlier follies. Certain basic remedies were applied by law to the houses; no thought was given to the neighborhoods.

Beginning with 1901, State law put a stop to the building of old-law tenements and in the last decade the legislature has enacted statutes requiring that the worst conditions in such tenements—there are still nearly 60,000—be remedied by the owners. It was the practical thing to do. It will take many years to erase and rebuild the slums. During these years of transition those who must live there should be entitled to do so in comparative safety. Unfortunately compliance with these newer laws has been slow. But no matter how vigorously these amendments to the multiple dwellings law are enforced they will be but a proper patchwork to keep 500,000 families housed during a period of needed change. It will take complete reconstruction to rehabilitate the neighborhoods themselves.

It is only in the last 3 years that a beginning has been made to solve the problem of such neighborhoods, and then only a modest beginning.

The year 1937 saw the start of a Federal program of slum clearance and rehousing based on the recognition of two newly established principles: First, that blight, far from being confined to a single house, affects a whole area and, second, that improved housing for families of the lowest income group living in slums must be built with the aid of government subsidy. And as a part of this program it was provided that for each unit built for this purpose there must be a corresponding demolition of an old-law tenement.

The State and city have joined the Federal Government in the rehousing effort. Several Federal-aid projects have been built, others are under construction and more are being planned; a small city-financed project is under way, and a plan for a huge project under a new State housing program is in the making. Yet when all of these projects together are completed they will house fewer than 61,000 persons—a mere fraction of the present slum-dwellers in the lowest income group. To rehouse all of this group alone will at this rate take generations; moreover, there are not sufficient funds in the public coffers to provide the necessary subsidy. Government can do no more than begin to do the job, and to point the way. No provision at all is made for the slum families of low and medium income.

How are these forgotten men of the slums to be rehoused—these families of low and medium income?

First, it must be said that they have been neglected by private builders because the builders long have been accustomed to expect large returns on their money. They have built, not for investment, but for speculation—for quick sale, for quick turn-over of capital. They have looked for a return of 20 or 30 percent on their equity money—that part of the cost not covered by mortgage. Such a return would be impossible from medium-cost dwellings built even for the man who can pay a monthly rent of $12.50 a room. His ability to pay requires construction on a solid, secure investment basis with a return of 3½, 4, or, at the most, 6 percent on equity money. The availability of equity money is the crux of the problem of supplying homes to this vast mass of wage earners looking for new homes. No one is willing to put up equity money without a chance of making a "killing." Banks can lend only 66⅔ percent of the entire venture in mortgage, and F. H. A. can guarantee only 80 percent of a project. We are therefore faced with the fact that unless the sponsor of a building project is willing to invest either 20 percent or 33⅓ percent of the cost there will be no money to start the ball rolling.

Housing for the medium- and low-income groups must be built on an investment basis at investment interest rates on equity money rather than for speculative profits. There are practically no such private investors today. There is virtually no money available for equity investment. Therefore there is no quantity of building for this large market of renters.

Yet there is now some hope at least for the families of medium income—chauffeurs, clerks, small-shop owners, and the like. It lies in the large reservoirs of uninvested funds tucked neatly in trust companies, life-insurance companies, and banks, waiting for investment.

Legislation was enacted in 1938 allowing life-insurance companies to use up to 10 percent of their assets in acquiring land and erecting buildings. So far only the Metropolitan Life Insurance Co. has taken advantage of this law by building a large housing development on vacant land in the Bronx; but lately an effort has been made to interest other companies in using some of their funds for housing, and they are beginning to quicken to the suggestion.

There is now pending at Albany legislation that would enable savings banks to use a part of their funds in building houses that could rent for an average of $12.50 a room in Manhattan and $11 a room throughout the rest of the city and State. That would mean that a bank, instead of taking a mortgage on a housing project, could defray the cost of the entire building.

Advocates believe that if this measure is passed the savings banks will devote their efforts to rebuilding in the old slum areas and will construct enough new housing to start the redevelopment of entire neighborhoods. Once rehabilitated these areas might well again attract the higher-income levels, too. For our American cities house within easy distances of each other all economic levels of our population.

These banks, more than others, have a stake in such areas. They hold mortgages on many of the old properties and, because of foreclosure, are the actual owners of many unprofitable old tenements, boarded-up buildings, and vacant lots. They would welcome, it is thought, an opportunity to turn the present slum localities into places of useful and fertile investment—the more so since they are at present hard put to it to invest their deposits, which increased by $194,000,000 in the last year. The greatest part of this is as yet uninvested.

There still remains the problem of rehousing the low-income families—those that can pay only from $8 to $10.50 monthly rent per room. Their income is not high enough to enable them to live even in homes that may be built on the nonspeculation investment principle. Still, for even these people human ingenuity always presents the hope of an answer.

Construction costs already have been greatly reduced during the short period in which technicians in the public-housing field have been studying this problem. It is therefore well within the realm of possibility that when investment housing enters the field with its own technicians the combined efforts of constant private and public enterprise may produce new methods of decreasing costs so that the low-income group too may get new homes.

A formula must be found eventually for the rehousing of each of the poorly housed income groups. And that formula must answer the question not only of how but of where.

There are some who urge that people removed from the slums should be rehoused in outlying areas. They contend that the inhabitants of these sections should be siphoned off to the periphery of the city where land costs are infinitesimal in comparison with the high prices of the old areas—prices kept high by unrelenting assessments, at present incapable of wide reduction. They contend that land prices in the old areas will crumble away when the population is drained. When that time comes they would rebuild. Meanwhile they would have the city lend every encouragement to building in the outlying sections.

Others, interested in this question, argue that people cannot forever be moved to other camping grounds without consideration of the public factors involved. They ask, How long will it take for land costs in slum areas to reach bottom? What are the costs to the taxpayer of the city during the years of collapse development? Should the city encourage such building in outlying districts in the face of the extra tax burdens involved in establishing a new neighborhood, with all the many new public services required for all time?

The recently published report of the City Planning Commission says: "In the opinion of this commission the building of low-rent housing in new areas in this city has gone as far as it should now be permitted to go. The time has now come for replacing appropriately located obsolescent areas with modern housing for low-income groups, particularly where this can be accomplished within walking distance of opportunities for employment."

The 32 mapped sections are so well placed that they were the first choice of early settlers when there was indeed a choice of sites. The subsequent intensity of use and crowding of population boosted the price of land and the city assessments.

When the neighborhoods became specters of the past and real-estate owners no longer made profits, parcels were sold at fractions of their assessed value. But the assessments themselves cannot be lowered, since on the city's assessment roll depends the amount of debt the city may incur and it is now very close to its debt limit.

It is therefore necessary to redevelop these areas so that the assessments fixed may be realistic; so that the property owner in these 32 districts may look upon the property he holds as a reasonable investment, not as a dream of a bonanza; so that those who live there may do so in the twentieth-century manner of life, and so that taxpayers of the city at large need not feel the extra burden which these vast areas now impose upon them in extra costs of policing, protecting from fire, collecting waste, cleaning streets, caring for delinquents, preventing crime, and providing maintenance in general.

The wastefulness of discarding area after area without a thought of their future has come to be recognized. The new State constitution contains adequate provision under which power could be conferred upon the city, if it does not already have it under its charter, to embark upon a program of "clearance, replanning, reconstruction, and rehabilitation of substandard and unsanitary areas * * * and for recreational and other facilities incidental or appurtenant thereto."

These prescribed powers should be invoked as soon as possible to solve the intricacies of a problem weighing heavily on public mind, sight, and purse.

Credit for Businessmen

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

EDITORIAL FROM NEW YORK TIMES

Mr. MEAD. Mr. President, I ask permission to have inserted in the Appendix of the RECORD an editorial appearing in a recent issue of the New York Times. This editorial calls attention to the plight of small business in connection with its need for adequate credit facilities. It likewise emphasizes an article which appeared in a recent issue of the Federal Reserve Bulletin, suggesting the formation of an industrial-loan corporation in order to take care of this pressing need.

I ask to have the editorial inserted in the RECORD, and I should like also to draw it to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 18, 1940]

CREDIT FOR BUSINESSMEN

Although less has been heard since the beginning of the war of the difficulties of the small-business man in obtaining adequate credit accommodations from the banks, the question has not been disposed of. The current issue of the Federal Reserve Bulletin discusses it at some length. Short-term credit appears in general to be available to those who constitute good risks, although some critics maintain that the banks' standards in certain cases are unduly exacting. Nevertheless, discussion of the question persists, suggesting that there may be classes of potential borrowers who do not fit into the framework of the existing credit machinery, and whose inability to obtain desired credit accordingly hampers business activity.

One of these groups comprises enterprises that are basically sound but which at present levels of business are not regarded as acceptable risks by the banks. Probably more important are those that are actually seeking long-term capital, which it has not traditionally been the function of American banks to furnish. Whether the banks should be permitted or encouraged to seek this type of business is, however, another question. It is true that in the past they have frequently supplied equity capital under the guise of short-term loans, periodically renewed; but such a practice is scarcely a solution of the problem.

The Federal Reserve Bulletin suggests an Industrial Loan Corporation, utilizing the existing Federal Reserve machinery, to supply capital directly or to guarantee advances by local banks. Whether or not the solution lies in this quarter is a question worth exploring further. The small business and the local enterprise that it typifies are an essential part of the American economy.

Prevention of and Punishment for Lynching

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE NEW YORK POST

Mr. CAPPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial appearing in the New York Post on March 18, 1940, entitled "New Style in Lynching."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Post of March 18, 1940]

NEW STYLE IN LYNCHING?

The special report on lynching which has been issued by a group of Congressmen (including Senator WAGNER and Representative GAVAGAN, of New York) does much to destroy complacency based on low recent lynching figures.

A native white southerner, unnamed, conducted the private investigation which lies behind this report.

He declares that the number of Negroes lynched annually is "countless," and that these killings do not reach the statistics solely because a new method of lynching has been evolved—one which avoids and defeats publicity.

Instead of a mob, a small group of picked men conducts the operation. They seize the victim in dark of night, take him to the woods or a lonely swamp, and there commit the crime. Sometimes, says the report, deputies are among the members of the lynching committee. At least four lynchings near one Mississippi town during the last half-year are alleged to have taken place.

It would be shocking to have to believe that the steady decline in lynchings (to a low of three last year) is based on a new style of mob murder, rather than on a genuine increase in respect for law and order.

If the report is based on misconceptions, few in the South have anything to fear from the antilynching bill. But if the report does reveal a dreadful and unsuspected condition, then we may understand some of the local bitterness roused by the measure.

Should this report be accurate, the bill becomes all the more important. It provides a positive means by Federal action to compel local law-enforcement officers to do their duty. At present there is no check upon them, and little remedy against them, even if they join with a lynch committee.

There will never be a good year for reaching a decision on the issue. It may as well be fought out this time as any, even at the cost of a filibuster. Let those on the other side file their reply to this new report on the lynch evil—if they have a reply.

Federal Taxes Not Always Levied Where Collected or Imposed Upon Those Who Pay Them—Federal Projects Not Always Opposed by the Taxpayer

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to point out the interdependence of the States of the Union, and the lack of self-sufficiency of any one of the States. I desire, moreover, to point out that taxes collected from persons and corporations in one State more often than not either are actually earned or finally paid from the resources of another State. I include the following news item relating to Federal taxes and the burdens of the States in which they are paid:

[From the Syracuse (N. Y.) Herald-Journal of January 25, 1940]

The proposed transformation of the St. Lawrence River from the Great Lakes to Montreal into a seaway would be a vast waste of taxpayers' money, Dean Charles L. Raper, of the Syracuse University College of Business Administration, told 450 transportation company officials attending the annual dinner of the Traffic Club of Syracuse last night. The dinner marked the twenty-fifth anniversary of the founding of the club. * * *

Dean Raper said: "New York State contributed about 22 percent of all Federal revenue and would, therefore, make at least one-fifth of the vast investment necessary for the transformation of the St. Lawrence into an ocean waterway. The people of the State have, therefore, every reason to demand that the most thoroughgoing investigation be made before a dollar of United States money should be invested in the making of the St. Lawrence into an ocean waterway, however profitable the people of our Northwest and of Canada may think it to be."

Who's Who of America says that Dr. Raper was born in 1870 at High Point, N. C., has been professor of transportation at the Syracuse institution of learning for the last two decades, and is also connected with the traffic bureau of the Syracuse Chamber of Commerce.

As Syracuse is a railroad city, until recent years its business section bisected at street level by railroad tracks, it could hardly be expected that Dean Raper would have deep affection for an improvement in the waterways of the continent such as is offered by the enlarging of the existing St. Lawrence Canals, and not arbitrarily to be completed before 1950.

But as Dr. Raper is a distinguished university professor who is also regarded as something of an authority upon the subject of taxation, his statement with respect to the proportion New York State contributes to all Federal revenue demands exploration. I make no claim to being expert as regards the complex question of taxation, although I have been a member of the Committee on Ways and Means for the past three terms. I do have some definite views on taxation and learned something of their origin and source, which collide with the views of the learned gentleman from Syracuse University.

An inquiry made to the United States Treasury for information as to Federal taxes received from a particular State and Federal expenditures in that State produced a letter containing the following paragraph:

It should be borne in mind that data representing Federal tax collections in particular States have very serious limitations, and, in the interest of accuracy, great care must be exercised in their use. Receipts from internal revenue collected in a particular State, for example, do not necessarily correspond with the amounts which the people of that State ultimately pay toward the expenses of the Government. While the individual reporting income in a certain State is usually a resident of that State, his income is often derived from sources in another State. Also corporations, particularly the larger ones, pay their income taxes in the States in which their principal offices are maintained, although their physical properties may be located in other States or sections of the country, and the greater part of their profits may be derived from sales in many States.

Dr. Raper has clearly overlooked the fact that the Government of the United States does not tax citizens of the State of New York. Instead the Federal Government taxes citizens of the United States who happen to have their residences or places of business in New York State. The farmer and the city dweller of New York State pays on the exact basis as every other citizen of the United States—no more, no less.

The founders of the United States intended ours should be one country of equal opportunity and burdens, and it has turned out to be one country of equal opportunity and burdens. New York State bears only its share in a pooled relationship.

Federal tax receipts reported by internal-revenue collection districts are not entirely indicative of the Federal tax burden of the respective States, since the taxes may be eventually borne by persons in other States. This is particularly true with respect to New York State, which likes to include as its own burden in support of the Federal Government the Federal taxes collected in New York City.

METROPOLIS OF ALL STATES

The great community of New York City, which constitutes more than half of the population and wealth of New York State, and pays nearly nine-tenths of the Federal taxes levied in New York State, is supported by the trade and industry of the entire United States, from Portland, Maine, to San Diego, Calif., from the Canadian border to Key West, Fla., and in which support the Great Lakes States and those of the Midwestern States are tremendously represented. New York City is not supported by the agriculture of the State of New York, nor the mining resources of the State, nor even by the manufacturing industries of the State of New York. It is the main hopper for money, talent, and property from both home and abroad; a cosmopolitan whirlpool of trading in stocks and bonds and the Nation-wide industries they represent.

For the calendar year 1939 New York City below the Harlem River—the first, second, and third New York collection districts—paid total internal-revenue taxes of $844,546,763. The internal-revenue collections in the same period for the entire State of New York were $987,757,122, or roughly a billion dollars.

Leaving out New York City, which is not truly the metropolis of New York State but the actual financial, industrial, and commercial metropolis of the entire United States, New York State made a contribution of but $143,210,359 to the Federal Government, which is 2.88 percent of last year's total internal-revenue collections in the United States of $4,957,046,038.

For the fiscal year 1939 the collector of the port of New York reported the collection of custom duties of $153,890,641 at the port of New York. These goods were distributed to all parts of the United States, only a fraction of them remaining in New York State. So in the last instance the duties were largely paid by citizens and corporations outside of New York State; just the same as tobacco smokers in all the 48 States pay the Federal taxes collected in the tobacco-growing and tobacco-manufacturing States of Virginia, North Carolina, and Kentucky, and automobile buyers pay their Federal taxes through the manufacturers centered largely in Detroit and throughout Michigan.

It should be stressed with pride that New York City is the largest urban community in the world. But it must not be forgotten that New York City got that distinction by being the financial, industrial, and commercial metropolis of the greatest country on earth, and not from being the metropolis of the State to which it has given its name.

The money that has poured into New York—and continues to pour in—to build its sky-scratching buildings, to create its great fortunes, and to furnish city and State with revenue to run, as well as the much-talked-about Federal revenue, is money taken from the soil and labor of all the 48 States in the Federal Union.

Instead of the Federal Government being in debt to the State of New York for a great yield in tax revenues, the city of New York and the State of New York and the people there are indebted to the people of the entire United States for the

local tax revenues, for the great improvements, and for all the wealth they have poured into that region for nearly three centuries. Nation-wide chain stores, railroads, steel companies, mining enterprises, banks, steamship lines, insurance companies, corporations selling food, clothing, and entertainment all pour their profits into New York City, which is the recognized national clearing house for big business in its multitudinous ramifications.

The State of New York is not a self-sufficient community. If it were physically detached from the United States and, together with New York City, put upon its own resources apart from the rest of the country and not left within the Union, I am afraid there is no reason it would have any greater importance than the Canadian Province of New Brunswick in the commercial and financial structure of the world.

This calling a spade a spade is my style of frank oratory and is made necessary when some New Yorkers ignore the part all America has had in building up the greatness even to its skyline of New York City and would blindly seek to throttle the economic expansion of one-third of the population of the Nation living in the Great Lakes Basin and the Midwest States beyond, and who have helped make New York great.

USE WEALTH AGAINST CREATORS

If the people of New York, city and State, want permanent equal treatment as other American citizens, at least they should fight to retain the privilege of paying taxes and receiving benefits on the same basis as all other citizens and all other communities in the United States. They should not use the wealth of the country, for which they are only the stewards, against those who assist in creating the wealth that gravitates in their direction.

In fact, it is exceedingly unwise for those enjoying the fruits of this stewardship to expose the center of the Nation's economic life—that is precisely what New York City has become—to criticism by reason of any selfish and unworthy efforts; for instance, such as to deprive citizens along the Great Lakes and St. Lawrence of a completed seaboard.

Mayor LaGuardia, of New York City, made a suggestion the other day that the Federal Government ought to collect most of the taxes, then remit part of the money to the States according to their needs. The Government could hardly collect real-estate taxes in every city, hamlet, and rural district. But it could collect various other kinds of taxes, and Congress could bar other tax agencies out of the fields that it enters.

The LaGuardia suggestion is important as revealing that new methods of taxation are under discussion. What if some future Congress, motivated by a feeling that New York's "dog in the manger" tactics on such projects as the St. Lawrence seaway should give attention to a movement for a system of taxation actually discriminatory against New York. Those who now plead for the special treatment of New York as if it were an independent principality are arguing in favor of just that sort of a policy.

The concentration of wealth and power in New York City and its attempt to dominate the entire country, forgetting what vast contributions have been made and are being made from the people of the other States, is bound to cause the victims to organize and declare: "Very well, we shall treat them just as if they did not belong to us and pass legislation designed to force citizens to come back to the communities where their industries are located."

TAX PEOPLE INTO EFFICIENCY

So far Congress has not acted along these lines. But there are plenty of arguments available. Decentralization of New York City has been discussed in magazines and from the platform. The disadvantages as pointed out are more than social. To store the wealth of the Nation upon the very outer seaboard, in case of war, lays open the nerve core of our economic life to attack and destruction, putting aside all thoughts of a possible earthquake or superstorm as unthinkable. These considerations as they become more widely understood may lead to a movement for a system of taxation actually discriminatory against New York. It rests with New York to avert this misfortune.

For once minds begin to turn to methods of breaking up the great concentration of wealth and population in New York City, one of the first considerations will be given to the fixing of a higher tax rate for New York State than fixed for other States, so as to eliminate the manifest social and economic disadvantages of life and business in New York City from affecting other areas. It would amount to taxing citizens of the United States away from superliving, away from expensive and unnecessary business headquarters, thereby improving efficiency in management at the source by restoring to industry direct contact between the responsible heads and their workers.

These are but fancies. Still, who can say how long before they become possibilities, and then with the suddenness of an April shower they may become actualities.

It has to be admitted that taxes are a terrible headache. However, they enter into every conversation, including advancement in business. A case in point was the decision of the directors of a business in a midwestern city to send the president of the company to open headquarters in New York City. The president, a young man of splendid ability, was receiving $25,000 a year, and he announced that it would cost him twice as much to live in New York as in the home town. After considerable figuring it was found that his salary would have to be increased to $60,000 if he maintained the same standard of living in the Big Town, less income-tax returns. The raise was given.

One of the directors of the company has since become an intense advocate of the Federal Government's increasing income taxes in the middle and higher brackets. His argument is that putting taxes up on the individual incomes will permit lowering of corporation taxes, and discourage business firms from sending their bright young men into New York City. A step in the direction of lowering the whole cost of production structure and benefiting consumers, is his contention.

Aside from the question of who pays for the St. Lawrence seaway completion, and in which Canada contributes a fair share, New York State is actually one of its chief beneficiaries. This great State, which now has 31 miles of ocean shore line as the crow flies on the Atlantic, will gain 513 miles of coast line on the north and west in the Great Lakes Basin.

Twelve New York State lake harbors, located upon Lake Erie, the Niagara River, and Lake Ontario, are destined to become seaports.

Lake Ontario is only 25 miles distant from Syracuse and Dean Raper's seat of learning. Who knows but Syracuse will someday emulate the example of Los Angeles and spread out in area—swallow up the intervening towns of Liverpool, Three Rivers, Baldwinsville, Phoenix, Fulton, and Minetto in a greater Syracuse—and itself share in the boom bound to be created by the modernized St. Lawrence seaway, or it might be that the city of Oswego, already a lake port, will start growing southward and bring a new prosperity to Syracuse.

WHAT SEAWAY MEANS TO MICHIGAN

Now, just a few words as to what the St. Lawrence seaway means to my district, to the city of Detroit, and to the State of Michigan. Recent testimony before my committee brought out important information which every well-informed Michigander knows by heart; nevertheless, I would like to quote that—

1. Detroit industrial area is the largest producer of manufactured products for export in the United States.
2. Six hundred industries in Michigan are engaged in exports.
3. One out of every seven dollars spent in this area is derived from foreign trade.

Refrigerators, chemicals, office equipment, pharmaceuticals, fresh and canned fruits and vegetables, and many other Michigan products are important exports.

In 1929, as reported by Shippers' Declaration, Michigan exported passenger automobiles, trucks, busses, chassis, automobile parts, accessories valued at more than a quarter of a billion dollars.

The second most important industry in Michigan is the manufacture of iron and steel products. In 1937 this industry alone provided gainful employment for 21,000 Michigan workers.

Michigan ranks first in the value of production of foundry, hardware, and wire-work products; second in stamped- and pressed-metal production; and third in the manufacture of stoves and ranges.

Because of the overlapping of functions which often occurs within the same plant, it is impossible to give an accurate figure without duplication for the value of iron and steel products manufactured in any individual area of the United States. However, it is interesting to note that the total exports of 1937 were even better than in the peak year of 1929.

Machinery ranked high in importance, especially the manufacture of specialized machinery. This territory is the leading producer of machine-tool accessories and machinists' precision tools. In the present war crisis foreign buying commissions were quick to place orders here for those commodities. In 1937, after the bottom level of 1932, exports rose to 90 percent of the 1929 level.

Michigan leads the country in the production of refrigerators and ice-making apparatus, accounting for nearly a quarter of the total production.

The United States exports of electrical refrigerators and parts have been steadily on the upgrade, and in 1937 were valued at more than $20,000,000.

Michigan ranks fifth as a producer of industrial chemicals, second in drugs and medicines, and fourth in paints, pigments, and varnishes. In 1929 exports of those commodities totaled $8,000,000.

As stated, Michigan's agricultural industry is a large contributing factor in Michigan's total economy, many of its products finding their way directly into foreign commerce. Chief of these is fruits and vegetables.

Michigan outranks all other States in the production of sour cherries for canning. It is also an important supplier of apples, pears, and peaches not only for the fresh-fruit market but also for the canning industry.

Annually for the past few years between six and seven million cases of canned fruits have been shipped abroad.

Interesting export figures may be gleaned from the table which was prepared by a well-informed witness who recently appeared before the Ways and Means Committee.

Chart showing that Michigan foreign trade goes hand in hand with farm income and industrial production

Year	Farm income [1]	Industrial production [2]	Exports [3]	Imports [3]
1928	$363,146,000	[4] $4,500,000,000	$328,436,000	$92,099,000
1929	245,963,000	4,656,718,046	342,646,000	105,449,000
1930	199,656,000	[4] 3,400,000,000	239,358,000	75,959,000
1931	150,885,000	2,551,257,763	144,869,000	56,832,000
1932	118,567,000	[4] 2,200,000,000	84,755,000	38,094,000
1933	134,612,000	2,104,104,542	82,058,000	40,537,000
1934	158,452,000	[4] 3,400,000,000	124,356,000	48,412,000
1935	185,620,000	3,986,178,348	129,243,000	54,054,000
1936	215,807,000	[4] 4,600,000,000	145,191,000	70,038,000
1937	238,252,000	5,296,100,960	190,223,000	86,238,000
1938	206,441,000	[4] 3,500,000,000	162,812,000	55,933,000

[1] Source: U. S. Department of Agriculture in cooperation with Michigan Department of Agriculture.
[2] Source: U. S. Census.
[3] Source: Our World Trade—Foreign Commerce Department, U. S. Chamber of Commerce.
[4] Estimate.

The seaway will mean a greater, happier, and more prosperous Detroit and Michigan, and similarly will affect millions who reside in the interior of the United States without detriment to New York or the eastern seaboard. A prosperous core within the country will increase the strength and the business of the East.

Omnibus Pension Bill

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, in view of the fact that yesterday when H. R. 7831, an omnibus bill granting increases in pensions to sundry widows, was before the House, a vote was taken on the motion of the gentleman from New York [Mr. HANCOCK] to strike out title 1. This motion was adopted by a vote of 224 to 68. Because of the limited number of Members who were on the floor during the 10 minutes' discussion of this title of the bill, those who came to the Chamber as a result of a call for a quorum could not possibly have understood the significance of the vote taken thereon.

The bill incorporated 13 titles under each one of which a widow of a high-ranking Army or Navy officer was given an increase in the pension she now receives. The officers referred to were Rear Admiral Hugo Osterhaus; Lt. Col. Charles G. Ayres; Maj. Gen. Edward Croft; Rear Admiral William A. Moffett, Chief of the Bureau of Areonautics of the Navy Department for more than 8 years, who lost his life on April 4, 1933, aboard the U. S. dirigible *Akron* when that lighter-than-air ship crashed; Admiral Edwin A. Anderson; Col. Thomas H. Jackson; Maj. Gen. Harry Hill Bandholtz; Rear Admiral John Hood; Rear Admiral William Carey Cole; Rear Admiral Frederick C. Billard; Maj. Gen. Oscar Westover, Chief of the United States Army Air Corps, who was burned to death when his airplane crashed on September 21, 1938, while on duty at Burbank, Calif.; Maj. Gen. Charles T. Menoher; and Maj. Gen. William H. Johnston.

Mr. Speaker, many of our people in this country are not privileged to have the information upon which to base a proper appreciation of the officers of our Army and Navy. More especially of those who, because of long and brilliant service, find themselves occupying the positions of greatest responsibility during the later period of their service.

Every Member of this House who has been here for any considerable period of time realizes fully that any youngster who can qualify for appointment to, and who can remain there and graduate from, either the Military or Naval Academy must necessarily be outstanding among his fellows. I believe every Member of this House exercises the greatest care in his selections for these appointments. To be successful a boy must have something more than high standing in his academic work. He must have outstanding physical qualifications. He must have outstanding qualifications of leadership. He must have courage. In other words, every youngster who successfully masters the work and tests at the academies necessarily must have every quality which makes for success, not alone in the Army or Navy, but in any walk of life. There are altogether too many of our people who believe we are doing a great favor to those appointed to these two splendid educational institutions. Altogether too many people overlook the fact that when we select the higest caliber of youth to assume the burdens and responsibilities of the defense of this country, we are doing far more for the country itself than we can possibly do for the individuals selected.

Mr. Speaker, the high ranking officers of our Army and Navy are always those who, through the splendid character of their service through the years, have demonstrated their fitness to occupy the positions to which they are promoted. These men, had they followed a career in civil life instead of the one in the Army or Navy, would without a doubt have been highly successful in anything they had undertaken. Success would have followed them there as it has in their chosen professions. So I say, Mr. Speaker, that these splendid citizens have contributed more to the welfare of their country than the country could possibly have contributed to them.

Everyone who knows anything about the regular services realizes fully that the salaries and emoluments received by the officer personnel are not such as to make it possible for those men to acquire the sort of competence they could well have secured in civil life. Frequent change of station is necessary, always involving at least some expense beyond that borne by the Government. The education of children is expensive under these conditions, and if an officer of the Army or Navy concludes his service with a modest amount of paid-up insurance, he is indeed fortunate. When an officer is retired from the service his retired pay comes to him only so long as he lives, and it is not passed on to his dependents.

The bill we had under consideration yesterday provides increases in pensions for the 13 widows named. Each of these widows now receives $30 per month. In 2 instances the bill proposed to increase the pensions to $75 per month and in the other 11 instances to $100 per month. Some of these widows, because of illness or disability, are actually in need.

These widows are no longer young. None of them are fitted to engage in useful and profitable work.

Mr. Speaker, I wonder how many Members of this House realize that it is now possible under the Social Security Act for any citizen when he becomes 65 years of age to receive $40 per month, provided the State will match the $20 offered by this Government? I doubt whether more than two or three of the beneficiaries proposed in the bill under consideration could qualify for a pension under this act.

The additional expense to the Government if each of these widows were given the increase provided would be but $11,320 per year. Why, Mr. Speaker, I suppose there are any number of bureaucrats holding down swivel chairs in this city whose services would be well dispensed with, and who are each costing the Government more than the sum involved in granting the increases in pensions for all 13 of the widows of these famous officers of our Army and Navy.

I stated earlier in my remarks that the vote itself indicated that the Members, as they came into the Chamber to cast their votes, were not aware of the things involved in this bill. As further evidence that this conclusion is a correct one, I submit the fact that 46 of the Members who, in reality, voted to kill this bill were men who a year ago, when the Townsend bill was before the House, voted to pay all our people over 65 years of age, regardless of the need of the individual, what the members of the Townsend organizations were led to believe would be $200 per month, or collectively from twenty-four to twenty-eight billions of dollars per year. I am certain the Members to whom I now refer would not have voted as they did had they known what was involved in the vote they cast. I am certain also, Mr. Speaker, that other Members in large numbers would have voted to support this worthy measure.

Mr. Speaker, I hope when next this bill comes before the House those of our Members who voted against this measure will have considered what I have said and will reconsider their action of yesterday. Let us not forget in this connection that one of these worthy women is the widow of Admiral Moffett, Chief of the Naval Bureau of Aeronautics, who, following a long and most honorable career in the Navy, was killed when the *Akron*, that unfortunate semirigid airship, crashed during a storm over the Atlantic. Another is the widow of the late Maj. Gen. Oscar Westover, Chief of the Army Air Corps, whose plane crashed and who was burned to death while on duty in California.

Mr. Speaker, I was a member of the Naval Affairs Committee of this House for 12 years. During that period and since, I have known the high-ranking officers of that branch of our national defense. I knew Admiral Moffett intimately; I knew the splendid type of service he gave to this country for many years; I know the type of service he would have continued to give had he been spared to the country.

Mr. Speaker, General Westover came from my home city. I also knew him intimately; he was my friend; I know the members of his fine family. His only son is now a splendid young officer in the Army Air Corps, and is carrying on the tradition of the family. General Westover's record is replete with deeds of daring, opportunities for which were not given to many men. He was one of the pioneers of the free-balloon experiments. Somehow he always sought the service wherein the risks were greatest. Mr. Speaker, I include as a part of my remarks the following from the letter of Gen. Frank T. Hines in connection with this case:

The records of the Veterans' Administration disclose that the late Oscar Westover enlisted in the United States Army on September 4, 1901, and was honorably discharged June 15, 1902, as first-class private, Company K, Third Battalion Engineers. He entered the United States Military Academy on June 16, 1902, accepted a commission as second lieutenant June 12, 1906, and was promoted to the rank of major general, Air Corps, Chief of Air Corps, which rank was held by him at the time of his death, which occurred on September 21, 1938, in line of duty and not the result of misconduct, but as the result of an airplane crash.

* * * * * * *

General Westover's widow, Adelaide R. B. Westover, filed claim for pension on September 24, 1938, and was awarded a pension in the amount of $30 per month, effective September 24, 1938, under the act of May 1, 1926, as reenacted by the act of August 13, 1935 (Public, No. 269, 74th Cong.), by reason of her husband's service during the Philippine Insurrection. Evidence was furnished showing that they were married on December 31, 1907.

Mrs. Westover also has title to pension under part II of Veterans Regulation No. 1 (a), as amended, promulgated pursuant to Public, No. 2, Seventy-third Congress, March 20, 1933, her husband's death having resulted in service, in line of duty, and not the result of his own misconduct. However, the monthly pension rate provided by part II of Veterans Regulations No. 1 (a), as amended, payable to a widow 50 to 65 years of age is $26. Mrs. Westover is receiving the highest rate of pension to which she is entitled under existing law.

The long, efficient, meritorious service rendered by General Westover is well known, and I am sure it is the desire of all persons concerned that the Government render every reasonable assistance to his widow and to other widows who have lost their husbands under similar conditions. * * *

The following is a current list of widows of high-ranking officers showing the amount of pension they are receiving:

Widow	Monthly rate	Deceased husband	Rank
Biddle, Martha R	$50.00	William P	Major general commandant, U. S. Marine Corps.
Corse, Frances	100.00	John M	Brevet major general.
Duvall, Maria Lamar	100.00	William P	Major general.
Goldberger, Mary H	125.00	Joseph	Surgeon, U. S. Public Health Service.
Greene, Augusta B	100.00	Henry A	Brigadier general.
Haan, Margaret H	75.00	William G	Major general, U. S. Army.
Hall, Terese B	100.00	William P	Colonel assistant adjutant general, U. S. Army.
Howse, Anne C. H	75.00	Robert L	Brigadier general, United States Volunteers.
McAndrew, Nellie Roche	150.00	James W	Major general.
Marix, Grace F	100.00	Adolph	Commander and rear admiral.
Reed, Emily Lawrence	125.00	Walter	Major and surgeon.
Stephens, Anita de Carmendia	100.00	John E	Brigadier general.
Wood, Louise A	416.66⅔	Leonard	Major general, U. S. Army.

For the foregoing reasons, the Veterans' Administration cannot recommend favorable consideration of the bill to your committee.

Very truly yours,

FRANK T. HINES, *Administrator.*

Mr. Speaker, I offer the following from the report of the committee:

It will be noted that General Westover was only 56 years of age when his airplane crashed at Burbank, Calif., on September 21, 1938, while on an inspection tour in several States by order of the Secretary of War. It is indicated from the opinion of the board of officers that investigated the fatal accident that same was not due to any carelessness of the officer but was due to a combination of conditions and situations; however, it was primarily due to engine stoppage when the airplane was in a left bank preparatory to making an approach to land.

General Westover was a soldier and gentleman of high caliber, and all who knew him have an indelible recollection of his fine qualities. From the time General Westover was selected as captain of his company in his first year at West Point until his death he was always chosen to shoulder responsibilities because of his outstanding knowledge and experience in his chosen field of endeavor.

General Westover was 52 years of age on December 22, 1935, when he was appointed Chief of the Air Corps of the United States Army with the rank of major general. He was one of the few pioneers of the air to be rated as a military air pilot, air observer, airship pilot, and balloon observer. He was made a commander of the Belgian Order of Leopold on March 26, 1937, and as heretofore set forth in the official report from the Secretary of War, it will be noted that he was awarded the Distinguished Service Medal with citation from our Government, which speak for themselves as to the high qualities and efficiency of the late officer.

The facts concerning General Westover's outstanding military record are cited in order to show that the widow of an officer who rendered such distinguished service to his country is warranted to receive a greater rate of pension than is allowed under existing law. The Congress has heretofore in several instances recognized the extraordinary services rendered by high-ranking officers of our Military and Naval Establishments and have enacted into law private bills giving greater benefits to their widows than are allowable under existing law. It will be noted in the report of the Administrator of Veterans' Affairs as of April 27, 1939, the names of those who are in receipt of a greater rate of pension under special acts of Congress, and these rates range from $50 to $416.66⅔ per month.

The increase of pension herein recommended will only act to partially compensate Mrs. Westover for the loss of her distinguished

husband, who rendered such extraordinary service to his country and whose untimely death while serving as Chief of the Air Corps was a loss to the Nation.

It is indicated by evidence presented to this committee that Mrs. Westover has only a small annual income aside from her pension and the medical evidence shows that she is suffering from myocarditis, chronic; arthritis, hypertrophic, involving lumbar spine and knee joints; and psychic trauma, the latter being incident to the recent airplane crash in which her husband, Maj. Gen. Oscar Westover, was killed.

The rate of pension Mrs. Westover now receives is $30 per month, which is paid her on account of her late husband having served as a private for more than 90 days during the Philippine Insurrection and not on account of the fact that he met his death while in line of duty as the result of an airplane crash. Your committee directs your attention to the fact that if Public Law No. 2, Seventy-third Congress, had not been repealed, the act of March 3, 1915, which allowed double pensions in case of airplane accidents, would have entitled Mrs. Westover to a pension at the rate of $60 per month.

It has been indicated by evidence submitted to the committee that Mrs. Westover's late husband was the only officer killed during peacetime in line of duty who held the rank of major general.

It is the unanimous recommendation of your committee that the rate of pension of Mrs. Westover be increased to $100 per month.

Nothing more should be necessary, Mr. Speaker, to show the justice, the plain everyday American justice, not only to the widows whose names appear in the bill under consideration, but to those splendid officers who so faithfully and with such distinguished honor and fidelity served their country. I hope when next the bill comes before us the Members of the House will recognize the wisdom and fairness of the committee which approved the bill unanimously and give to these sorrowing women the increases in their pensions which they so richly deserve.

Airplanes

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

EDITORIAL FROM THE ADRIAN (MICH.) DAILY TELEGRAM OF MARCH 16, 1940

Mr. MICHENER. Mr. Speaker, pursuant to the privilege given me to extend my remarks in the RECORD, I include an editorial from the Adrian (Mich.) Daily Telegram of March 16, 1940, entitled "Airplanes." I believe this editorial expresses the view of a majority of our people. It is as follows:

[From the Adrian (Mich.) Daily Telegram of March 16, 1940]

AIRPLANES

The War Department recently released for export to England and France a high-speed pursuit airplane known as the Curtiss P-40, and it is said that certain other modern types have been, or will be, released.

As might be expected, various Members of Congress are greatly stirred up. The grounds of their objections, or their alarm, are summarized in Senator LA FOLLETTE'S demand for an investigation to determine whether sales of airplanes abroad will (1) delay American defense plans, (2) give away military secrets, or (3) raise the cost of our own building program.

These questions are pertinent. To many they may seem vitally important. But there is another question paramount to them all, and which must dominate American policy in such matters. It is this: Which is more important, to prepare to fight a future war without help, or to assist the Allies to win the present war?

In our opinion the arguments are overwhelmingly in favor of the second policy. If the Allies are defeated, we shall have to make ourselves ready to fight a most formidable European and Asiatic combination. That means that we must rapidly make America the greatest fighting power in the world on the sea and in the air. The cost will be colossal; but we can do it, and regardless of cost it must be done.

If the Allies win, on the other hand, no such early conflict is in sight. Our armament program will be more moderate, less hurried, and less costly. And—more important still—our national security will be enormously increased.

This forecast is so sound and probable that it may be accepted, not as a bit of imagination but as a fact. It follows, therefore, that it is vital to the interests of the United States that we should give the Allies every possible help in the way of war materials.

What, then, as to the three objections raised by Senator LA FOLLETTE?

1. As to delaying our own air program, building planes for the Allies probably would not have that effect. But it would not matter if it did. At the very worst, our great air forces would not be used for at least a number of years in any war against a victorious Germany. Therefore, whether we build more or fewer planes this year would have little effect upon our own future war. But whether we supply more or fewer planes to the Allies this year might have an immense effect upon the present war. It might determine whether or not we have to fight a war of our own later, all alone.

If we actually should have to fight such a war several years hence, our air power would not depend on the number of 1940 and 1941 planes we might have on hand; it would depend on our capacity for rapid production then. And that would depend on the amount of skilled labor then available. The more planes we build now for the Allies, the larger force of skilled labor will be built up and the greater our productive capacity will be.

2. As to giving away secrets, that is much less important than it might seem, for the secrets of today are not the secrets of tomorrow. Even if we gave the Allies the benefit of our very latest airplane designs, they would be out of date long before we had a war of our own to fight.

The Curtiss P-40—one of the newest Army planes, which we have released to the Allies and which stirred up all the furor—is already out of date. A new plane is being brought out which the Secretary of War says is of "definitely superior performance." In short, P-40 is not vitally important to us any more; we shall be building something better. But P-40 is immensely valuable to the Allies, for it is better than what they have. They need it now, and it is to our interests and safety that they should have it now.

3. As to raising the cost of our own airplane program, selling planes abroad would not affect the cost of those already contracted for by our Government. Whether it might make costs higher in 1941 or 1942 is problematical. But even if it did, such an increase would be a low price to pay for the advantage of strengthening the Allies against Germany. It would be cheap national defense for the United States.

The greatest value these new airplanes can have for us is in the hands of the Allies. If we withhold them, they are of no use to us until we go to war; but in the hands of the Allies they would help to save us from having the kind of war that we are afraid of.

The interests of this country in the war are clear, and American sympathy is equally clear. It is so overwhelmingly on the side of the Allies as to be not far from unanimous. Nine Americans out of ten fear and dread a German victory, and would be glad to help the Allies in any way short of actual involvement in the war. Fortunately the greatest help we can give is in supplying airplanes. The Allies are ready to pay for them in cash. No question of neutrality is involved. Our Government can help the Allies by making efficient planes available to them without any cost, danger, or detriment to our own national interests.

That should be the American policy. Any other course would be a mistake which might later prove to be colossal.

National Defense

EXTENSION OF REMARKS

OF

HON. CHARLES I. FADDIS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

LETTER BY HON. CHARLES I. FADDIS, OF PENNSYLVANIA

Mr. FADDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me recently to Mr. Sherman H. Dryer, radio director of the University of Chicago, in reply to a letter asking me to make a contribution toward a forum to be held next Sunday on Can We Defend America:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 15, 1940.

SHERMAN H. DRYER,
Radio Director, the University of Chicago, Chicago, Ill.

DEAR SIR: Your letter of March 14 is a very general one and it would indeed be difficult to answer it properly.

To begin with, you want to know just what I believe we would need in the way of an army and navy to protect this Nation from invasion. That would depend entirely upon just what forces were threatening to invade us. Of course, the potentialities in that

respect would range all the way from any one nation in the world to a combination of any or all other nations in the world. It would depend, also, on the availability of certain essential commodities which we do not produce, and which are absolutely necessary to the maintenance of a proper defense. It might depend upon whether or not we would have to fight a war inside the Nation as well as outside. If you would include in your defense, forces which could insure our supply of these commodities which are essentially a part of our defense, that would be one part of the proposition; if you mean just what would be necessary to repel an actual landing force, that would be another.

To defend in reality means to secure from damage by a hostile force. If a commander of an army were given the mission of defending Chicago, for instance, it would not be sufficient for him to take possession of Chicago, and deny the hostile army possession of the city. He could only properly fulfill his mission by going far enough away from the city to protect it from damage by hostile forces. Although I have been a student of military matters for 35 years, saw service in the World War and have served on the House Committee on Military Affairs for 7 years, I can only say that this proposition is so gigantic and so fraught with many possibilities and probabilities which cannot be foreseen that until a concrete proposition is at hand I could not attempt to answer this letter in the manner you desire.

If you will pardon my saying so, I believe you people with such propositions are just about as dangerous to democracy as a foreign enemy. Of course, you mean well, but the danger is that the people will too eagerly seize upon what you produce as something upon which to base a policy of national defense. You know we are a democracy, and the great weakness of a democracy in time of war is too well known to necessitate any comment. It is, indeed, unfortunate that the United States seems to be filled with great numbers of otherwise intelligent and well-meaning people who will gravely and confidently presume to set themselves up as authorities on matters of national defense and reach a conclusion by some process of mental legerdemain which the officials of our Army and Navy, with their years of actual experience and professional studies, would have difficulty in reaching.

It would seem to me as if the plight which England has found herself in during the past 10 years in regard to military affairs would be a warning to every democracy in the world, but it does not seem to be so.

Again let me say that I do not doubt your good intentions, but I do doubt the advisability of such matters. It seems to me too likely to produce public reaction not based upon proper consideration and entirely too likely to result in such opinions as that of William Jennings Bryan when he said America was in no danger and that if she were ever threatened "a million men would spring to arms overnight." We hope that would be true, but God knows there has never been a time when they would have arms to spring to.

I have never believed that the Government of the United States could properly be conducted in the manner of an overgrown New England town meeting; neither do I believe it can be conducted by the back-seat driving of Father Coughlin, Dr. Townsend, John Lewis, Liberty Leaguers, United States Chamber of Commerce, or other volunteer guardians of the national welfare. Every 2 years an election is held and a Congress is elected to legislate for the Nation. Questions arise which require a great deal of study, thought, and research, as well as free discussion among those who are elected by the people to do this legislating. I do not believe our Government can properly be conducted with constant pressure from the minorities which are organized not in the interest of the United States as a whole but, more often than not, to promote the personal ambitions of the organizer.

Now, if you are concerned about national defense, that is one thing; but if you are looking for a radio program, that is another. Of course, this is a Nation of free speech and free press. The above is my contribution.

Very truly yours,

CHAS. I. FADDIS.

Congress Resounds

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

ARTICLE FROM THE BEVERLY HILLS (CALIF.) CITIZEN

Mr. LELAND M. FORD. Mr. Speaker, at a time when we frequently hear much of certain segments of our American youth which have been misled by the false siren call of communism and other subversive influences, it is a pleasure to be reminded that the great bulk of American youth are patriotically dedicated to the American way of life and too intelligent to listen to political and economic fakirs.

Under leave granted me by the House, I therefore am glad to call attention to the following feature article from the Beverly Hills Citizen, issued daily in Beverly Hills, Calif. This article, entitled "Congress Resounds," was written by a high-school student out there by name of Leonard Low, and reflects the high standards of citizenship shared by the vast majority of California youth. Far from being an article written in support of some deluded Youth Congress operated under the disguised guidance of Moscow agents and parlor pinks, this young man describes how he and his associates experienced the training of a genuine reproduction of our American Congress and how, instead of learning how to overthrow this Government of ours, they practice the techniques of self-government by which it can be improved.

It happens that our colleague the gentleman from South Dakota, KARL MUNDT, is national president of the National Forensic League, which sponsored and conducted the first national student congress in America, which was held in Wooster, Ohio. The second of these history-making congresses was held in Beverly Hills, Calif., and the third in this series will be held next May in Terre Haute, Ind.

Mr. Speaker, the future of America is safe so long as its high-school and college students train themselves in the advantages and techniques of self-government instead of permitting themselves to be used as cat's-paws to promote the subversive objectives of Communists and foreign agents. I call your attention to the interesting article prepared by this Beverly Hills high-school senior.

[From the Beverly Hills (Calif.) Citizen of March 9, 1940]

CONGRESS RESOUNDS

(By Leonard Low)

Legislative debates of the United States Congress in Washington, D. C., will echo through the halls of Beverly Hills High School today and tomorrow when the District Student Congress convenes in its second session.

The congress—not to be confused with the American Youth Congress, which has been in the headlines recently—will run in conjunction with the National Forensic League district qualifying tournament.

Started in 1938 as a special project of the National Forensic League, the congress serves the double purpose of training students in the legislative procedure and of giving them the chance to develop a logical persuasive speaking style. As far as is practicable, the actual workings of lawmaking bodies are followed. Bills and resolutions are introduced, referred to committee, and brought out on the floor of the chamber for actual debate.

DEBATE TOPICS

In former sessions debate has centered around such topics as the purchase of Lower California, income-tax revision, a ban on highway billboards, a canal through Nicaragua, old-age pensions, public ownership of munitions and arms plants, and disposition of unclaimed bank accounts.

The N. F. L. was organized in 1925 and immediately started sponsoring competitive speech tournaments along conventional lines. However, in 1938 a definite need was felt for a speech program which was noncompetitive and would allow for training and helping a large group of students in practical speaking. Thus was born the idea for a National Student Congress.

PLAN TRIED OUT

The plan was put into effect that year at the national speech tournament at Wooster, Ohio, where Robert Hine won a national championship in original oratory for Beverly Hills. Although this was the first congress, 32 senators and 60 representatives were in attendance. The idea was pronounced an outstanding success by Bruno E. Jacob, national N. F. L. secretary, and Congressman KARL E. MUNDT, of South Dakota, national president.

The following year the N. F. L. decided to hold district student congresses throughout the country, with delegates to be chosen from each State to attend the National Student Congress at Beverly Hills last year.

CITY IS HOST

After months of preparation Beverly Hills, on June 16, 1939, welcomed the Tenth National Speech Tournament, and with it the second session of the National Student Congress. Elaborate plans for the meeting had been set up. The auditorium of the Beverly Vista school was secured as the house chamber and the Beverly Vista Community Church as the senate meeting place. To add further to the reality of the occasion, Rev. J. K. Stewart was elected chaplain and offered prayers at each session.

The meeting itself showed that some of the young people of the Nation have a finer understanding of local, State, National, and international problems than many adults. There was no barrier to the subject matter of the bills introduced.

All sections of the Nation were represented in the Congress, and each delegate introduced legislation pertaining to the problem with which he was best informed. Some of the action which came to the floor of the house and some bills which did not progress that far showed real thought and sincerity of purpose.

MANY TOPICS DISCUSSED

Among the acts which were introduced and which received spirited debate on the floor or in committee one provided for consideration of the agricultural difficulties of the United States. The congressmen who were not acquainted with the problem soon learned about it, but in return they showed what the effects of the legislation might be in their own localities. Other bills which were considered included uniform marriage and divorce laws, Government aid to the railroads, elimination of the electoral college, establishment of a diplomatic school, national defense, a continental highway system, and many others which provoked intelligent and practical discussion and thought.

Adult speech instructors were assigned to preside over the congress, but as soon as capable student leadership asserted itself, students were permitted more and more leeway in the handling of the congress. At the first session each house elected its own officers, who took a greater part as the congress continued.

Elaborate plans were made both by Beverly Hills and by the N. F. L. to provide for utmost efficiency. Each house had three clerks who handled all the necessary clerical details. In addition there were pages in each house who took care of any requests any delegate might have and also were responsible for transmitting messages from one house to another.

The coaches who were presiding were kept on their mettle at all times, for many ticklish questions on parliamentary procedure came up. Many of the most heated discussions revolved around the decisions of the chair on a certain point.

INTERHOUSE PROCEDURE

Whenever one house passed a bill it was immediately sent to the other house for its consideration. If the two houses could not agree they followed the procedure of the United States Congress and appointed a conference committee from each house to settle the issue.

At the conclusion of the 1939 session the delegates had seen the wonders of the State of California and were also much better equipped to consider pressing problems. The National Student Congress had proved itself a success. It became firmly established as an N. F. L. activity.

The only recurrent difficulty found by the N. F. L. last year was that many students were also competing in regular speech events, and thus could not give their full time to the congress. Consequently this year any person who is in the congress is ineligible for any other competition, which should make the congress approach even closer to its goal.

THE 1940 SESSIONS

The personnel of the National Student Congress is composed of students selected by the district student congresses to make the trip to the Nationals in order to represent their districts. The California-Arizona district, of which Beverly Hills High School is the leading member, is playing host to the 1940 congress today and tomorrow. Approximately a dozen schools will send two senators each, and a number of representatives based on chapter strength, when the congress holds its first meeting of the second session at 2 o'clock today at the local high school. All arrangements have been made, and the district congress will choose two of its members to return to the National Student Congress as senators and two as representatives. In addition, alternates will be picked in case the first choices will be unable to make the trip to Terre Haute, Ind., the week of April 29 to May 3, 1940.

Beverly Hills High School is fortunate in securing the services of J. Edmund Mayer, Alhambra High School coach, who served as speaker of the national house last year. He will serve in the same capacity again this week. The senate will be presided over by William Quandt, social studies department head at the local high school. Due to the fact that only a day and a half is available, the congress will forego committees at this session, with all action going directly to the floor.

NOMINATING CONVENTION

An innovation this year in the congress is the presidential nominating convention which will take place tomorrow evening. The youths will be able to express their opinions on the 1940 presidential situation, each party nominating a candidate.

The path of a bill once it is introduced follows as closely as possible the workings of the United States Congress. In the house, a member may hand the clerk his bill at any time, while a senator must rise and present it by title. The presiding officer then refers the bill to the proper committee, where the bill's fate is decided. The committee may recommend it to be passed, recommend its defeat, or amend it as it pleases. If the bill is reported out of committee, it is placed on the calendar of the house. When its turn is reached, any committee amendments are first accepted or rejected. Then any member of the house has the right to offer amendments, and these are then discussed and voted upon. At this stage the bill is ready for action by the entire voting membership of the house. If it passes, it is sent by messenger to the other house. There the same procedure is followed.

GOES TO PRESIDENT

If both houses agree to a bill, it is sent to the president of the congress for his approval. If he vetoes the bill, it returns to the house in which it originated, and a two-thirds vote is necessary for its repassage.

Although the Congress discusses measures pertaining to the N. F. L. rules and regulations, it has no actual regulatory power, as the N. F. L. constitution gives the executive council full legislative powers. However, the congress may accomplish substantially the same effect by recommending certain improvements to the council.

Advantages of the student-congress idea have been a much keener appreciation of the American system of government and a deeper understanding of the basic problems facing the country and the world.

DESIRE EXPRESSED

Many of the youths who attended the congress last year expressed a desire to continue along the lines of the congress. Beverly Hills should be proud of the part it has played in furthering speech education and, in particular, the student congress.

Some day in the not-too-distant future, all those connected with helping these students to become more appreciative of their privileges and more conscious of their responsibilities as American citizens may read in the newspapers that "Senator John Smith was receiving congratulations today upon his election to the United States Senate as junior Senator from California. He announced that he wished to express his gratitude to the National Student Congress for the inspiration and training which many years ago started him on his climb to success."

W. P. A. Reports on Roads

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

ARTICLE FROM THE NEW YORK POST OF MARCH 19, 1940

Mr. DICKSTEIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article which appeared in the New York Post on March 19, 1940:

[From the New York Post of March 19, 1940]

W. P. A. REPORTS ON ROADS—BUILT OR FIXED 457,000 MILES

WASHINGTON, March 19.—W. P. A. workers were credited today by Commissioner Harrington with having built, reconstructed, or improved 457,000 miles of roads and streets in four and a half years.

"For every 10 miles you drive," he said, "an average of one and a half miles of road has been built or improved by W. P. A."

Harrington's report was the first of a series.

He said that 197 new airports had been built, 337 reconstructed or improved, and additions built to 35. One hundred seventy-six landing fields were constructed, while 298 were improved and 1,755,000 feet of new runways built. Of the latter, more than 1,000,000 feet were paved.

The W. P. A. constructed 56,000 bridges and viaducts, Harrington said, and improved or rebuilt 37,020. Among other things, W. P. A. employees put up 638,848 traffic signs and 21,696 street-light standards.

W. P. A. rolls will shrink by about 700,000 persons to slightly more than 1,600,000 by July 1. The agency may stay within the limits of its $1,477,000,000 appropriation for the 1940 fiscal year, which ends June 30. Latest figures showed 2,323,000 on the rolls March 6.

Interior Department Appropriation Bill—Indian Hospital, Tacoma, Wash.

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

Mr. COFFEE of Washington. Mr. Speaker, legislative authority to acquire the existing plant and site of the Tacoma Sanatorium from the Puyallup Tribe of Indians was granted by the act of August 11, 1939—Public, No. 384, 76th Cong., 1st sess.

The various main buildings of this plant used for the housing of patients were constructed between 1904 and 1910

and were designed for school purposes. Being of frame construction, they have been greatly deteriorated by dry rot which makes them an extreme fire hazard. The cottages and other buildings are of similar construction, some of them dating back to 1874. A warehouse which was destroyed by fire was completely consumed in the space of 1 hour.

So great is the danger that the Tacoma Fire Department makes frequent inspections of the hydrants and gives instructions as to the action to be taken in case of a fire. All fire fighting is to be left to them, the employees of the plant to devote their attention entirely to the rescue and care of patients. Due to narrow hallways with sharp turns, crippled tuberculosis patients strapped to frames would be difficult of rescue and the time would be very short on account of the tinderlike condition of the buildings.

An appraisal of the property as of June 13, 1931, made by a board comprised of a Tacoma real-estate man selected by the Tacoma real-estate board, two members of the Puyallup Tribe, and former superintendents of Tacoma Sanatorium and Tulalip Agency places a valuation of $228,525 on the site and plant, which valuation was accepted by the tribe. The value of the 38.5 acres of land was placed at $103,860 and of the 31 buildings at $124,665, which is considered to be very reasonable.

Over 1,000 patients are treated at this institution each year at its present capacity of 230 patients. To avert a very possible tragedy as a result of fire, the plant should be replaced by fire-resistant construction, which will be possible only through purchase of the property from the Puyallup Indians.

The proposal to purchase the property, begin construction, and incur a contractual obligation for complete replacement is made as being of first importance to the Indian Service, and particularly to the Northwest Indians and Indians and natives of Alaska. Contracting for the replacement of the entire plant at one time, the actual construction to extend over a period of 3 or 4 years, should effect a saving to the Government of a considerable sum. It is essential that the amount allowed by the Bureau of the Budget, $500,000 for purchase and construction and $815,000 for contractual obligations, be allowed to stand in order to provide reasonably adequate sanatorium facilities for the territory served.

The Government now owns 5 acres of land containing a flowing spring of excellent water, sufficient to supply a small city, and the right-of-way for a pipe line to the plant. A few years ago a pipe line was installed at a cost of $25,000, which is estimated to be serviceable for 50 years. Sewers, steam tunnels and distributing system, water lines, paving, and so forth, are already there and ready to be connected to the proposed new buildings and will serve for many years to come.

The plant is now leased from the Puyallup Tribe at $9,000 per annum, with the provision that the Government keep the buildings in a normal state of repair. To carry out this provision would necessitate virtual replacement at great cost due to the extensive dry rot of the timbers in the buildings. The logical course to pursue is to purchase the plant and replace it with fire-resistant construction, not only to safeguard the actual lives of 200 or more patients, but to provide up-to-date hospital and sanatorium facilities to a large number of Indians in the most economical manner.

What Goes On in Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

RADIO ADDRESS BY HON. WILLIAM J. MILLER, OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on March 17:

Time flies so rapidly it is difficult to believe that this is the third monthly broadcast I have delivered over these facilities since the convening of the present session of the Seventy-sixth Congress on January 3, but such is the case. All of which means that I have but one more opportunity to report to you on the subject of What Goes On in Congress; April 14 will be the last broadcast of this series. This year, as you know, is election year and radio station managers have decided, and rightfully so, that after the middle of April, any Congressman's broadcast might well be considered a campaign argument rather than a report to his constituents. Whether or not I will be permitted to resume these broadcasts next January will be determined in November.

In addition to these monthly broadcasts over the air, I have been mailing to several hundred residents of Hartford County a monthly letter, briefly outlining the activities of Congress for the past month. These letters, or bulletins, will be continued until the adjournment of Congress. If any of my listeners would like to have their names placed on this list to receive future bulletins, and will drop me a card notifying me, I will be glad to add the name to the mailing list.

Last month I devoted my full 30 minutes to a discussion of the Reciprocal Trade Treaties Act. This month the time will be divided between several legislative matters which have recently been considered by Congress.

First, let us consider the all-important subject of economy. From the opening of this session up to the past week, Congress seemed determined to cut every appropriation bill presented, in an effort to keep the national debt below the legal limit of $45,000,000,000, without new tax legislation. Appropriation bills presented to the House in January and February were cut $307,578,000 below the amount asked by the President and the Budget Bureau. In most cases the Senate sustained the cuts and, in some cases, made further reductions. Real progress was being made toward economy until the agriculture appropriation bill reached the Senate. As this bill left the House of Representatives, it appropriated an amount of $404,190,796 less than last year's appropriation, and $67,000,000 less than that requested by the Budget Bureau. This bill was referred to the Senate Appropriations Committee and then things began to happen. The Senate committee added approximately $300,000,000 to the bill—two hundred and twelve millions for so-called parity payments and approximately $90,000,000 for the purchase of surplus farm commodities.

It is becoming increasingly evident, as this session progresses, that the present administration will not support a sincere effort to reduce the cost of government. If the Senate and House approve the recommendation of the Senate Appropriations Committee and adds $300,000,000 to the agricultural appropriation bill, all of the reductions made to date will be wiped out.

As to the Surplus Commodities Corporation increase, I call your attention to an item appearing in the Saturday Evening Post of March 9, as follows: "The Federal Surplus Commodities Corporation shipped three carlots of Washington relief apples here (Bentonville, Ark.). Benton is one of the first five apple-producing counties in America, with 30 carlots now in cold storage here for a lack of a market, and more than half a million bearing apple trees." This is just one of many instances of the way our money is being wasted by this organization.

The proposal to continue so-called parity payments has a much less valid basis than the other item. No one can deny that the farmer of America is entitled to a fair return on his investment and for his labor. The term "parity" simply means that the farmer receives a price for his products that will allow him to buy the things he needs, such as farm machinery, seeds, fertilizer, etc. At the present time wheat is selling in Chicago for a little over $1 a bushel. Its producers are being paid 9 cents a bushel on account of soil conservation and 10 cents on account of parity payments. Dollar wheat in Chicago permits a farmer to operate successfully. There can be no excuse for additional payments to farmers either on soil conservation or on parity payments when we have dollar wheat. With dollar wheat and these payments, farmers are receiving $1.19 per bushel.

Now, take cotton—cotton is 11 cents a pound in New York. The market on the farm certainly is 9 cents. With the cotton farmer receiving 9 cents on the farm, 1.6 cents for conservation payments, and 1.55 cents for parity payments, it makes a total of 12.15 cents per pound. My understanding is that cotton farmers who can get 9 cents for their cotton are being taken care of rather well. That is, considering modern machinery and modern handling, that 9 cents lets them grow cotton and make a profit. Why we should give them 3.15 is too much for me to figure.

Corn at Chicago is about 57 cents. Soil-conservation payments of 10 cents are provided, and 5 cents parity payments, making a total of 72 cents. During our best years, if a farmer got 60 cents for his corn, he was doing pretty well.

The result of the soil conservation payments has been to crowd farmers out of wheat, cotton, and corn, and into dairy products and other agricultural products which are facing the same kind of a situation. To put it another way, the total cash farm income in 1939 was $8,518,000,000; the total income of farmers from corn, wheat, and cotton was $1,331,000,000. This means that we are paying to farmers who contribute 15.6 percent toward the total agricultural income, a bonus amounting to approximately $800,000,000 this year, and the result of that operation is to reduce the price of other farm products, such as fruits, vegetables, dairy products, poultry and livestock, so that the producers of these commodities will not fare so well.

When the promoters of the parity proposition came before the Congress, and wheat was 60 cents, corn at 40, and cotton at 6 or

7 cents, they had a right to say that the price was below a fair one; when they come to us at a time when the price is high enough to yield a moderate return, there is no justification for an increase.

At this time, and with the situation that appears to be confronting the country, there is absolutely no excuse for continuing the so-called parity payments in 1941. So much for economy.

Let's turn our attention, for the next few minutes, to the questionnaire prepared by the Census Bureau for the taking of the 1940 census. Judging from the mail I have received, there is a great deal of interest in the questions to be asked this year. There is nothing new in the taking of a national census, but this year the Census Bureau proposes to ask certain personal questions which have never been asked before as part of the regular national census. In addition to the population census, the last session of Congress authorized the taking of a so-called housing census. I voted against this authorization because I felt that not only was it a waste of $8,000,000, but because departments of the Federal Government had plenty of information on housing. The W. P. A. has recently completed a national housing survey. Soon after the Census Bureau made known the questions to be asked as part of the census, I started to receive letters objecting to the proposed census. I am rather proud of the fact that I was the first Member of the House to call the attention of Congress to these objectionable questions. An examination of the statute relating to the taking of the census failed to disclose any authority for asking a citizen to disclose the amount of his income.

Soon after I addressed the House on this subject, Senator TOBEY, of New Hampshire, introduced a resolution in the Senate declaring that no citizen should be compelled to divulge the amount of his income and that questions Nos. 32 and 33 should be eliminated from the questionnaire. Hearings were held before the Senate Commerce Committee on this resolution, and it was my pleasure to present the views of my constituents who had written to me to this committee. On last Tuesday the Senate committee voted approval of Senator TOBEY's resolution, and it is expected that it will be approved by the Senate within a few days. However, the Census Bureau has instructed its census takers to allow a person having an income of more than $5,000 to simply state that it was over $5,000.

Congressman REED of New York has introduced a bill which would repeal the authority for the taking of a housing census, in addition to the elimination of income questions. Administration spokesmen declare that the objections raised to answering these questions were coming solely from Republicans who desired to embarrass the administration. While I do not have a party caucus list in my office, I am quite sure that the letters I have received from the district are from members of both political parties.

Assuming for the moment that the Census Bureau has the legal right to ask these questions, I maintain that this is a poor time for our Government to do anything that would increase the feeling on the part of the citizens that we are headed toward dictatorship. It seems to me that another reason so many people object to the proposed questionnaire is that they have no assurance that the information given to the Government will be kept in confidence. The fact that only last January the President, by Executive order, instructed the Internal Revenue Bureau to turn over certain income-tax returns to a committee of the Senate leads me to feel that the information given to a census taker may sometime be turned over to a congressional committee. It is true that in the past the Federal Government has conducted surveys in which there have been personal questions asked, but there is a great difference between previous surveys and the present census inquiry in that a person refusing to answer the present census questions finds himself subject to a jail sentence or possible fine. The questions asked on the surveys were more or less voluntary in nature.

I am confident that, due to the large number of protests received in Washington, the objectionable questions will be eliminated from the questionnaire between now and April 1. However, I feel it is my duty to remind my listeners that refusal to answer any question on the census takers' list leaves them subject to criminal prosecution.

During the past week the House passed another appropriation bill making appropriations for the legislative department of the Government. This bill provides money for both Houses of Congress; for the Congressional Library; and for maintenance of the Capitol, Senate, and House Office Buildings. We hear a great deal about the cost of maintaining the legislative branch of the Government, but it is interesting to note that this particular appropriation bill calls for an appropriation of only three-tenths of 1 percent of the total cost of maintaining the Federal Government.

The House also considered and passed a naval bill during the past week. This bill authorizes, but does not make appropriation for, the expansion of the United States Navy. The bill authorizes an appropriation of $655,000,000. Among other things, it is proposed to build three additional aircraft carriers and purchase additional aircraft to bring the naval aviation strength up to 4,500 planes. Even if the Congress should appropriate money to carry out all of the provisions of this authorization, the United States Navy will not be quite up to the so-called treaty strength or, putting it another way, we will not be up to the 5–5–3 ratio approved by the last naval conference. While the Navy Department recommended that we start on a 5-year naval-expansion program, the House Naval Affairs Committee felt, however, that it would be better to confine this expansion to a 2-year program in the hopes that at the end of the 2 years war conditions may be such that further expansion of the Navy will be unnecessary. Providing for the Navy Department under existing world conditions is one of the most difficult problems faced by Congress. Every Member wants to provide whatever is necessary to give us an Army, Navy, and Air Service of sufficient strength to protect our own territory, but the real difficulty comes in determining how large an Army and Navy is necessary to guarantee us the protection we desire.

Some of my listeners will recall that the Republican minority last year appointed a special committee to study the national-defense needs of the United States. This committee submitted a very interesting report which I incorporated in a broadcast last April. The same committee submitted a supplemental report last week which I think you will find interesting, and which I submit herewith:

"In the first session of the Seventy-sixth Congress, the Republican minority united in adopting and putting forward a statement defining and clarifying the policy of national defense which they believed should appeal to the Congress and to the people. That statement of policy was presented to the House of Representatives. Subsequent action of the Congress was such as to justify the belief that this statement of policy and of the mission of our military forces in defense of it, met with general approval. Nothing has occurred since then to alter this belief. Further study prompts the minority to submit to the House some considerations which it deems to be of the utmost importance at this time.

"Our concern is heightened and intensified by what we see going on all over the world today. Recent events strengthen our determination that we shall remain at peace, and secure in that peace. As we plan for security we mean security not only in the physical or material sense, but, taking the long view, the security of our free institutions.

"Our thoughts now turn to the present condition of our military services. In order that they shall be able to perform the mission assigned to them, it is obvious that we need them in adequate strength. It is when we come to give consideration to the strength of the services—not only strength in numbers but especially strength in material and equipment of all kinds—that we find ourselves confronting a difficult and complicated circumstance. It is conceded, we believe, that both the Army and the Navy should be stronger if our military defense is to be adequate. We believe, further, that there would be little hesitation on the part of the Congress in adding very substantially to the present-day strength, especially in equipment, were it not for that circumstance which confronts us and which we must not ignore.

"To reach a better understanding of it we must reexamine the broad outline of our participation in the World War. Upon doing so we are reminded that when we entered that war, in April of 1917, the national debt stood at $1,100,000,000. In the 18 months of our participation we spent something in excess of $35,000,000,000. To meet that expenditure we raised about ten billions through taxes. We borrowed the remainder, and came out of the World War with a national debt of twenty-six billions. That wartime financing was accomplished with comparative ease, for when we began it the Government owed very little.

"Compare that to our present situation. For 8 or 9 years the Federal Treasury has been running in the red. Through all of these years we have been spending much more than we have collected from taxes. The more we have spent the more we have borrowed. As a result, we have piled up a huge national debt. Present law provides that the national debt shall not exceed forty-five billions. It is now conceded that by the end of the next fiscal year the direct bonded debt will have approached forty-four billions. If our spending in the near future goes on at anything like the recent rate the forty-five billion limit will be reached. The Congress will have to raise the limit, and we shall continue plunging along the reckless road.

"Let us remember, therefore, that should we be drawn into a war of first magnitude, we should have to start with a debt of at least forty-four billions, probably more, and then finance the effort on top of that debt. It is a prospect which must concern every thoughtful person in the land.

"The President himself gave evidence of his concern when, in his message to the Congress, he suggested the imposition of a special tax calculated to produce revenue sufficient to meet the additional burden of the national defense, and at the same time avoid the necessity of increasing the debt limit. While we share the President's apparent concern, we are convinced that the imposition of an additional special national defense tax would be inadequate as a remedy and essentially unsound. It would not reach the heart of the problem.

"No one at this time can foresee accurately the measures we might have to employ were we drawn into war but all of us can visualize the danger to our institutions were we forced to resort to inflation, to confiscation, and ultimate repudiation. Could our free institutions survive such a strain? Similar institutions have perished in other lands within our time. Driven to such expedients it might well be that we shall have failed actually in our defense.

"Such a possibility should convince us that the most serious weakness in the armor of our national defense today is the existence of a national debt of $44,000,000,000. There it stands, towering,

ominous. Much as we should like to, we cannot consider our problem solely in terms of soldiers and sailors, of divisions and battleships.

"To deny that a healthy economic condition is vital to our national defense would be absurd. Our ability to mobilize and maintain the resources of the country in a major effort depends fundamentally upon the strength of our national economy. True, we need soldiers and sailors, divisions and battleships, with adequate modern equipment, but to secure their effectiveness in a long, gruelling struggle, and at the same time to preserve our institutions, we must mend our ways.

"It will not be an easy task. We have acquired a habit difficult to cast off. Many of our people, thoughtless of the consequences, laugh at debt and demand that spending shall go on. But it must be curbed, for we cannot go on this way and be secure in this troubled world.

"The maintenance of our defense is linked with the maintenance of all other necessary activities of our Government. At the present juncture we cannot separate one from the other. The cost of the whole of them combined must be our concern as we strive to put our house in order.

"To put it simply, our plea is that the Congress, and others in high authority, reestablish thrift as a virtue in the conduct of government as it is a virtue in the conduct of the individual."

I believe we have just about reached the point of security, and in the immediate future we will have to guard against a desire on the part of some people for overexpansion.

Perhaps the most interesting debate of the present session involved increasing the capital of the Export-Import Bank by $100,000,000. This bill passed the House and Senate 2 weeks ago. While the question of a loan to Finland was not specifically mentioned in this bill, it was generally known throughout the country as the Finnish loan bill. The debate in the House centered around the suggestion that the Export-Import Bank should loan $20,000,000 to Finland. Some felt that the loan should be made in such a way that Finland would be allowed to purchase whatever material was needed in this country—materials that would be helpful to her in defending her territory. Others felt we should make the loan and restrict its usage to nonmilitary supplies, largely surplus farm commodities.

Inasmuch as our own State Department definitely stated that legally Finland was not at war, we therefore could not consider it a belligerent nation. The President had not, nor has not, invoked the provisions of the Neutrality Act in the case of either Finland or Russia. That being true, I felt we were justified in permitting Finland to purchase whatever type of material was most needed, providing, of course, that she secured ships of other countries to transport the material home. It was brought out during the debate that we were, in fact, financing a war for both Russia and Japan through the purchase of gold and silver from these countries. We have bought several million dollars worth of gold from Russia at a cost of $35 per ounce; gold which cost Russia only $8 an ounce to mine. Recently a man was in my office who had personally seen kulak and prison labor used to mine gold in Russia. This gold was being mined by the old, primitive method of scratching gravel out by hand. It is a matter of record that Russia has used the proceeds from the sale of gold to the United States to buy war materials here in the United States. During the past 4 months more than 90 percent of our exports to Russia have been in the nature of munitions and implements of war. While I do not want to see this country take any step that might ultimately involve us in war, I felt that, since we were financing Russian war machinery, we should aid Finland in some practical way. While writing this, word comes to us that the Finnish-Russian War has come to a temporary end; whether or not Finland has been compelled to accept the Russian peace terms because of lack of assistance from other countries we will perhaps never know. However, the fact remains that Finland has given the world an example of reliability and bravery that we can never forget.

The House, thus far, has given very little consideration to important legislation which should be taken up, other than routine appropriation bills. About the only exception has been the continuation of the Reciprocal Trade Treaties Act, which I discussed fully last month.

Some of us are beginning to wonder if we will be given a chance to vote on bills that should be enacted this session. As most of my listeners realize, the minority is powerless unless members of the majority party will permit legislation to be presented to the House. The standing committees are composed of 15 Democrats and 10 Republicans. The only way legislation can be taken from a committee is by securing the signatures of 218 Members on a discharge petition.

Many of us want to vote for legislation to provide adequate old-age assistance. We want to consider the recommendation of the so-called Smith committee. This committee has held extensive hearings in connection with its investigation of the National Labor Relations Board. They have submitted a report to the House accompanied with suggested amendments to the National Labor Relations Act. I have not had time to study this report and proposed amendments but I intend to devote the April 14 broadcast to a discussion of this report.

Then, too, there is the Walter-Logan bill, the enactment of which will benefit many of our citizens. This bill is designed to curb abuses by bureaucratic agencies of the Federal Government. During the past 7 years there has been a growing tendency for Congress to write regulatory laws in such form that enforcing officers, boards, and commissions are given power to fill in the details. The rules and regulations of these bureaus have been the force of law, and many of them carry severe criminal penalties. Such regulations have no permanency; they are changed almost overnight without the knowledge of many who are governed by such regulations. This bill strikes at three evils: (1) Making arbitrary decisions contrary to factual evidence; (2) delay in issuing regulations under which a given law will be administered and with consequent uncertainty to those coming under the provision of the law; and (3) restricting the right of court appeal by parties aggrieved, especially in regard to findings of fact. The Walter-Logan bill would hold administrative agencies strictly to the act by providing that any decision may be set aside if it appears to the court that findings of fact are erroneous or that the findings are not supported by substantial evidence and that the decision was issued without due notice and without affording the aggrieved party the full or fair hearing so that it infringes on the Constitution or statutes of the United States or in any other way contrary to law.

The enactment of the Walter-Logan bill would assist many harassed employers and would, I believe, in due time stimulate business and employment.

Many Members of the House are anxious to consider legislation that will permit the continuation of the slum-clearance or low-rent, low-cost housing program. This bill died in the closing days of the last regular session. The proposal is now before the Rules Committee and it is up to the House majority leadership to decide when it shall again be presented to the House for action.

In closing, I would like to mention the flood-control hearings that will open before the House Flood Control Committee next Tuesday. The city of Hartford will be ably represented by Mr. Charles Bennett, secretary of the Hartford Flood Control Commission; and East Hartford will be represented by Mr. John Burke, president of the East Hartford Council.

While it is true that the amount of money recommended for flood-control work this coming year has been reduced, I feel confident that sufficient money will be made available to complete the Connecticut River projects.

There seems to be some misunderstanding regarding flood-control legislation. First of all, Congress passes an authorization bill, approving a certain complete project, based on recommendations of the Army engineers. Next, an appropriation bill must be passed to provide the money needed to do all the work that can be done during the next year. It would be most unusual for Congress to fail to provide money needed to complete a project such as the Connecticut River project that is now under way. The work may be slowed up by reduced appropriations, but I am confident we have nothing to worry about in connection with flood control.

The hearings Tuesday will be on recommendations of the Army engineers, contained in a recent review report of the Connecticut River project, and while copies of this report are not as yet available, I am informed the recommendations meet the ideas of representatives of Hartford and East Hartford.

There is much that could be done to improve business and lessen unemployment, and I for one hope that the desire for early adjournment because of the political conventions will not cause Congress to go home leaving so much of its work undone.

Americanism and the American Legion

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

ADDRESS BY DR. RUTH MILLER STEESE

Mr. SIMPSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dr. Ruth Miller Steese, State legislative chairman, American Legion Auxiliary of Pennsylvania, delivered at Palmyra, March 11, 1940, at public meeting sponsored by the American Legion and American Legion Auxiliary of Palmyra, Pa.:

United in the common bond of service to God and country, we meet here this evening to consider the vital issues of Americanism and national defense. As we gather in historic Palmyra we are reminded of that great American, one of the first of our national defenders, that outstanding Revolutionary patriot, Dr. John Palm. As you know, Dr. Palm in 1766 bought 100 acres of land here, settled, and began farming and practicing medicine. In the course of a few years a town sprang up called Palmstown, which name was changed to Palmyra in 1810.

The American Legion was so proud of Dr. Palm that early in 1932 you erected a marker at his grave in the cemetery adjacent to Bindnagle's Lutheran Church. In the fall of the same year a boulder and tablet were donated by you, the citizens of Palmyra, and erected and dedicated by the Washington Bicentennial Committee under the direction of the Lebanon County Historical Society.

Such has been and is your faith and pride in the founder of your community. As the great-great-great-great-granddaughter of Dr. Palm, it is but natural that I should share in your pride. And I do; and my youngest son bears the name, John Palm.

And so this evening, bound by the ties of kinship to the historic past, we consider Americanism. This season is filled with American history and tradition because it is the time when we review the lives and achievements of those two immortal Americans, George Washington and Abraham Lincoln, the Father of his Country and the preserver of our Union.

May we pause to pay tribute first to George Washington, and may this tribute be expressed by the words of Abraham Lincoln:

"Washington is the mightiest name on earth; long since mightiest in the cause of civil liberty; still mightiest in moral reformation. On that name no eulogy is expected. It cannot be. To add brightness to the sun or glory to the name of Washington is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked deathless splendor leave it shining on."

May my tribute to Abraham Lincoln be in these words: "It is the glory of Lincoln that, having absolute power he never abused it, except on the side of mercy. Wealth could not purchase, power could not awe this divine, this loving man. Hating slavery, pitying the master, seeking to conquer not persons but prejudices, he was the embodiment of self-denial—the courage, the hope, and the nobility of a Nation."

Such have been the greatest men of American history, men of great ability and pure patriotism, men with no motive apart from love of their country.

How significant it is that we celebrate the birthdays of Washington and Lincoln in February, and then comes March. In this month we celebrate another birthday, that of a great organization, the great American Legion. This trio of anniversaries reminds us that in a changing world, with changing values and changing standards, the birthday of the Legion nevertheless deserves third place in national history, for the American Legion is dedicated to uphold and defend the Constitution of the United States, which was the greatest achievement of the Revolutionary period; to maintain law and order, the foundation for which was laid by Lincoln and the "men in blue"; and to foster and perpetuate a 100-percent Americanism, the price of the sacrifice of '17 and '18.

To consider the term "Americanism," we must go back to the beginning of all things. The God who created man implanted in his soul a yearning and love for liberty—liberty of mind, body, and spirit, liberty of heart and conscience. In his quest for liberty man has endured suffering, undergone persecution, and made sacrifices which grip the heart and move the soul. In his efforts to realize his yearning for liberty almost all of man's existence has been one of strife and struggle, battle and trouble.

For centuries he knew but one world, the Old World, which shackled and confined him physically and spiritually. Then happened a great event—a new world, America, was discovered—which at once seemed to be the land of opportunity, the land of liberty of body, soul, and spirit.

In time men came from other lands with hope in their hearts. They settled in this virgin world in quest of the liberty, happiness, and contentment which they believed this new land would bring them. At first came the English to Virginia, then the devout Pilgrims, the sturdy Dutch, the tough-fibered Scotch-Irish, the patient Germans, the conscientious Huguenots, and the resolute Danes and Swedes. These were the peoples—stout of heart, strong of faith, and sturdy of conscience—who laid the foundations of the Government, great and wonderful, which you and I are enjoying today.

After a century and a half of struggle, suffering, and sacrifice, marked by battling with illness and hunger, fighting with wilderness and savage, man's yearning for liberty crystallized and found expression in the Declaration of Independence, that great creed of self-governing freemen, voicing for the first time in the annals of history the belief in the equality of man and the faith in the people to govern themselves and, through self-government, to realize man's yearning for a higher, a better, and a happier life.

Americanism had its actual birth and definition in this Declaration of Independence, in those immortal words of Thomas Jefferson, "When in the course of human events, it becomes necessary for one people to dissolve the political bonds which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect for the opinions of mankind requires that they should declare the causes which impel them to the separation," and these are the significant words, "We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men; deriving their just powers from the consent of the governed."

And so we learn that the Declaration of Independence, the first governmental document uniting the Thirteen Colonies, was one based on idealism and spirituality—on a faith in the value and potentialities of the common man. It was a document proclaiming the birth of a Nation dedicated to the personal and religious liberty of mankind.

Thus we perceive from the birth of our Nation, through its existence down to the present time, running through it like a golden thread, a deeply spiritual strain, a pervading reverential recognition of Divine Providence.

And so, the word "America" does not mean merely this splendid Nation with its gigantic forests, its lordly mountains, its vast prairies, its beautiful valleys and its crystal lakes, not just America the beautiful. It means more and vastly more. It means the history, the tradition, the patterns of life and conduct, the economic order and the system of individual and human liberty for which we stand.

Obviously, with so many peoples in so many lands seeking to find the solution to the political problems of the ages, it cannot be said that we in America are living under the one and only perfect system. But there is at least one perfect element upon which we can securely rest. And that is that in this country of ours we have a system and a tradition based upon two centuries of furthering an ideal, the ideal of a society which recognizes that at the base of any economic, social, and political structure like ours there must be the individual, and that this individual cannot contribute to the fullest degree if he does not possess those individual rights, liberties, and freedom outlined in the Declaration of Independence and guaranteed by the Constitution and the Bill of Rights.

But as this great Government places supreme value upon the rights of the individual, it also demands in return the finest and the best. It presents opportunities and emphasizes responsibilities. It is a challenge to the richest and noblest life of which mankind is capable, a challenge to the great unconquerable spirit which characterized our great men of the past and which must characterize our men of today if this Nation is to continue to rise to greater planes of service and usefulness in the future.

Americanism today is faced with more problems, more serious obstacles, than during any great war period. We are living in an age of dictatorships, either threatened, implied, or accomplished. Two decades after the World War which was waged to abolish autocracy and to make the world safe for democracy, we find dictatorships the fashion in over half of Europe. Even in our own United States, which we have long regarded as the strongest citadel of popular government, there are subversive forces at work seeking to overthrow our constitutional liberty.

Knowing the conditions that have existed in our Nation, the American Legion fought these subversive influences for 20 years. Success first crowned our efforts when the Seventy-fifth Congress passed House Resolution 282 authorizing the appointment of a congressional Committee on Un-American Activities.

With but a small appropriation, the committee was appointed with Hon. MARTIN DIES, of Texas, as chairman. The investigation brought forth startling revelations, indisputable evidence as to the foreign agencies working in and through our citizens for the destruction of our great Republic. The chairman and his committee exerted every effort and were steadfast in their determination to learn the truth. Their first report was presented to the first session of the Seventy-sixth Congress, January 3, 1939.

Then a second fight was in order, with strong political forces seeking the discontinuance of this committee. But with the efforts and support of the American Legion and allied organizations, real Americans forced the issue through Congress again, and the committee was continued with an additional appropriation. This winter, in the third session of this same Seventy-sixth Congress, we fought our third battle. Again public demand, public opinion, molded by the dauntless spirit of the American Legion compelled Congress to continue this committee. The resolution passed on January 23, 1940, with 344 yeas, 21 nays, and 57 not voting. We as American citizens appreciate the courage and conviction of our Congressmen, who in the face of overwhelming odds, dared to vote for this resolution. Your own Congressman, the Honorable JOHN C. KUNKEL voted for it. If you are genuinely interested in this investigation and in the disclosure of un-American activities in our country, you as organizations and you as private citizens should publicly and privately, orally and by letter commend Congressman KUNKEL for his support.

This is only one of the many grave problems facing us at the present time. As we consider our great national problems and issues, let us work out their solutions by a study and application of the teachings of our recognized great Americans. Abraham Lincoln and George Washington shall always live because they never wavered in their allegiance to constituted American government, to constituted American authority. Lincoln gave us this admonition, "Let us have faith that right makes might. And in that faith, let us to the end dare to do our duty as we understand it."

Divine Providence, which watched over the early colonists, guided our forefathers in the creation of our glorious Union, has continued to watch over us and to raise up strong, courageous men in every period of crisis in our history. Today, when the future looks dark, when republics are giving way to dictatorships, when individual rights are being surrendered to the States, and when

States' rights are being centralized in Federal authority, we need great men. Today, if we are to return to our faith in the fundamental principles of government, if we are going to support and maintain the Constitution of the United States, if we are going to retain the freedom guaranteed to us in the Bill of Rights, and make this country the great republic for which it was planned, we need great men. Let us seek for the Washingtons and Lincolns of 1940, who will lead us back to the path of the truly American way of life, living, and government. May our guiding sentiment in 1940 be—

"God give us men!
A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office cannot kill;
Men whom the spoils of office cannot buy;
Men who have opinions and a will;
Men who are honest, men who will not lie;
Men who can stand before the demagogue
And damn his treacherous flatteries without blinking;
Tall men, sun crowned,
Who live above the fog, in public duty and in private thinking.
For while the rabble, with their thumb-worn creeds,
Their large professions and their little deeds,
Mingle in selfish strife,
Lo, freedom weeps,
Wrong rules the land, and waiting justice sleeps.
God give us men!"

Interstate Chain Store Lobby Ganged Up on Farmers

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. PATMAN. Mr. Speaker, chain stores, with their insidious propaganda, are telling the people just how much they spend for farm products, but they do not say how much more they should have paid the farmer so he could make a living. It is most encouraging that organized farm opinion now can speak for itself on the chain-store question. When facts were compiled definitely showing that the more the chain stores sold, the less the farmer received, it was not a surprise that the 5,000 delegates of the California State Grange, in its annual State convention November 15, 1935, unanimously passed the following resolution:

Whereas mass buying as practiced by chain stores is a menace to the farmer and tends to produce a private monopoly in the distribution of food; and

Whereas private monopoly in the distribution of food is a threat to the welfare of all people; and

Whereas chain stores do not now pay their fair share of the tax load, and at the same time take the net profit from business out of local communities and send it back to Wall Street-controlled financial centers in the East, destroying, at the same time, opportunities for our own boys and girls coming out of high schools and colleges to go into business for themselves: Now, therefore, be it

Resolved, That the California State Grange endorses and supports legislation to curb expansion and to regulate existing chain stores in California.

It was reported in the newspapers recently that the National Grange condemned chain farming. I construe that as an expression by this organization against absentee ownership of a business that should be owned locally.

HOW INTERSTATE CHAINS AFFECT FARMERS

In a recent report the Federal Trade Commission cites a number of glaring examples of the unfair gouging of farmers and growers throughout the land. This report deals with many commodities. I will mention a few. In each example the consumer's dollar is broken down, fractionally, as follows:

Pacific Northwest apples: Of one consumer dollar spent in 1936, 14½ cents paid for packing and loading, 23⅓ cents for railroad shipment to Dallas, Chicago, New York, and other principal markets; the interstate chain stores hogged 31⅓ cents of the consumer dollar while the poor grower got a mere 21⅓ cents.

Texas onions: Again in 1936, of one consumer dollar, 11½ cents paid for packing and loading; 28 cents for rail—watch this closely—41½ cents went to the interstate chain stores, but the hard-working Texas onion grower received only 12¼ cents.

Now, take Texas cabbage: In 1936, and for the same markets of one consumer dollar, 10¼ cents paid for packing and loading; 36 cents went to railroads; the interstate chains grabbed 35½ cents; and the painstaking Texas cabbage grower got only 14½ cents.

Florida cabbage, for the same year, same markets: Of one consumer dollar, 14¾ cents for packing; 27½ cents for railroads; interstate chains greedily clutched 40¼ cents, but the Florida grower received a miserable 11¼ cents.

California tomatoes: Of one consumer dollar in the same markets, 11 cents for packing; 17½ cents for railroads; interstate chains received 44¼ cents; and the grower ended up with only 23 cents.

These are very convincing official figures by the Federal Trade Commission. Similar illustrations could be given for other commodities, including dairy products.

Prior to the advent of the interstate chains the average farmer had an open market in which to sell his products. But today his price is virtually dictated by the grasping chain-store interests.

OFFICIAL REPORT OF FEDERAL TRADE COMMISSION

Last year, 1937, the Federal Trade Commission reported to the Congress of the United States as follows. Listen to this. I quote:

The Commission records with dismay its belief that the survival of independent farming by farmers who own their own farms and maintain an American standard of living is in jeopardy.

You cannot read this report without realizing that the Federal Trade Commission is saying, in just so many words, "Mr. Farmer, unless the interstate chain-store system is broken, you are absolutely ruined."

LOBBY GANGED UP

This lobby has ganged up on the farmers. It has ganged up on the wage earners. It has ganged up on the livestock and dairy producers, and it is wrecking them. In cities where they obtain control they gang up on the consumers.

EVERYBODY PROFITS BUT FARMER

The national corporate chains claim much credit for disposing of certain surplus commodities of the farmers. One critic advised me that he had just purchased from a national chain store three cans of peas for 12 cents and challenged me to deny that such purchase was in his interest and the interest of the country. He incidentally pointed out that the farmers were helped as well as himself; that the farmers had a surplus of peas that the chain store was helping them to dispose of. Let us see who was helped by this sale of surplus peas at 4 cents a can. The can company made a fair profit on the can. The railroad company made a fair profit on transporting the can to the producer and cannery, and also on the transportation after the can was filled. The telephone company made a fair profit on the calls necessary to complete the sale to the distributor, but the farmer who produced the peas worked for less than 5 cents an hour and threw in absolutely free the soil on his farm required to produce them. The wage earner working in the cannery did not receive a living wage. The chain store either received a profit or else placed his competitor a little bit nearer to bankruptcy. The railroad company profited, the Can Trust profited, the telephone company profited, but the farmer and wage earner suffered.

HEARINGS

H. R. 1, a bill to curb interstate chains, is now before the Committee on Ways and Means of the House. Hearings will commence on this bill March 27, 1940.

Payment of Income Tax in the District of Columbia by Residents of Massachusetts

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

CORRESPONDENCE WITH THE COMMISSIONER OF CORPORATIONS AND TAXATION OF MASSACHUSETTS

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following correspondence which I have had recently with the commissioner of corporations and taxation of Massachusetts:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 16, 1940.

Hon. HENRY F. LONG,
Commissioner of Corporations and Taxation,
Boston, Mass.

DEAR MR. COMMISSIONER: I read with much interest your letter to Congressman MCCORMACK, which he inserted in the CONGRESSIONAL RECORD, relative to the question of whether Massachusetts people residing in the District of Columbia should file State or District income-tax returns. As is the case with each Member from our State, I have many constituents living here in the District, most of whom are employed by the Government, and who retain their voting residences in the State. Some of them have been here for many years, own their homes here on which they pay taxes to the District, and have never filed income-tax returns in Massachusetts. The question whether they should file such returns has, of course, been brought to a head by the situation here, where Congress enacted an income-tax law for the District for the taxable year 1939. Scarcely a day goes by but what my office receives telephone inquiries from Massachusetts folks as to whether they should now file State-tax returns or District returns. I have carefully refrained from offering any advice one way or the other.

This morning my office received a phone call from a man from western Massachusetts who is permanently employed by the Government and who has been here for a number of years. He recently wrote to your office and received a reply to the effect that he should file a State tax return, and the circular sent him stated he would have to pay a penalty of $5 per day for each day's delay subsequent to March 1. From his conversation I inferred that because of this penalty he would be inclined to file a District of Columbia return instead and give up his voting residence in Massachusetts. I presume his case is typical of a great many others. They naturally would prefer to retain their voting residences in Massachusetts, and of course it would be to the financial interest of the State to have them do so and hereafter file State tax returns. I am wondering whether, in view of the peculiar situation which has arisen here, there is any means whereby the penalty could be waived for District of Columbia people this year if they will file delayed returns with your office. If this could be arranged, I believe I could have the matter sufficiently publicized in the Washington newspapers to reach the attention of most Massachusetts folks employed here, and I feel it would result in a great many returns being made to the State which otherwise will be made to the District of Columbia.

I would be glad to have your reaction to this matter at your convenience.

With personal regards,
Sincerely yours,

ALLEN T. TREADWAY, M. C.

[Telegram]

DEPARTMENT OF CORPORATIONS AND TAXATION,
Boston, Mass., March 20, 1940.

Congressman ALLEN T. TREADWAY,
House of Representatives, Washington, D. C.:

Your suggestion in respect to inhabitants of Massachusetts who are employed in the District of Columbia and who are filing Massachusetts income-tax returns for the first time in 1940 is deeply appreciated and wholeheartedly adopted.

Please be advised that all penalties because of delay in filing Massachusetts income-tax returns will be waived by me as commissioner of corporations and taxation. It will be appreciated if those who can immediately file the Massachusetts income-tax return due March 1st, but in accord with the thought of this communication all are hereby assured that any return filed on or before April 1 will be accepted without any penalty because of lateness in filing the return which was due March 1. Forms will be instantly forwarded to those who indicate they require them.

It is my thought that every possible aid and assistance should be given to those to whom you call attention and others perhaps similarly placed. I am more than pleased with the opportunity you afford me of making clear to all that Massachusetts income-tax returns may be filed by all, secure in the understanding that no penalties will be imposed for late filing.

HENRY F. LONG,
Commissioner of Corporations and Taxation.

Investigation of Activities of Government Employees on Behalf of Foreign Countries

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

RESOLUTION OF THE GENERAL ASSEMBLY OF THE COMMONWEALTH OF KENTUCKY

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith include a resolution passed by the general assembly of the Commonwealth of Kentucky to memorialize the Congress of the United States in behalf of H. R. 8368 to provide for investigation of activities of Government employees on behalf of foreign countries, which bill I introduced at the request of the Newport Lodge, No. 273, of the Benevolent and Protective Order of Elks.

The resolution is as follows:

OFFICE OF CHIEF CLERK,
HOUSE OF REPRESENTATIVES,
COMMONWEALTH OF KENTUCKY,
March 5, 1940.

Mr. Carl Scheben, of the county of Campbell, introduced the following resolution, viz:

"House Resolution No. 103

"Resolution to memorialize the Congress of the United States in behalf of H. R. 8368, by Representative BRENT SPENCE, of Kentucky, to provide for investigation of activities of Government employees on behalf of foreign countries

"Whereas a bill has been introduced in the House of Representatives of the Congress of the United States by the Honorable BRENT SPENCE, Representative of the Fifth District of Kentucky, known as H. R. 8368, of the Seventy-sixth Congress, third session, and entitled 'A bill to provide for investigation of activities of Government employees on behalf of foreign countries'; and

"Whereas this aforesaid bill is directed against un-American activities; and

"Whereas this legislation is sponsored by the Benevolent and Protective Order of Elks as a means to curb communism, nazi-ism, and other un-American 'isms': Now, therefore, be it

"Resolved by the General Assembly of the Commonwealth of Kentucky, That this general assembly earnestly recommends the passage by the Congress of the aforesaid bill; and be it further

"Resolved, That copies of these resolutions be forwarded to the Honorable BRENT SPENCE, Representative of the Fifth District of Kentucky, and to the Chief Clerk of the House of Representatives of the Congress of the United States, by the clerk of the house of representatives."

This resolution was adopted by the house of representatives on February 23, 1940, and concurred in by the senate on March 4, 1940.

Attest:

W. A. PERRY,
Chief Clerk, House of Representatives.

A Job for Every Man Who Wants To Work

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

ADDRESS BY HON. EDWARD A. KELLY, OF ILLINOIS, AT A MEETING HELD BY AN AFFILIATED GROUP OF LABOR ORGANIZATIONS, FEBRUARY 23, 1940, AT BLUE ISLAND, ILL.

Mr. KELLY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address deliv-

ered by me to a group of labor organizations on February 23, 1940, at Blue Island, Ill.:

In coming here tonight I come here in the light of fairness to the forces of labor, not in the spirit of taking any part with or affiliating my remarks to any group of any labor organization. I have always been fair in my judgment to the cause of labor, both organized and unorganized alike.

There have been many changes which have occurred in our economic life since the Declaration of Independence and the Constitution set forth their proposals for fostering the welfare of the American people. With conditions changing those proposals require new public responsibilities.

I firmly am a believer that where industry fails to provide a job it is the duty of the Government to provide a job for every man and woman who wants to work.

In the birth of democracy never lose sight of this fact: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights—that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends it is the right of the people to alter or abolish it and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

In the early beginning of our country the above statement, taken from the Declaration of Independence, July 4, 1776, was a bold denunciation of all governments then existing. It denied the right of the few, anywhere, at any time, to rule the many. It was the first attempt in all history to establish a government upon the broad foundation of the rule of the masses. Only idealists of the far-removed Colonies, those dreamers of field and forest, of the far frontiers, had the vision to behold or the courage to declare such a truth, and the tenacity of purpose to do battle for it.

Within this American wilderness there began the political evolvement of a Nation whose progress and destiny were to depend upon in its day by those who did not approve of it and classified it as that most radical of doctrines.

Thirteen years after the much-ridiculed Declaration of Independence—the first time in history a people deliberately framed in writing their agreement as to the form and method of government which they desired to adopt and follow—the basis of that government was the reaffirmation of that ridiculed declaration of equality in a constitution which they adopted to formulate the economic rights under the great Declaration.

The Constitution was wisely written. It provided for its own modification to meet changing economic needs. It has already been amended 20 times, and as the economic system changes it may be amended many more times to meet the trend of the people.

Each change in the Constitution has been, and always must be, designed toward an ever closer conformity with our basic Declaration of Independence. This declaration is not subject to change. It is the one great changeless part of our national expression. Men accept it and become Americans, or reject it and remain foreigners. Upon this rock we have founded our Nation. By it as written we stand or fall.

It was upon this well-considered, well-planned, well-worked-out system that America started on her mighty course. It was idealism in behalf of humanity that was to be given practical, every-day expression in the acts and achievements of a people coming from many national stocks. They accepted fully the great truth that the highest ideal is the surest and safest guide in the practical things of life, and that the aspiration for equality of opportunity among men is the highest ideal in the government of men, and they followed it.

Under this system of government we have already come far. Under it we have passed safely through many dangers and difficulties. We have warred with other nations here in America. We have warred among ourselves for the very life of our country.

We, America, started the movement for political democracy and assisted largely in its promulgation and adoption throughout the world. At the time of our adoption of the Constitution America was purely an agricultural country. Through successive developments it has grown largely into an industrial country. Our whole economic life has changed as a result of this evolution. The old order has failed to meet the new conditions. What was fair and equitable when all labored alike, has become clearly unfair and inequitable under the new conditions. The physical development of the country has outrun the economic adjustments which that growth required.

The economic system of distributing wealth which prevailed at the time power was first applied to machinery, "labor-saving machinery"—in America as well as in other countries—permitted the piling up of tremendous fortunes by the few and prevented the many from sharing fairly in the wealth which the many created. This is the unanswerable evidence of the enormous economic inequality actually existing.

In the light of our experience the remedy suggests itself. Since political equality has removed most of the political abuses which had so long cursed the world, economic equality will as certainly remove the abuses which have so cursed the economic world. I listened very attentively a few nights ago to a Member of Congress of the Republican Party, in a speech delivered at the Stevens Hotel, Chicago, in which he castigated viciously the so-called New Deal. He spoke of how the Republican minority in Congress now was saving America. He failed to state, however, that practically every single Republican Member has and is voting to a man against all progressive legislation, legislation beneficial to the public welfare and to labor.

He mentioned about the enormous debt that the Democratic Party has foisted on the backs of the American people. He failed however, to mention that it was his party that caused a national deficit of $21,000,000,000 that the Democratic Party inherited on the 4th day of March 1933. He failed to tell his audience also that his party left a bankrupt nation to the Democratic Party on that day. He failed to state that between 1929–33 that 10,333 banks in this Nation had closed their doors and confiscated billions of dollars of the hard-earned money of the American people who placed their money in these institutions for safekeeping. He failed to say that an unregulated stock exchange then operating under Republican control closed their doors and took billions of dollars more of the people's money placed in securities of industry that they thought were secured, but turned out to be nothing more or less than watered securities and securities that never existed.

He mentioned about what the party that he represents would do for the American farmer if it were restored to power in this Nation, but he did not inform them that under his administration the farmer became another bankrupt person in America, because his party failed to help the American farmer retain his markets.

He forgot to tell his audience in Chicago that the lowest price of hogs in 1929–33 was 3.3 cents per pound—by the so-called Republican prosperity that he now yells about. He forgot to inform his listeners that the American farmer only received 31.9 cents for corn, 38.2 cents for wheat; eggs he fed to his hogs, for he could not get a fair price for them in the markets.

Yes; he forgot to state about the scandal created by his party in the case of Colonel Forbes, Director of the Veterans' Administration, who was tried for conspiracy to defraud.

He forgot to mention that one of the Cabinet members under the Republican administration of the old order of business was found guilty of accepting a bribe in dealing with leases of the naval petroleum reserve and was sentenced to jail.

They thought so much of the laboring classes of people then that they called out the United States marines and at bayonet points drove them off of public lands that had been given these people under free land grants of the United States Government because rich mineral resources had been discovered there and left these unfortunate people stranded in the desert of America to starve and die.

Yes; he failed to mention that his party stood idly by and witnessed the collapse of this Government without trying one remedy to prevent it. And, oh, he failed to tell his audience how Herbert Hoover drove the ex-soldiers at bayonet points out of the Nation's Capital they fought to preserve when they marched on to Washington for food and jobs and redress in life.

And above all else he failed to state that his party repeatedly sat idly by and allowed the prohibition amendment to the Constitution to ruin the moral character of her people, to put them in a life of crime and murder, and make them disrespectful people of this Nation. And then the long-forgotten Jones five-and-ten law, that virtually made criminals out of every American citizen that dared sip an ounce of alcoholic beverages, unless you had a permit from the Nation's own bootlegger, Andy Mellon.

He forgot to mention that for 40 years past the railroad men of this Nation sought a pension for valorous service they rendered to America and could get no consideration from his party.

Oh, I could go on and on and reiterate many happenings, but I wish to be fair with you all, for sometimes it gets boresome to those who have to listen.

And now I purpose to state what this Nation, under one of the greatest Presidents it has ever had, has done, and before going into this I want to say I met a man a short while back en route to Washington from Chicago. He did not know who I was, as we met in the dining car on the Capitol Limited and discussed the economic situation prevailing in America. He said, while he was a Republican and did not support Franklin Roosevelt in 1932, he certainly would support him in the coming year, meaning 1936, for if, one thing he did which met with his approval, he prevented the American people from taking up arms against one another, and while he did not agree with his entire program, he nevertheless would support him upon those principles.

Now what has this administration done for labor:

The first act was to secure the banking structure of this Nation and to save the solvent institutions from further collapse. It passed the Federal Deposit Insurance Act that today safeguards your money up to $5,000 in the bank. We repealed the eighteenth amendment and the Jones five-and-ten law restoring civil liberties back again to the masses of American people.

We passed the Agricultural Adjustment Act to rehabilitate the American farmer, and as we witness today the prices of farm commodities, to what they were, the American farmer has received more than an even break. We passed an emergency relief act to take care of the American people, to feed and clothe them, extend medical aid to the sick, and to take care of the underprivileged persons of this Nation that were left destitute by the Republican calamity. We passed the soldiers' bonus bill. We passed legislation for the

widows and orphans of soldiers who died that were service-connected cases.

After a 40-year fight we passed the Railroad Retirement Act, and many fights ensued between Congress and the Supreme Court over the validity of this act.

We now have before us in conference the so-called transportation bill, that will equalize all forms of carriers in commerce.

We passed under a Democratic House the Anti-Injunction Act of 1932, which protects labor from a discriminatory use of the injunction to break strikes. We created a national labor act, giving the right to employees to join a union of their choosing and a right to collective bargaining.

We provided for the establishment of fair labor standards in employment, known as the Fair Labor Standards Act of 1938. This established in industry engaged in interstate commerce or in the production of goods for commerce of labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers.

The establishment of minimum wages and maximum hours.

We passed a system of Federal old-age benefits and by enabling the several States to make more adequate provisions for aged persons, blind persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment-compensation laws.

We passed the 40-hour workweek for all Federal employees engaged in the Post Office Department.

We prohibited prison-made goods to flow in commerce in competition with union-made goods.

We passed as an emergency act the establishment of the C. C. C. camps to take boys off of the streets and make useful citizens out of them.

We established a Fair Standard Act in the paying of wages on Government contracts.

We passed the Longshoremen and Harbor Workers Compensation Act with respect to rates of compensation.

We created the Public Works Administration, Civil Works Administration, and the Works Progress Administration to cooperate with the States in an emergency where employment could be given on needed public-works improvements.

We passed the Home Loan Corporation Act, that enabled people to amortize mortgages they owed on property that were in a distressed condition and saved millions of home owners from losing their homes.

The Federal Housing Corporation Act made it possible for people in low-wage brackets to build and purchase homes on the basis of small monthly payments, where the Federal Government guaranteed the payments to mortgage companies and building and loan associations, and at the same time made it possible for the building industries to reemploy building mechanics.

These, my dear people, were some of the most important acts passed by this administration beneficial to the public interest and its general welfare.

In conclusion, I wish to reiterate a statement issued by the President of the United States in which he said, "Democracy is not a static thing, it is an everlasting march; when our children grow up they will still have problems to overcome. It is for us, however, manfully to set ourselves to the task of preparation for them so that to some degree the difficulties they must overcome may weigh upon them less heavily.

I am confident that the people of the Nation, having put their shoulder to the wheel, will build a better future for the children of the days to come.

Democrats' Part of National Debt Under President Franklin D. Roosevelt Does Not Exceed $20,000,000,000

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

Mr. PATMAN. Mr. Speaker, President Woodrow Wilson, during the World War, said that those who profited by the war should pay its cost, and he persuaded the Congress to pass tax laws which, if they had remained upon the statute books, would have caused the entire payment, the complete liquidation, of the national debt by June 30, 1927. When the Republicans came into power March 4, 1921, they did not see fit to keep these war taxes in effect. They did not want to liquidate the national debt so quickly. In fact, it was contended by the administration in power and by many of the big financiers of the country that a pretty good size national debt was a sound thing for the country.

I am inserting herewith a statement prepared by Mr. L. H. Parker, chief of staff of the Joint Committee on Internal Revenue Taxation, which discloses that if the Woodrow Wilson taxes had continued in effect, the national debt would have been entirely paid by June 30, 1927, and there would have been a surplus at that time in the Treasury of $1,542,000,000 after the payment of the debt in full.

The statement I refer to is contained in volume 79, part 3, of the CONGRESSIONAL RECORD for the Seventy-fourth Congress, first session, page 2687, and is as follows:

Estimate of additional revenue that would have been derived under the income and excess-profits tax rates of the year 1918 continued in subsequent years, with effect upon the public debt by the application of such additional revenue thereto

INDIVIDUAL INCOME TAX

Year	Actual net income	Actual tax	Theoretical tax	Excess
1918	$15,924,639,000	$1,127,722,000	$1,127,722,000	
1919	19,859,491,000	1,269,630,000	1,406,052,000	$136,422,000
1920	23,735,629,000	1,075,054,000	1,680,483,000	605,429,000
1921	19,577,213,000	719,387,000	1,386,067,000	666,680,000
1922	21,336,213,000	861,057,000	1,510,604,000	649,547,000
1923	24,777,466,000	661,666,000	1,754,245,000	1,592,579,000
1924	25,656,153,000	704,265,000	1,816,456,000	1,112,191,000
1925	21,894,576,000	734,555,000	1,550,136,000	815,581,000
1926	21,958,506,000	732,471,000	1,554,662,000	822,191,000
Total	178,795,247,000	6,758,085,000	12,658,705,000	6,400,620,000
1927	22,545,091,000	830,639,000	1,596,192,000	765,553,000
Total	201,340,338,000	7,588,724,000	14,254,897,000	7,166,173,000

CORPORATIONS—INCOME AND EXCESS-PROFITS TAXES

Year	Actual net income	Theoretical net income	Actual tax	Theoretical tax	Excess
1918	$8,361,511,000		$3,158,764,000		
1919	9,141,418,000	$8,031,704,000	2,175,342,000	$3,034,137,000	$858,795,000
1920	7,902,655,000	6,542,608,000	1,625,235,000	2,471,601,000	846,366,000
1921	4,336,048,000	3,399,895,000	701,576,000	1,284,378,000	582,802,000
1922	6,963,811,000	5,222,858,000	783,776,000	1,973,060,000	1,189,284,000
1923	8,321,529,000	6,241,147,000	937,106,000	2,357,743,000	1,420,637,000
1924	7,586,652,000	5,689,989,000	881,550,000	2,149,530,000	1,267,980,000
1925	9,583,684,000	7,187,763,000	1,170,331,000	2,715,350,000	1,545,019,000
1926	9,673,403,000	7,255,052,000	1,229,797,000	2,740,770,000	1,510,973,000
Total	63,779,200,000	49,571,016,000	9,504,713,000	18,726,569,000	9,221,856,000
1927	8,981,884,000	6,736,413,000	1,130,674,000	2,544,842,000	1,414,168,000
Total	72,761,084,000	56,307,429,000	10,635,387,000	21,271,411,000	10,636,024,000

Public debt June 30, 1926		$19,643,000,000
Additional revenue if rates continued through 1926	$15,122,476,000	
Probable saving in interest by annual payment of such additional revenue on public debt	2,450,000,000	
		17,572,476,000
Balance of debt, 1926		2,070,524,000
Public debt June 30, 1927		18,510,000,000
Additional revenue if rates continued through 1927	17,302,197,000	
Probable saving of interest by annual payment of such additional revenue on public debt	2,750,000,000	
		20,052,197,000
Surplus after complete payment of public debt		1,542,197,000

NOTE.—It is assumed that business profits (net income) would not have been depressed by the high tax.

(This statement prepared by the Joint Committee on Internal Revenue Taxation. Mr. L. H. Parker, chief of staff.)

If the Republicans had paid the debt as provided by law, it would have been entirely paid with a surplus, June 30, 1927. If we deduct the amount of the national debt on March 4, 1933, and the amount of interest that has been paid on the $17,572,476,000 since June 30, 1927, from the present debt, the part that should be charged against the present administration from March 4, 1933, would not exceed $20,000,000,000.

Agriculture and the Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

STATEMENT BY HON. HENRY A. WALLACE, SECRETARY OF AGRICULTURE

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the subject of agriculture and the trade-agreements program made by the Secretary of Agriculture, Henry A. Wallace, on January 12 of this year, in the hearings before the House Ways and Means Committee on the resolution to extend the Trade Agreements Act of 1934.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When your chairman invited me to come here today to discuss, from the point of view of agriculture, the desirability of continuing the trade-agreements program, I was glad to accept. The fact that I did not appear before your committee in 1937, when the Trade Agreements Act was up for renewal, was interpreted by some as meaning that the Department of Agriculture was not in accord with the trade-agreements program. Because of that interpretation I addressed a letter to your chairman on February 8, 1937, stating emphatically that the Department of Agriculture was in accord with the program and giving the reasons why. Later I amplified those views before the Senate Finance Committee. In concluding my statement before that committee in 1937, I said:

"The Department of Agriculture does not consider the trade-agreements program a cure-all for our agricultural problem or a substitute for other farm programs. We do consider it an important and highly desirable supplementary program. * * * We cannot get away from the fundamental fact that our agricultural plant, as it exists today, will in years of ordinary weather produce more than can be consumed at fair prices within the United States. We believe that it is extremely important to maintain, on a sound basis, as large a foreign outlet for our export products as possible, consistent with sound soil conservation practices. We believe that this can only be done through permitting larger imports of goods and services from abroad to pay for our larger exports and through securing reductions in extremely high foreign trade barriers. The trade-agreements program is making definite progress along this line."

I stand on that statement today. Even though the trend of world events has kept the trade agreements from having the full beneficial effects on international commerce and on our exports of farm products that we had hoped they would have, the program has been distinctly worth while. I believe that, from the standpoint of agriculture, as well as the welfare of the Nation as a whole, discontinuance of the authority to conclude reciprocal trade agreements would be extremely unfortunate. A program of this kind will be particularly important in the days of a post-war world, which all of us, I am sure, sincerely hope are not too far away.

I came here today primarily to make a positive statement as to the position of the Department of Agriculture on the question of the continuation of the trade-agreements program. I hope that I have made that position clear. It is not, I take it, my place to discuss at length the more general aspects of the program, its legal basis, or the actual accomplishments in the way of agreements concluded, concessions given and obtained, and the like. Those matters will be covered fully by others and particularly by the Department of State, which has the program directly in charge.

But I do think it will be appropriate for me to comment briefly on certain phases of the program that bear most directly on agriculture. These are phases on which much has been said already and on which much more will doubtless be said in the days and weeks immediately ahead.

First I wish to refer to the perennial question of agricultural imports. It has been charged repeatedly that the trade agreements have caused a "flood" of agricultural imports, and by so doing have ruined particular agricultural industries. Presumably this refers to the effect of duty reductions on particular agricultural imports.

Now, what are the actual facts? Well, one fact is that imports of agricultural products of a kind similar to those produced in the United States rose considerably during the first 2 or 3 years following the original enactment of the Trade Agreements Act. But this rise in imports can be entirely explained by two developments. First, there were the disastrous droughts of 1934 and 1936, which made it necessary for us to import a relatively small amount of certain products, which are ordinarily on an export basis, in order to supplement our much reduced supplies. The second development was the improvement in economic conditions in the United States, which, as is always the case, led to increased imports of certain products which are regularly imported into this country because our production does not equal our own requirements. A case in point is wool.

It should only be necessary to point out that in all of the more important cases of increased imports, such as wheat from Canada, corn and hides from Argentina, and wool from Australia, there had been no change whatever in the tariff rates established in the Smoot-Hawley Tariff Act of 1930, to dispel the myth that trade agreements were responsible for the temporary rise in imports during the middle thirties. I say "temporary," because since 1937 imports of the so-called competitive products have declined to approximately the level that prevailed in 1934 and 1935 before the trade-agreements program had really gotten under way.

It is also a fact that some reductions have been made through trade agreements in the duties on agricultural products. But I do not know of a single case where such duty reductions have seriously inconvenienced an American agricultural industry. As a matter of fact, in cases where a damaging influx of agricultural products might take place as a result of duty reductions, meticulous care has been taken to see that safeguards were introduced to prevent such an influx.

Numerous examples of such safeguards might be cited, but I shall refer to only one—that on cattle. In the first place, in the trade agreements with Canada the duty was reduced only on the kind of cattle which Canada predominantly supplied, namely, cattle weighing over 700 pounds and calves. This made it impossible for Mexico, the only other source of cattle imports into the United States, to bring in any large quantity of cattle under the duty reduction made in the agreements with Canada. In the second place, the duty reduction was made applicable only to a certain number of cattle. In the first Canadian agreement of 1936 this number, in the case of heavy cattle, was 156,000 head annually. In the second Canadian agreement, which replaced the first agreement in 1939, the number was 225,000 head. The first number represented about 1 percent of our estimated total cattle slaughter in 1935, and the second 1.5 percent of our total slaughter in 1938. But in the case of the larger number in the second agreement the further precaution was taken to limit the imports in any one quarter to not more than 60,000 head. This step was taken partly because of the complaints under the first agreement that, while the number involved was small, the fact that they could all come in within a limited period was likely to result in damaging competition.

Now, it has been argued, and it doubtless will continue to be argued, that, while the quantity of cattle imported from Canada under the trade agreement is quite small in relation to our total cattle slaughter, the arrival of such cattle on particular markets in particular days causes a glut which results in reduced prices in that market. Some even go so far as to say that this reduction spreads then to markets throughout the country, but the Department of Agriculture has seen no concrete evidence to this effect. It may be admitted, however, that the arrival of a certain number of cars of Canadian cattle at a market which has already received a much larger percentage of domestic cattle might cause a temporary market decline. This is not a peculiar attribute of Canadian cattle. Such a decline will just as certainly take place under similar conditions upon the arrival of a small number of cars of domestic cattle.

Whatever may be the case with local market situations, it is an undeniable fact that prices received by domestic producers of cattle in the United States since the enactment of the Trade Agreements Act have been consistently higher than they were in the period immediately preceding the program and in some cases as high as they were back in the predepression years. As a matter of fact, even in 1939, when imports of cattle reached record levels, the farm price of cattle was at or above parity every month of the year. Actually, the prices received by American cattle producers are determined almost exclusively by the number of domestic cattle produced in a given year and the economic conditions in the United States during that year. If these conditions are such as to make for high prices, then we shall have some imports of cattle. If they are such as to make for low prices, then we shall have only small imports of cattle notwithstanding the concessions made to Canada in the reciprocal trade agreements.

Here is another point on imports. There has been a good deal of loose talk about agricultural industries being singled out for sacrifice in the trade agreement bargaining process. There is absolutely no foundation for such statements. In the first place, reference has already been made to the fact that, when necessary, special safeguards, such as customs quotas, have been introduced in connection with duty reductions in trade agreements. These customs quotas (with only one or two exceptions) have been applicable to agricultural products. Furthermore, an analysis shows that, on the basis of 1937 trade figures, only 14 percent of the total imports of agricultural products into this country are affected by any of the duty reductions made under the trade-agreements program up to November 1, 1939. On the other hand, almost 22 percent of the imports of nonagricultural products were affected. Of the 14 percent of agricultural imports affected, almost half consisted of sugar, the imports of which have been subject to strict quantitative limitation and have not prevented the total acreage of sugar beets and sugarcane harvested for sugar

in continental United States in 1938 from being the largest in our history.

In short, the part of our agricultural imports that have been affected by duty reductions under trade agreements is only about one-third as large as the part of the nonagricultural that have been affected. This does not look as though agriculture has been sacrificed on the altar of trade agreements.

Within the last few weeks there has been a great deal of agitation, on the part of opponents of the trade-agreements program, over the supposed harm that was going to come to agriculture from a trade agreement with Argentina. As you know, the negotiations for such an agreement have recently been terminated. Enemies of the trade agreements now assert that this break-down of the Argentine negotiations is just a subterfuge, and that as soon as the act is extended, the Argentine agreement will be concluded and agricultural interests in the United States will be sacrificed to Argentine competition. But this accusation overlooks two things: First, it overlooks the fact that an important reason for the break-down of the negotiations was the firm stand made by the United States Government for quantitative limitations on the amount of competitive farm products which could be imported under a reduced tariff. Second, it overlooks the reputation for integrity of Secretary Hull and his associates. Anyone who knows anything at all about Secretary Hull knows that the kind of trickery which is now being imputed to him is entirely foreign to his nature. If the handling of the Argentine negotiations proves anything, it proves that this administration is looking out for the interests of agriculture and is not sacrificing the interests of agriculture to those of industry.

It is remarkable what can be done in demonstrating a preconceived notion by the careful selection of figures. For instance, opponents of the trade-agreements program have frequently compared our agricultural imports during 1932 with those during 1937. During 1932, because of business depression in this country and large farm surpluses, agricultural prices hit bottom and farm imports reached an extremely low point; whereas imports were much higher in 1937, when business was at a post-depression peak and our farm prices, which had been substantially strengthened by the operation of the triple A program, had been boosted to an even higher level by the extraordinary droughts of 1934 and 1936. A precisely opposite impression as to the effect of trade agreements on agricultural imports would be shown if one were to select a figure for any year during the 1920's and compare it with imports in any year since the trade-agreements program became effective. I shall not engage in any statistical legerdemain of this kind. But I do think it is legitimate to point out that the imports of agricultural products into the United States of a kind similar to those produced in this country were smaller in the last fiscal year, 1938–39, than they were in the first year of the trade-agreements program, 1934–35, and were less than half as large in terms of value than were the average annual imports of such products during the entire decade of the twenties.

So much for the matter of imports. In the case of exports it is also possible to distort the figures by a deliberate choice of particular years, since, in this case, too, factors other than trade agreements have played a large part in the ups and downs of agricultural exports in recent years to such an extent as largely to obscure the effect of trade agreements. The most important of these, of course, is the droughts of the middle thirties. But there is one comparison which it seems to me is valid. That is the trend of our farm export trade with countries with which we have concluded trade agreements as compared with those with which we have no agreements, for example, our agricultural exports to the 16 countries with which trade agreements were in effect during the entire fiscal year 1938–39 were 15 percent larger than the exports to the same countries in the fiscal year 1935–36. On the other hand, our farm exports to all other countries declined 19 percent during this particular period.

This, it seems to me, is concrete evidence that the trade agreements have been getting results from the standpoint of improving the foreign-market situation for our agricultural-export products. Nevertheless, it must be admitted that our agricultural exports have not gotten back to predepression levels. The outstanding reason for this is to be found in the rise of the totalitarian states during the 1930's. The economic policy of these states, particularly that of Germany, has been directed toward national self-sufficiency with respect to foodstuffs and agricultural raw materials. Moreover, the vast expenditures for armament in practically all European countries in recent years has without doubt diverted a vast amount of purchasing power away from our agricultural export products.

There is another aspect of the relation of trade agreements to agriculture upon which I should like to touch briefly. It is frequently assumed that any bargaining power used to obtain improved export markets for our manufactured goods is wasted so far as agriculture is concerned. This is by no means the case. Improved export outlets for our surplus industrial products cannot fail to improve economic conditions and purchasing power in our industrial centers and thereby improve our own domestic markets, which are, of course, the most important markets for our agricultural products. For instance, the increase of almost $100,000,000 a year in exports of manufactured goods to Canada since the first trade agreement with that country has certainly raised urban purchasing power in the United States for our agricultural products above what it would otherwise have been. Moreover, it has benefited not only our great export products but also, and especially, such products as beef, milk, and eggs, which depend almost entirely on the domestic market.

It is my opinion that the trade-agreements program has made remarkable progress in the face of extremely adverse conditions. But it is also apparent that the program was not able entirely to overcome these conditions. That is not the fault of the trade-agreements program. If the program or a similar one had been given a chance to operate a few years earlier it is entirely possible that the conditions underlying the growth of totalitarianism might have been ameliorated to such an extent as to have largely avoided its subsequent growth. That is something upon which we can only speculate. The fact is that the trade-agreements program did make remarkable progress in certain countries but not in the countries which for one reason or another adopted national self-sufficiency as their primary goal.

It is my feeling that little progress in the way of trade-agreement negotiations can be expected in Europe during the continuation of the European war. I do feel that the trade-agreements program can operate usefully in Latin American countries; that it will help to build up a feeling of solidarity in the New World; and that in contributing to such a feeling of solidarity it is valuable peace insurance.

I am strongly in favor of closer relations between the countries of the Western Hemisphere. But I do not believe that even the Western Hemisphere as a whole can expect to remain unaffected by chaos in the rest of the world. The United States and its Latin American neighbors should, in their own interests, look forward to positive collaboration in the reconstruction of international economic relations after the war is over. It seems to me that the trade-agreements program, conducted much along the line that it has been conducted in the last 6 years, together with special international agreements in the case of such commodities as cotton and wheat, can be an extremely important factor in the economic reconstruction of the post-war world.

In the current debate over details of the trade-agreements program I believe there is danger that the real issue, so far as agriculture is concerned, will be overlooked. That issue continues to be, as it has been ever since the World War, the question of what kind of tariff will really benefit the American farmer.

On the theory that high tariffs would cure the agricultural depression which set in after the first World War, the Fordney-McCumber Tariff Act was passed in 1922 and the Hawley-Smoot Tariff Act was passed in 1930. Both these tariff acts, in their initial stages, were supposed to give relief to the farmers by eliminating foreign competition. Actually, in both instances, the industrial interests, which long have fattened on tariff protection, seized the opportunity to boost their own tariff walls. The net result, especially in the case of the Smoot-Hawley tariff, was great injury to the farmers through the loss of a large portion of their foreign markets.

I do not have time today to go into detail concerning the results of that "tragedy of 1930," but the whole world today is paying the cost. The acts and policies of the United States in the international sphere during the twenties and early thirties—combining as they did the stimulation of foreign loans and the insistence on collection of the war debts with the erection of higher and higher tariffs—these acts and policies threw the tremendous prestige and commercial power of this country on the side of the restrictive forces at work in the world. After the Hawley-Smoot Act was passed in 1930, foreign countries felt obliged to erect prohibitive trade barriers in retaliation, international trade swiftly dried up, and what started out as a mild recession soon became a world-wide economic disaster of cataclysmic proportions. The financial collapse of Austria was followed by the financial collapse of Germany, the abandonment of the gold standard by England, the bank panic in the United States, the rise of totalitarianism in Germany and other capitalistic countries, the break-down of the League of Nations, and finally a major war.

All this is past history and would not need to be recited here, except for the fact that the industrial interests which are trying to scuttle the trade-agreements program are apparently preparing for another "tariff grab" like those of 1922 and 1930. They are apparently attempting to induce certain farm interests and certain labor interests to act as the shock troops in this campaign, so that they themselves can stay in the rear and come up in time to walk off once more with the major share of the booty.

There is always a certain amount of enticement for the farmers in talk about raising tariffs high enough to shut out competitive imports entirely. There is no doubt that farmers are as much entitled to tariff protection as any other group. If the kind of protection given them in the Fordney-McCumber and Smoot-Hawley acts had really helped them, then there would be ample reason for repeating that kind of help today. But the events of the last 15 years show how desperately injurious that supposed help for agriculture turned out to be. To repeat it now would be the height of folly.

As I said a moment ago, the farmers are entitled to effective protection. They fought in vain all through most of the 1920's for such protection in the form of the McNary-Haugen bill, with its equalization fee. They finally got such protection in 1933 in the form of the processing tax, only to lose it again when the Supreme Court killed it in January 1936. Now they are working for such protection again in the form of the proposed farmers income certificate plan, which would guard the prices of their important export commodities against the impact of world surpluses.

From the standpoint of the friends of the trade-agreement program, there would be a great advantage in the enactment of some

such plan as the farmers' income certificate plan, in preference to another tariff boost like that in the Fordney-McCumber and Smoot-Hawley Acts. That kind of tariff interferes so seriously with foreign trade as to dry it up entirely, whereas the farmers' income certificate plan would permit international trade to increase in a healthy manner through the assistance of the trade agreements.

I am mentioning this aspect of the agricultural problem here because it has such a close relationship to the trade-agreements program. The position of the Department of Agriculture is that the interest of agriculture would be best served by a program which combined the trade agreements, special international agreements to assure our fair share of the world market for such commodities as cotton and wheat, and some plan like the farmers' income certificate plan which without interfering at all with foreign trade would give the farmers income equality in the domestic market.

An Opportunity for Americans

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 20 (legislative day of Monday, March 4), 1940

ARTICLE BY DR. JOSEPH F. THORNING

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the RECORD an article by Dr. Joseph F. Thorning, of Mount St. Marys College, recently published in the magazine Spain, entitled "An Opportunity for Americans."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Spain for March 1, 1940]

AN OPPORTUNITY FOR AMERICANS

(By Dr. Joseph F. Thorning)

With most of Europe at war, Spain is revealed as a nation offering matchless opportunities for both recreation and education. In the past 6 months, thousands of Europeans have recognized this fact. Sun worshippers, who formerly spent their winters in the French resorts at Cannes and Nice, are learning the delights of the Spanish Riviera, which extends from Malaga to Cadiz. There they find the warmth, the clear sky, and the rich vegetation, dominated by palm trees, combining to render southern Spain a refuge, health station, and playground.

Of course, during the last week in March, Holy Week, many of these visitors will concentrate upon Seville, where the traditional Semana Santa ceremonies will be carried out with proper solemnity. Springtime Andalusia furnishes a perfect setting for a fiesta of this type. Roses, bougainvillea, and hibiscus overflow every bush and window box; trees along the stately avenues are mantled in fresh, vivid green; while the orange groves in the Cathedral patio glisten with the gold of first fruits. Is it any wonder that the acolytes before the High Altar enact their ritual dance reminiscent of David's exultation before the Ark of the Covenant? As the gorgeous Holy Week pageant unfolds in Seville, one cannot forget that the original name of the province, whose metropolis it is, was the Land of Immaculate Conception of the Blessed Virgin Mary.

To be sure, San Sebastian, on the Bay of Biscay, is an all-year resort. Every month is "the season" on the Côte d'Or. Hotels, apartments, and villas were built for guests of discriminating cosmospolitan tastes. Biarritz, on the French side of the frontier, is garish, common, compared to its Spanish rival. The gem of the Basque country has a tone, a refinement and distinction that does not require gambling casinos, "American bars," and night clubs in order to remain attractive. In other words, San Sebastian is a spot where a Spanish gentleman takes his wife and children, secure in the knowledge that nature and art will provide family pleasures: Picnics, beach parties, excursions into the mountains and forests.

At San Sebastian, one is within easy range of Bilbao, the second greatest industrial city of Spain; Santander, the famous center of summer studies for foreigners, and Gijon, the port of Oviedo. The latter city, capital of the Asturias, has a magnificent cathedral and is associated with some of the most stirring episodes in Spanish history. Nearby is the sanctuary of Covadonga, dedicated to the Blessed Virgin, by whose help the Spaniards in 718 routed the Arabs commanded by Alkaman. Around Cape Ortega, on the Atlantic Ocean side, nestles El Ferrol, the home of Generalissimo Franco. El Ferrol is the port of Galicia, one of the four notable regions of the peninsula. Vigo, with a bay large enough to harbor the navies of the world, is the last metropolis in the direction of the Portuguese frontier. Due to the European conflict, all these stations on the Bay of Biscay, as well on the Atlantic, have increased strategic importance.

Mention has been made of the lovely vistas opened up by the route along the Spanish Riviera. East of Malaga, where perpetual spring prevails, the coastline curves northward to Cartagena, Valencia, Castellon, Tarragona, and Barcelona. This is Levantine Spain. The stretch from Valencia to Barcelona is particularly beautiful and healthy. Since the mountains approach to the sea, they cut off the bitter north winds, while during the summer months the heat is moderated by breezes from the Mediterranean. For artists and writers who seek the ideal climate for creative activity Palma de Majorca beckons from the Balearic Isles. Winter and summer the average temperature is 62 degrees. There is good air and water transport between Palma and the mainland.

It should not be necessary to dwell upon the charms of Madrid. Restored to its dignity as capital of Spain, the heart of New Castille is once more throbbing with life. Nowhere is progress more manifest. Scars of the civil war are gradually being eliminated. Public buildings and parks have their pristine quota of workers and caretakers. The shops, although not gaudy, are able to carry stocks of essential materials. The art treasures of the nation have been returned to the Prado. One by one the sanctuary lamps are reilluminated in the churches, chapels, and shrines of the people. The Madrileños are no longer tempted, as in pre-war days, to spend the winter in Paris and London. Every good Spaniard realizes that there is plenty of work for him at home. Madrid, as the center of a more highly centralized Government, attracts larger and larger numbers of citizens either for permanent tasks or for temporary visits. Every train to and from the capital is packed with passengers.

Significantly enough, the Royal Palace, overlooking the Manzanares River and the plain, will remain unoccupied. It is a national monument for the people. The headquarters of Generalissimo Francisco Franco will be the Escorial. His apartments in this palace are practically ready for him and the members of this staff. The austere beauty of El Escorial comports well with the personality of the head of the Spanish State. This building, the pride and joy of Philip II, is simple, chaste, strong. It partakes of the enduring grandeur of the mountain granite which is its background.

Twenty minutes from Madrid in a swift motorcar, El Escorial will provide a residence for the generalissimo that will permit him to keep all the strands of administration within easy grasp. Naturally, the monks of San Geronimo will continue to chant the divine office in the Escorial Church as well as to maintain their community life in the monastic cells adjacent to the generalissimo's chambers. This is not meant to be a symbol of the union of church and state, an arrangement expressly excluded in the phalanx program. But it may be considered an example of the mutual contribution to civilized living that can be afforded by religion and patriotism. It is easy to see that El Caudillo intends to pray as well as to work.

Rich as Spain is in scenic and historic interest, the nation is even more generously endowed in the domain of education. A word about the past and present of Spanish universities will make this clear.

When one speaks of universities, one thinks of Salamanca. This institution had its origin in the Cathedral School under the direction, from the twelfth century, of a magister scholarum (chancellor). In 1230, Alfonso IX of Leon summoned to Salamanca "the most experienced masters of sacred letters and established schools." This was the nucleus of the studium generale. On April 6, 1243, in letters patent, St. Ferdinand, son of Alfonso IX, took under his protection the professors, students, and their property. The foundation was maintained by the next king, Alfonso X, surnamed "the Wise." During his reign began that period of unrivaled prosperity for the university, which for centuries made it "the glory of Spain" (Denifle).

Contrary to the popular view, doctrinal and ecclesiastical professorships did not predominate in the university. Departments of medicine and jurisprudence were also established. International law, at the hands of Francisco de Vitoria, reached its apogee at Salamanca. In a course of lectures delivered in 1532, the celebrated Dominican outlined the principal tenets of the law of nations. Vitoria's work was complemented by the research of his fellow countryman, Francisco Suarez, at the University of Coimbra, Portugal. (Cf. The Spanish Origin of International Law by Dr. James Brown Scott, p. 103.)

Martin V gave the university its definitive constitution and numbered it among the four greatest in the world. In 1584, the number of students at Salamanca reached 6,778. Theological studies flourished in the sixteenth and seventeenth centuries. The nineteenth century was a period of decline, due to the secularizing character of the Leftist Government. Some of the professors who taught with brilliant success at Salamanca were women: Doña Beatriz Galindo and Doña Alvara de Alava.

During the civil war Salamanca regained a portion of its primacy in Spain's educational system. For many months Generalissimo Francisco Franco had his headquarters in this city and took a personal interest in the research work of the faculty. Those who read the July 18, 1939, issue of the magazine Spain recall that Government decrees provide that Salamanca will train all university professors of Latin and Greek. There will be profound specialization in the sphere of classic philology, whereas at Saragossa the emphasis will be upon the humanistic or literary phase of Latin and Greek. The curriculum at Salamanca will embrace courses in Indo-European languages, Sanskrit, archaeology, epigraphy, numismatics, palaeography, and the history of ancient art. It will be an institute for master scholars.

The University of Saragossa was established in 1585 by Don Pedro Cerbunc, prior of the cathedral in that city. At the end of the sixteenth century theology, philosophy, canon and civil law, medicine, and the humanities were taught. Subsequently the university attained eminence in economic science. At present there are excellent courses in medicine, anatomy, and surgery. The municipal hospitals, clinics, and dispensaries are at the disposal of the university faculty and student body. Sanitation and hygiene have been brought to a high pitch of perfection. During the civil war, Saragossa was one of the chief centers of the blood-transfusion corps. Exact records have been kept of success in this field. Furthermore, a most discriminating study of public law will be undertaken at the Aragonese center, as may be evidenced by the scholarly contributions on this subject to Spain (August 1 and October 1, 1939), by Prof. Salvador Minguijon, of the University of Saragossa.

About 1250, the Dominicans, with a view to the conversion of Jews and Moors, established schools for the teaching of Hebrew, Arabic, and Greek in Seville. A few years later, Alfonso the Wise reorganized these institutions, paving the way for Alexander IV's recognition of the foundation as a generale litterarum studium. Cooperation of the Cathedral Chapter insured the College of San Miguel as a school for ecclesiastical students. The final step toward construction of the university was taken by Rodrigo de Santaello, archdeacon of the cathedral in 1502. In the same year, Ferdinand and Isabella published a royal decree, permitting the foundation to grant university titles.

From the beginning, the influence of the University of Seville on the development of the fine arts was extraordinary. In its shadow the school of the famous master, Juan de Mablara, was established; intellects like those of Herrera Arquijó and many others were developed, while there were formed literary and artistic clubs, like that of Pacheco, which was a school for both painting and poetry. Like the other universities of Spain, that of Seville languished during the Leftist domination of the nineteenth century. Now it is being reinvigorated, especially with a view to the spread of Hispanic culture in North Africa and Spanish America. It is well known that Col. Juan Beigbeder, the foreign minister of Spain, takes a personal interest in the expansion of the University of Seville. As a specialist in Islamic literature, history, and art, he understands how potent Seville may be in maintaining the loyalty of Spain's Moroccan population. Historical studies will likewise be stressed, because the Archives of the Indies, lodged in the Casa Lonja, constitute a veritable treasure house of virtually untouched material on the discovery and colonization of the New World. At present, the university comprises the faculties of philosophy and letters, law, the natural sciences, and medicine. A first-class polytechnic institute will also be established in Seville with courses in seamanship, cosmography, mathematics, agronomy, and engineering.

On a plane with Salamanca in the Middle Ages was the University of Alcalá de Henares. After a period of development and many vicissitudes the faculty of Alcalá was finally transferred to Madrid in 1836. At the time of its transference the university included a theological school, but this was suppressed in 1868. Nevertheless, the University of Madrid flourished, imparting instruction to 6,000 students in the pre-World War days. Law, medicine, and the sciences were particularly stressed. The buildings in the new University City section contained some of the most commodious and well-equipped lecture halls, laboratories, and museums in the world. The library included 6,000 rare manuscripts and more than 300,000 volumes. Unfortunately, the brunt of civil war in the Madrid area fell upon University City. Although the shell of the academic edifices remains, it will scarcely serve any useful purpose until thoroughly refurbished. In spite of these difficulties, the University of Madrid is restoring all its former faculties and contemplating new schools. Emphasis will be placed upon the social sciences and the new syndicalist organization of the professions, arts, and industries.

The University of Barcelona was the outgrowth of the ecclesiastical schools founded in the eleventh century. The academic charter was granted by Alfonso V of Aragon and confirmed by Pope Nicholas in 1450. By royal decree of Charles III, a college of surgery was established at Barcelona in 1764. One of the most prized possessions of the university is the Archives of the Crown of Aragon. The library houses 2,000 medieval manuscripts. Instruction is given in philosophy and letters, law, science, medicine, and pharmacy. It is expected that a school of commerce and business administration will be added to the faculties.

This enumeration of the educational advantages of Spain, although not complete, suggests that the administration of Generalissimo Franco is determined that scholastic achievement shall match military prowess. While other universities in Europe are depopulated, those of the Peninsula will attract the youth of the world. The full import of this development has been grasped by those cultured, far-sighted Americans, the Honorable and Mrs. Alexander W. Weddell, who represent the United States in Madrid. Thanks to the munificence of the Ambassador and his wife two scholarships for American students have been endowed at the University of Salamanca. Nothing is better calculated to produce an understanding of Spain in North America than study pursued at a Spanish center of learning.

The Spanish genius is something special, extraordinary, unique. It must be approached with keen sensibility and respect. The dignified pride of the Iberian, whether shepherd or king, leaves the impression of cold aloofness. Only when the mind and heart have been touched does the Spanish soul radiate warmth and cordiality. Contact in university circles can do much to cultivate this atmosphere. Nor should it be forgotten that the culture of the university filters through to the ordinary Castilian peasant who "thinks like Plato and talks like Cervantes." The citizen of North America who understands Spain will gain a precious insight into Spain's offspring in Central and South America. In the ice age of international relations the channels of Spanish culture are open.

Statement on Behalf of Sugar Refinery Workers of Philadelphia

EXTENSION OF REMARKS

OF

HON. LEON SACKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

STATEMENT BY JOSEPH McFADDEN

Mr. SACKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. Joseph McFadden, union delegate, Franklin Sugar Refining Co., at a meeting called by the mayor of Philadelphia, December 14, 1939:

Your Honor, ladies, and gentlemen, first, in the name of organized labor connected with the local refining industry, I should like to publicly acknowledge the great service performed by the Members of Congress in 1937 who fought for the protection of our jobs when the sugar bill was being drafted. Particularly, I should like to mention the names of Congressmen Leon Sacks, James McGranery, Michael Bradley, the late Burrwood Daly, Frank Dorsey, James Wolfenden, and Senator Jim Davis, who have always been friends of Pennsylvania labor.

Philadelphia has had a cane-sugar-refining industry for 150 years. From 1789 to 1925 the industry grew in size and importance. Since 1925 the industry has declined considerably.

I was first employed in the local industry in 1919 to 1925; we all enjoyed a full pay envelope. From 1925 to the present time, due to the inflow of offshore refined sugar, our pay envelopes have been cut in half. As you all know, the refineries are all located on the waterfront, and we can see the boat loads of offshore sugars, that is, sugar refined in the Tropics by cheap, unorganized labor, coming into the port of Philadelphia. We can also see our jobs going to the Tropics.

You, and all your friends, can help us do something about it. You can help in two ways: First, buy sugar refined in Philadelphia; second, help us all you can to secure favorable legislation when Congress meets in the early part of 1940. By following these suggestions you will save the jobs of thousands of Philadelphians and a $3,100,000 pay roll.

I wish to thank you for this opportunity to speak to you on behalf of the sugar-refinery workers of Philadelphia.

Food-Stamp Plan

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

LETTER OF HON. KEY PITTMAN, OF NEVADA, TO THE SECRETARY OF AGRICULTURE

Mr. PITTMAN. Mr. President, I ask unanimous consent to publish in the Appendix of the RECORD a letter which I wrote to the Secretary of Agriculture on the subject of the food-stamp plan.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON FOREIGN RELATIONS,
Washington, D. C., January 6, 1940.

MY DEAR MR. SECRETARY: I am just in receipt of a copy of a letter written to you by Mr. Roger Teglia, manager, Nevada Poultry Producers, Inc., of Reno, Nev., in which he is urging that you inaugurate the use of food stamps in Reno. Mr. Teglia in his letter to you says: "We noticed that on December 18 the food stamps went into

effect in the city of San Francisco, and from the report, it will also go into effect in other cities in the State of California. * * * We are sure that if this could be put into effect (in Reno) very shortly it would be a great relief to our poultry producers. If this relief is not forthcoming soon, it will force out a great many of our poultry producers who are now making their livelihood from the production of eggs.

"In the report that we received today from San Francisco we noticed that since the food stamps went into effect the sale of eggs went up almost immediately. We are sure that it would do the same thing here and would also have a tendency of strengthening the market. It would also give us more encouragement for taking the surplus of eggs that will begin in the next 45 days."

I assume that the inauguration by you of the food-stamp scheme has been and now is accomplishing the results stated by Mr. Teglia, for otherwise I cannot conceive why you would continue such plan. If such is the case, Mr. Teglia's petition should be granted.

The Constitution imposes upon the National Government the obligation to coin and supply money and circulating media for the maintenance of industry and for the carrying on of trade and commerce. It is a sad commentary upon the failure of our Government when heads of departments are forced to adopt unauthorized and unsound subterfuges for lack of legal circulating media. While I deplore the necessity for the substitution of this form of circulating medium for national currency, nevertheless, when a government will not supply sufficient national currency, the adoption of substitutes is inevitable.

Of course, every time one states that there is a lack of circulating currency he is told that there is just as much circulating currency now as there was in 1929. This, of course, is not true. There is just as much currency outside of the Treasury. It is not, in fact, however, circulating. It is beside the question in consideration of this matter as to why it is not circulating. There is not the same volume of circulating credit as there was in 1929. When bank credits are restricted, no matter for what reason, cash transactions become absolutely necessary.

Let it be remembered also that substantially four-sevenths of our currency consists of Federal Reserve notes. These notes are issued by the Government to the banks upon the banks depositing proper securities with the Treasury. The banks may retire these Federal Reserve notes at any time by returning them to the Treasury through the Federal Reserve Board and recalling their securities. In other words, all of this currency may be legally retired. Of course, it will be answered that it would be absurd for the banks to retire this currency if there is a demand for it; but, again, the banks determine whether they will lend these Federal Reserve notes. If they don't lend them, then few of them go into circulation.

I contend that a sound monetary system requires a nonretirable national currency equal at least to 10 percent of deposits and national income based upon 100-percent metallic reserves. The Federal Reserve notes should be superimposed upon this nonretirable national currency subject to expansion and contraction as conditions may require. Certainly a 10-percent nonretirable currency is not too much when we realize that such currency in the ultimate is the only thing with which to settle all deposits and other indebtedness. Our entire monetary system is based upon confidence. Confidence by the depositor that he can get money for his deposits when he demands it. Confidence by the bondholder that he can get money for his bonds when they are due. And the only money to meet these demands and sustain that confidence is the $7,598,000,000 of circulating money of the United States. Whenever a depositor thinks he cannot get money for his deposits, there is a run on the banks. There may be runs again in the future. It depends upon confidence. There is a limit to which you can try the confidence even of American people.

It sometimes occurs to me that bank credits may be developed to the point of danger. We realize, of course, that 95 percent of our business and commercial transactions are carried on through checks and drafts, and so forth. When banks close, this form of money ceases to circulate. When banks close a large portion of this form of money ceases to exist.

When banks close, credit contracts and even the flow of national currency is retarded. During the bank panic of 1907, national currency was locked up and all forms of substitutes such as scrip, and so forth, were adopted. During our great monetary panic of 1929, probably three-fourths of our currency and all of our credit money was temporarily out of existence resulting in a tremendous depression in industry, trade, and commerce. Our citizens were compelled to carry on transactions essential to life through the rapid turn-over of the small portion of the national currency and coins that they fortunately had in their safes, tills, and pockets. Their suffering would have been far less if they had had a larger quantity of national currency and coins in their possession.

It sometimes occurs to me that there has been and there may be now an advantage in the people hoarding a reasonable amount of small metallic currency. If I remember correctly, it was the 5,000,000,000 gold francs that had been hoarded by the peasants of France that made it possible for the French Government to pay 5,000,000,000 francs to Germany after the Franco-Prussian War, and thus save France from becoming a province of Germany.

I will not enter into this argument, as I realize that you are now overburdened in attempting to harmonize the conflict between your conservative learning and the necessity for unsound substitutes for national currency.

I thought I understood what the President meant by a commodity dollar which he advocated in 1933. I can't understand, however, how the price of commodities can be higher unless dollars are cheaper; nor can I understand how the price of commodities can be put higher through natural action unless dollars are first made cheaper. Please do not understand that I am arguing for monetary inflation. I am arguing against deflation of commodity purchasing power. I have in mind reflation. Until it is realized that commodities and labor, on the one hand, buy money, as well as that money buys commodities and labor, we will never adjust and equalize the purchasing power of the two things.

A sound monetary system may be illustrated as based upon the theory of the seesaw, with money on one side and commodities and labor upon the other. When there is too much of commodities and labor in proportion to money, the seesaw goes down on the side of commodities and labor, and the purchasing power of money goes up on the other side of the seesaw.

It is a pitiable matter that the great economists of our Government, with practically unlimited control over the expansion and contraction of money—I mean national money as well as credits—haven't the intelligence and ingenuity to balance the seesaw. Certainly you have been attempting to accomplish this purpose. Your attempted establishment of parity prices for agricultural commodities is nothing but an attempt to level off the seesaw. Instead of placing more weight of money on the side of the seesaw opposite to your commodities, you have been attempting to reach the equalization by taking off a large portion of your commodities and throwing such commodities away. Even children accomplish this leveling off and equalization of the seesaw through adjusting their weights at different positions on opposite sides of the seesaw.

I realize, however, that you represent only one department of our Government. You have been attempting for years, and still are attempting, to raise the purchasing power of commodities with relation to our money. On the other hand, however, several other departments of the Government are not concerned with raising the purchasing power of commodities. In fact, we have many departments, each devising many schemes to increase the prosperity of its own department without regard to the effect upon any other department and without any attempt whatever at coordination.

We have the Federal Reserve Board, who have their theory that there is no such thing as debt because the people own the Government, and therefore any debt of the Government is but a debt to the people. The people do not understand this, and never will so long as 60 percent of their earnings are taken in the form of taxation to pay the debts of the Government. We have the Federal Reserve Board doubling the reserve requirements of banks for the purpose of discouraging loans. The effect of this, of course, is to make money scarcer and therefore more valuable with relation to everything that it buys and everything cheaper that is required to buy money.

The Treasury Department sterilizes gold. The intention of this act is to contract credits and reduce loans. This makes the demand for money greater, enhances its value, and depreciates the value of commodities with which money must be purchased.

These departments are only interested, apparently, in preserving what they term "the soundness of our monetary system"; but what in reality they mean is preserving the high purchasing power of the dollar. They are so afraid of monetary inflation that they constantly engage in deflation.

I asked Chairman Eccles, of the Federal Reserve Board, at the hearings before the special committee of the Senate upon the investigation of the silver question: "What would be the effect of monetary inflation?" He answered this question twice by stating unequivocally, "The effect would be the rapidly rising price level. It would be a diminution of the purchasing power of the dollar." Of course, he immediately asserted that there was plenty of money and that it would circulate whenever the people required it.

Does not the necessity for the furnishing of food stamps and the demand for such food stamps by the people prove that the people want circulating currency, but can't get it and are forced to accept a substitute for national circulating media?

Would it not be better to diminish the purchasing power of money, pay relief workers prevailing wages, thus increasing purchasing power and consumption, with the result of proportionate increase in commodity prices? The Government could then afford to pay the prevailing wage of the employed relief workers only on such projects as would add permanently to national production, such as roads. There is no doubt, I take it, that facilitating and cheapening transportation tends to increase production.

What, in your opinion, would be the result if the Government today coined dimes, quarters, and half-dollars out of the billion and a half dollars' worth of silver bullion that it has in the Treasury as a profit that it has made out of the purchase of silver, and circulated such coins in actual payment for labor engaged in relief work? And what would be the result if, in addition to the circulation of this silver coin, the Government would coin $5 gold pieces to the extent of a billion and a half dollars out of the $2,000,000,000 stabilization fund and pay these $5 gold pieces out to relief workers? Again, what would be the effect if these things were done and 10 percent of these coins were hid in socks to meet emergency needs instead of being placed in country banks throughout the United States? And would not this process delay at least the concentration of national currency in the speculative centers of the United States? Would not an increase in cash transactions make for a greater monetary security? For one thing, Congress would not be called upon to increase the limit of the indebtedness of the United States for some time, if ever. For another thing, possibly people would commence to realize that there is a potential

metallic reserve behind our paper currency, behind our bonds, and behind the deposits in the banks of the United States.

Is the Government to continue endlessly the vicious cycle of selling to the banks of the country interest-bearing bonds which are paid for by the depositors' money and upon which the depositors must pay taxes to pay such interest? Does the expenditure of such credits by the Government upon the great majority of projects result in the creation of enterprises that constitute expansion of industry, which is essential to increase in employment and national income?

When in a philosophical mood, I would be pleased if you would discuss these matters, not in the nature of an answer, but to relieve my mind of considerable confusion.

With best wishes, I am,

Sincerely,

KEY PITTMAN.

HON. HENRY A. WALLACE,
Secretary of Agriculture, Washington, D. C.

National Transportation

EXTENSION OF REMARKS
OF
HON. MORRIS SHEPPARD
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 21 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. MORRIS SHEPPARD, OF TEXAS

Mr. SHEPPARD. Mr. President, I submit for incorporation in the Appendix of the RECORD an address delivered by me on Tuesday, March 19, 1940, over the Mutual Broadcasting System, the subject being National Transportation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to have this opportunity to express my appreciation of the liberal policy of the Mutual Broadcasting System in allotting time on its Nation-wide program for the discussion of topics of vital public interest.

Tonight I want to talk about the Wheeler-Lea bill now pending before Congress, which is supposed to solve our transportation problem. I speak not as an advocate of any special kind of transportation, but as a public servant charged with the consideration of this question in its bearing on our national security as well as our economic welfare.

It has been many years since we, here in America, have had to face the grim necessity of mobilizing our domestic transportation behind a front line of defense. Abroad, as we know, it is quite the reverse. Almost daily dispatches filtering through the lines from over there show how indispensable are the waterways to the warring nations. It is known, for instance, how frantically Germany has been striving to complete the hastily planned navigable life line between the Rhine and the Danube in time to circumvent her economic blockade.

The feverish activity in canal construction throughout Europe prior to the outbreak of hostilities gives us a good idea of what must be happening now behind the veil of censorship. Undoubtedly a heavy burden is falling on completed waterways through the need for industrial as well as military mobilization.

Relief of the overburdened railways thus accomplished and in the release of their facilities for troop movements is counting, and probably will count even more heavily, toward the final outcome. In this respect water transport is said to be withstanding aerial bombing attacks better than rail or highway.

One lesson we, ourselves, learned in the last war. Water transportation adequate to meet national demands cannot be provided after the emergency is upon us. Our sore need for it may come without advance warning. Surely this is not the time to take measures discouraging the development of our inland and coastal shipping.

Yet that is just what the Wheeler-Lea bill, in my opinion, will do. The latest available draft, if enacted into law, will subject coastal and inland water carriers to regulation by the Interstate Commerce Commission. The act will give that Commission power to adjust the rates, routes, and schedules of water carriers whenever and wherever they might be considered as interfering with the profitable operation of railroads. It will go even further. No coastal or inland water carrier can issue securities, no new boat line can be started under the terms of this bill without the consent of that Commission.

Do you get the full import of what this delegation of power over the use of the Nation's waterways will mean? Control would be exercised through the issuance or withholding of permits or certificates of convenience and necessity. We get warning of just how necessary these enterprises would be considered by the Interstate Commerce Commission from a very recent public statement by its Chairman. He holds that money spent on inland waterways had much better be given to the railroads as an outright subsidy.

That body has not always had such a hostile attitude toward water transport. In 1914, in a famous decision (31 I. C. C. 281, 288), the Interstate Commerce Commission said:

"A natural waterway, improved by the expenditure of public funds, should be thrown open, as far as possible, to the free and unrestricted use of all those who desire to avail themselves of it. It differs materially from a privately constructed and privately owned roadbed, which, though quasi public in nature, is built by individuals or corporate interests primarily for their own gain. A navigable river is a public highway—a natural avenue of commerce—and the public interests demand that its advantages be utilized to the fullest extent."

Now, contrast that sound public policy with what the same Commission said in 1939 (I. C. C. Annual Report, 1939, p. 4):

"We see no reason, also, why regulation of water carriers should not be comparable to present regulation of railroads and motor carriers, covering not only rates and accounting but also control over new operations through certificates and permits."

The explanation is that back in 1914 the Commission was still a commerce commission. Now, due at least in part to congressional forbearance, it has become a railroad commission, concerned chiefly with the financial solvency of the railroads. You have only to read its recent report on the proposed Lake Erie-Ohio River Canal to be convinced of that. The report recommends that the people continue to pay $8,000,000 per year in excess of the necessary freight charges on the essential commodities, coal and iron ore, so that all six railroads operating in that area, the weak ones as well as the strong ones, may continue to earn a profit.

Now, it is perfectly natural and normal that conflicting carrier interests, all bidding for the job of transporting the Nation's freight, should employ every legitimate weapon within reach to hamper the development of traffic on competing routes. There is nothing dishonest or reprehensible about it. Each one is after as much profit as he can get. But the interests of these rival groups do not coincide with the public interest. To adopt the interest of one group at the expense of all the others is not a solution of the problem.

The public is concerned with stimulating a revival of commerce on a Nation-wide scale. We must not try to make commerce serve transportation; we must make transportation serve commerce. Yet this bill sets out to insure a profitable level of freight charges for all carriers, no matter how unsoundly conceived or wastefully managed some of them may be, nor how much it costs the shippers. If there is a surplus of transportation, why should we not meet the issue squarely and scrap the most costly and uneconomical line? Why should we penalize our sound investment in the cheapest of all ways of moving freight—that is, the waterways?

The Interstate Commerce Commission is not the only Federal agency familiar with transportation problems. The Departments of War and Agriculture and the Maritime Commission also are directly concerned. In my capacity as chairman of the Senate Committee on Military Affairs I have worked in especially close contact with the Army engineer organization. Through my chairmanship of the Rivers and Harbors Subcommittee of the Senate Commerce Committee I have had occasion to observe their technique in handling the many transportation problems that arise in connection with waterway improvement. The principle controlling their recommendations is that navigation projects, to be held meritorious, must be capable of providing genuine, not public, benefits. That means, after deducting all legitimate cost, the public expense of providing and maintaining the channels as well as the cost of carrier service. I am glad to avail myself of this opportunity to pay tribute to the competence, sound judgment, and disinterested fairness of that fine group of engineers. I also want to commend the able economic and technical specialists of the Department of Agriculture and the Maritime Commission.

The heads of these three great Government agencies, in response to a request of the chairman of the Senate Commerce Committee, joined in an unbiased, dispassionate, detailed analysis of the provisions of the bills as passed by the two Houses. In their joint statement they uncovered the many pitfalls, and indicated the many grave dangers of injury to the public, inherent in the pending legislation.

They pointed out that the application of the principle of railroad regulation to water carriers was inappropriate and unnecessary. Water carriers do not enjoy monopoly of routes or commodity movements upon which to shift the cost of rate wars. They are, therefore, incapable of sustaining destructive competition, and cannot overcharge their shippers without losing business to a competitor. They thus provide their own wholesome regulation. There has been no complaint from the shipping public against their practices.

Regulation of rail transportation, on the other hand, is admittedly necessary. Railways can bid for every kind of traffic everywhere. By reason of their financial strength and their backlog of noncompetitive tonnage, they not only can destroy, but do systematically try to destroy, their water competitors, one by one, by the simple expedient of cutting rates. They concentrate on one block of competitive tonnage after another, shifting meanwhile the burden of making up their losses onto helpless shippers, elsewhere.

The practice entails loss of revenue to the railroads, loss of capital to the water carriers, and loss of tonnage to the waterways. With one hand traffic is held away from waterways by

artificial expedient, while with the other hand the absence of barge tonnage occasioned by such expedient is pointed to as indicating failure of river improvement as a national policy.

The salvation of water carriers lies in their genuine economy, and their consequent ability to maintain the low-cost transportation essential to our basic industries. A favorite argument of rival services is that the savings thus effected are not passed on to consumers. That is fallacy. The most elementary economics teaches that in the long run the total cost of transportation is reflected in the base price of goods in any competitive business. The user of water transportation cannot pocket his savings and keep competitors from capturing his market.

No other form of transportation can profitably supplant water carriers in fulfilling the demands of industry for cheap raw materials. Rail competitors, having persisted to the verge of bankruptcy in trying to run them out of this business, now turn to Congress asking that their bad judgment be converted into wisdom by legislation. If this bill fails to raise rates and to stifle water competition, its original proponents will lose all interest in its passage.

One thing the act cannot do, and that is to drive barge traffic in raw materials to the railroads. Railroads cannot handle that kind of tonnage cheaply enough to make it move. The Wheeler-Lea bill will simply dry up that sort of traffic, along with many industries dependent upon it. But advocates of the bill will not let it stop there. Here is what Traffic World for December 30 last has to say about that:

"So, as we say, even if the water regulatory provisions of the bill become law, there will still be much to do. But enactment of the bill will be a step in the right direction. The point is that the public must not be allowed to believe that the question is settled. Primarily, the job of 'selling' the public this idea is up to the railroads. * * *

In line with that prediction, hearings were announced yesterday before the Lea committee on a bill to impose tolls for the use of canalized waterways.

If another national transportation law must be enacted, then let one be based on an adequate, impartial study by all the agencies familiar with all kinds of transportation. Let a law be drafted that will protect all transportation labor, whether working on section groups, motor vans, or towboats. Let a law be drafted that will be in the interest of the entire country, its agriculture and industry and commerce, not just the transport agencies alone. Draft a law that will truly safeguard for the benefit of all the people all the natural, inherent economies of all forms of transportation.

There is not now a need for haste. There is no longer a transportation crisis. The present need is for more deliberate action with a broader objective than merely overcoming the deficits of the railroads. Even a slight upturn in business recovery will accomplish that. Let us not awake from an orgy of regulation to find that we have sacrificed in the time of our greatest need a priceless and indispensable public asset.

Effect of British Embargo on American Production of Tobacco

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD remarks delivered by me before a joint meeting of the civic clubs of Danville, Va., on March 13, with respect to suggestions for the improvement of conditions confronting the tobacco growers and tobacco manufacturers.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

The first and most important problem of the growers of tobacco is to have lifted the embargo that has been placed by the United Kingdom against the importation of American tobacco.

It is true that small shipments of tobacco already purchased are still being made. Such shipments in January and February amounted to about $4,000,000, but these shipments show a greatly restricted movement, and there is a direct embargo on all American tobacco, excepting that already purchased by British manufacturers.

The most serious factor of the British embargo is that Great Britain has made a 20-year agreement to purchase tobacco from Turkey and Greece, I am informed by the State Department. This action is in violation of the reciprocal-trade agreements between this Nation and Great Britain.

I am requesting the Senators from all tobacco-producing areas to join me in a strong protest to the State Department, so that our Government will insist that any contracts with other nations for purchases in violation of the trade agreements be canceled.

The importance of our tobacco export trade is shown by the fact that the average of the value of all tobacco exports to the United Kingdom during the last few years is $80,000,000 per year. Comparing this figure to the cash income of $294,000,000 to the growers from the sale of tobacco for the year 1938 gives forcible evidence of the great importance of maintaining the export trade of Virginia tobacco.

The significance of the action of Great Britain in making a 20-year contract with Turkey and Greece as relating to the future of our tobacco industry cannot be overestimated.

Once the British Empire purchases foreign tobacco for any length of time, it is probable and likely that such purchases will be made permanent and our tobacco will thus be excluded from the foreign markets.

In the long-range program for the benefit of the tobacco growers consideration should be given to a number of factors. No one familiar with the future of the tobacco industry in Virginia and elsewhere in the United States can fail to recognize that many serious conditions exist which deserve and should have the attention now of those who are interested in improving the price of tobacco and the condition of the tobacco farmers.

TOBACCO GROSSLY OVERTAXED

Another serious condition that must be met fairly and frankly is the fact that tobacco is grossly overtaxed, probably the most heavily taxed of any product, and the tax imposed is of such great consequence as to reduce materially the consumption of tobacco. The total derived from the taxation of tobacco by the United States Government is $580,000,000. This is nearly twice as much as the payments received by farmers for all tobacco produced in the country. Furthermore, the Federal receipts from the taxation of tobacco alone are equivalent to more than 10 percent of the total receipts from all taxation, and no one can deny that tobacco is bearing an unjust part of our national taxation. To this must be added taxation by certain States and municipalities.

I am in hearty accord with the resolution passed by the General Assembly of Virginia, introduced by C. M. Waldrop, I. N. Coleman, Preston Moses, and R. B. Davis, which declares:

"The Congress of the United States be and is hereby memorialized to take appropriate action to effect a reduction in the Federal excise taxes on manufactured tobacco and tobacco products in such a manner as to provide that the farmers engaged in the production and marketing of tobacco will receive the benefit of such reduction by way of increased return for their product."

The Federal tax on a package of cigarettes is four times as much as the amount received by the tobacco grower. I have always favored and, in a conference with the President of the United States several years ago, earnestly advocated that the injustice of the excessive and arbitrary taxation of tobacco be reduced. This is one of the reasons why I have been fighting extravagance at Washington. Any reduction in tobacco taxes is difficult until the excessive spending of Federal funds is reduced.

Under the Constitution all revenue measures affecting taxation must originate in the House of Representatives. Congressman THOMAS G. BURCH has recently introduced legislation providing for a substantial reduction in the tobacco taxes. If and when this measure passes the House of Representatives, I, as a member of the Senate Finance Committee, will vigorously urge its passage in the Senate.

INCREASED USE OF BYPRODUCTS

The next step is to increase the use of the byproducts of tobacco. I introduced on June 8, 1938, a resolution requesting the Secretary of Agriculture to report to the Senate a plan to increase the use of the byproducts of tobacco, to increase the export trade, and otherwise to recommend such methods as may be advisable to improve the condition of the tobacco farmers. As a result of this resolution, an exhaustive report was submitted to the Senate, and tobacco has been made one of the first agricultural products to be investigated by the farm laboratories, recently established by the Federal Government looking for means to increase the use of the byproducts of tobacco.

PROHIBIT THE EXPORTATION OF AMERICAN SEED TOBACCO

A most important step to protect the American tobacco farmer is the passage of a bill to prohibit the exportation of our tobacco seed. A bill to prevent such foreign shipments of tobacco seed was passed by Congress a year ago, but it was vetoed. I have introduced it again and am working in cooperation with Congressman BURCH in this and all other matters for the protection of the tobacco growers.

In view of the embargo placed on tobacco by Great Britain, it appears to me that the passage of this bill is even more necessary today than it was a year ago.

Until a few years ago, cigarette tobacco was grown only in the United States. British manufacturers own and control a large percentage of the business in foreign countries, and until recently they purchased their tobacco from the United States. These foreign exporters, in order to get cheaper tobacco, conceived the idea of getting American tobacco seed from American farmers through their local buyers and growing a substitute in foreign countries for our

tobacco grown in the United States. Tobacco from American seed is being grown in the British Empire—in Canada, India, Australia, Rhodesia, and other provinces. It was planted there by their farmers, who were encouraged to grow this type of tobacco as a substitute for the American type.

It was discovered in foreign areas that they could use our seed and from this seed could grow a substitute for our tobacco, but that after several years the tobacco would revert to the native type of the foreign country and lose its commercial value, and new American seed was again necessary. The American flue-cured tobacco is indigenous to the southern section of the United States. The soil and climate of this section of the United States provide the properties which make this flue-cured tobacco the best smoking tobacco in the world, and it will not retain these properties when planted in other countries, even as a substitute, for longer than 2 or 3 years. Therefore it is necessary for foreign countries to secure annually large quantities of our tobacco seed.

Japan is getting our seed and scientifically encouraging farmers in Manchuria and elsewhere to grow a substitute for American tobacco, and in six or seven provinces of China they are growing from our seed a substitute for our tobacco. India for a long time has been one of the large tobacco-growing countries. Now, under the direction and with the encouragement of the British Government, India is getting our seed and producing millions of pounds of tobacco as a substitute for American cigarette tobacco.

The British Government has placed a much higher tax on tobacco imported from the United States than on that which they grow from our seed in their own possessions, notwithstanding the fact that their substitute is grown from our seed and displaces our business.

Many other countries—Turkey, Greece, and Sumatra—protect their tobacco industries and will not allow their seed or plants to be sent to other countries for commercial purposes, for they, like the United States, grow a particular type of tobacco.

The purpose of the bill introduced by me to prevent the exportation of American tobacco seed is to prevent the ultimate destruction of the export-tobacco industry of this country. This measure does not involve the rights of nations to secure seed or plants for experimental purposes.

In 1928, when British India began to grow a substitute for American flue-cured tobacco from seed sent them from the United States, they produced 32,000 pounds. Ten years thereafter, in 1938, this production increased to 36,000,000 pounds.

It is certainly not fair or reasonable for the British Government to place an embargo, as has been done, on the importation of Virginia tobacco, and at the same time for the United States Government to permit the exportation of American tobacco seed to compete directly with our own product.

I, therefore, think that one of the most important matters before the tobacco growers of America is to insist that the bill vetoed a year ago shall be passed again by Congress, and that the exportation of American tobacco seed, enabling our foreign competitors to take away our markets, be prohibited.

The National Farm Problem

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA, AND INTRODUCTORY REMARKS BY CHESTER H. GRAY

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the senior Senator from Montana [Mr. WHEELER] on the National Farm Problem over the Mutual Broadcasting System, on March 20, 1940. I also ask that there be printed preceding the address the introductory remarks by Mr. Chester H. Gray introducing the Senator from Montana to the waiting audience.

There being no objection the matters were ordered to be printed in the RECORD, as follows:

Chester H. Gray, master, Potomac Grange, No. 1, in introducing Senator WHEELER, said:

"It is felt that Potomac Grange, No. 1, the Grange of the founders, the first local grange organized almost 75 years ago, is making Grange history tonight in broadcasting over the Nation-wide facilities of Mutual Broadcasting System from the master's station in its grange hall at the Nation's Capital.

"It is fortunate we have with us a Member of the United States Senate who has always fought for the welfare of agriculture. There is a peculiar pleasure in introducing our guest speaker, who at the beginning of the depression, when farmers were losing their homes by the thousands, introduced and fought to successful enactment the emergency and temporary low rate of interest on farm mortgages in the Farm Loan System. This he did against great opposition both within and without the Government.

"To those here assembled in Grange Hall, and to the radio audience, Potomac Grange, No. 1, presents Senator BURTON K. WHEELER, of Montana."

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

I am happy to address this meeting. The National Grange, with its innumerable local granges, constitutes one of the truly great farm organizations in this Nation.

I always hesitate to discuss the farm problem with an eastern audience, for I know that too often they regard such a discussion as a political stump speech. But our farm problem is more than the problem of a single group or a single industry—it is a national problem of the first magnitude.

The welfare of agriculture with its 30,000,000 people directly affects fully a quarter of our population—but it also concerns with almost equal force every worker and every manufacturer in this country. The American farmer constitutes a really important consuming unit for manufactured goods.

American industry has been afforded the protection of tariff walls. The workers of America through unionization have been able to demand and obtain higher and higher wages. Some industries through organization are able to maintain and in many cases artificially fix the prices of products. You and I want to see high wages for labor and fair prices for business. They are essential to the well-being of the Nation. But we must not overlook the fact that everything the farmer buys has been increased without a corresponding increase in the price he receives for his products. A farmer must sell on a highly competitive world market and he buys in a noncompetitve and protected home market. It has been aptly said that a farmer sells everything at wholesale and buys everything at retail.

A balanced economy in this Nation demands either a substantial rise in farm prices or a substantial reduction in industrial prices.

You may theorize all you want; you may analyze the causes of the depression, but what I have said diagnoses our domestic economy. When we have accurately diagnosed the disease we should be able to find the remedy. Tonight I would like to discuss corrective legislation. It will not be pleasing or palatable to all groups. Remedial legislation is never entirely acceptable to all, because it tends to equalize economic privileges. It takes from one and gives to another.

Today farmers are demanding appropriations for parity payments, payments that would tend to establish partial equality between farm and industrial prices. They are demanding that which the Congress morally obligated itself to do under the terms of the 1938 Farm Act. They are demanding that to which they have a certain right, if we in Congress keep our promise, but which large segments of industry and the public regard as a political hand-out. Call it what you will, the present act makes it necessary for the farmers to panhandle Congress. I am sure this is as obnoxious to the farmer as it is to his critics. He wants no dole. The farmers do want parity with industry, and parity with labor. He wants economic equality; an opportunity to sell his products at fair prices so he can live and buy shoes, clothes, automobiles, and other industrial products. He wants a home, schools, and churches for his children. He is neither a Communist nor a Fascist. He is not opposed to good wages or a fair return on capital. Labor and capital are short-sighted if they refuse to see that the farmer must prosper if they themselves are to prosper.

Over a year ago I introduced in the Senate a bill that has become known as the wheat-income-certificate bill. It may not be perfect, but it is a realistic and practical approach to the problems of the wheat farmer. Its principle could be readily extended to other crops. Indeed, legislation to cover four others has already been drafted.

The mechanics of the proposed legislation are simple. The bill is realistic. It recognizes the fact that a politically minded Congress will not go on and on appropriating money for even the most deserving of purposes. This legislation would put parity payments on a permanent basis. It creates no bureaucracy, nor do the philosophies of scarcity or compulsion dominate this proposal.

A local committee would, on the basis of a farmer's historic acreage, determine his allotted bushelage. The farmer could plant and harvest any amount of his crop that exceeded his bushel allotment. Upon this surplus or excess he would be paid no benefits at the time of production; however, it could be stored and marketed as a part of the succeeding year's allotment. And under these circumstances benefit payments would be made. The legislation would thus preserve all the essential features of the ever-normal granary, and at the same time fill a definite need in the great wheat-producing areas.

Bumper crops would provide a surplus or a reserve from which the farmer could draw during drought or other bad years. Parity prices for his historic bushelage would not make it necessary for him to sell every pound of a good wheat crop. He could afford to create a backlog without depriving his family of necessities or his farm of improvements. This legislation would give the farmer a measure of protection from bad years. It would be a tremendous stabilizing force in a presently hazardous industry.

Parity for agriculture with industry would be established without adding to the national debt. The bill is self-financing. Wheat income certificates would be issued in amounts representing the difference between parity and the market price. Wheat processors would purchase these certificates, and from such revenues the farmer would be assured parity prices for his produce.

Charges will be made that the bill imposes a consumers' tax upon the public. But you and I know that the price of bread to the public has been substantially static during a period in which wheat fluctuated from 25 or 30 cents to $1 a bushel. We know that a single bushel of wheat produces some 60 loaves of bread. We know that processing, merchandising, transportation, and other costs are apparently the dominant factors in the price of bread to the consumer. The wheat farms of the Northwest understand and want this legislation.

But there is another phase of the farm problem—that of debts.

Continued drought in some sections of the country and sustained depression prices for farm products have forced the farmer deeper and deeper into the mire of debt. The principal and interest on those loans contracted during periods of inflation is a factor in the present gradual destruction of a great industry and a great class of people. In principle, I am opposed to debt repudiation, but there is a limit to what the most honest and industrious farmer can pay. For the Federal Government or a private banker to collect or attempt to collect more is unwise.

Farmers driven from farms and dispossessed of their homes are swelling the ranks of the unemployed with a shocking rapidity. This is a dangerous and un-American trend toward a modern agricultural feudalism. It must be curbed. Good farmers must be given an opportunity to farm—to replace him on the farm with an inexperienced tenant because low prices will not permit payment of debt based on inflated values is both uneconomic and unwise.

Some 2 weeks ago Senator BANKHEAD, of Alabama; Senator LA FOLLETTE, of Wisconsin, and I, introduced in the Senate comprehensive farm-debt legislation. Chairman JONES of the House Agricultural Committee introduced a companion bill. We are hopeful that this legislation will be passed during the present session of Congress.

Without disturbing the intermediate credit banks—the banks for cooperatives or the production credit corporations or associations—the bill revamps the Federal land-bank system. Interest rates would be permanently reduced to a uniform 3 percent on land-bank and land bank commissioner loans. The present average interest rate on these loans is 5 percent, though by act of Congress it has been temporarily reduced to 3½ and 4 percent. This was accomplished by legislation which I first introduced in 1935, and which was subsequently reenacted. In addition to establishing the lower interest rate the required 5 percent capital-stock subscription by borrowers would be stricken from the statute books. At the present time land-bank bonds are guaranteed morally by the Government of the United States. In the future they would be actually warranted by the Government. This would reduce the interest on these bonds, and after 1946 a new interest rate would be fixed equal to the amount of interest paid on land-bank bonds plus an additional 1 percent. This would mean a further reduction in interest for debt-harassed agriculture.

Other phases of this proposed legislation meet a direct and vital phase of the farm-debt problem. A formula for adjusting present farm mortgages and production loans is offered. It would adjust inflated and oppressive farm debt to a realistic debt based on the actual value and earning power of the farm.

The mechanics of these provisions are not complex. A farmer whose property has been foreclosed or whose mortgage is delinquent for 3 years would make application for an adjustment of his debt. In the event of repurchase or refinancing—title of the property would vest in the Farm Mortgage Corporation. A 5-year lease, with the option to purchase, would be offered the farmer. During this 5-year period the farmer and the farm unit would be studied—and upon this information a reappraisement would be made by a county committee. The farm would then be reconveyed to the farmer at its real and productive value.

This legislation would destroy no existing cooperative aspects of the Federal Land Bank System. The bill would eventually eliminate the present land-bank farm-credit system whose benefits would be felt by the farmer and the public.

A sound national economy demands a sound agriculture. The legislation I have outlined is a definite step in that direction. Until the farm problem is solved—until agriculture is economically rehabilitated—this Nation will not enjoy real prosperity. Intelligent selfishness on the part of all of us requires our complete and unselfish efforts in solving the farm problem. Well-balanced economy—parity for the farmer with labor and with capital—is the goal toward which we must all strive.

Cancer Control

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

PROCLAMATION BY THE PRESIDENT

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation regarding cancer control issued by the President yesterday:

CANCER CONTROL MONTH—1940

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

Whereas the President is authorized and requested by Public Resolution No. 82, Seventy-fifth Congress, approved March 28, 1938 (52 Stat. 148), to issue annually a proclamation setting apart the month of April of each year as Cancer Control Month, and to invite the Governors of the several States, Territories, and possessions, of the United States to issue proclamations for like purposes; and

Whereas it is also requested in the said Public Resolution No. 82 that the proclamations issued invite the medical profession, the press, and all agencies and individuals interested in the control of cancer through a national program of education and other cooperative means to unite in dedication to such a purpose and by concerted effort to impress its necessity upon the people of the Nation; and

Whereas by this dedication of the month of April to a voluntary national program for the control of cancer, the people of the entire country will be acquainted with the progress that is being made by the Federal Government through the United States Public Health Service, by certain of the States and by other agencies, as well as by individuals, in the struggle against this dread disease, which is second among the causes of death in the United States:

Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, do proclaim the month of April 1940 as Cancer Control Month, and do invite the Governors of the several States, Territories, and possessions of the United States to issue similar proclamations; and in order that the people throughout the land may have informed knowledge concerning the prevalence of cancer and of the means which can be taken to control it, I also invite the members of the medical profession, individually and through their associations, other scientific groups, all organs of opinion, including the press, the radio, and the motion picture, and all others who have the interest of the public health at heart, to unite during the month of April 1940 in concerted effort to impress upon the people of the United States the necessity of a national program for the control of cancer to the end that suffering may be relieved and life preserved.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 18th day of March, in the year of our Lord 1940, and of the Independence of the United States of America the one hundred and sixty-fourth.

[SEAL] FRANKLIN D. ROOSEVELT.

By the President:

CORDELL HULL,

Secretary of State.

Aggression on Poland

EXTENSION OF REMARKS

OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ADDRESS BY CAPT. FRANCIS X. SWIETLIK

Mr. SLATTERY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a speech

by Capt. Francis X. Swietlik, dean of Marquette University and censor of the Polish National Alliance, at the monster relief mass meeting in Madison Square Garden, New York City, on March 12, 1940.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

As I gaze upon this imposing assembly gathered here this evening to voice its protest against wanton aggression and anxious to render aid and assistance to the victims of this aggression, I cannot refrain from paying tribute to the spirit which motivates you and from expressing my admiration for those who have made a manifestation of this character possible.

In the front ranks of the tragic victims of the present cataclysm in Europe lies Poland, the country of your fathers and my fathers. But it is a Poland with a spirit unconquered, with a will and determination to live, and, God willing, she will live and ere long her lands and her freedom will again be restored to her.

The fate of Poland is tragic. As we reflect upon her historical role we cannot but cry out in protest against the injustice which is her lot today. The champion and defender of other nations, historically the bulwark of Christianity and western civilization as borne out by the battles of Grunwald, the relief of Vienna from the Turkish siege, the defense of Warsaw from the Soviet invasion in 1920, a nation which at no time waged a war of conquest or aggression.

Poland, wherein the oppressed Jew of the Middle Ages found a haven of refuge, the country of Copernicus and Curie-Sklodowska, of the art of Matejko, Kosaki, and Styka, of the literature of Mickiewicz, Kraszewski, Slowacki, Sienkiewicz, of the music of Chopin and Paderewski—a nation which but 22 years ago was liberated from a century and a half of tyranny and oppression, which sought nothing else but the right to a peaceful national existence—today is a tragic victim of the despoilers, her fields are laid barren, her cities a mass of ruin and debris, her people wantonly and willfully dispossessed of their property and hoarded off to restricted areas or concentration camps, her foodstuffs conscripted and transported to the enemy, her wealth confiscated, her youth and intellectuals ruthlessly exterminated, her seats of learning, churches, and convents defiled; the aged, helpless, and nonoffending professors of the Jagiellonian University at Cracow bundled off from their classrooms in trucks to prison camps where several perished from exposure; her religion, language, and press suppressed; death, hunger, pestilence—the Three Horsemen of the Apocalypse—rampant in the land.

Poland fought courageously. She yielded only when attacked from the rear by the armed forces of Soviet Russia. Confronted by the Nazi dictator, superior in manpower and mechanized military equipment, Poland stood her ground. True to her historical tradition she declared that honor is more sacred than peace. The soldiers and civilians of Poland fought heroically in the face of overwhelming odds. What feat of heroism in history parallels the valiant, courageous, although hopeless, defense of Warsaw under the leadership and inspiration of its chief executive, Stefan Starzynski? Therein is an epic of Spartan like courage and bravery—of patriotism in the ultimate. Therein we see an exemplification of the true spirit of the nation. And I say to you that if the dictators of Germany and Russia, the present despoilers of Poland, would only heed the lessons of history, they would realize that although for the time being they can erase geographical boundary lines, they can expropriate the population of the conquered country, they can colonize the land with their own people, they can persecute and execute thousands of her men, women, and children, they cannot crush a spirit entrenched in age-old culture and consecrated in sacrifice. For the time being they can take the body, but they cannot, they will never succeed, in killing the soul of the nation.

Poland was partitioned on three occasions in the past, her cities ruined, her people driven to the wilderness of Siberia, but she always retained her national soul and survived.

Prior to the World War she was occupied by the three most powerful military nations of the world. During the war her fields were furrowed by the trenches of the enemy and became the battlefields of contending armies. She was bled white. And yet, when the war was concluded she regained her independence and became one of the leading nations of the world. Persecution only strengthened her determination to live, and after the persecution was over she emerged from her ordeal stronger and more ready to take on new duties as a nation.

Today, when we contrast our happy lot with the tragic lot of the people of the Old World, we can be thankful to Divine Providence for the blessings of peace and democracy which are ours.

At no period in history did mankind witness such sudden and numerous changes in the forms of governments of nations as took place within the last two decades. After the termination of the World War there arose upon ruins of age-old empires and monarchies forms of government which seemed to be patterned according to our own. People demanded and obtained a voice in their government. Nations which had been held in subjection, some for hundreds of years, regained their independence and were enabled to live their own national lives and to again breathe the air of freedom. It seemed that the long-awaited and hoped-for millenium had arrived and that the nations of the world could at last direct their efforts to the peaceful pursuits of civilized life.

But this new-found freedom was of short duration. In less than 20 years after the termination of the World War some of the principal nations of Europe placed themselves under the rule of dictators and seemed to leap back over centuries to the darkest ages of history. Under this modern dictatorial government the state is glorified and everything else must be subordinated to it. Instead of acting as a servant of the people, such a government becomes their master and the people become its slaves. The God-given rights of the individual which are so eloquently set forth in the Bill of Rights of our own Constitution, are violated and discarded. Freedom of speech and of press, those most important guaranties of the liberties of any people, are entirely denied. Under a dictatorship the press is merely the mouthpiece of government propaganda. No one dares to complain, no one dares to criticize, all must obey. Religious freedom is denied. It is impossible to have religious freedom under a dictatorship. The teachings of Christianity are inconsistent with the idea that the state is supreme and that the individual is wholly subordinate to it. It recognizes in man certain inalienable rights, the right to possess property, the right to pursue one's happiness, the right to free expression. It is for that reason the dictators consider it their first duty to suppress all religious freedom.

Dictators do not recognize the fact that in their relations with other nations they must follow a certain norm of morality and justice if civilization is to survive. They disregard the sanctity of treaties. They will tear up treaties which have been solemnly entered into if such course suits their purpose. They take the position that the end justifies the means; that any conduct on their part, no matter how immoral and corrupt, is justifiable if it leads to the attainment of the object which they have in mind. Such a philosophy of government is a reversion to paganism. It may result in seeming temporary success, but the time comes when the inevitable law of right triumphs and successes earned upon such a foundation must totter to their well-deserved ruin. It was this philosophy that might makes right, that stronger nations have the right to deprive weaker nations of their independence simply because they are weaker, that brought temporary misfortune to Poland.

This gallant nation is in ruins; her people are destitute; hundreds of thousands, both soldiers and civilians, sought refuge in neighboring countries. Others remained in their homes. The story of their suffering, which percolates through the strict censorship of the belligerent countries, is most harrowing. They need food, they need shelter, they need clothes. It is estimated that 7,000,000 persons in the so-called government area of Poland, are in dire need of food and clothing; that $50,000,000 are essential to hold them to life.

While some of the European nations are doing all they can to alleviate the situation, we in America must bear the brunt of this burden. Several days ago the Foreign Relations Committee of the House of Representatives, under the chairmanship of Mr. SOL BLOOM, of your State, conducted hearings in the capital of our Nation to ascertain the facts about Poland so as to recommend to Congress such relief measures as, in their judgment, may be necessary.

Ladies and gentlemen, as I stand before you, conscious of the fact that on the speakers' platform is seated one of the great humanitarians of the world, my memory harkens back to the post-war era of the last World War of barely a quarter of a century ago. America, who so significantly contributed to the ultimate victory of the Allies, at the conclusion of the hostilities and the signing of the armistice, bore no thought of malice and vindictiveness of territory and reparations. True to her traditional spirit, the same soldier who but a few weeks ago fought on the fields of France became a messenger of mercy, carrying food and clothing to the innocent victims of that great conflict. Under the inspirational guidance of your guest of the evening, Mr. Herbert Hoover, as the head of the American Relief Commission, this same soldier became a Samaritan—he went to Belgium, to Poland, to Finland; even to the countries of the recent enemies, Germany and Austria; to friend and foe alike, to feed and to clothe; to save from starvation the women and children of those countries.

I am confident that America will not turn a deaf ear to the plea of Poland, but as in the past she will again stand forth as the one hope for all suppressed people, and will again send her messengers of mercy to the desolate land of the Old World, bringing assistance to those in need as she did in the past.

Pass the Hatch Bill

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE ST. LOUIS STAR-TIMES

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article which appeared in the St. Louis Star-

Times under date of March 19, 1940, entitled "Pass the Hatch Bill."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis Star-Times of March 19, 1940]

PASS THE HATCH BILL

The Hatch bill goes to the House of Representatives, following passage by a 58 to 28 bipartisan vote in the Senate, with indications that it will be strenuously opposed by the official Democratic House leadership.

If that is so, the bill faces a precarious future. House procedure permits the bottling up of legislation, even a popular bill, in the powerful Rules Committee, which can block any proposal by the simple expedient of refusing a rule, thus denying the House as a whole the opportunity of a vote.

The opposition in the Senate centered largely in conservative southern Democrats, plus a few new dealers with private practical reasons for their antagonism. If the same element shows the same attitude in the House, the Rules Committee—dominated by southern conservatives—may be expected to do all in its power to destroy the bill.

So much political trickery and double-dealing are involved in such a bill as the Hatch proposal that neither Republicans nor Democrats can claim too much virtue in their attitudes toward it. Republicans who now solidly support it, because it would injure Democratic State machines, refused to adopt similar measures during the era of Republicanism, when Republican machines would have been injured.

The interest of the public, however, transcends the selfish interests of the politicians in Congress. From the public viewpoint the Hatch bill is desirable—even imperative.

What will be the effect if the bill is sabotaged? It will mean that a major step toward a decent civil service is postponed perhaps for years. It will mean the loss of the impetus toward abolition of the spoils system gained with the enactment of the original Hatch law last year.

Defeat for the bill will tell administrative employees of the various State governments that they are free to play politics while drawing salaries supposedly for public service.

It will be equivalent to placing the benediction of Congress on the State highway department officials who regiment thousands of their subordinates into high-powered machines manipulated for election purposes.

It will be saying that political activities which have been pronounced "pernicious," and forbidden to Federal employees, are entirely proper when practiced by State employees, even when these State workers are hired by departments and agencies supported in whole or in part by Federal funds. "Macing" of employees for campaign contributions will not only be tolerated; it will be tacitly blessed, sanctified, and approved.

It is not necessary for supporters of the Hatch bill to accept without protest the suffocation of the proposal by a small clique of powerful men. They can call upon Mr. Roosevelt to aid them by endorsing the bill with his full authority both as President and as titular leader of the Democratic Party. They have the right to expect his support, expressed as openly and vigorously as necessary, because the President specifically recommended the principle of the pending bill when he signed the original Hatch law last year.

And if extreme measures are required, the House can overcome its Rules Committee by circulating a petition to discharge the committee from further consideration of the proposal. A simple majority, signing such a petition, can force the bill to the floor of the House for a vote.

It would be a major step backwards, a disgraceful surrender of the principles of good government to selfish and partisan purposes, if the Hatch bill should die. Every friend of an efficient and nonpolitical civil service should use his influence to see that the bill is not permitted to die.

The Place of Advertising in the American Scheme

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ADDRESS BY RALPH STARR BUTLER

Mr. NYE. Mr. President, James S. Milloy, of the Washington office of the Minneapolis Tribune, has brought to my attention an address delivered to the recent advertising awards dinner in New York City by Ralph Starr Butler, vice president of General Foods Corporation. The title of the address was "The Place of Advertising in the American Scheme," and because of Mr. Butler's preeminence in the field of advertising, and the contribution his address makes to a subject of such widespread interest throughout the country today, I ask unanimous consent to insert it in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During the past 10 years, to a greater degree than at any other time in our history, forces were at work that stimulated questions about many phases of American life. Philosophies of government, social points of view, and business procedures which had in the past been generally accepted without serious question, were subjected to scrutiny and challenge. Among the subjects in which new interest was aroused was that complex of activities which we call the machinery of distribution. A public which had taken for granted the practices involved in the distribution of the world's goods became aware of the distributing machine and began to formulate questions about the usefulness, economy, and desirability of many of its parts.

It is right that this should be so. The machinery that has been developed to make available the output of the farms, the factories, the forests, and the mines is a tremendously important factor in the lives of the people. Our physical and economic welfare is influenced in many ways by the practices followed in distributing goods from the hands of those who make them to the homes of those who use them. The far-reaching influence of these practices makes it desirable that they should be the subject of general knowledge and intelligent scrutiny. It is not to be hoped or expected that they could or should continue in operation unobserved and unquestioned. If the distributing machine is fundamentally useful and sound, it has nothing to fear from intelligent inquiry into its workings. If it cannot stand up in the light of general knowledge and careful analysis, it does not deserve to continue unchanged.

Among all the phases of distribution which have been the subject of recent scrutiny and question by the American public, one of the phases that has aroused the most interest and the most controversy is advertising. This is natural, because advertising is a spectacular manifestation of the work of the distributing machine. By its very nature advertising is not hidden or submerged. It is in the forefront of public consciousness. It enters the home in practically all periodical literature. It provides the basis for the tremendous development of radio in the United States. It is in every way the daily companion of the American consumer. It is natural and right that, being so continually conscious of advertising, the consumer should wonder about it and ask it to justify its existence.

ARRAY OF CHARGES

Advertising is being attacked on several fronts. Its honesty is challenged; its effect upon public taste is deplored; its successful development of new wants is criticized; its appeal to the emotions is frowned upon; its insistence is disliked; and its standardizing influence upon American products and American life is resented. More frequent than any other charge, however, is the contention that advertising does not contribute to values in proportion to its cost. Those who make this charge are concerned with what we may call the economics of advertising rather than with its social implications. To state their case bluntly, the complaint is current that advertising increases prices to the consumer. It is this charge alone that I should like to explore, because it seems to me a most important part of the indictment.

In considering the contribution of advertising only to tangible values, we run the danger of overlooking its contribution to other values. Advertising is an important social force as well as an aid in the promotion of industry. It tells the story of inventions and improvements so that new aids to civilized living become almost immediately available to an entire nation. It promotes that divine discontent which makes people strive to improve their economic status to the end that they may be able to satisfy new wants and to provide for their families the maximum of comforts and conveniences. It has had, and continues to have, a very great influence on the American standard of living. It aids in the stabilizing of industry. It makes possible inexpensive periodicals and free radio. In many ways it beneficially affects our national life. All these contributions of advertising need analysis, amplification, and repetition, but they are not our concern at present. Leaving them in the backs of our minds, let us direct our thinking exclusively to the influence of advertising on more tangible values.

Once more, however, we must restrict our field of inquiry. When advertising is charged with adding to the cost of advertised merchandise, or with being an economic waste, or of unduly increasing the cost of living, or with doing any of the other things that are part of current critical comment, I suspect that the critics do not have all advertising in mind. We hear little questioning of retail store advertising, whether it be in newspapers, window dressing, or inside store display. Few shafts of criticism are leveled at the millions of dollars spent by the mail-order houses for catalogs and other forms of promotion. There is no audible chorus of protest against those who solicit business by mail. And yet all these things are advertising, differing in no degree in principle or in economic justification from the more common subject of critical indictment.

When advertising is said to be an unnecessary charge upon the consumer the reference is usually to one kind of advertising alone—the kind that is used by a manufacturer whose trade-marked goods are distributed through retail stores and who seeks, with the aid of newspapers, magazines, radio, or signs of various kinds to promote

the sale of his merchandise to the consumers who trade at those stores. This kind of advertising, to be sure, represents a considerable proportion of all advertising; but it is only a part, and differs in no way in principle from all the other things that are done in the name of business promotion. If advertising is an economic waste, and if we wish to be consistent, we must stop most of the printing presses, find some new way to finance radio, bar business solicitations from the mails, tear down all billboards, board up the store windows, destroy all store signs and displays, and permit a retailer to do business only through a hole in the wall. That is the absurd Utopia which the really consistent critic of advertising must envisage.

CONVENTIONAL EXPLANATION

Forgetting the inconsistency of critics, however, let us consider only the kind of advertising that is most frequently condemned. There is a conventional answer to the critics. The argument runs something like this: A manufacturer starts with a certain volume of business. On that given volume he has a known manufacturing cost for each unit produced. If he can largely increase his business, he can obtain the manufacturing economies of mass or large-scale production. Each unit will cost less to produce, and each unit, therefore, can be sold for less to the consumer. He then employs advertising successfully; he realizes his desired increase in sales; his production cost for each unit declines; and he can and does sell each unit for a reduced price. Furthermore, with increased sales he can spread his overhead of selling and administrative costs over a larger number of units; each unit will require a lessened loading for overhead; and this saving also will be passed on to the consumer.

If this formula works in all cases or in most cases, we have a complete defense of the economic value of advertising. Advertising, then, figuratively speaking, costs nobody anything. So frequently is this explanation of advertising used that we need to make careful studies to find out how generally the formula works out in the ideal way in which it is stated. This need has been recognized; the Advertising Research Foundation has commissioned the Harvard Graduate School of Business Administration to conduct a study of the economics of advertising, which study, I hope, will include a critical evaluation of this conventional defense. The graduate school, I understand, is still at work on this important task and no report has yet been issued.

Even in advance of the foundation's report, it is permissible to suspect that the formula will be found to have something less than universal application. For one thing, we know that in many industries most of the manufacturing economies of large-scale production are realized when the business has reached a certain volume, and that relatively unimportant additional economies result from the further expansion of the business beyond that point. It is possible, too, in some cases that the cost of advertising, added to the other costs of the business, might to some extent counterbalance the savings resulting from lowered unit cost of manufacture. Furthermore, an individual manufacturer, unless pressed by equally efficient and aggressive competition, might retain as additional profit for himself all or part of the economies resulting from his expanded operation.

Finally, we must admit the existence of the phenomenon of unadvertised products selling not infrequently at lower prices than advertised products of similar quality. It is not enough to say that in almost countless cases the unadvertised products would not exist if some advertising manufacturer did not originate them, or that the unadvertised products would find no market if an advertising manufacturer had not created a market for them. These contentions are entirely true, particularly with respect to drug-store and grocery-store merchandise. With so few exceptions that they prove the rule, such unadvertised specialties ride along largely on the promotion work of advertising manufacturers.

Yet, except in the case of some store brands that have been long on the market, it is almost axiomatic that unadvertised specialties, produced in smaller quantities than advertised competing products, cannot be sold successfully except with a price advantage. The consumer, choosing between the guaranteed quality of advertised products and the not always known quality of the unadvertised competitor, will seldom buy the latter unless to effect a considerable saving.

ADVERTISING IS ONE OF MANY COSTS

If it should develop that the conventional justification of advertising as a contributor to tangible values for the consumer does not always work out in practice, how can we explain the economic desirability of this potent force in business promotion? I submit that we must shift our point of view from advertising as an isolated phenomenon to advertising as an integral part of the existing industrial system. I shall endeavor to justify the contention that advertising is no more legitimately to be selected as an undue charge upon the consumer than is any other charge involved in the management of industrial enterprises or in the distribution of the output of our factories.

Every price includes many things beyond the actual cost of production. Additions to the cost of production are inescapable under our present system. These additions should include all of the selling and administrative expense of the manufacturer, the expenses of the jobber and retailer, and any other factors in the distributing chain, as well as a profit for each factor that handles the merchandise. There is no possibility of avoiding these costs. In every dollar the consumer pays, each of these charges is represented by a specific amount of money, varying item by item in accordance with the particular way in which any given product is distributed and with the amount of profit realized.

It is my belief that advertising, as a single cost in this chain of costs, can no more rightly be criticized as a contributor to the consumer price than the salary of the president of the manufacturing company, the expense of the salesman who travels for the wholesale house, the cost of the clerk behind the counter, the expense of an accounting department, or a reasonable profit on the operations. This I believe to be true as long as we admit the validity and desirability of the economic system under which we are living.

COLLECTIVISM VERSUS CAPITALISM

To establish this contention, it is necessary to look at the fundamentals of what is variously identified as the capitalistic system, the profit system, the competitive system, and the system of free enterprise. Let us accept, first, the concept that any economic system exists for one purpose alone, and that is to transform the inherent or natural utilities existing in the products of the soil, the forest, and the mine into things that are usable by the consumer, and to make those usable things available to the consumer in suitable quantity and grade at the place where and at the time when he wants to use them.

Fundamentally there are only two ways in which this purpose can be accomplished. The doctrine of the collectivist holds that the purpose can best be accomplished by having society set up a group of individuals endowed with a degree of wisdom which is not to be found in fallible mankind, who will determine what the consumer wants or should have and the quantities that should be available to him, and who will then designate certain individuals in society to operate the machinery of production and distribution without financial risk to those who are appointed to the several tasks. This is the doctrine of "production for use and not for profit." It is the doctrine of the Socialists before and after Marx, and it seems in many respects to approximate the doctrine of that revival of totalitarianism which is exemplified in certain countries of Europe today. With relatively minor variations, these and other forms of collectivism are based upon the idea that somebody in authority shall decide what is to be made, how much is to be made, and who shall make it and distribute it.

Opposed to the collectivist concept is the system of free or voluntary enterprise. Under this system no constituted authority dictates what is to be made, how much is to be made, or who is to make it. Instead, the system is operated by leaving the performance of its various functions to volunteers. Under this system one man elects to become a farmer, another chooses manufacturing, a third volunteers to perform the wholesale function, and a fourth decides that he wishes to operate a retail store. Each volunteer obviously runs financial risks in undertaking to operate his part of the industrial machine. He may lose all he has put into the business. He must have some incentive to induce him to embark upon the enterprise and to compensate him for his risk in voluntarily assuming a place in the industrial structure. Therefore, he is permitted, if he can, to earn and retain a profit over and above his expense of operation. This, of course, is an oversimplification of the system of free or voluntary enterprise, but it is at least an accurate picture of the skeleton of the system under which we are operating. Let it be understood that this is just as truly a system as that promoted by the collectivists.

In all systems designed to control human behavior in a complex society there appears occasionally the need for certain exceptions to the general rules. Our system rightly recognizes such exceptions and makes provision for them. For example, no one is permitted to embark upon a business which is morally or physically injurious to the public. In fields vitally related to the general welfare, such as communication, transportation, and public utilities, the advantages of governmentally supervised monopoly or semimonopoly are recognized, and no new competitor is admitted unless he can prove that the public will benefit substantially from his contemplated enterprise. Such exceptions apply only to a small minority of fields of industrial activity. If this were not so the system of free enterprise itself would be the exception, and we should then be well on our way to a collectivist society. If we are to retain our present system, freedom of opportunity must generally remain open to the volunteer businessman, because such freedom is the very foundation of the philosophy on which the system is built.

The American people, thus far at least, by a tremendous majority, prefer a system of free or voluntary enterprise to the collectivists' proposal of governmentally dictated production and distribution. Accepting this point of view we must frankly recognize some of the inescapable connotations of our industrial philosophy.

HOW FREE ENTERPRISE WORKS

What has all this to do with advertising? By the following example, I shall try to show that, given the desirability of a system of free or voluntary enterprise, advertising contributes to keeping down the costs of business, and thereby becomes a social aid rather than a social charge. The economic justification of advertising will appear, as I believe it to be, inextricably interwoven with the justification of the economic system under which we are living.

Under the present system let us assume that a man elects to manufacture a specific product or a line of merchandise. Except in a very few fields of industrial activity, he does not have to obtain anyone's consent to embark upon this particular interprise. Of course, he must conduct his business in accordance with certain rules of the game that have to be established to protect his neighbors and his competitors. In this respect he is not different from

any other citizen. Freedom of enterprise, like freedom of speech, freedom of the press, and freedom of religion, does not mean license. Certain essential regulations must be promulgated and enforced. Within the confines of those regulations, however, the very nature of the system not only permits but encourages him to establish and operate his industry.

After successfully producing his merchandise, he faces the problem of finding people who will buy it. He may begin by peddling his goods to the homes in his immediate neighborhood. If he does that, and if he stops with that, his decision to stop is not forced upon him by any governmental body but is one for which he alone is responsible. If, however, he is aggressive and ambitious, he seeks a wider market which will bring him more business and more profits.

Now, here is a very important point to bear in mind: It is essential in a system of free enterprise that he should be permitted to seek as wide a market as he may desire. His freedom to do so may, in certain exceptional cases, be limited by requirements of the public good—such as the need for conserving natural resources or the recently appreciated need for protecting the soil. These restrictions, however, must be exceptional and based on clear advantages to society. If they are not exceptional, and if they should become general, the system of free enterprise would no longer exist. Under our present system then, and with respect to most kinds of merchandise, there is not, and there cannot be, any law, rule, principle, or power which restricts a manufacturer's operations to one square block or to a thousand square blocks or to a thousand square miles. If he could be told by some Government bureau that he could operate only in some prescribed narrow field, free enterprise would be a misnomer, and we should have to find a different name for a very different kind of industrial organization.

FREE CHOICE OF METHOD

Let us assume that a manufacturer, having elected to produce an item of merchandise, decides to seek a national market for his goods. He wants to establish a stable business and not to plan or operate just for the immediate present and just for immediate profits. What is he to do? Has he, or should he have, freedom of choice among the several different practical procedures that have been developed by successful usage? It seems to me that this added freedom of choice is an essential corollary to his other opportunities to make free election. Without available means to extend his business, of what value is his freedom to decide that he would like to extend it? To make any freedom of choice a mere futility is to take away the freedom itself. So we must conclude that the availability of means of extending a business is one of the basic essentials of the system of free or voluntary enterprise.

To be sure, he need not be permitted to use every method that might come into his mind. He must not be allowed to lie, or cheat, or offend against decency, or treat his competitor unfairly, or injure the public, or do any of the other things that rightly come within the province of the police power of the State. But outside the area of rightful and legitimate proscription, he should have free choice among all useful and workable and successful promotion practices.

Particularly should there be available to him all promotion procedures that are economical in their operation, because there is an obvious social advantage in keeping costs of business as low as possible. It would be a strange thing if, through misinformation and misunderstanding, those who cry loudest against the effect of promotion charges on consumer prices should be successful, by some means, in restricting or eliminating the use of the one great merchandising aid which in nearly every instance is least expensive to the manufacturer and to society.

There are several choices of method open to our manufacturer. If he turns to advertising, it is because advertising is the least expensive means to accomplish his legitimate purpose. The relative economy of advertising can be proved, but this is not the time or place to prove it. Of all kinds of advertising, those most generally charged with contributing unduly to costs—newspapers, magazines, radio, and the various kinds of sign advertising—when used in the circumstances that I have described, are actually the least costly to the manufacturer and to society.

It is important that the economy of these forms of advertising as compared with other methods of promotion be understood and accepted, because the fact of that economy occupies an important part in our chain of reasoning. As evidence that advertising is less costly than other ways of promoting and maintaining a national business, it is appropriate to point out that under a system of free enterprise the control over undue profits and undue expense is entrusted to the workings of competition. Our manufacturer, faced with the competitive necessity of selling at the lowest possible price, would be very foolish if he elected to use a selling method which, from the standpoint of its cost, would operate to his competitive disadvantage. Neither this particular manufacturer nor any other manufacturer whose operations at almost every step are governed by considerations of competition would or could use advertising if there were any cheaper way to accomplish his purpose.

ADVERTISING CUTS COSTS

If we accept the fact of the relative economy of advertising as a method of promoting and maintaining a manufacturer's business, what is the significance of that fact in our endeavor to justify advertising in the present economic system? In brief summary, my reasoning has run as follows:

1. At the very basis of the profit system, the competitive system, the capitalistic system, or the system of free and voluntary enterprise lies the fact that each individual volunteers to perform some function in that system; he is free to select the kind of business in which he wishes to engage, and, as a matter of free choice, he may determine the extent to which he will try to develop his operations. In such a system business activity is encouraged, profits are expected, and success is commended, because the system, by definition, provides no means of accomplishing its necessary functions except by successful volunteers.

2. It follows that a manufacturer seeking to establish the sale of his product, having made free election of the kind of business and kind of product and the desirable extent of his intended operations, must be permitted to use any method of reaching his objective which is honest, which conforms to the taste of the times, and which is not unfair to competitors or injurious to society. Without this free choice of method his other fields of freedom of choice become futile, and the system of free enterprise becomes a misnomer and an unworkable theory.

3. The manufacturer selects advertising as a means to aid him in achieving his legitimate purpose, and if, as is almost universally the case, he must contest for patronage in a competitive field, his selection is due exclusively to the fact that advertising is the least expensive tool that he can employ.

4. All of which leads, I believe, to the inescapable conclusion that in the existing industrial system advertising, instead of increasing business costs is a vital factor in keeping them at a minimum, and, therefore, because all business costs must ultimately be borne by the consumer, advertising makes a definite contribution to the economic benefit of the community. This is a bald and brief statement of an exceedingly significant truth. If my reasoning is right, the conclusion cannot be avoided. And if the conclusion is right, then advertising is amply justified in a society that believes in the system of free enterprise, the legitimacy of the profit motive, and the advantages of competitive industry.

If we accept that system, we must admit the justification of any activity which, as is the case with advertising, contributes to the effective and economical working of the system. Advertising, then, and the social and industrial system under which we are living, have one and the same justification. The fact that advertising is a spectacular manifestation of one phase of the existing system does not excuse the attempt to treat it as an isolated phenomenon. If the system is right, advertising is right. If the system is wrong, and if it should be changed, then I suspect we should find ourselves in such a different kind of world that the problem of the rightness or wrongness of advertising would be insignificant in comparison with the problems of how to maintain our standard of living and of how to retain and advance the tremendous achievements of our capitalistic civilization.

THE PRICE OF FREE ENTERPRISE

Supporters of the existing economic system may grant our conclusion, and yet contend that competitive distribution involves costs (including the cost of advertising) which constitute an undesirable addition to prices and that these costs ought to be reduced, or even that efforts should be made to eliminate them. They cannot be eliminated, obviously, if we are to retain the competitive system of industry; there can be no effective competition without the use of the tools of competition. Costs of competitive distribution may be reduced, however. Every operator in a competitive field, legitimately seeking a competitive advantage, is selfishly inspired to get his merchandise to consumers at the lowest possible cost. To operate at minimum cost is the constant goal of industry.

Reductions in the cost of distribution will occur in the future, as they have occurred in the past. Nevertheless, whatever may be accomplished in this direction, competitive industry will always result in certain costs of competition which must be included in the prices for which merchandise is sold. It has not been proved in actual practice that final prices in a competitive system are higher than they would be in a collectivist society. To the extent however, that they may be, even theoretically, higher, the added costs of competitive distribution are the price we pay for the privilege of living under a system of free enterprise.

Just as believers in democracy realize that they can enjoy the inestimable advantages of democracy only by paying the price of delay and cumbersomeness inherent in democratic processes, so the believers in free enterprise must be prepared to pay a certain price, if necessary, to maintain the industrial system that has built our modern world.

The system, of course, has its faults, its wastes, and its weaknesses. But so has any other system in which the human equation must play a large part. Evolution has done much to better our system in the past, and it will bring about the correction of many of its remaining faults in the future. Those who believe in the present system recognize its faults, but they recognize also the greater disadvantages of the collectivist alternative. While we may or may not think that the free enterprise system is the last word in the development of society, most of the people of this country believe it holds far more for them of happiness, freedom, and general welfare than any alternative that has thus far been proposed. I believe that our existing system will persist; that it will gradually be bettered by evolution rather than by revolution; and that as long as its essential features remain, advertising as an economical aid to business will continue to justify its existence by performing a necessary function and by contributing in an important way to the welfare of society.

My Record in Congress

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

Mr. NICHOLS. Mr. Speaker, the history of leadership in the Congress indicates that the best policy for the people of any district is to keep a Congressman who is rendering good service on the job. The leaders of Congress are the men who have been here from 20 to 30 years. I would like to become one of these leaders, not alone for the honor it would bring to me but for the opportunity to render greater service to the people of my district, my State, and Nation.

There is, of course, no point in keeping a man in Congress unless he is doing a good job. Therefore it is proper to review the events of my service since January 1935, when my term of office started.

VETERANS' LEGISLATION

I am a veteran of the World War. I served in that war as a buck private and received from it an honorable discharge. My friends over the district in my first race for office were headed by my old Army buddies. Naturally, I was much interested in veterans' legislation.

When I came to Congress the Economy Act had been put into effect, cutting off many of the veterans who had been drawing compensation. My buddies were in need, and wanted to draw their adjusted compensation, known as the bonus. They wanted preference on Government relief work. In general, they wanted justice from their Government, which they had served, and for which they had suffered.

I helped to bring about payment of the bonus. I led in the movement to give veterans definite preference for relief work. I have been trying to wipe out the injustices of the Economy Act.

I favor giving the veterans of the World War the same treatment on pensions that the veterans of the Spanish-American War, and other previous wars have received. I also favor the same pension provisions for their widows and orphans that were given widows and orphans of previous wars. I hope that this session of Congress will make a start toward this program.

My comrades of the World War are much aroused over the threat to our safety occasioned by the wars in Europe and Asia, and I have pledged to them that I will do all I can to keep us out of war.

I am opposed to again sending our young men to foreign nations to settle local quarrels, and will never vote to do this. I further pledged, and here repeat, that the day that I vote to involve the United States in war for any purpose, that I will resign my seat in Congress, and again enlist in the armed forces.

OLD-AGE PENSIONS

One of the most important things I wanted to do when I came to Congress was to set up an old-age pension system. I believed, and still do, that this is a measure of justice to the veterans of civil citizenship.

I voted for the Social Security Act, explaining at the time that I did so not because I thought this legislation was adequate but because it did recognize our obligations to the old people, and because it was the best bill that I could vote for that had a chance to pass at the time.

Under this act Oklahoma, in cooperation with the Federal Government, is now paying "old-age assistance" to more than half of the persons in the State over 65 years of age. Oklahoma is paying such assistance to a larger percentage of its people than any other State in the Union.

I still do not think that the Social Security Act is doing the job right. I favor a Federal old-age pension, paid direct by the Federal Government by check from Washington, without all the machinery that we now have checking up on and harassing the old folks. I also believe that, as a matter of principle and simple justice, the old folks in all States should receive the same amount monthly. I pledge a continuation of my best efforts to this end.

FARMER COOPERATION

My district is mostly a farming section. Most of my constituents are farmers. A large part of my time in Congress has been, and will continue to be, devoted to working for the farmers.

I favor organization of farmers—just as I favor organization of laboring men into unions. I am an honorary member of the Farmers' Union, and the author of the Farmers' Union bill now pending in the House to provide 20-cent cotton, and corresponding prices on other crops, on that portion of our production consumed in the United States.

I favor farmers cooperating in rural electrification projects, and am glad that these lines are being extended into most of the counties of my district. I favor farmers cooperating in any way that they can. I have always made it a practice at the end of each session of Congress, when I got home, to notify the farmers of the different counties to meet me in the county seat to consult with them about the general situation and receive their advice and reactions and first-hand information about farm practices and results.

Through such cooperation of the farmers in my district I was able on two occasions when drought struck our country to bring quick relief to them through the agencies of the Federal Government. I pledge myself to continue to cooperate with the farmers by this personal contact which enables me to intelligently bring their problems to the attention of the proper agencies of Government.

FARM LEGISLATION

I introduced the bill creating the Soil Conservation Service as a permanent agency of the Government. This Service is teaching our farmers how to preserve their greatest asset—the fertility of the soil—and is also the backbone of national farm policy. I want to preserve, to extend, and to perfect this great work and make it better able to meet the needs of our folks.

In addition, I helped put an amendment into the relief bill a year ago providing that the Work Projects Administration could use relief labor on soil-conservation projects. Hon. H. H. Bennett, Chief of the Soil Conservation Service, did me the honor to come to my district and officially open work on the first such project in the United States in which the Soil Conservation Service cooperated with the W. P. A. to do this important work.

On June 29, 1937, I made a speech on the floor of the House advocating that the Federal Housing Administration plan be extended to the farm to enable tenant farmers through the use of private capital and Government credit to become landowners. This was the first time this theory had ever been advanced in Congress.

I am the author of a bill now pending in the House of Representatives to carry out this program. An almost identical bill as mine, introduced by Hon. JOSH LEE, my colleague from Oklahoma, has passed the Senate, and there is a strong probability that this measure will become law at this session of Congress. It will make available to many thousands of tenant farmers the opportunity they have been looking for to own a farm that they can easily pay for and build up and call home.

The last time I visited with my farmer friends over the district I asked them what was the most urgently needed change in the present farm program. They told me that they believed a change to give county committees the right to reallot acreages for cotton which was not wanted by the farmers to whom these acreages had been given to other farmers in the same county would be a big help. I got a bill passed last year giving county committees this authority, and it has helped make cotton allotments work out better.

I am now working on a plan to change the basic cotton acreage allotment system as between the various States, which will give Oklahoma cotton farmers a better break.

PROGRAM FOR YOUTH

The work of the Civilian Conservation Corps has been of great value to our young people. I have strongly supported this program; and in 1936, when a reduction of one-third in the number of camps had been decided upon by the administration organized and led a sufficient group of House Members so that we were able to induce the President to rescind his order, thus saving this drastic reduction and sustaining the C. C. C. camp program at approximately that level until the beginning of this year.

The National Youth Administration has been of much benefit in enabling our young folks to continue their education in school and to obtain training out of school which would fit them for earning a livelihood. I pledge my best efforts to a continuation of this program.

The common school is the greatest institution in American life. It has always been a delight to me to go around and visit the schools and talk to the young people upon patriotic topics. In doing so, I learned that many districts had old buildings, not adequate to care for enlarged enrollments, and in many instances condemned as unsafe for further use.

In order to correct this condition, I urged W. P. A. officials to encourage school-building projects and urged school boards to submit such projects. As a result my district is dotted with new school buildings, in most instances erected out of native stone at small cost. This has helped the schools, has given work to many men in need of it, and has also taught them how to work with native stone so they can build homes for themselves out of the same materials.

It is interesting to note that one-third of all the school buildings in the United States erected by W. P. A. are in Oklahoma, and that half of those in Oklahoma are in my district. Of course, the principal credit belongs to the fine teachers and the earnest school boards, who had the vision and energy to initiate and push these projects, but it has been a pleasure for me to cooperate in every way possible, to work endless hours in cutting red tape, that this work might go forward.

CONSTRUCTION WORK

When I made my first race for Congress, the possibility of constructing flood-control and hydroelectric-power dams within the Second Congressional District was but a dream. Since that time surveys have been made and completed on Tenkiller Ferry in Sequoyah County; Fort Gibson and Markhams Ferry on the Grand River. Subsurface soundings were taken last year at Tenkiller, and work will this year go ahead on the completion of this project. Fort Gibson and Markhams Ferry will be authorized for construction in this year's flood-control authorization bill.

Since I have been in Congress a Federal building was completed at Henryetta and new ones constructed at Tahlequah and Eufaula. A new building is now under construction at Stilwell. Also a $360,000 addition was made to the Federal building at Muskogee. This figures out one building a year since I have been in Congress.

Three other cities are eligible, by postal receipts, for new buildings. They are Sallisaw, Stigler, and Wagoner. I pledge my best efforts toward getting buildings for each of these progressive cities as quickly as possible, and for other cities which may become eligible in the future.

INDIAN MATTERS

I have given a great deal of thought and study to the problems of the Indians and what should be done for them and am convinced that a general reexamination of the Indian problem is necessary, with a definite understanding to be reached as to the responsibility of the Federal Government.

I do not like the present Indian Bureau and its administration of Indian affairs. I think that too much money is spent on high salaries and not enough gets to the Indians.

First, we need to settle the Indian claims. I was for the proposal to set up a claims commission to examine them all, throw out those without merit, and see that the others are brought to early conclusion, so that the money that it is determined is due the Indians can be paid.

After the Indian claims are paid, then there should be a definite understanding as to what Indians are to be given further help by the Government and what Indians are to be allowed to make their own way unassisted. It is necessary to settle the claims first, so that all Indians entitled to share in the benefits may do so.

After this is done it should be clearly decided what Indians are entitled to aid in education, in hospitalization, in loans, and in other similar matters.

My personal opinion is that Indians need assistance in education and health matters more than anything else. I favor additional Indian hospitals so that all can be given proper care.

A large percentage of the money used for administration of Indian affairs in Oklahoma now is devoted to taking care of the wealth of millionaire Indians. I do not think that this is right or proper, and believe some method should be devised so that the expenses of such administration could be assessed against the estates.

Our Indians are sound and practical and patriotic citizens. They want only what is their right and just dues. I have never "kidded" the Indians and told them I would get them any large sums or encouraged any of them to hope for fortunes to come from legislation or court action.

We do not get too much money for Indians in Oklahoma, but too great a percentage of the money spent in Oklahoma goes to officials and not enough to the Indians. I pledge myself to make diligent effort to bring about correction of this condition.

OTHER ACCOMPLISHMENTS

I was instrumental in bringing the regional offices of the Veterans' Administration to Muskogee, after a $315,000 addition to the plant there had been constructed under authority of a bill which I introduced.

I brought about construction of a new Indian hospital for members of the five civilized tribes at Tahlequah, and was able also to bring a large number of Indian work projects, such as roads, bridges, community houses, C. C. C. camps, and similar programs to the second district for the benefit of the Indians.

I tacked an amendment to the Hatch Act which provides that no person may work for the Federal Government who is a member of any party, society, or organization which is engaged in attempting to overthrow our democratic form of government. This is in line with the ideas of those people who believe that we who believe in Americanism should fight for it and see that those who are not truly American should not bore from within by obtaining Government appointment.

I put an amendment upon a recent Civil Service Act which provides that eligible applicants from Oklahoma, and other States which do not have their full quota under the Apportionment Act, must be given appointment ahead of other applicants from States which are over their quota.

EXPERIENCE BRINGS ADDED ABILITY

My record stands on my work for measures intended to improve the conditions and opportunities of my people, and my fights against proposals intended to hurt or curtail their existing rights and privileges. I hope it has entitled me to the respect of the thousands who gave me this chance to serve them. I believe I can assure my friends that I enjoy the confidence of my colleagues in Congress and the respect of the governmental agencies before whom I have pleaded the cause of my constituents.

The experience I have gained by the continued support of the voters of my district has ripened my original enthusiasm into a steadier ability to accomplish the proper solution of the many problems of the various elements of our citizenship.

The people of the Second Congressional District have enabled me to gain this experience. I have used and will continue to use it for their benefit. Added experience gives me added prestige with those in Washington who have the power to give and withhold, which power was gained by them through ripe experience and long service.

The district gains in accomplishment of its needs and desires as I gain in accumulation of experience and service.

For these past expressions of confidence from my friends and neighbors, I promise the continued exertion of my entire ability in their behalf. I promise a veteran's fight for a sturdy progressive people.

The Farmer and the Forest Service

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

RADIO ADDRESS BY HON. GIFFORD PINCHOT

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Hon. Gifford Pinchot, former Governor of Pennsylvania, over stations of the National Broadcasting Co. on the Grange Hour, from Washington, D. C., February 17, 1940:

The farmer and the Forest Service, the farm and the forest. Why am I putting the two together? Because of the attempt of the Interior Department to take the Forest Service away from the Department of Agriculture.

Well, why not? What has forestry to do with farming? The answer is: More than I could tell you in a month of Sundays.

To begin with, farming without the forest couldn't go on. The farmer must have fence posts, fuel, and wood for a thousand different uses. For no farmer can succeed without the help of trees. The farmer and the forester are two fingers on the same hand.

I'm a forester, and that is one good reason why for 40 years I have been deeply interested in the welfare of American farmers. Forestry is the side partner of farming. Indeed, when you come right down to brass tacks, forestry is farming—tree farming. Just exactly that.

TREES REGARDED AS A CROP

Farming is getting one crop after another from the land. Forestry is getting one crop after another from the land—trees in the case of forestry; potatoes, or cotton, or wheat, or whatever in the case of farming. Trees can be grown and are grown as a crop just like anything else that has it roots in the soil and its leaves in the air.

The farmer gets one crop after another of hay, oats, wheat, cotton, and tobacco from his farm—crop after crop. The forester gets one crop after another of cordwood, fence posts, logs, poles, railroad ties, from his forest—crop after crop.

The forester, like the farmer, gets a lot of products on the side from his land. Good farming yields also such things as butter, eggs, apples, calves. Good forestry, in addition to fencing, lumber, and firewood, yields such things as returns from grazing, regulation of stream flow, protection against soil erosion, and protection against wind. Wind erosion and water erosion in the West and South are deadly enemies of the farmer.

Farming cannot go on unless one crop follows another. No more can forestry. A farm crop may reproduce itself without seeding, or it may have to be sown or planted. Just exactly so with trees. Each succeeding crop of trees may grow up without help, like each succeeding crop of hay, or young trees may have to be planted just as each crop of tobacco has to be set out.

Different kinds of field crops must be handled in different ways. So must different kinds of trees. You can't handle potatoes like pumpkins or winter wheat like corn. Neither can you handle black locust like beech or hemlock.

A well-handled farm gets more and more productive year after year. So does a well-handled forest. And on a badly handled farm, contrariwise, production decreases, the soil washes or blows away, and not only the farmer but the public interest gets it in the neck. And the same is true of a badly handled forest, only more so.

The main difference between farming and forestry is that on a farm you can usually get a crop every year from the same land, while from a forest usually you can't. It takes less cultivation and more time to grow a crop in the forest. It takes less time and more cultivation to grow a crop on the farm. But what you get in both cases is a crop—a crop from the land.

AS PRESIDENT ROOSEVELT SEES IT

The frozen fact is that forestry is a part of farming, and every farmer who owns a woodlot and takes care of it will agree with that statement. And so does the President of the United States, for no longer ago than last December he said, speaking to American foresters, "the forest problem is part of the broad problem of modern agriculture."

You can't farm without wood; you can't irrigate without water (and that usually comes out of the forest); you can't run cattle or sheep in most parts of the country without summer or winter or all-year range in the forest. And I could give you other illustrations till the cows come home. Forestry is tree farming, don't ever forget it, and the farmers of America can't get along without the help of the trees.

Congress recognized that forestry belongs with farming when in 1876 it established the first Government organization devoted to forestry and put it in the Department of Agriculture. Ever since that time Agriculture has led all the other Government departments put together in everything that concerns the growth and use of trees.

Ten years later Congress created a Forestry Division, and then a Bureau of Forestry, always in Agriculture. Congress knew what it was doing and wanted it that way.

The Agricultural Department was advancing forestry in two ways. It was working in the woods to get sound forest management—real tree farming—substituted for destructive lumbering. At the same time it was carrying on research, both in the woods and in the study, to learn about the habits of growth, the uses, and the best treatment of our American trees.

Through this combination of research and action the Agricultural Department did and is doing far more than all other agencies combined to create and set going the art and science of American forestry.

This combination is like the ax and the helve. The cutting edge of the ax does the work; the helve directs the ax and makes it useful. Try cutting down a tree once with an ax head and nothing else.

Forest research is the helve, but the practice of forestry in the woods is the ax that gets the work done. These two go together. Neither can do good work without the other.

While forest research and forest management in the Department of Agriculture were doing their best to bring sound practical forestry to America, something else was happening which proved better than any argument the foolishness of separating the two. Congress gave the President the right to set aside forest reserves—what we now call national forests—and left them in charge of the Interior Department which had control of the public domain.

HOW INTERIOR BUNGLED THE JOB

There was not a single forester in that Department, and for years not a single person in the division which was supposed to run the forest reserves from Washington had ever set foot on one of them. The result was disastrous to the forests. Under the Interior Department the handling of the reserves was so ridiculously bad that it was actually comic.

For example, one man in the field who had charge of some of the heaviest forest in the world was ordered from Washington to buy a couple of rakes for himself and his only ranger, and clean up the dead and down timber on nearly 4,000,000 acres. Some job. And a rule of the Department forbade a forest ranger to go out of his district to fight a forest fire, although it was burning in plain sight, just across the line.

The rangers and other field men were political appointees, nearly all of them incompetent, many of the "lungers" or otherwise crippled, and not a few dishonest. The whole situation became so impossible that even the men who had charge of the forest reserves wanted to turn them over to the Department of Agriculture.

In 1904 Secretary of the Interior Hitchcock said in his annual report: "Forestry, dealing as it does with a source of wealth produced by the soil, is properly an agricultural subject," and he added that the transfer of the forest reserves to the Agriculture Department was "essential to the best interests, both of the reserves and of the people who use them."

In four successive annual messages to Congress Theodore Roosevelt urged that transfer. Finally, in 1905, Congress did transfer the Forest Reserves to Agriculture. And ever since their management has been a model of clean, competent, nonpolitical, efficient administration.

There is no better bureau anywhere under the Government than the Forest Service. No one even pretends that its work could be better done in the Interior Department than in the Agricultural Department, where it was born, grew up, and has made, and is making, such an admirable record.

THE TAIL AND THE DOG

Nevertheless, the Interior Department has for years been trying to take the national forests and the Forest Service away from the Department of Agriculture. And it is trying to do that very thing right now. Just one more case of the tail trying to wag the dog.

Why? Because the amount of forestry practiced by the Interior Department is hardly more than a flyspeck in comparison. There is no tree farming on national parks. The whole area on which Interior could practice forestry, if it chose, is below 40,000,000 acres. But Agriculture has nearly 200,000,000 acres of forest on farms to look after and is directly responsible for 175,000,000 acres of national forest. Call it 350,000,000 against 40,000,000, and you get the idea.

But there is even a better reason. The Forest Service belongs in the Department of Agriculture, because it is in close, constant, and necessary cooperation with more than half of the other bureaus of that Department.

The Forest Service cooperates with the Agricultural Adjustment Administration, the Soil Conservation Service, the Extension Service, the Farm Security Administration, the Bureaus of Agricultural Economics, Plant Industry, Animal Industry, Entomology,

etc. It is tied into these and other parts of the Department on not less than 24 important activities, all of which would be left with one foot off the ground if Interior should realize its ambition to get back what it lost—what it had once and proved it couldn't take care of.

I wonder if you realize what forestry means to American farmers. One-third of the Nation's good commercial forest is on farms. Farm-owned woodland covers 185,000,000 acres, or an average of 44 acres per farm. Forest production from farms in 1937 was worth $330,000,000. What did I tell you about forestry and tree farming?

FARMERS CANNOT AFFORD TRANSFER

There is no part of this Nation in which the farmers can afford to have the Forest Service taken away from its home in the Department of Agriculture and forced to live among strangers.

The South as a whole has 60 percent of her whole area still in forests. Would southern farmers, who need forests almost as much as they need field crops, like to have forestry turned over to the Department of the Interior, which knows no more about the problems of southern agriculture than I know about the dark side of the moon?

In the northeast region 70 percent of the land is in forest. In the Lake States, 80 percent. In the prairie region, 330,000 farms are in country that needs shelterbelts. In the West irrigation farming depends absolutely on the forest for water and for protection from destructive floods.

Half of all our farms are in distressed rural regions, and 60 percent of the land on those farms is forest. In those forest lands there is a huge reservoir of work waiting to be tapped. Do the farmers want that question separated from other farm questions?

But I haven't yet mentioned the strongest of all reasons why the Forest Service should stay where it is. That reason is that the 30,000,000 farmers of the United States need to have it left, and want to have it left, in the Department of Agriculture, where it is now. They want it left where it can keep on helping them as it has been doing. The farmers know what they want, and they haven't left the slightest doubt about it. They have spoken through their great national organizations with no uncertain voice. And what they said was this, "Let the Forest Service alone. We want it to stay where it is. We want it in Agriculture."

The Farm Bureau Federation, the National Grange, the Farmers' Union, the National Cooperative Council, the Federation of Milk Producers, and many other farm organizations have made official protest against the proposed transfer of the Forest Service to the Interior Department. And so have the foresters of America through the American Forestry Association, the Association of State Foresters, and the Society of American Foresters.

So have the conservationists through the National Federation of Women's Clubs, the Izaak Walton League, the Camp Fire Club of America, and so on.

And so have the national-forest users. They have spoken through the National Livestock Association, the National Wool Growers' Association, the National Lumber Manufacturers' Association, and the American Mining Congress, and through their representatives in Congress.

The more closely people come in contact with the national forests and the Forest Service the more vigorously they are in favor of leaving them where they are. But greatest and most important of all is the voice of the farmers of America saying, "Let the Forest Service alone."

Passage of the Hatch Bill—"Now It's Up to the House"

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE KANSAS CITY STAR OF MARCH 19, 1940

Mr. CLARK of Missouri. Mr. President, I ask to have printed in the Appendix of the RECORD an article under the headline "Now It's Up to the House," which was published in the Kansas City Star of the 19th instant.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of March 19, 1940]

NOW IT'S UP TO THE HOUSE

The Senate passes the Hatch bill and the responsibility for its enactment now goes to the House. The need for this legislation and the various questions bearing upon it have been pretty thoroughly threshed out. There is no occasion to go over the ground again.

The issue now simply is whether the House of Representatives is going to have a decent respect for the opinion of the Senate, the expressed wish of the President and the overwhelming demand of the people that public jobholders shall not be exploited for political ends or allowed voluntarily to engage in "pernicious political activities" instead of doing the work they are paid to do.

This particular measure is an extension of the original Hatch Act applying only to Federal employees. It carries the same provisions on to include State and local employees paid wholly or in part with Federal funds. It is said that a jobholder army of 500,000 is involved. Presumably all these were appointed for needed work. Trying to line up the vote is not a part of that work nor should it be permitted to become a part of it. An amendment just adopted would prevent applying the lug to these employees.

Kansas City is seeing the attempted use of the latter right now. The whole case for the Hatch bill is clear. The Speaker of the House says he is not for it. He doubtless has his reasons for the opposition. So perhaps do many of the House Members, all of whom must come up for re-election this year.

These Members may think the heat is on them in the Hatch bill. But it will be turned on them tenfold by the people if they dodge their responsibility and consent to a sidetracking of the bill.

The Political Parade

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 21 (legislative day of Monday, March 4), 1940

ARTICLE BY GEORGE ROTHWELL BROWN

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article on the census entitled "The Political Parade," by George Rothwell Brown, appearing in the New York Journal-American of this date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Journal-American of March 21, 1940]

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, March 20.—Mr. Roosevelt's "bulginbrow" secretariat—with an understandable passion for anonymity—has led him, in the argument with Senator TOBEY over the census questions, into a blunder as striking as the $9,000,000,000 error the President made recently at Hyde Park in discussing the question of debt.

The President's blunders in this case are those of judgment, history, and law.

Let us consider the last first.

The President said that Senator TOBEY had urged the public to break the law by refusing to answer census questions as to income.

Senator TOBEY himself demolished that one by sarcastically asking the President if it were his position "that an unauthorized ruling of a departmental bureau constitutes a law of the United States."

Has the President an escape from that one? Let's see.

About the time the White House was issuing its blast at Mr. TOBEY, Secretary Hopkins was issuing instructions modifying the income-question requirements so that those not desiring to reply to the census enumerators could place their unsigned replies in sealed envelopes.

Now, if those questions are based on law, what right has Secretary Hopkins to change the law?

The Department of Justice would have to look into that.

And if the questions were not based on law, but on bureaucratic ruling, then the President is wrong, and Mr. TOBEY right.

Which horn of that dilemma will the President elect to choose?

The President's history, as handed to him by his expensive secretariat, is also wrong.

Mr. TOBEY is by no means the first Senator to urge the people to resist a distasteful law.

During the agitation for the antislavery "Wilmot proviso" in the Senate, John C. Calhoun proposed that all the Southern States close their ports "until full justice should be done the South." In other words, to refuse to obey the customs laws of the country.

All through the antebellum period northern Senators urged their people to ignore the fugitive-slave law.

Back in the Jackson era, when "Old Hickory" tried to enforce a distasteful tariff law, Calhoun urged the whole State of South Carolina to ignore it. Said Calhoun in the Senate, quoting Thomas Jefferson:

"Where powers have been assumed that have not been delegated, nullification is the rightful remedy."

Now, as to the question of judgment, in which, as in his knowledge of history, the President should rely more on his own powers and less on those of the anonymous geniuses around him, the dialog should have run something like this:

"PRESIDENT (as member of secretariat appears, wearing horn-rimmed spectacles to prove how smart he is, in response to pressed button). Can you recall any Senators beside TOBEY who ever urged anybody to violate a law?

"SECRETARY (wrinkling the brow). Offhand; no. No; since I can't recall any, that's proof there weren't any.

"PRESIDENT. Be sure, now. No Senators?

"SECRETARY. No; but I can recall a President who once urged some gentlemen to ignore the Constitution.

"PRESIDENT. Indeed! When did that outrage occur?

"SECRETARY (blushing). Why, Mr. President, don't you remember the letter you wrote to Chairman SAM HILL, of the Ways and Means Subcommittee, on July 5, 1935?

"PRESIDENT. What letter?

"SECRETARY. You know; they were considering the little N. R. A. coal bill and were about to ditch it. You wrote urging a favorable report.

"PRESIDENT. It all comes back to me now.

"SECRETARY. The concluding sentence read: 'I hope your committee will not permit doubts as to constitutionality, however reasonable, to block the suggested legislation.'

"PRESIDENT. Tell Steve not to give out that attack on TOBEY."

Which is the more to be condemned—for a Senator to urge his countrymen not to obey a regulation of bureaucracy masquerading as law or for a President to require a committee of a rubber-stamp Congress to report a bill, notwithstanding their doubts, under their solemn oath of office, as to its constitutionality?

Operations of the National Youth Administration in Louisiana

EXTENSION OF REMARKS

OF

HON. JOHN K. GRIFFITH

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

Mr. GRIFFITH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a short table which summarizes the current operations of the National Youth Administration in Louisiana and the program of the National Youth Administration in my district, the Sixth Congressional District of Louisiana, as of March 1, 1940, and wish to say that I am very much in favor of continuing the present appropriation of $100,000,000 for the fiscal year ending June 30, 1940, to the fiscal year ending June 30, 1941, instead of reducing it to $85,000,000, as proposed.

The National Youth Administration has done splendid work and accomplished a great amount of good in Louisiana, enabling many girls and boys to procure an education to whom it would otherwise have been denied.

THE PROGRAM OF THE NATIONAL YOUTH ADMINISTRATION IN THE SIXTH CONGRESSIONAL DISTRICT OF LOUISIANA, MAR. 1, 1940

The school work program

Student quota	634
Number of participating schools	131
Funds allotted for fiscal year	$34,182

A high-school student who could not otherwise attend school may work for and be paid from $3 to $6 per month; the average payment is $4.75.

The college and graduate work program

Student quota	894
Number of participating schools	4
Funds allotted for fiscal year	$120,690

These figures do not include students attending colleges or universities located outside the district. A college student who could not otherwise attend school may work for and be paid from $10 to $20 per month; the average payment is $11.40.

The out-of-school work program

As of Jan. 5, 1940:	
Number of youth employed on the N. Y. A. out-of-school program	612
Number of unemployed youth certified and awaiting assignment	1,928
Estimated number of needy unemployed youths not certified	4,763
Total unassigned needy youths in Sixth Congressional District	6,691

Summary of current operations in Louisiana

Employment program	Number of youth employed		
	Total	Male	Female
All programs	12,787	6,228	6,559
Out-of-school work program, February 1940	5,491	2,382	3,109
Student work program, January 1940	7,296	3,846	3,450
School work program	4,932	2,468	2,464
College and graduate work program	2,364	1,378	986

Number of youths certified and awaiting assignment, Jan. 5, 1940	11,726
Estimated number of needy youths not certified, Jan. 5, 1940	60,485
Total unassigned needy youths	72,211

Employment by type of project, February 1940—Number of persons

Highway, road, and street	36
Improvement of grounds	380
Public buildings	314
Clerical and service projects	680
Recreational leadership	5
Professional assistance projects	367
Workshops	228
Sewing	125
Miscellaneous production	92
Resident training centers	2,837
School lunches, nursery schools, and homemaking	275
Projects not elsewhere classified	152
Total number of youths	5,491
Supervisors	297
Grand total	5,788

Funds allotted, 1939–40

Out-of-school work program	$1,599,639
Student work program	505,145
Total	2,104,784
School work program	227,180
College and graduate work program	277,965

Number of schools participating in the student work program

Schools	787
Colleges and universities	23
Total	810

Average monthly earnings

Out-of-school work program:	
Youth employees	$16.15
Supervisors	84.64
Student work program:	
School	4.75
College and graduate	11.55

The New Deal Applies Scriptural Text of Not Letting Its Left Hand Know What the Right Hand Doeth

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

ARTICLE BY ALVIN E. OKONSKY

Mr. CRAWFORD. Mr. Speaker, from time to time I receive letters from farmers in my district indicating that they seriously question what appears to them to be conflicting policies followed by the Federal Government and the administration and all under the name of an agricultural program. In response to consent given to me by the House, I wish to submit the comments made by one of our Washington newspapermen and which I believe have been made

with no partisan motive. Many conflicts which could be eliminated by the Congress and the Cabinet exist, and I personally feel that we should correct the errors and without further delay. Mr. Okonsky's article follows:

THEY KNOW NOT WHAT THEY ARE DOING—WE HAVE CAUSE TO WONDER IF THEY ARE ALL THERE

(By Alvin E. Okonsky in Capital Comment)

When one looks at the farm program of the New Deal, he is caused to wonder if a good mental examination ought not to be given those who are in charge of the so-called farm program.

It appears that one department knows not what the other is doing. What one department does the other undoes and so on. And the farmer is the innocent victim of all this "ain't we got fun" attitude in Washington.

Not only is there a lack of knowledge of what each other is supposed to do but in reality they fight each other.

Two great Government departments are at war with each other. American farmers are the victims in the war.

One department is spending hundreds of millions of dollars to reduce the surplus of farm products. The other department is making trade agreements and lowering tariff duties on the same products. An influx of foreign farm products adds to the domestic surpluses. The trade-agreement program is at war with the surplus-removal program.

The Ways and Means Committee of the House of Representatives has been holding hearings on the resolution to extend the trade-agreement program for another 3 years. Placed in the record an official report showing the purchase of the Surplus Commodities Corporation for the fiscal years 1938 and 1939, and alongside the figures are placed official reports showing imports of the same commodities for the same period.

This deadly parallel reveals that while the Surplus Commodities Corporation was spending $30,000,000 of public money in buying up and giving away surplus commodities, there was an influx of $92,000,000 of the same commodities from abroad. These imports were encouraged, of course, by the reduced duties granted in the Hull trade agreements.

What Mr. Wallace is trying to do, Mr. Hull is making it impossible to do. Mr. Wallace is attacking the farm surplus. Mr. Hull is piling up the surplus.

This economic war between Mr. Hull and Mr. Wallace is growing worse as additional cuts are made in duties on farm products. The whole world is invited to add to the American farm surplus.

President Roosevelt should call a Cabinet peace conference immediately. The two Departments now in collision should be forced to make peace before the American farmer is ruined.

A Letter From Congressman Tinkham to Secretary of State Hull in Relation to the Recent Disloyal and Seditious Conduct of James H. R. Cromwell, United States Minister to Canada, and the Offensive Conduct of Lord Lothian, British Ambassador to the United States

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

LETTER FROM HON. GEORGE HOLDEN TINKHAM, OF MASSACHUSETTS

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me yesterday to the Secretary of State:

MARCH 20, 1940.

The honorable the SECRETARY OF STATE,
Washington, D. C.

DEAR SIR: Any disciplinary action taken against James H. R. Cromwell, United States Minister to Canada, that falls short of his immediate recall will be insufficient to meet the present situation.

Mr. Cromwell has made two offensive and disloyal speeches in Canada recently. His utterances on both occasions were in flagrant violation of the neutrality proclamation of the President of last September. The speeches were intended to incite the American people to enter the present war in Europe and were seditious utterances. They were the speeches of an alien propagandist, not of a loyal American representative.

Disloyalty and sedition should no longer be tolerated by the American people.

As you know, the speeches made by Mr. Cromwell were also in flagrant violation of chapter 15 of the Foreign Service Regulations of the United States which forbid diplomatic officers from alluding in any public address to political issues pending in the United States or elsewhere.

If James H. R. Cromwell is not recalled at once, the Congress should seriously consider his impeachment.

Walter Hines Page, United States Ambassador to Great Britain before and during the World War, has been proven by documentary evidence to have betrayed the interest of the United States by acting as the agent of an alien belligerent government. Such disloyalty and sedition on the part of a United States representative must not be tolerated again.

Let me at this time draw your attention to another speech which was intended to incite the American people to enter the present war in Europe. I refer to the speech made in Chicago last October by Lord Lothian, British Ambassador to the United States. His speech was a clear violation of diplomatic privileges and immunities, and another such violation should be followed immediately by a request to the Government of Great Britain for his recall.

Very truly yours,

GEORGE HOLDEN TINKHAM.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. ROUTZOHN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared March 15, 1940, in the New York Times, under the title "Wagner Act Changes":

WAGNER ACT CHANGES

The attack by Senator WAGNER on the amendments to the Wagner Labor Relations Act proposed by the House investigating committee brings considerable more heat than light to the discussion. Much of Mr. WAGNER's attack is merely rhetorical, and it contains a number of statements that are clearly unjustified. Thus, there is no ground whatever for the statement that the Smith amendments would "more than repeal the Labor Act" and make it a "concrete weapon for the oppression of labor." On the contrary, those amendments retain the basic intent of the Wagner Act—to protect the right of collective bargaining—and merely strive to establish definite limits and safeguards against one-sided prosecution or the unreasonable interpretations which ambiguities in the present act have permitted.

It is difficult to see, moreover, the justification for some of the more specific criticisms of the Smith amendments that Mr. WAGNER makes. He calls the proposed new definitions of collective bargaining "destructive." But as the committee has pointed out, these definitions merely incorporate explicitly in the law itself interpretations that the Supreme Court has already laid down. Mr. WAGNER denounces the proposed amendment which would remove any right of an employee who has engaged in violence or unlawful destruction or seizure of property to be reinstated by order of the Labor Board. He declares that he is unable to believe that as a matter of inflexible Federal law "a man should lose all right to earn his bread because of a minor scuffle on the picket line." This is not an accurate interpretation of what the amendment actually would provide. A worker who engaged in violence or destruction of property could still, as far as this amendment is concerned, be employed by anybody, even the employer whose property he destroyed. All that the amendment would do would prevent the Board from ordering the reinstatement of such a man. Such an amendment would merely write explicitly into the law the decision of the Supreme Court in the Fansteel case.

Mr. WAGNER objects to the amendment that would limit back-pay awards to 6 months. But the Smith committee pointed out that cases had been brought to its attention in which the decision of the Labor Board was not rendered until at least 18 months after the case was argued before the Board, and in which the Board issued an order directing the payment of money during this entire period of time. To force a company to pay back wages to striking employees for whole years during which they were not working, as a result of legal delays over which the company had no control, could conceivably ruin a company. The mere existence of such possibilities can be deeply disturbing to business confidence. To ruin companies or undermine business confidence is not the way to help the great body of labor. Some reasonable limitation on back-pay penalties would, in addition to other advantages, tend to remove undue delays in decisions.

What is most significant in Senator WAGNER'S whole statement, however, is his final expression of willingness to amend the act in some particulars. The act, in other words, is no longer regarded by its sponsors and defenders as sacrosanct and untouchable. This is a great gain. But changes will obviously have to go much further than Mr. WAGNER suggests. It is not enough to deplore, as he does, the "highly undesirable" conduct of some members of the Labor Board staff. We must set up whatever legal safeguards seem indicated to prevent such abuses in the future. The Smith amendments doubtless have their defects. They may go too far in some directions and perhaps not far enough in others. But they are based on the most thorough study of the workings of the act that has so far been made, and they deserve a much more open-minded study and a more judicial analysis than Mr. WAGNER has seen fit to give to them.

Why the Attacks on Governor Horner?

EXTENSION OF REMARKS

OF

HON. LAURENCE F. ARNOLD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

EDITORIALS FROM THE CHICAGO HERALD-AMERICAN AND THE DECATUR (ILL.) HERALD

Mr. ARNOLD. Mr. Speaker, I have read with extreme disgust the suggestions of political office seekers that a health-investigating committee be appointed to determine the status of Governor Horner's health. Anyone who would, to gain selfish ambitions, harass one who has given his all to his beloved State and who fell stricken in line of duty should merit the contempt of all loyal Illinoisans.

During my last visit with the Governor, in December, he was able to make all decisions with reference to the welfare of Illinois, and had better judgment than any of his traducers. If he should now be suffering a temporary relapse, I know from my 4 years' close contact with the department heads Governor Horner so carefully selected that the citizens of Illinois have nothing to fear concerning the administration of their affairs.

I am including as a part of my remarks the following editorials from the Chicago Herald-American and the Decatur (Ill.) Herald:

[From the Chicago Sunday Herald-American of March 17, 1940]

WHY THE ATTACKS ON GOVERNOR HORNER?

Surprisingly, and unpleasantly, the primary campaign in Illinois has centered its fury on Governor Horner, who is not an issue in the campaign, because he is not a candidate.

The Governor's political opponents have assailed his political morality.

They have accused him of condoning dishonesty.

They have taken advantage of the fact that he is physically sick to spread intimations wildly exaggerating his condition.

They have tried to make it seem that he is concealing a great and ugly scandal.

A member of his cabinet, who was ill, died.

There is evidence that the man had been emotionally shaken, either by his illness or by circumstances in his life not yet revealed, and the Governor's opponents are trying to make it appear that something he did or failed to do brought on this tragedy.

That would be rough fighting in any political campaign.

In this one it just doesn't make sense.

Since the Governor isn't running for office, he is nobody's opponent; no candidate need attack Horner's character for the customary political purpose of taking the public's mind off defects in his own.

The Governor is not a fair target at all; when a candidate attacks him, it is as if a football player tackled a spectator, or say a coach, sitting on the side lines.

There is simply no occasion for dragging him into this campaign.

If the politicians felt that they must drag him in, they should have used enough restraint to save themselves from looking foolish.

Because whoever gives a sober thought to the charges they have flung at Governor Horner knows they simply can't be so.

His known character refutes them every one.

Nobody who remembers Henry Horner as judge of the probate court believes for a minute that he would condone dishonesty.

His years of service there in the difficult business of conserving and distributing estates among their proper heirs brought universal praise, universal recognition of an exceptional ability, and an iron integrity.

Naturally he took that same ability and integrity with him into the governorship.

Few Governors, if any, have worked as hard and as earnestly as he for the people who elected him.

What other Governor, for instance, sat up night after night, carefully reading each bill passed by the legislature before accepting or vetoing it, so that he himself would know exactly what was in it, instead of accepting the word of others?

Governor Horner has managed the public's tax money as if he were a trustee handling private funds, and everyone knows it. It is in the record.

He has run the State's business with shrewd intelligence and bold imagination, and that is in the record, too. It stands recorded forever in the list of his achievements for the State.

Henry Horner has been really one of Illinois' great Governors.

He will not be Governor much longer.

When he fought in the political wars he fought always with courage and energy and wit, but also with fairness and tolerance. Gallantry, they call it in the armies of the world.

He was stricken in line of duty and has been forced to withdraw from the battle.

He needs rest and relief from strife to regain his strength, and those who are still fightitng the political wars should let him have it.

He has deserved that much, and infinitely more.

He has deserved of the people of Illinois—all the people, including politicians of every party and faction—honor and gratitude for the things he has done, respect and admiration for the kind of man he is.

[From the Decatur Herald of March 17, 1940]

AS I VIEW THE THING

(By Sam Tucker)

This column ought not to be necessary, but it is. No newspaperman likes to advertise his own personal activities and friendships. We see too many publicity-hunting individuals.

During the last week, however, there has been a despicable series of attacks upon Henry Horner, who happens to be still the Governor of Illinois, and, what is more important to me, my friend. That last word is used in humility, because a reporter is of no great importance, but it is also used in pride.

Henry Horner is about to retire and has no more important favors to bestow. Merely political friends are deserting him like rats scurrying from a sinking ship. It just happens that I never needed from him any favor except news, and do not need any now. I have known him as the hardest-working, most conscientious, and able man I have seen in public service. It is for that reason I prize his friendship as much today as on that day, never to be forgotten, when he first arrived in Springfield as Governor.

Upon the urging of physicians and friends (and they were right), Governor Horner announced that he would retire at the end of his present term, giving up a cherished ambition. A day is positively set for his removal from the mansion and from the Governor's office. That has not been enough for his enemies and rivals. They must try also to poison the remaining weeks of his public service with slanderous accusations and insinuations spread over the State.

Candidates from political platforms have suggested that the Governor is mentally incompetent and that a secret cabal of custodians are making his decisions for him. (It would be to the advantage of the candidates in question if they could destroy his prestige among the people of Illinois.) A scurrilous Chicago newspaper joined the attack. (For this bit of dirty work the Chicago paper sent to Springfield not its trusted political reporters, who are well known to the Governor, but a police reporter and an automobile editor.)

Refused an interview, they intimated that nobody sees Mr. Horner except the "palace clique"; that the executive mansion of the State conceals some dark mystery; that the Governor, in fact, no longer is aware and in command of his office.

The insinuations are about as dirty as any that have ever been used in a political campaign. They demand a reply from somebody who has no political ax to grind. The people of Illinois have a right to know the truth. That is the reason for this column.

I have talked with Governor Horner in the last 24 hours. This is nothing new. I talked with him many times before he became Governor, and week by week through his long term of residence in the executive mansion. The point is, I have known him and seen him regularly, in sickness and in health; if there were any radical change in his mental processes, I think I would be qualified to recognize it.

What is the truth then about Governor Horner's health and his ability to carry on the essential work of his office? You have a right to know, in the face of all the malicious stories, and I shall try to give an honest description.

The Governor has suffered a very dangerous and prolonged illness. Friends feared as much years ago, when they found him working at his desk in the mansion, night after night, until 2 or 3 in the morning. He is not a born executive; he never has learned to delegate authority. So long as he was able, he undertook to do far too many of the routine tasks himself. He wore himself out trying to deal with the last-minute task of office and finally broke under the strain.

Today he is pathetically frail. His physical strength is slight. His mighty appetite has been curbed by the orders of doctors, but he still enjoys everything they will let him have.

On rising in the morning and reaching his office rested, he is remarkably like his old self. He tires rapidly, however, and after a few hours of interviews and study of papers he is in desperate

need of rest. Contradictory reports about the degree of his recovery come from visitors who have had interviews in the morning and those who have met him after noon.

Members of the official family in the mansion tell me, however, that he makes a slow, consistent gain since the set-back occasioned by a bad cold in January. Like all the big, barrel-chested folk, he suffers excessively of colds.

So much for physical description. The really essential matter is, the adequacy of his brain. Does he know what is going on in the State government? Can he direct it? Well, rather.

Nobody else is doing Henry Horner's thinking for him. His memory is clear and embarrassingly complete. His first question when he saw me was, "Where's your cane?" During half an hour he recalled a score of unimportant little jokes that had come up during our years of acquaintance. He was more alertly sensitive, however, to present problems. All the complicated relationships of State politics were on the tip of his tongue. He is most sincerely and profoundly eager for Harry Hershey's success.

As one who has lived fully and gaily, he is depressed by his enforced seclusion. He would rather die in the thick of a battle than endure this imprisonment. "I'll make some speeches before it's over, though," he says. Contrary to gossip, he sees many people each day; all the responsible executives of the State government in turn. If he declines to raise his blood pressure by receiving political enemies and representatives of newspapers sent to malign him, that is his privilege. He is not satisfied with everything that is done by subordinates in the statehouse and chafes under the necessity of conserving strength.

As a friend, I was saddened to hear him say that he would as soon be dead as be idle in retirement. The next moment, however, his face lighted with one of the familiar flashes of Horner wit. He is the same Henry Horner, and he will finish out his elected term in office with distinction, as he began.

Let's Save the Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

ARTICLE FROM THE WASHINGTON POST

Mr. HORTON. Mr. Speaker, the farmers of my State do not want to see the Farm Credit Administration lose its independent status.

Certainly they are not willing to have it come under bureaucratic control and made the testing grounds for unsound business practices and socialistic set-ups.

In support of this contention I wish to extend my remarks by including an article which appeared in the Washington Post on March 14, 1940:

[From the Washington Post of March 14, 1940]

GOSS QUITS, ATTACKS FARM CREDIT BILL—JONES' MEASURE WOULD SUBSTITUTE ONE-MAN RULE, HE SAYS

(By Hedley Donovan)

Controversy over Federal farm-loan policy mounted last night as President Roosevelt made public the resignation of Albert S. Goss, land bank commissioner of the Farm Credit Administration.

Simultaneously with the White House announcement, Goss condemned farm-credit legislation under which "the Government pays the loss whenever the borrower wants to quit paying."

The retiring commissioner asserted the bill introduced by Representative JONES (Democrat) of Texas, chairman of the House Agriculture Committee, "would destroy the cooperative credit system which has operated successfully for 23 years and substitute for it a highly centralized bureaucratic lending agency under one-man control."

Goss said the Jones measure is "loaded with political bait." He expressed hope that "the foundations of a sound credit system have been so firmly laid that they will withstand the efforts being made in this election year to use the system for political purposes."

He called the bill a "secret rush act," charging that it was drafted without consultation with the land banks or farm-loan associations. Goss became commissioner in 1933. His resignation takes effect tomorrow.

The Jones bill would retire capital stock of the land banks and eliminate the present arrangement by which farm borrowers take 5 percent of their loan in stock. It would cut to 3 percent farm-loan interest rates, now fixed at 3½ percent on land-bank loans and first-mortgage obligations, and 4 percent on land bank commissioner loans and second-mortgage obligations.

Text of the formal statement issued by Goss follows:

"For 25 years I have been doing what I could to help build a farmer-managed cooperative credit system based on personal integrity, a proper selection of risks, and joint responsibility. These principles, honestly followed, will cut losses to a minimum and thus assure the cheapest money and best terms available. While not everybody can be served directly by such a system, it acts as a pacemaker and controls, in large measure, the rates and terms of all farm-mortgage lenders.

"Now the distinct tendency is toward a type of so-called credit in which personal responsibility is denied, loans are made to everybody, no adequate margin of safety is provided, and the Government pays the loss whenever the borrower wants to quit paying.

"I suppose my leaving the Farm Credit Administration has its origin in the sharp conflict between these two basic ideas.

"I hope the foundations of a sound credit system have been so firmly laid that they will withstand the efforts being made in this election year to use it for political purposes. Farmers should never forget that lending them deeper into debt is no substitute for lack of income, and that under sound farm conditions with fair prices, mortgage credit ceases to be a grievous problem. Through 23 years of sound operation they have built up an independent credit standing almost equal to that of the Government itself and they should not lightly surrender this cooperative credit system to order to embark on experiments in socialized credit. To ask them to do so is comparable to asking commercial banks to meet the unemployment situation because they have plenty of money to lend. To require them to do so by regulation or legislation in the face of their outspoken opposition is reprehensible."

Goss told the Post the Jones bill is typical of a tendency "to try to solve the farm problem by lending more and more money. And each new loan bill gets softer and softer."

The Jones measure, "in an effort to aid some very worthy farmers in the drought area," would "wreck a successful cooperative credit system serving the whole Nation," he asserted.

The Sugar Crisis

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

A SERIES OF THREE ARTICLES BY HON. FRANK C. OSMERS, JR., OF NEW JERSEY, PUBLISHED IN THE BERGEN EVENING RECORD, HACKENSACK, N. J., AND AN EDITORIAL ON THE SUBJECT FROM THE SAME NEWSPAPER

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles written by me and appearing in the Bergen Evening Record, of Hackensack, N. J.:

[From the Bergen Evening Record, Hackensack, N. J., March 1, 1940]

The limitation upon the import of refined cane sugar from Puerto Rico and other American islands expires today, March 1. All limitations against tropical refining as established originally in 1934 expire at the end of this year.

This may appear as relatively unimportant news to the average person, but unless Congress again renews the legislation which has afforded protection to one of America's largest industries, March 1, 1940, will go down in history as the day when began the gradual disintegration and eventual destruction of the United States cane sugar refining business.

PROBLEM IS NEW

New Jersey in general and Bergen County in particular have a vital stake in the decision which Congress will be called upon to make, for at Edgewater is located one of the biggest cane sugar refining plants in the United States. Established in 1904, this plant, while operating today at 60 percent of its capacity because of the growing importation of refined sugar from the Tropics, gives steady employment to about 1,300 persons with an annual pay roll of close to $2,000,000.

The sugar problem dates back to 1925. Prior to that time, and, in fact, for the past 25 years, the cane sugar refining industry increased efficiency, decreased consumer costs, and invested millions of dollars in mechanical improvements. Raw sugar was, and still is, imported from the tropical islands. But in 1925 the tropical raw-sugar producers saw an opportunity to enter into the refining business. There were no laws or Federal restrictions. Cuban plantations began in 1925 by shipping 1,000 tons of refined sugar to our shores. In the years that followed, her exports of refined sugar increased sharply until it was averaging nearly 500,000 tons a year. Puerto Rico, the Philippines, and other tropical islands immediately sensed a new avenue of business and began following the example set by Cuba. The year 1933 found the raw sugar producing islands sending nearly 700,000 tons of refined sugar to the United States.

ACTED IN 1934

Repercussions of tropical-refined sugar dumping were severely felt in the United States. A once thriving and prosperous industry which had been giving employment to thousands saw its business

dropping. Three large refining plants, unable to stand the pressure of such competition, closed their doors permanently. Two of these were in the port of New York. All other plants reduced capacity and retrenched by laying off thousands of workers. Allied industries, such as coal, textiles, chemicals, and cartons, suffered accordingly.

Taking official cognizance of this dangerous threat to the large home refining industry and other difficulties in sugar, Congress adopted the Sugar Control Act in 1934. The act set up a control system for all sugar people, growers, producers, and refiners. It regulated cane refiners as well as beet-sugar refiners. It placed a quota on the amount of refined sugar that could be shipped to the United States by the tropical islands. A ceiling was placed on the amount of raw sugar that the home cane refiners could buy in a year and they were required under the act to buy their raw sugar from specified sources.

The act is far too complex to discuss in detail, but another provision is worth high lighting in order to furnish a better understanding of the legislative problem. In order to aid the tropical islands, and in addition to a handsome tariff protection, the act provided that the Federal Government should grant large cash bounties to raw-sugar producers. Obviously this greatly benefited them. It stabilized their business, swelled their incomes, and gave definite protection.

THEY'RE PROTECTED

Some idea of the size of these cash bounties can be realized from statistics made available by the Government which show that from 1934 to 1939 Puerto Rican producers alone received about $34,000,000. Hawaiian sugar industrialists receive about $9,000,000 annually in cash subsidies from the United States Government. Cuba likewise was given ample protection under the act by being granted a preferred price for her raw sugar, a factor worth millions of dollars to her annually. American beet-sugar raisers and beet factories also came in for their share of cash subsidies under the act. In fact, every unit of the sugar industry, except the home cane refiners, got cash considerations from the Government. Home refiners benefited only from that part of the act which set limitations on the amount of refined sugar that could be shipped to this country in a year and the amount of beet sugar that could be refined in the United States annually. Since the limitation of Puerto Rican refined sugar has been allowed to die, at least temporarily, home refiners are now left without any protection from that source of Government-subsidized competition. New Jersey's refining will suffer.

[From the Bergen Evening Record of March 2, 1940]

The expiration this year of the Sugar Control Act is a grave threat to the American cane sugar refining industry with its investment of $250,000,000.

Unless Congress acts quickly either to renew the act or amend it, home refiners and allied industries will suffer a tremendous loss in business at the hands of tropical refiners from Puerto Rico, Cuba, the Philippines, and other islands whose exports of refined sugar to this country were limited under the Sugar Control Act. The subsidized beet-sugar industry must be kept within bounds also.

The problem is an acute one. It is of particular interest to New Jersey because in Edgewater is located one of the largest and most modern cane-sugar refineries in the world.

PRODUCTION OFF NOW

If the Edgewater plant, its production already slashed to 60 percent of capacity, is forced to shut down permanently because of the Federal Government's failure to provide protection against tropical refineries or beet sugar, the repercussions will be widely felt in our State.

That the Edgewater plant has a definite place in the industrial scheme of New Jersey is reflected in a few interesting facts and figures. Despite the fact that its production has been slowed up seriously in recent years, this plant today furnishes employment to about 1,300 persons who, in turn, support some 5,200 dependents. The annual pay roll of the Edgewater plant is close to $2,000,000. Approximately $100,000 is paid each year to the Borough of Edgewater for local tax purposes.

Let us look at a few more figures to see what a vital place this business has in the industrial set-up of our State. Consider, for example, that more than 100 ocean-going vessels are berthed there in a given year; fifteen to twenty million gallons of fuel oil are purchased annually by the plant, as well as about 50,000,000 cubic feet of water and about 10,000,000 paper packages or cartons.

Can New Jersey afford to swell its unemployed list by permitting this plant to close its doors? Can New Jersey afford to lose the huge amount of business made possible to other industries? Must our State see one of its most productive industries collapse because the Federal Government is indifferent to the need of continuing to provide protection against the influx or subsidized competition whether from the Tropics or from beet sugar?

Contrast working conditions at the Edgewater plant with those found in tropical refineries. Collective bargaining is in vogue at the Edgewater plant, with both major national labor organizations maintaining local unions in the plant. The basic minimum wage is around $6 a day with a 5-day week and an 8-hour day. Workers get vacations with pay and work under the most healthy and modern circumstances. In this connection, it is interesting to note that 53 percent of the Edgewater workers have been with the firm for 10 years or more, while 71 percent have worked for the company 5 years or more. Compare these facts with conditions found in tropical refineries, where workers on the average get around $1 a day and operate under a paternalistic plantation system without collective bargaining and without the benefits of inspection in modern and sanitary plants.

It is a palpable fact that the American refining industry paid the highest wage in the entire sugar system and still provides refining service at a low price to consumers. And yet today this industry is in danger of being displaced by the refined-sugar production of the tropical islands, where industrialists depend exclusively on cheap labor.

It has not been and will not be the intention of Congress to enact a sugar program which would injure sugar producers of the Tropics. Cuba, Puerto Rico, the Philippines, and other tropical islands are dependent for their livelihood upon the growing of cane sugar and the production of raw cane sugar. These countries are not, and never have been, dependent upon the refining of sugar. They are essentially plantation agricultural areas. To protect consumers and to be fair to the islands, no duly restrictive quotas should be set by our Government on the amount of raw sugar coming from the Tropics. But, obviously, if Congress is to have a general protective sugar system, then there should be a quota set on the amount of refined sugar which the Tropics can ship to America. Otherwise one of the best established industries in this State will not survive.

[From the Bergen Evening Record of March 4, 1940]

In the preceding articles I described how under the Sugar Control Act growers of sugar beets and cane sugar, including the plantations in our tropical islands, received direct and indirect cash benefits from the Federal Government. The natural question that follows is, Where does the money come from?

As usual, the consumer pays. In the case of direct sugar subsidies, it is passed on to the housewife in the form of a hidden sales tax, thereby creating a cash fund of approximately $65,000,000 annually out of which cash bounties are given. The indirect cash benefits arising from the import duties is worth about $200,000,000.

STATE CONTRIBUTES

The next question is, How much does New Jersey contribute toward these bounty funds?

Based on the last census figures there are about 4,000,000 persons in New Jersey. Statistics prove that each person uses 100 pounds of sugar per year on an average. Direct and indirect subsidies from tariff and processing taxes in the last 4½ years have been in the neighborhood of 2½ cents per pound, or $2.50 per person per year. This means that New Jersey consumers have coughed up about $45,000,000 in the last 4½ years toward the bounty funds. The money, in turn, contributed by New Jersey consumers, has not been used to protect the State's own home industry, but has been used to bolster and protect the sugar industries in other States, in the American tropics, and to a lesser degree in Cuba. New Jersey's refining industry receives no subsidies of any kind.

It seems to me that New Jersey consumers have a right to demand that Congress take quick action to protect a home industry from tropical islands already benefiting from subsidies partially contributed by New Jersey consumers.

Contrary to the general impression, cane-sugar refiners in the United States would make far larger profits and give greater employment if there were free trade in sugar. Free trade would mean a crippling of the raw cane sugar industry in the American islands and in Louisiana; low cost in raw sugar from Cuba would expand our imports from that island. Free trade would bring sudden death to the beet-sugar industry in our own Western States. With the collapse of the beet-sugar industry, the home cane refiners would acquire a substantial volume of business. With cheap raw and refined sugar there probably would be some expansion in consumption. As a result of these two factors the volume of the home refiners would increase and the cost per unit would decrease.

Any request by Congress for a quota upon refined sugar from the Tropics is not discriminatory against any island. In the first place, it is well to bear in mind that Cuba, for example, did not start to refine sugar for the American market until 1925, and at the present time there are only about 4 sugar mills out of approximately 165 which do refining. Cuba is overwhelmingly a raw sugar producing area. Her need is an adequate raw-sugar quota and a low tariff on raw sugar; the home refiners are not against this.

In Puerto Rico the same condition is true. As producers of cane and raw sugar the Puerto Ricans receive the benefit of a tariff on raw sugar, which is now about 1½ cents per pound. They also receive the benefit of direct cash bounties which amount to about 55 cents per 100 pounds. These subsidies, both through a tariff on raw sugar and the cash bounties, place the United States home refiners at a distinct disadvantage in competition with Puerto Rican refiners, who are also cane producers.

The United States refiners have a right to demand that they should not be subsidized out of business by any sugar group. If tropical producers or sugar-beet interests are to receive hand-outs from the Federal Government and from the consumers, they should not be allowed to expand their refining to the detriment of an established American industry.

Continuation of a Federal program to limit the shipping of tropical refined sugar here does not affect the price paid by the housewife. The United States Department of Agriculture is authority for the statement that the limitation upon the importation of tropical refined sugar does not affect the prices paid by con-

sumers. New Jersey refined or tropical refined sugar costs the same at the grocery store.

In summary I want to emphasize that New Jersey, along with eight other refining States, helps pay the sugar subsidy bill, but does not receive one cent of the subsidy benefits. That is why I am vitally interested in seeing that Congress takes the necessary steps to renew the Sugar Control Act. New Jersey cannot afford to lose its sugar-refining industry. The United States cannot afford to lose the entire refining business. And yet this is the threat today. American consumers are being forced to pay a Federal sales tax on sugar which in turn is used to help tropical islands choke a large home industry. Federal subsidies should not be permitted to kill nonsubsidized business.

Here is the problem that warrants the help and attention of every American citizen. The fate of a big industry hangs in the balance as do the jobs of thousands of American workingmen.

[Editorial from the Bergen Evening Record, Hackensack, N. J., March 5, 1940]

TOPSY-TURVY ECONOMICS

In a series of articles concluded in the Bergen Evening Record yesterday, Representative FRANK C. OSMERS, Jr., has discussed the importance of renewing the Federal restrictions on importation of tropical refined sugar. As Mr. OSMERS made clear, the question is of vital importance to Bergen County, since 1,300 jobs and an annual pay roll of $2,000,000 are involved, but its importance here is by no means its whole significance.

Until about 15 years ago there was no question of forcing United States manufacturers to compete with subsidized tropical sugar refiners. The tropical islands produced sugarcane which was shipped in its raw state and then refined here. At that time, however, the growers went into the refining industry. By 1934 the situation had become so grave that Congress passed restrictive legislation limiting the amount of refined sugar that could be shipped into the United States. One such restriction expired last Friday; by the end of this year all of them will have elapsed.

Even if the sugar industry of the United States needed tariff protection to maintain its wage standards and preserve itself from bankruptcy, it would be entitled to sympathetic consideration. In the present case, however, it asks no such help. All it asks is that the Tropics be restricted as to the amount of refined sugar they may ship here.

Their primary production role is growing cane sugar; to that end they are assisted by bounties paid plantations by the United States Government out of taxes collected from the people of the United States, including New Jersey residents. To have them use the bounties to undermine and wreck an essential United States industry creates a situation so anomalous that Congress should act at once to correct it.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

ADDRESS BY HON. LANSDALE G. SASSCER, OF MARYLAND

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. LANSDALE G. SASSCER, of Maryland, at the annual St. Patrick's Day banquet of the Ancient Order of Hibernians and Ladies' Auxiliary of the District of Columbia, March 16, 1940:

It is such a distinct honor to be invited to speak at a Hibernian banquet, particularly here in our Capital City, that when I received the invitation through my good friend Mr. Daly I accepted with pleasure.

Through numerous close associations with the Irish during the war, and for many years in my business, public, and social life I feel that I have many cherished ties with your organization and your people—not the least of which is the blood of Ireland which pulses through the veins of my children passed on to them from their maternal grandmother. This blood of Ireland, which for generations, more than that of any other nation, has woven itself into the fabric of American life and contributed so generously to the development of our Nation, chiefly because among the fine traits that the Irish brought to this country is an innate love of God, country, home, and justice. Into the life of the nations to which the sons and daughters of Ireland have gone they have carried a wit and humor that has brightened dark hours, dried tears, and encouraged despondent souls. The ability to "smile through tears" and radiate sunshine to those about them is a wonderful characteristic, and during the trying periods of our Republic the resolute courage and wit of the Irish has been a strengthening and comforting influence.

Although Hibernians are holding St. Patrick's Day exercises almost all over the globe, it is quite fitting that an order such as yours, which down through the centuries has battled for freedom, should also celebrate here in the Capital of one of the few nations in which freedom is still a reality.

The fundamentals of your order and your ideals of freedom and justice are such that in your annual St. Patrick's Day exercises the people from all over the civilized world of all nationalities and creeds join with you in commemorating the principles of liberty and your history and in honoring the name of St. Patrick, a great saint and a great man, whose influence and teachings are daily felt throughout the world. According to most historians, St. Patrick was born in Scotland; sold at an early age into slavery, his escape and return to Ireland through the intervention of a vision to preach Christianity, his life challenges the imagination of all who read it; and his humility, perseverance, courage, and zeal are an inspiration to his followers.

It is well known that Ireland accepted St. Patrick and Christianity without bloodshed. This unusual happening in that pagan era was due largely to the work of the ancient orders, which were the progenitors of the present Ancient Order of Hibernians. These ancient orders were bound together since about 1331 B. C., by a vow of fraternity, friendship, and unity. This strong fraternity, back in the early pagan days, bound together by a vow directed to such noble purposes, created a structure upon which the progress of Ireland was developed and which through the years nourished and kept alive Christianity, culture, and learning. Well may you members of the Ancient Order of Hibernians today be proud of the contribution made by your organization to Ireland and to the world, and proudly may you carry the mantle passed down to you by Rorie O'Moore and the many other patriots who preserved and transmitted to you the spirit of the vow of the ancient orders.

We justly point with pride to the progress we have made in America in social legislation. It is interesting to note that the Irish Free State, established in 1922 and comparatively an infant in relation to other nations, has made astounding progress to which the older nations can look with envy. We recently established here our T. V. A. for the purpose of harnessing streams and creating power and extending rural electrification. On the River Shannon a hydroelectric plant was established in 1925, and 4 years later the Shannon was furnishing cheap electric power to all the counties in the Free State. This electric development has not only spread comforts and modern convenience to the people in remote areas, but has to a large extent made Ireland independent as to foreign coal.

The new government is rapidly advancing a slum-clearance program, and has built more than 50,000 low-cost cottages and homes, available to the average workers. The Irish Free State has been a pioneer in old-age pension, unemployment compensation, education, comprehensive road programs, and general laws for the protection of labor and agriculture, as well as public health, including loans to communities for sanitary facilities and new hospitals.

We in America are accustomed to having groups, societies, and foreign countries come to America to raise money for their causes, but it took this young struggling Irish Free State to surprise us by paying back the money, with interest, which was borrowed here in 1920 and 1921.

That spirit of creative genius which has made such rapid progress in recent years in that young government for those who stayed in Ireland, has placed a firm imprint upon the development and progress of our own Nation. Right from the very inception of this Nation, back in the early times when groups of log huts grew into cities and a fringe of seaboard was transfigured into a throbbing empire, men and women of Irish blood have contributed to the success and upbuilding of this Nation.

Although there was migration from Ireland to America during the colonization of this continent, as is evidenced by the fact that there were many Irish emigrants among the groups who settled at Plymouth, Jamestown, and particularly in my native State, the emigration materially increased during the period of Irish history when famine, terror, strife, and oppression reigned, which was the decade prior to our Civil War. At that time when our country was a comparatively new world of infinite possibilities, hopeful eyes were turned toward America. As the fugitives and refugees began arriving in the United States from Ireland, never before was there experienced a welcome equaling the warmth with which they were greeted and received by the Hibernian groups here.

The migration from Ireland was its loss and America's gain, as we learn not only from reference to our own history books, but from the additional evidence in a speech made by the Honorable Luke Gardiner in addressing the English Parliament on April 2, 1784, in which he attributed the American victory to the Irish emigrants, and said in part: "These emigrations are fresh in the recollections of every gentleman in this house. I am assured from the best authority, the major part of the American Army was composed of Irish, and that the Irish language was as commonly spoken in the American ranks as English. I am also informed it was their valor determined the contest so that England had America detached from her by force of the Irish emigrants." Our history also tells us that during the Revolutionary War, Washington's army was composed of from 40 to 50 percent of Irish, among which were many officers.

Likewise, in the War of 1812 and the Mexican War, the courageous sons of Ireland were found again fighting for America.

It is generally believed that the Irish participated chiefly in the Union Army during our Civil War. This, however, is not basically true, because, when the Civil War plunged America into sectional strife, with that military spirit which flowed in the blood of the Irish, they rushed to serve the flags, both North and South, which had sheltered them. Irishmen and Hibernians were loyal to the communities which had welcomed, accepted them, and extended hospitality. The Order of Hibernians then in Pittsburgh enlisted to a man and the large percentage of them gave their lives in the cause for which they were fighting. The New York Hibernians' division was disintegrated by its members rushing into the Irish brigade. Hibernians and Sons of Ireland in the South rushed with equal spontaneity and valor to the cause of the Confederacy, they too exemplifying the characteristic spirit of loyalty of the Irish people to the homeland.

Most of us here can remember the heroism of the Irish-American in the recent World War.

The pages of American history are so replete with names and biographies of famous Irishmen that in recounting them I am by necessity limited tonight to a few from my native State. As a Marylander I cannot, however, pay respect to the Sons of Ireland without mentioning Cecil Calvert, Charles Carroll of Carrollton, Bishop John Carroll, and Roger Brooke Taney, who played such an important part as statesman, jurist, and clergyman in the settling, molding, and developing of early Maryland.

May we, the Americans of today, composite products from many countries, with the blood of many races interfused in our veins, blessed by Christian guidance, strengthened by the spirit of liberty, inspired by the memories of the past, and stimulated by the needs of the present, jealously and resolutely preserve here in America the principles of liberty and justice, and direct our united efforts to the preservation of the American ideals of opportunity, religious liberty, and freedom.

May we, irrespective of our race or creed, cooperate together as brothers, welcoming all Americans, whether born here or newly arrived, to join us in the promotion of peace and happiness and the enjoyment and protection of the many advantages of our American system of government. But at the same time let us, in the common defense and the promotion of general welfare, join together in the same fraternal spirit to resolutely oppose and ban those who, although living here, feel that this Government is not good enough for them, and who would through subversive influences sow the seeds of dissention and destructive "isms" here.

Employment and Wages Lag as Industrial Production Rises Above 1929 Level

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

ARTICLE BY PAUL O. PETERS

Mr. HORTON. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article that appeared in the Syndicate Trade Press by Paul O. Peters, as follows:

WASHINGTON, March 18.—With both employment and wages lagging, industrial production during the latter part of 1939 rose to a point almost 10 percent above the 1929 level.

The increased production, with fewer employees, is attributed in part by the Department of Commerce to technological developments which not only displace labor but increase the man-hour production, and, while production is well above the 1929 level, commodity prices are approximately 25 percent lower today. In a special digest of employment and pay-rolls prepared for Members of Congress last week, Dr. Isador Lubin, Commissioner of Labor Statistics in the Department of Labor, revealed that, while Nation-wide employment was 1,110,000 higher in January 1940 than in January 1939, employment in the manufacturing industries was still more than 10 percent below the employment average of 1929. The following table graphically illustrates the situation:

Employment and wages in manufacturing industries, 1929, and January 1940 compared

	Employees	Earned wages	Weekly average
1929 average	8,821,757	$11,607,278,000	$25.30
January 1940	8,017,000	[1] 186,156,000	23.22

[1] Weekly wage.

ON THE SPENDING FRONT

During the calendar year 1939, Federal Government expenditures amounted to $9,345,000,000 as compared with expenditures of but $3,591,325,000 in 1929. Appropriations for the fiscal year 1940 were more than $13,500,000,000. Were the appropriations all to be spent during the year, the business of running the Federal Government would require a larger sum than the combined earnings of all the wage earners employed in the manufacturing industries and a sum equal to almost twice the value of the total agricultural production of the Nation.

With rising State and municipal expenditures looming on the scene, it is apparent that labor must have higher wages and the farmers better prices to meet the impact of added governmental costs.

How Can We Better Sell Wildlife Conservation to the People?

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

ADDRESS BY HON. A. WILLIS ROBERTSON, OF VIRGINIA

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from Virginia [Mr. ROBERTSON] at the Fifth North American Wildlife Conference, Washington, D. C., March 20, 1940:

Mr. Chairman, ladies and gentlemen of the conference, this splendid assembly of conservation officials and nature lovers has met here today to discuss how we can better sell wildlife to the people. I have contended for the past 30 years, and still contend, that you can't sell anything to anybody by force, not even the old watering trough to the horse. And you can't sell anything to most of us in the absence of a personal profit motive. There is no difficulty about selling this program to the fifteen million or more who hunt and fish. Selling it to an equal number of landowners is a horse of another color. Are they expected to furnish better hunting and fishing free? And if not, what is their profit motive to induce them to cooperate? The only effective sales campaign is education. Our manufacturers and our merchants learned that fundamental principle many years ago, and annually spend millions of dollars through the newspapers and through broadcasting stations in advertising their goods, wares, and services.

Conservationists have been slow to grasp these principles, due, no doubt, to the erroneous belief in many quarters that our wildlife resources were inexhaustible and we need take no thought of the morrow. But when the topsoil of the Dust Bowl began to blow into our Capital City; when we had to send to Canada for lumber for our homes; when we had to send to Japan and Russia for fish; when we had to go 100 or 200 miles to get unpolluted drinking water for our big cities; when we sat in a duck blind all day repeating the lines, "Vainly the fowler's eye might mark thy distant flight to do the wrong"; when we visited our favorite stream and returned with nothing except the classical fisherman's luck, public-spirited men like Jay Darling, Tom Beck, Harry Hawes, Fred Walcott, Senator Pittman, and a few others, whose names will ever be inscribed on the hearts of every nature lover, began telling the American public what was actually happening to a once glorious natural resource. And at long last the program of education started.

The first essential step in that educational program was the organization of the National Wildlife Federation. I do not minimize the educational work done by the Audubon Society, by the American Game Conference, by many other smaller conservation organizations, and by the various State game and fish departments; but it remained for the National Wildlife Federation to tackle the problem of reaching on a national scale the "grass roots," so to speak. Most of our best species of small upland game find their habitat in cultivated areas, and 1,000,000,000 acres of such areas in this country are privately owned. For many years hunters had been gathering at their city clubs or mountain lodges and engaging in wistful wishing for a return of the good old days, but few of them had read the inscription on the flyleaf of an old book: "He who learns and learns and does not as he knows, is one who plows and plows but never sows." And still fewer had read with an understanding heart the words of Samuel: "I heard the voice of the Lord saying 'Whom shall we send and who will go for us?' and I said, 'Here am I, Lord, send me.'"

Each spring some 13,000,000 fishermen would pack up their troubles in the old kit bag along with their fishing tackle and go to some mountain area where massive peaks invited the heavens to rest upon their stately columns, where majestic oaks that had survived the vicissitudes of the elements could teach how to clasp with tougher roots the inspiring earth, where sparkling streams

concealed in limpid pools the elusive trout, and where they could catch the personal inspiration of the lines: "To him who in the love of Nature holds communion with her visible form, she speaks a varied language; for his gayer hours she has a voice of gladness and a smile and eloquence of beauty, and she glides into his darker musings with a mild and healing sympathy that steals away their sharpness, ere he is aware."

But that was not putting any fish into a depleted stream. Each fall seven and a half million hunters would pay thirteen and a half million dollars for hunting licenses, as well as a million dollars for duck-stamp licenses, to pursue their favorite type of game, but that was not bringing into the conservation picture the owners of that 1,000,000,000 acres of farm land, except as silent sufferers of careless hunters or willful trespassers. Neither was it bringing back the flight of ducks, which in 1935 had reached the all-time low of 30,000,000, the deer, and turkeys that had completely disappeared from many of their favorite haunts; nor the cheery call of the bobwhite to the fence posts from which they had disappeared.

To reach the grass roots as a foundation upon which to build a constructive national program, this splendid organization set out to enlist in its active membership the farmers and landowners of the country as the first step in an educational program. Hand in hand with that private undertaking went a greatly quickened interest in conservation by the Federal Government. So much so that recently the Secretary of the Interior announced that during the past 7 years the Federal Government had made greater progress in conservation than during the entire previous history of the country.

The first undertaking of these private and public agencies, working hand in hand, was to let the people know the present balance to their credit (since the title to all wildlife is held by the States in trust for the people, with the exception of migratory birds, which are held in trust for the people by the Federal Government under its treaty-making powers). That inventory on the debit side showed thousands of miles of polluted streams, millions of acres of burned-over forest lands, million of acres of farm lands so badly eroded as to produce neither food nor cover for wildlife, the total disappearance of some valuable species, and great reductions in the supply of others. On the credit side it showed that the people of this country owned 26 national parks, with a total of 25,000,000 acres; 158 national forests with a total of 175,000,000 acres and 173,000,000 acres of public domain, all now being administered with a view to wildlife conservation, not only to preserve what we now have but to increase the supply for the future use and enjoyment of the people.

The Congress passed a bill to impose a Federal license on migratory bird hunters to produce a fund for the acquisition and maintenance of migratory bird refuges; it passed a bill to earmark the 10 percent excise tax on arms and ammunition for the development as grants-in-aid to the States for the development of upland game. It created a select committee of the House to study conservation problems from a national standpoint, to coordinate Federal conservation activities and to recommend necessary or desirable legislation. The Congress created the Civilian Conservation Corps that has built over 4,000 fish-rearing ponds, planted food and cover on 54,251 acres, and reforested 1,300,000 acres, and improved fishing conditions in streams to the extent of 6,135 miles. It created the Resettlement Administration that purchased 9,200,000 acres of submarginal land, much of which is now being devoted to wildlife conservation. The Congress created the Soil Conservation Service which has 526 projects in 45 States, with 57,003 farm owners cooperating in the retirement of 683,497 acres of land from soil-depleting crops, strip cropping an additional 1,084,812 acres, and doing hillside terracing to prevent erosion to the extent of 74,249 miles. The Soil Conservation Service has built 3,707 storage dams impounding 80,000 acres of water. The Congress has appropriated vast sums to the W. P. A., of which $227,000,000 have been expended on conservation projects, including the expenditure of $500,050 on fish hatcheries for the Bureau of Fisheries, supplemented by an allotment of $808,500 from the P. W. A. And that type of W. P. A. activity will be continued through the current year, improving existing Federal hatcheries and the fish-cultural facilities in the Yellowstone and Glacier National Parks, and a new pond fish hatchery in Alabama.

The Congress during the past 7 years has made relatively liberal appropriations for the operations of the Bureau of Fisheries, which has been making splendid progress not only in the improvement of scientific-management plans but in the actual improvement of fishing conditions through the annual distribution of some 8,000,000,000 fish, many of which were reared to legal size before being planted in the streams and ponds. The Bureau of Fisheries hopes it has saved the salmon industry on the west coast by designing practical and successful fishways to move the salmon to their spawning beds in the Columbia River past the Bonneville, Rock Island, and Grand Coulee Dams. Approximately a million salmon have ascended these fishways during the two seasons of their operation. The successful administration of the fisheries of Alaska have maintained an average yield of 6,500,000 cases of salmon during the past decade. The fur-seal herd of the Pribilof Islands has been increased from 130,000 animals in 1910 to about 2,000,000 animals at the present time and during the 30-year period in which the Bureau has managed this valuable resource 900,500 skins have been obtained. After 3 generations of careful selection, the Bureau, at its Pittsford, Vt., hatchery produced a type of brook trout that grew so rapidly they spawned a year earlier than wild stock, yielded double the number of eggs and were more resistant to disease. The restocking activities of the Bureau have been centered on the national-park and national-forest areas, which are under Federal control and open to the public, the prince and the pauper on equal terms.

The Congress has, likewise, supplemented the duck stamp and Pittman-Robinson Act funds to the Bureau of Biological Survey with the appropriation of sufficient funds to acquire approximately 12,000,000 acres of areas suitable for migratory birds, principally ducks and geese. As a result of that program, coupled with a wise restrictive shooting program, our supply of ducks has been increased 100 percent since 1935, to my mind the most remarkable recovery of a threatened specie in history. But let no one assume that recovery is a signal for letting the bars down to a million hunters, since the present supply of ducks in this country is only a fraction of what it once was, and far below the population of 120,000,000 birds which we should have before we can say we have brought back the ducks. The Biological Survey has made a valuable contribution to the preservation of domestic fur-bearing animals, from which our trappers derive an annual revenue of about $65,000,000. They have educated the people to the value of insectivorous birds on the protected list, more than 50 of which make war on that enemy of the cotton farmer, the boll weevil. And they have told us that the bobwhite of the Southern States include in their normal diet 50 kinds of insects that are agricultural pests. The Biological Survey has also shown great zeal and a commendable understanding of local problems in the administration of the Pittman-Robertson Act, under which 167 restoration projects have been started in 42 States at a cost of $1,350,000. And that program will be stimulated by the Federal appropriation this year of $1,000,000 more than was appropriated last year for the same purpose. The engineer of that outfit, Ira N. Gabrielson, has had his hand on the throttle and his eye on the rail.

Time will not permit me to elaborate upon the splendid accomplishments of the National Park Service under the leadership of Arno B. Cammerer, or the United States Forest Service under the leadership of that outstanding forester and beloved man, the late F. A. Silcox. It is more important for me, as a legislator, to hear the views of the delegates to this conference than it is for me to recount at length what has been done by the Federal Government. Yet reference to what the Federal Government has done is necessary in any program of education to better sell wildlife to the people. Knowledge of what needs to be done and knowledge of what is being done, coupled with a vision of what can be done, should quicken and stimulate public interest and public cooperation. In conclusion, my friends, I wish to touch briefly on another phase of this educational program to sell wildlife to the people, and that is the opportunities it offers to the people to find peace and contentment, now a stranger in many hearts. While the foreign situation is a subject of absorbing interest and, of course, vital concern, we must not let it obstruct the seriousness of our domestic problems. We have many unemployed men and women; we have class antagonisms; we have some un-American and subversive activities; we have many who think that the principles of a democracy should mean equality of property instead of equality of opportunity. We have many who do not realize that contentment is a frame of mind, an attitude of heart, and does not come from the possession of material things. We must teach the people how to find peace and contentment in the simple pleasures of the out-of-doors; we must teach them how the principles of equality of opportunity is being exemplified in the administration of our national parks and national forests. We must develop sound minds in sound bodies through outdoor recreation. We must develop patriotism and love of constitutional freedom in a representative democracy through the fullest and freest use of the wonderful natural resources that God created for the benefit of man, made in His own image.

One-half of all of the people of the world today are engaged in war, engaged in the business of destroying each other and each other's homes, while we can still give thanks that under the wise leadership of an able and conscientious Secretary of State we have not been involved, and the white wings of peace are still spread over our fair land. But our land isn't any fairer or richer in natural resources than the vast area we once called Russia. It, too, could have been a land of peace and plenty if its rulers had been wise enough and just enough to permit those resources to be enjoyed by all of the people instead of by the favored few.

While our State laws have all denied to the privileged few the right of private ownership in wildlife until reduced to possession; while ours was the first Nation in the world to establish a national park for the benefit of the people; while our Nation has set aside more areas for public use and enjoyment and spent more money on their development than any other nation in the world, we must not assume that the job of contributing to good citizenship in this manner has been completed. It has only been commenced. Highway development and the mass production of automobiles has done much to bring recreational areas closer to the underprivileged man in the city, but many additional such areas need to be established and developed. And if we succeed in our campaign to sell the advantages of wildlife and outdoor recreation to the approximate 85 percent of the people now unsold on that program, the demand thus created will far outstrip the supply unless our educational program included the esthetic enjoyment of these resources. Civilization has by no means eradicated the primitive killer instinct in man, which finds expression in the

needless killing of wildlife as well as in the barbarous killing of war. Woodrow Wilson said: "Our civilization cannot survive materially unless it be redeemed spiritually." In attempting to sell wildlife to the people, let us seek to place proper emphasis upon the spiritual values involved, recalling that

"The heavens declare the glory of God
and the firmament showeth His handiwork."

Real Facts About Chain Stores and Prices Paid to Farmers

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. CELLER. Mr. Speaker, I am a great admirer of the Texas onion. I prefer that big, tan-colored variety with plenty of juice in it and I like it cut up with a little vinegar, or sliced and placed between bread with a little salt. I have not quite gotten to the point where I can eat it like an apple, but given time I will probably accomplish that.

Now, I am not belittling or making light of the onion. I have often shed tears over it. It is an important staple of food. What makes me mention these facts is that there appeared in the CONGRESSIONAL RECORD the other day—March 8 to be exact—under extension of remarks, the statement of our distinguished colleague from Texas, the Honorable WRIGHT PATMAN, concerning his bill, H. R. 1, a bill to provide a Federal tax on interchain stores. A subsection of his remarks on page 1273 in the Appendix of the RECORD was entitled "Chains' Concern for the Farmer," in which was quoted the proportion of the price received for Texas onions by the farmer by comparison with the amount received by the chain store. This was from a Federal Trade Commission report, page 392, of part II of the Agricultural Income Inquiry. It was said that while the grower received 12.2 cents of the dollar paid for onions by the consumer the chains got 44.39 cents. It was not stated that the customary way of purchasing onions is as they lie on the field, not even packed, sorted, sacked, or loaded into a car as stated on page 374, part II, of the study. Now, to be completely honest in this comparison, it must be said the Federal Trade Commission stated that any conclusions as to whether chain stores or other purchasers of Texas onions paid higher prices "would not necessarily accord with the facts." But Mr. PATMAN has made this comparison by inference, and it is just as fair for me to use the figures as it is for him; and so I would like to quote the Federal Trade Commission as to how much the growers of Texas onions received from chain stores and how much they received from other purchasers during the onion-harvesting season of 1936 for onions sold in five markets—Boston, New York, Philadelphia, Baltimore, and Chicago.

Our distinguished colleague from Texas, in his honest enthusiasm for the furtherance of his bill, may lose sight of substantial facts which I think should be presented to this House. For facts and figures, I am willing to rely upon the Federal Trade Commission's reports. It is well to set forth pertinent extracts from these reports here and now, and I thus set them forth with all due respect to our distinguished colleague from Texas, for whom, nevertheless, I have the highest regard, but with whom, in this particular instance, I must differ.

I hold no brief for chain stores any more than I hold for the independent, up-to-date, sagacious, and efficient independent merchant. I am just as much for one as I am for the other. I cannot, however, swallow all the balderdash that comes from the lips of the inefficient and weak merchant who wants the Government to do the things for him that he should do for himself.

In that connection, I am anxious to set forth before this Congress the facts. The Federal Trade Commission reported:

Table 147 also shows (column B) that, at the prices effective in the stores immediately after receipt of these onions by the chain stores in the five markets, the average retail value (consumers' cost) of Texas onions was $1.73 per 50-pound sack; also that the average wholesale price and average growers' proceeds per sack were $1.01 and 21 cents, respectively, whereas the average wholesale price and average growers' proceeds per sack of onions sold to other purchasers (column F) were 88 cents and 18 cents, respectively.

Mr. Speaker, there was not quoted in the RECORD of March 8, aforesaid, the whole table. If such had been the case there would have been displayed the very evident figure of 21 cents per sack for onions sold to the chain stores and only 18 cents, or 14 percent less, for those sold to other purchasers.

Now, I am not arguing that the Texas onion grower receives too much for his onions. I doubt if he receives enough, and I further know that distribution takes a large part of the onion dollar. But the point I wish to make is that it definitely is not the chain stores that are responsible for such prices. In fact, the chain stores, because of economies in other directions, pay better prices to farmers, and they also sell to consumers better-quality products at savings on prices, with the result that farmers' markets are widened and increased and more farm products are sold.

Since the Federal Trade Commission's agricultural income inquiry was used to try to show how little the farmer receives for his products from one class of purchaser, with the very decided inference that this class of purchaser tries to beat down the prices of farm products, I have taken the liberty of considering the total prices paid to growers for all the agricultural items surveyed by the Federal Trade Commission in its inquiry, this being the only source of information pertaining to this particular subject on record. And, basing my figures on the tables shown on pages 477 and 479 of part II of the Commission's report, I find that the grower receives 45.63 cents of the wholesale dollar for fruits and vegetables sold to chain stores and only 43.48 cents, or 2½ percent less, for the same fruits and vegetables sold to other purchasers. This is shown in the following table:

Break-down of wholesale price (retail laid-down cost) received from chain stores and purchasers other than chain stores for 10 fresh fruits and vegetables, Oct. 16, 1935, to Dec. 16, 1936 [1]

	Chain-store purchasers	Purchasers other than chain stores
	Percent	*Percent*
Wholesale price (retail laid-down cost)	100.00	100.00
Wholesale and other distributors' margins	6.04	5.59
Freight and other transit costs	30.56	32.80
Packing, loading, storage, and miscellaneous	17.77	18.13
Proceeds to growers	45.63	43.48

[1] Based on the Federal Trade Commission's Agricultural Income Inquiry, 1937, pt. II, pp. 477, 479. Markets for chain stores included Philadelphia, New York City, Chicago, Boston, Baltimore, Atlanta, Kansas City, Detroit, New Orleans, Dallas, and St. Louis; for other purchasers, Philadelphia, New York, Chicago, Boston, Baltimore, Kansas City, Minneapolis and Atlanta. Fruits included table grapes, Florida oranges, and grapefruit, California Navel and Valencia oranges, Pacific Northwest apples, Georgia and Carolina peaches; vegetables included Maine potatoes, Idaho potatoes, Eastern Shore potatoes, Texas onions, Pacific Coast iceberg lettuce, Texas cabbage, Florida cabbage and Florida and California tomatoes.

Mr. Speaker, I wish to be perfectly frank in this statement, and I wish to repeat that the Federal Trade Commission stated that this does not "necessarily" mean that the chain stores pay more than other purchasers, but when it shows up so often that the farmers receive more for their products when selling through chain stores than other buyers, in such a wide survey, I am inclined to believe that they get better prices from them. At least it proves without question that the chain stores do not beat down the prices of farm products, as charged. As a matter of fact, the chains pay better prices. Moreover, it has been reported, in both the Federal Trade Commission and the United States Department of Agriculture studies, that the chain stores appear to be demanding better quality and are paying the usual premium prices for such quality. Now, I would like to ask, What better agency of distribution have we today than the chain store, which pays

better prices to farmers and producers and sells at such price savings to the consumer? If anyone can name one, I will be very glad to have the facts; but I want them to be facts and not fabrications.

The conclusion is inescapable, that the farmer fares better with the chains than he does with the independent merchants. In any event, there is a superabundance of data which indicates that at least he does as well with the one as he does with the other.

Flood Control

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

ARTICLE FROM THE MARINE JOURNAL OF FEBRUARY 15, 1940

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an article reprinted from the Marine Journal of February 15, 1940, Flood Control Costs Not Properly Chargeable Against Navigation, as follows:

[From the Marine Journal of February 15, 1940]

FLOOD-CONTROL COSTS NOT PROPERLY CHARGEABLE AGAINST NAVIGATION

(By John L. Bogert)

The general impression among otherwise well-informed people is that immense sums of the taxpayers' money have been spent on our great rivers solely for the benefit of the Federal Barge Line and other water-transportation agencies. Nothing could be further from the truth. When locks and dams are built in any of our rivers their cost is properly chargeable to navigation, but for every dollar spent on locks and dams there has been another dollar spent on levees and other forms of bank protection. For 1,000 miles of the Mississippi River, from Cairo south, there are no locks and dams, but millions have been spent in trying to confine "Old Man River," just because he insists upon flooding all the cities, towns, villages, highways, and railroads along his route. If in the attempt to avoid the disasters that flow in the wake of a river flood immense sums of money have to be expended, just upon whom should the burden fall of providing those immense sums of money? Should they be chargeable against those whose property is saved from destruction, or should they be charged against the owners of floating equipment who use those same rivers but are uninjured by the river's rise to the extent of one dollar? So far as they are concerned, the more water in the river the better; the only thing that holds them up is lack of water. Let's try to get this thing straight. The water-transportation people are quite willing to admit that locks and dams are for their convenience and benefit, and if all moneys spent on rivers had to be assessed against the beneficiaries, the cost of the locks and dams would be chargeable against them. However, all the money spent for flood control would necessarily be charged against the land transportation beneficiaries—the railroads, the trucks, and the busses.

A photograph that appeared with this article shows the justice of the foregoing contention. It shows the completed section of the flood wall at Huntington, W. Va. On the left side of the wall one sees the Ohio River and the river bank. On the right side the tracks of the Chesapeake & Ohio Railway in the foreground, with the city itself in the background. The Ohio River at Huntington has a watershed of 55,620 square miles. The excessive precipitation during great general storms, which occur in the winter and spring months over the watershed, causes frequent floods on the Ohio River which affect Huntington. Existing records show that during the last 55 years the flood stage of 50 feet on the Huntington wharf gage has been equaled or exceeded 24 times. The maximum flood of record occurred in January 1937, having a crest stage of 69.2 feet on the wharf gage. The year before, in March 1936, a great stage of 58.9 feet was reached.

The 1937 flood covered about 65 percent of the flood-plain area, Approximately 70 percent of the total area of Huntington is located on this broad flood plain, which extends about 9 miles along the Ohio River. Ninety percent of the entire population of Huntington live on this flood-plain area, and but 10 percent live on the high ground of the adjacent hills.

It shouldn't require a high grade of intelligence to grasp the fact that navigation on the Ohio River had nothing to do with these floods or with the necessity for expending large sums of money to keep the floodwaters from overflowing its banks. The 1937 flood necessitated the suspension of all normal activity in the city; of the 40,000 persons living in the flooded areas, 25,000 were made refugees. Rail traffic was suspended at the height of the flood. Approximately 21,500 feet of wall and levee will be required to keep the water in the river and out of the city, the levee being from 42 to 55 feet high and the concrete wall from 12 to 14 feet high.

Now, suppose we try to get this thing straight. If there wasn't a barge of any kind, nor a towboat, nor steamer on the Ohio River, the levee and wall described above would still have to be built. So what? Why, just this: There is no justification in assessing one dollar of the cost of the levee or wall against navigation. If the railroads want to pay some share of the cost because the levee and wall save their tracks from being washed out, no one should object. But to try to saddle the waterway bargeman with any of the cost would be the height of injustice.

What occurs during floods at Huntington is characteristic of what happens all up and down the Ohio River, and, to a greater or less extent, on all the rivers tributary to the 1,000 miles of lower Mississippi River. Through this latter river all the floods from all the tributary rivers must seek the sea.

According to United States Geological Survey Water Supply Paper 334, the flood damages in the Ohio River Valley from the 1913 flood were $180,000,000, and 415 lives were lost. The 1907 flood damages were $100,000,000, and the 1933 flood damages were also $100,000,000. The same authorities estimate that the flood damages for the last 50 years in the Ohio Valley have exceeded $1,000,000,000.

If it be true that during the past 112 years the United States Government has spent $693,420,042 on the Mississippi River system, it must be evident that the barge lines which ply the lower Mississippi River are in no way responsible for by far the larger part of this huge sum. The adjacent cities, towns, and villages cannot exist unless protected from river floods. What is true of the individual localities is also true of the railways that serve them. Neither the Missouri Pacific system nor the Illinois Central system could afford to be assessed for any part of the many millions that have been spent in levees and concrete walls on our river banks. Nevertheless it was those millions so expended that they have benefited by, and it is for that very reason that they should be the last ones to stir up the question of assessing river improvements against the users of waterways. If a dispassionate analysis of the proportion of Government waterways expenditures that benefit the railways, on the one hand, and the expenditures that benefit water transportation, on the other, were to be made, there isn't a doubt but that the railways have benefited quite as much as the waterway user. So it is high time, the foregoing facts being recognized, this senseless chatter about subsidized forms of transportation should be dropped. All kinds of transportation need Government help, and they all get it. Don't ever let anyone tell you the railways don't get their share. Easy and secure access to their terminals must be provided at the taxpayers' expense, and it is so provided.

The persistent campaign to "smear" the navigation of our waterways, publicized at great expense, in our most important magazines can be well exemplified by the following "gem" which is taken from a full-page advertisement in Collier's for January 13:

"Railroads meet all their own costs and help support the Government as well. They operate under the strict control of rules and regulations built up over the past 50 years on the theory that they are a monopoly, but actually they compete with other forms of transportation which are promoted and subsidized by Government."

Economists long ago agreed that everyone "helps to support the Government, whether he pays taxes directly or indirectly." To that extent the railroads share the common lot, out of every dollar earned by everybody the Governments, National, State, and local, take out their "cut." But when the friends of the railroads claim that the railroads meet all their own costs, it just isn't so. They don't have to pay any special tax or assessments to pay for the levees and concrete walls that prevent their tracks from being washed out nearly every spring, and they don't have to pay any special tax or assessment to dig out the sand bars that mayhap form in front of their slips or docks. The railroads own ferryboats, tugs, car-floats, lighters, and other kinds of floating equipment, more than $100,000,000 worth. And, as has been pointed out, their floating equipment in the port of New York transfers more tons of freight than even is represented by the cargoes of the ocean steamships that frequent that port. And what is true in the port of New York is true in every port in the country where there is a railroad terminal at the water front. When the railroads pay taxes on their right-of-way, they are doing just what Mr. John Q. Citizen does on his private drives and bridle paths. Their right-of-way is theirs exclusively. The barge man who uses the national rivers or canals is but enjoying public property like the bus or truck man on a highway or street. If a street has to be repaved, are the trucks and busses that pass through it assessed for the cost of repaving? So why should the barge or towboat have to meet an assessment for keeping any waterway free from sandbars or silting up? In the first place, who is responsible for the silting up of our rivers? The sewers that pour their filth and chemical waste products into those same rivers. O reader, does it fit in with your sense of justice that the cost of river upkeep should be borne by those who use, or by those who abuse and injure waterways by turning them into sewage-disposal receptacles? The railroads meet some of their costs, but not all.

We imagine that it is a very grave question whether the railroads ever would have been regulated if it hadn't been for their pet slogan—"all the traffic will bear." The "rules and regulations built up over the past 50 years on the theory that they are

a monopoly" were thoroughly justifiable in the opinion of our most enlightened economists. While there was constant complaint that different stations on the same railroad were favored at the expense of others by a freight-rate structure that bore no relation whatsoever to the actual cost of the service rendered, it was natural that Congress should be petitioned for the creation of some regulatory body with power to protect communities discriminated against. To the thoughtful individual the unforgivable transportation sin is to build up one community by excessively low freight rates, and make up the losses thus incurred by imposing excessively high freight rates elsewhere on the line. If that practice had not been indulged in wherever there was possible water competition, it is a question whether there ever would have been an Interstate Commerce Commission.

No such state of affairs has ever existed in the field of water transportation, so far as we have been able to discover. Water rates have been quite usually quoted at about 60 percent of rail rates between the same points, which naturally raises the question: Why should the water rates be regulated? If the I. C. C., having the power under the Wheeler-Lea Act, orders the water rates raised to a closer parity with rail rates, the waterways carrier will lose business and the shipper probably also. The railroad will probably not be permanently benefited, since the traffic will not bear the increased rate.

Probably, the most senseless and inaccurate statement in the advertisement we quoted, is the one that asserts, that there are "other forms of transportation which are promoted and subsidized by the Government." If this is meant as a "fling" at the Federal Barge Line on the Mississippi River and Black Warrior River systems, it is wide of the truth. It has always been the expressed intention of the Government to sell the line "lock, stock, and barrel" to any private concern that could and would give satisfactory assurances that it was able financially to operate and develop the line, and was not trying to buy it, that it might ultimately give it the "kiss of death," as the Pennsylvania Railroad did to the Delaware and Raritan Canal, through which we got our hard coal at low prices; or as the New York, New Haven & Hartford Railroad did to the steamboats on Long Island Sound.

So far from the Federal Barge Line functioning with an operating subsidy, it operates entirely on the receipts taken in from the freight it transports, and quite a while ago turned back into the Government a substantial part of the money originally voted it for development purposes. It should interest everyone to know that the Federal Barge Line carries but a small percent of the total traffic that passes up and down the Mississippi River. Even if it were out of existence, the traffic on our western rivers would not be noticeably diminished. Just because the Federal Barge Line couldn't be bought up and scrapped by railroad bankers, it has served the Nation well.

And that brings us to the final aspersion of the Government as a promoter of "other forms of transportation." During the past 8 years no new canal save the abortive Florida canal has been started by the Government, and its mental attitude seems to be summed up in an expression of fear that the building of competitive waterways might so weaken the railroads as to prevent them from meeting the "needs of the public for efficient and safe transportation." During these years little Belgium has built the wonderful Albert Canal, which will undoubtedly save the industrial region around Liege; and Germany has commenced the canal that is to link the headwaters of the Rhine and Danube. Russia has also been busy with a system of canals that will ultimately make for untrammelled waterborne commerce from the Baltic to the Black Sea. With all the billions that the Government has spent, in an effort to find jobs for our unemployed, would it have passed up the perfectly obvious chance to set thousands at work digging the canal across New Jersey, which would not only rival in importance commercially the St. Mary's Canal, connecting Lake Superior with the others, but form as important a defensive means against invasion as the Albert Canal is against the German "blitzkrieg"? There are four possible canals in this country, the digging of which would set more than 100,000 at work directly, and so react on the industries of the Nation that prosperity would be here with a bang. Nevertheless, probably realizing that perfectly, Mr. Roosevelt and his advisers have listened to the prayers of the railroads, and so far, declined to start digging canals that might cripple some of our railroads. In the name of the prophet stop knocking the waterways. They don't knock the railroads. They wish them all the luck in the world with fast freight.

The National Rivers and Harbors Congress

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

MESSAGE FROM THE GOVERNOR OF PUERTO RICO

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include this message from the Honorable William D. Leahy, Governor of Puerto Rico, to the National Rivers and Harbors Congress Twenty-fifth Annual Convention, March 14–15, 1940:

Gentlemen, in these few words I hope to thank you, in the name of the people of Puerto Rico, for the excellent work of the Rivers and Harbors Congress.

Perhaps no other community under the flag of the United States depends more upon shipping than does the Territory of Puerto Rico. The economic life of the island is linked inseparably with water-borne commerce. The dredging of a harbor, construction of a dock, erection of a breakwater may not be of vital importance in a country so vast as continental United States. But in our small island such activity affects, directly or indirectly, the lives of Puerto Rico's 1,800,000 people.

Puerto Rico's geographical position makes it a perfect link between the mainland United States and the countries of Central and South America. In commercial position, Puerto Rico stands among the leaders in world trade with the United States. We are Uncle Sam's second best Latin American customer. Such importance cannot be neglected.

Today a new and vigorous Puerto Rico is rising. The island has taken on new life, first, because of its selection as a military stronghold to guard the Panama Canal Zone; and, secondly, because of its discovery as a tropical vacation land under the flag of the United States. To keep pace with its growing importance, Puerto Rico must have the best facilities for shipping that are available.

The official family and the people of Puerto Rico are grateful for your cooperation. Much has been done in the past. Much remains to be done in the future. For what has been done in the past your Congress has our deepest thanks. For what will be done in the future we have nothing but hope.

Thanks.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

Mr. PATMAN. Mr. Speaker, I do not know of any organization in our Government that is performing a greater work than the National Youth Administration. I do not know of a better way for Government funds to be expended. When an investment is made in the education or improvement of a young man or a young woman, it will help the country for an average of 40 years. Such an investment by the Government provides good citizenship and will guard against some of the social evils that we are now trying to correct. There are a good many more students asking for this aid than can be helped. I do not know of an investment that is made by the Government that will yield a greater return than the investment in these young students and workers, who are to be the citizens and leaders of tomorrow. I hope the appropriation for the N. Y. A. is not reduced below the appropriation for last year. I am in favor of an appropriation of at least that much and will vote for that much and would even vote to increase the amount.

I am inserting herewith tables and information prepared by the National Youth Administration in Washington and in Texas, which is self-explanatory:

FEDERAL SECURITY AGENCY—NATIONAL YOUTH ADMINISTRATION

Summary of current operations

Employment program	Number of youth employed		
	Total	Male	Female
All programs	746,268	398,584	347,684
Out-of-school work program (January 1940)	311,918	177,667	134,251
Student work program, total (December 1939)	434,350	220,917	213,433
School-work program	314,310	148,256	166,054
College and graduate work program	120,040	72,661	47,379

Number of unemployed youth certified and awaiting assignment, Jan. 5, 1940	340,000
Estimated number of needy unemployed youth not certified, Jan. 5, 1940	2,119,000
Total unassigned needy youth	2,459,000

Labor turnover on out-of-school work program:	
Number of youths who left N. Y. A. projects, July 1939 through January 1940	154,820
Average number leaving each month is 9.1 percent of the number employed.	
After adjustment for reassingments the annual turnover rate is between 90 percent and 100 percent.	
Funds allotted for 1939–40:[1]	
Total	$95,182,927
Out-of-school work program	67,133,000
Student work program	28,049,927
School work program	13,675,370
College and graduate work program	14,374,557

[1] Exclusive of administrative costs.

Annual cost per youth

	Out-of-school work program	
	Federal funds[1]	Cosponsors' funds
Total	$268.80	$52.08
Youth labor	180.72	
Supervision	43.08	16.92
Nonlabor	24.60	35.16
Administration	20.40	

[1] Includes administrative costs for entire program.

Student work program[1]

Total	$59.41
School	39.69
College and graduate	113.31

[1] Wages to youths—all other costs paid by schools.

Out of every dollar of Federal funds spent by the National Youth Administration during the current fiscal year, 76.8 cents will go to young people in the form of wages; 11.6 cents will go to supervisors; 6.6 cents will go for materials, supplies, and equipment; 50 cents will go for administration.

Summary of current operations in Texas

Employment program	Number of youths employed		
	Total	Male	Female
All programs	39,501	22,535	16,966
Out-of-school work program, February 1940	18,133	10,946	7,187
Student work program, January 1940	21,368	11,589	9,779
School work program	15,128	8,099	7,029
College and graduate work program	6,240	3,490	2,750

Number of youths certified and awaiting assignment, Jan. 5, 1940	23,467
Estimated number of needy youths not certified, Jan 5, 1940	224,089
Total unassigned needy youths	247,556
Employment by type of project, February 1940:	*Number of persons*
Grand total	18,736
Total number of youths	18,133
Highway, road, and street	1,491
Improvement of grounds	679
Public buildings	3,252
Recreational facilities	1,296
Conservation and sanitation	513
Clerical and service projects	2,982
Recreational leadership	118
Professional assistance projects	1,135
Workshops	1,896
Sewing	521
Resident training centers	2,652
School lunches, nursery schools, and home making	1,450
Projects not elsewhere classified	148
Supervisors	603
Funds allotted, 1939–40:	*Amount*
Total	$5,158,130
Out-of-school work program	3,709,902
Student work program	1,448,228
School work program	702,458
College and graduate work program	745,770

Number of schools participating in the student-work program:	
Total	2,663
Schools	2,579
Colleges and universities	84
Average monthly earnings	
Out-of-school work program:	
Youths employees	$15.04
Supervisors	99.95
Student work program:	
School	4.73
College and graduate	12.73

THE PROGRAM OF THE NATIONAL YOUTH ADMINISTRATION IN THE FIRST CONGRESSIONAL DISTRICT OF TEXAS, JAN. 1, 1940

The school work program

Number of students aided	816
Number of participating schools	206
Funds allotted for fiscal year	$35,100

A high-school student who could not otherwise attend school may work for and be paid up to $6 per month; the average payment is $4.78.

The college and graduate work program

Number of students aided	203
Number of participating schools	5
Funds allotted for fiscal year	$23,220

These figures do not include students attending colleges or universities located outside the district. A college student who could not otherwise attend school may work for and be paid up to $20 per month; the average payment is $13.24.

The out-of-school work program

Number of out-of-school youths employed	1,755
Number of work-project units operating	62
Funds allotted for fiscal year	$351,550
Number of unemployed youths certified and awaiting assignment	1,216
Estimated number of needy unemployed youths not certified	29,391
Total unassigned needy youths	30,607

The projects being operated include:

Location	Description	Sponsoring agency	Local adviser
De Kalb	Gymnasium construction.	De Kalb School District.	W. E. Williams.
Avery	Resident center for girls.	Red River County	Marion Lawson.
Sabine	Farm community center.	Farm Security Administration.	A. M. Beakey.
Marshall	Resident center and shop.	City of Marshall	H. L. Graeser.
Linden	Experimental farm	County commissioner's court.	Kermit Womack.

Colleges participating in the National Youth Administration college and graduate work program in the First Congressional District of Texas

College	Student quota	Yearly fund quota
Total	172	$23,220
Bishop College	38	5,130
College of Marshall	28	3,780
Parris Junior College	39	5,265
Texarkana College	14	1,890
Wiley College	53	7,155

The Preservation of Free Private Enterprise

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING

Mr. O'MAHONEY. Mr. President, on numerous occasions recently, before gatherings of various kinds, I have

had occasion to express my belief that the reason why the institutions of democracy and capitalism are under attack throughout the world is that under modern conditions there are too many persons without property. I have repeatedly contended on this floor that one of the most fundamental cures for our present economic difficulties would be the encouragement of free private enterprise. That these opinions are held by large numbers of persons has been indicated by the number of requests I have received from time to time for the text of my remarks.

Last December I made a talk to the New York Board of Trade, at the Waldorf-Astoria Hotel, in which I set forth with some care the thoughts I have on this subject. In order that these requests may be more conveniently met, I ask unanimous consent that this talk on the Preservation of Free Private Enterprise may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once again I must express my gratitude for an opportunity to talk to the members of this organization about the most pressing problem of our time—the preservation of free enterprise. The turmoil in which the whole world is involved gives eloquent testimony to the gravity of the question, and upon the answer which is given by the people of America depends in very large measure the future history of mankind.

If this seems too broad a statement of the issue, a glance at Europe should be sufficient to prove the point. The events now being enacted there are the result of the failure of European civilization to preserve the economic freedom of the masses and the conflict now in progress is a clash between the liberal philosophy of democracy on the one hand and the radical philosophy of despotic socialism upon the other. It is a conflict between man and the state, between the philosophy which holds that government and the servant of man is the philosophy which holds that it is his master.

In this conflict of deals there can be no question on what side the hearts and minds of most Americans are arrayed. We believe that "governments are instituted among men" to secure certain inalienable rights to individual men and that all governments derive "their just powers from the consent of the governed." This is the rock of principle upon which the American Republic was founded. It is the principle which is being assailed today by the totalitarian concept of government which reduces man to a position of complete servitude under the state.

Let no one imagine that European dictators are the causes of the crisis we behold. They are results, the accidental personal manifestation of the economic ills which have undermined free enterprise across the ocean. Different one from the other, talking different languages and moving in slightly different spheres of action, they are, each of them, nevertheless, the result of the failure of the European system to preserve free economic opportunity for every man. If we in America wish to protect and defend the American principle of liberal democracy, and we do, then our supreme duty is to protect free enterprise from every attack that may be leveled against it. It is of supreme importance, therefore that we understand just what we mean by free enterprise and that we understand the causes which have been undermining it, not alone abroad, but here in America as well.

Free private enterprise means not only that every man shall have an opportunity to work, but also that he shall have the right to own and hold the product of his toil. Free private enterprise is possible only under the capitalistic system, under a democratic system which recognizes the right of every man to develop in accordance with his own free will the talents with which he was endowed by an all-wise Creator, so long as he does not invade the rights and liberties of his fellows.

All this, I think, is clearly understood by the great majority of our people. Upon these elementary concepts of popular government there is no disagreement in the United States, except upon the part of a very small minority who have accepted European philosophies. What we have not clearly understood, however, seems to be that the preservation of private enterprise begins at the very bottom of the economic scale. It begins with those men and women, wherever they are, who are so situated that they are unable by their own unaided efforts to support themselves and their families. The very first task of the defenders of capitalism is to make certain that in America no person, whatever his status, shall be without the opportunity to earn and hold property.

It is precisely because this opportunity is now lacking that we are confronted by an economic crisis that challenges all the wisdom, tolerance, and understanding of which we are capable.

PEOPLE WITHOUT PROPERTY

The farm problem and the problem of industrial unemployment are the symptoms of the diminishing economic freedom which is the primary cause of the growth of big government. These symptoms are not of recent occurrence. They are the marks of this generation, and their beginnings were discernible long before any of the men who now occupy positions of leadership in business or in government attained their present importance.

Fifty years ago 70 percent of our population lived in the country and almost 75 percent of all farm operators owned their own farms. Today less than 45 percent of our people live in the country and only a little more than 55 percent of our farm operators are also farm owners. Farm tenancy has been steadily increasing year by year during the past half century. That means that so far as our agricultural population is concerned the private ownership of real property has been decreasing. That is a symptom which is bad for capitalism and which the defenders of that system must set about curing if they are going to preserve it.

With the growth of the factory system and the movement of the population from the country to the city, the problem of industrial unemployment began to arise. I shall not weary you with statistics, but every authority will agree that even in those days when we thought we were enjoying industrial prosperity we had an unemployment problem. The significant thing is not so much the actual figures reflecting the total number of unemployed at any particular time; it is rather that the unemployed as a whole are a class without property.

This is the supreme danger to the system of free enterprise—that during a period of more than 50 years the number of people who are without tangible, physical property or the opportunity to gain it has been steadily increasing. In other words, economic freedom has been undermined; and when economic freedom is threatened, political liberty itself is endangered. This is the fundamental fact which all believers in the philosophy of liberal democracy must keep clearly before their minds.

Our task is to restore economic freedom, to make it stable, to make it certain, and it is one which cannot be performed in any tempest of emotion. Let no one imagine that he can preserve the system of free enterprise by merely mobilizing discontent. That is what was done in Europe. That is the manner in which the totalitarian state was created. In Russia the discontent of the dispossessed was mobilized under the proletarian dictatorship. In Italy and in Germany the discontent and fears of the propertied class, who were not paying any attention to the problems of those at the bottom of the economic scale, were likewise mobilized. In each instance there was one faction which seized control and by force and despotism fastened its power upon the masses.

It is not by searching for a scapegoat, either economic or political, that we in America are going to show the world how the system of private enterprise may be preserved. We have to settle this matter in the American way, and that is by way of conference, of tolerant, wise search for the facts, and of faith and confidence in the ability and the will of the people of America to maintain a Government which shall preserve and maintain the rights of all.

Some there are, I know, who imagine that a planned economy is necessary. I do not believe that is the way out, whether the planning is done by concentrated private power or concentrated political power.

Some there are who believe that soaking the rich, as it is called, will redistribute property and restore opportunity. I do not believe in that course either. All the wealth that has ever been made or accumulated is, in my opinion, not a drop in the bucket when compared to the wealth that can be made and accumulated in a really free economy.

THE GROWTH OF GOVERNMENT

Some there are who believe that relieving business from what they are pleased to call Government interference will restore the balance. This again is a mistaken notion, which takes no note of the perfectly obvious fact that the expansion of Government powers has been the inevitable result of the concentration of economic power. Write this down as a proposition which cannot be denied: Political centralism, wherever it appears, is the product of economic centralism. Big government is the outgrowth of big business. It is not the product of any personal leadership, of any political school or cult, any political party, or even, let me add, of any President.

The growth of government in America has kept steady pace with the expansion of business. In just that degree to which steam and electricity have concentrated the population in the big cities and extended the radius throughout which men may exert their economic genius by reason of the improvement of the means of transportation and communication, to that same degree government has grown.

It was in 1887, when the railroads first became too great in their extent for successful regulation in the public interest by the States, that Congress established the Interstate Commerce Commission. That was 52 years ago and the legislative history of Congress from that day down to this has been the history of expanding Government powers ordained by the people and by both Democratic and Republican administrations in the effort so to regulate concentrating business that economic opportunity would be preserved for the masses.

It was a Republican Congress and a Republican President who enacted the Interstate Commerce Commission Act. It was a Republican administration which gave us the Sherman Antitrust Law. That was in 1890, and that law, passed in the Senate without a single dissenting vote, was an attempt to prevent the concentration of economic power to the detriment of free opportunity. That law was expanded and enlarged by a Democratic administration in 1914 when the Clayton Act and the Federal Trade Commission Act were passed. No one proposes to undo these laws, because it is recognized that they were created for the express purpose of preserving and maintaining the fundamentals upon which both the American Republic and the capitalistic system are founded.

When I hear people talking about regimentation of business by government I remember, for example, as a boy reading of the embalmed-beef scandal during the Spanish-American War, and a few years later of the passage of a Federal meat-inspection act to prevent such exploitation of the people and of the Government in the future. The Packers and Stockyards Act, giving the Secretary of Agriculture broad powers over a great industry, one of the greatest in the whole country, was enacted in 1921. Federal regulation of exchanges began as long ago as 1912 when the Grain Futures Act was passed. The Food and Drug Act, which in its day was denounced as an unwarranted interference by Government with business, was passed by Congress in 1926. In the next year the Radio Act came into existence, and so it has gone during the last 50 years, step by step, as business has become more and more national in its scope, the powers of the National Government have been expanded to meet the newly arising problems. It was a perfectly logical and inevitable development.

GOVERNMENT AIDS BUSINESS

There is no conflict between business and Government in any real sense of the word. Government today, as from the very beginning of this Republic, has been aiding business. Even the present administration, which is occasionally charged with being hostile to business, appropriated millions and created an improved Maritime Commission in order to build up a privately operated merchant marine. Until the exigency of the European war, by the almost unanimous decision the American people reversed its policy, I think it may be fairly said that this administration has done more to stimulate private enterprise upon the ocean than ever had been done before. The same record is to be found in the aviation industry, and those who are pleased to accuse the Government of having a defeatist attitude overlook the fact that under the present Government policy private enterprise in aviation has achieved its most profitable year since aviation began.

Out in my country—in the public-lands States—it is commonly charged that mineral lands are actually administered in the interests of big business rather than in the interests of the rank and file. The story of the tariff even now is the story of Government aid to business. Out in our country, where agriculture is the primary industry, we do not like the reciprocal-trade program of the present administration because we think that it subordinates the interests of agriculture to the interests of industry.

And so I could go on citing case after case to illustrate how Government aids business even while it is trying by various expedients to solve this fundamental problem of preserving private enterprise for the man at the bottom of the scale.

I do not want to be understood as intimating that Government has not made and is not making mistakes. I am merely trying to illustrate the fact, which is clear from our economic and political history, that the establishment at Washington has grown simply because business has grown; that this growth has gone on year after year, no matter what administration was in power; and that those who make up the Government are not hostile to business but are anxious to do everything in their power to foster and encourage it.

It is my conviction that business and Government can cooperate to solve this problem. Indeed, I assert that business and Government must cooperate, and that the European spectacle is an ever-present warning to us to get about the task without recrimination and without delay. It is easy to say, and, of course, it is quite true, that public spending is no cure for our economic ills. Deficit financing is merely a stopgap which cannot safely be allowed to continue indefinitely. Nor can we rely upon emergency profits from war trade. There may be a stimulus to business growing out of the war, but when all is said and done, profits are made only out of production, and when one-half of the world is bending all of its efforts and all of its energies to the destruction of wealth, it cannot hope to pay the other part of the world for supplying food to be consumed and materials to be blown away.

AN ECONOMIC CONSTITUTION NEEDED

Our duty lies here at home. If we want good business, we must first of all provide the masses of the people with the ability to purchase the things that they need and desire. Economically, it seems to me, we are in exactly the same position that founders of this Government were in during the period of chaos between the victory at Yorktown and the ratification of the Constitution. Business and Government both were then completely disorganized, but the leaders of that time had the wit and the will to confer and to draft a political constitution which established order and unity.

Have we the wit and the will to draft an economic constitution? We need it. We need, first of all, to define the powers and the responsibilities of those national corporations, those artificial agencies which carry on national commerce. We need to protect little business from the constant encroachment of big business, an encroachment which is not necessarily motivated by wrongful intent, but an encroachment which nevertheless does close the door of opportunity to the little man.

Why is it that State legislatures throughout the Union for the past 20 years have been building up trade barriers against one another? Simply because the growth of national business has overspread the local scene, and the little-business man feels that he is being overwhelmed. It is not government that encroaches upon his domain, it is business, big business.

It is not necessary to destroy big business in order to protect little business, nor is it necessary to clothe government with the authority to direct business. Discretionary control of business, whether big or little, when it resides in a political agency, is contrary to the fundamental principle upon which this Republic is founded. But if we are going to prevent the growth of that idea, then it is clear that we must find a national rule for national business which will permit big business and little business to exist side by side without further expansion of government control.

REGULATION DIFFERS FROM CONTROL

It must be remembered that there is a difference between control and regulation. The latter is the necessary rule of the game which must be laid down by government or else there is no order by which our economic life may be guided. When organized business which spreads beyond the local scene and covers States and even nations is not subject to regulation in this sense, the opportunity is afforded for the growth of those abuses which, through financial manipulation and unfair practices, lay the groundwork for arbitrary private control, a species of economic regimentation which is equally as bad as regimentation by public authority. Indeed, the one leads inevitably to the other, as the history of the present regime in Germany so eloquently proves.

We hear a lot of loose talk these days about the lost frontiers upon the part of both those who believe that government must supplant private enterprise and those who would abolish government regulation of commerce. It is true that the triumphs of inventive genius have not come to an end. It is true that greater and greater opportunities will be afforded mankind to live in peace and plenty as science and invention develop. It is true that new opportunities for profit will be uncovered as these new frontiers are discovered. But let us not forget that the geographical frontier of the past, which has disappeared, was the outlet to our ancestors when the concentration of economic power at home seemed to close the door of opportunity to them. When they could no longer successfully compete with uneconomic accumulations at home, when they were unable to acquire private property because of oppression and exploitation, it was possible for them to push on into the unknown to become the pioneers of new lands and to build new homes. Now they must acquire private property in some other manner, and the problem of discovering that manner so as to preserve private enterprise and private ownership of property is the question that is presented to us.

Businessmen and farmers, employers and employees, professional workers and those who work with their hands, and consumers all have a stake in the preservation of free enterprise. My own belief has long been that the solution is so simple that we have been unable to see it. We have persisted in treating the artificial business corporation as though it were a natural person, and although the Constitution of the United States gave the Federal Congress the explicit power to regulate all foreign and interstate commerce, we have persisted in refusing to let the National Government prescribe by law the duties and responsibilities of the corporations which carry on that commerce.

This refusal has proceeded out of a fear that it would mean more Government control of the activities of men. The fear was unfounded, but because we have failed to take a perfectly obvious means of making business free we have found ourselves watching the steady growth of bureaucratic power. But whether I am right or wrong in this belief that national charters for national commerce will liberate business from too much government and preserve opportunity for the masses of men, whether engaged in agriculture or in industry, of this I am certain—that the people of America have the courage and faith to maintain the principles of economic and political freedom to which all our greatest leaders have always been dedicated.

BUSINESS NEEDS ECONOMIC FREEDOM

Business needs the liberation of the natural person from the regimentation of monopoly as well as his protection from regimentation by government. There is no possibility for the continued expansion of business unless the power of the masses of men to purchase the products and services of business is steadily increased. A reasonable program for the preservation of private enterprise therefore calls for the exertion of our best talent to encourage farm ownership and agricultural profit upon the one hand and the stability of industrial employment upon the other.

Furnishing jobs for men is not the business of government; it is the responsibility of business. The first concern of every man who calls himself a defender of the institution of private enterprise is to make certain that private enterprise provides employment for all who are willing and able to work. Unfortunately, we too often think of labor as a commodity which may be used or set aside just as so much raw material may be used or set aside. This is a fundamental error, because business as well as government is created to serve men, and when it fails, first of all, to protect men, it fails to conserve its own best interest.

It cannot be too often repeated that the success of business is measured by the distribution of goods and services among men, and that this distribution is encouraged in a free economy.

Whatever tends to deprive men of their economic freedom is bad for business; and if there is any group in America which should be determined to cooperate with government in the elimination of all practices that restrain economic opportunity, it is such a group as that represented here today, the business executives of America.

Your interests and the interests of the common man are identical. You help yourselves most when you help him most.

The world is waiting for social and economic justice. We shall begin to achieve it when we cooperate to make certain that in America there shall be no people without property.

Letter From Administrator of Farm Security Administration Relative to Loans in Wisconsin

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

LETTER FROM WILL ALEXANDER

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to insert in the RECORD a letter received from Mr. Will Alexander, of the Farm Security Administration, giving a summary of its work in Wisconsin. This is a splendid showing, and I hope will be read by many people. It presents an answer to those who said the group to be benefited would and could not be rehabilitated. The program should be greatly expanded upon the basis of these fine results.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FARM SECURITY ADMINISTRATION,
Washington, March 22, 1940.

Hon. ROBERT M. LA FOLLETTE, Jr.,
United States Senate.

DEAR SENATOR LA FOLLETTE: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the State of Wisconsin.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 7,440 standard rehabilitation borrowers in your State had an average net income last year of $683.13 per family, as compared with $494.17 in the year before they came to F. S. A. for help. This represents an increase of 38 percent.

Moreover, these families increased their average net worth—over and above all debts—from $1,216.19 before they came into the F. S. A. program to $1,658.17 at the end of the 1939 crop year, a gain of 36 percent.

In other words, these families not only have added $3,288,331 to the wealth of their communities, but they also have increased their annual incomes by a total of $1,405,851. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the State.

At the same time, the survey showed that the borrowers in your State already have repaid $2,674,234 into the Federal Treasury as installments on loans totaling $7,979,921. The typical rehabilitation family in Wisconsin has borrowed $1,072.57, and already has repaid $359.44. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else; and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems, which have been growing steadily worse for more than a generation, it is financed out of relief appropriations, and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting, instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged $108.12 per family, or a total of $804,413 over a 4-year period.

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion, they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether debt reductions totaling $2,993,389 have been negotiated for the farmers in Wisconsin. This represents a scale-down of 38.3 percent. As a direct result of these adjustments, $68,163 in back taxes have been paid to local government agencies.

In helping rehabilitation borrowers to plan their farm operations, we always urge them to get away from one-crop farming, and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your State produced $1,381,301 worth of goods for home consumption last year, as compared with only $881,268 worth before they came into the F. S. A. program.

These families canned 1,835,597 quarts of fruits and vegetables last year, or an average of 247 quarts per family for home consumption. They also produced 2,332,961 gallons of milk, an average of 314 gallons; and 503,167 tons of forage, an average of 67.63 tons. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which came to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start, we have made every effort to assist them in getting adequate-size farms. Consequently, the borrowers in Wisconsin are now operating an average of 126.34 acres, or an increase of 39.37 acres since they came on the program. This increased acreage has not added materially to the production of commercial crops, however, since virtually everything raised on it is consumed on the farm. It simply means a better diet and a better standard of living for these families.

Another main objective of F. S. A. is to help tenants and sharecroppers get more secure land-tenure arrangements so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 3,970 tenants in your State have obtained written leases in place of verbal agreements.

In making the survey our field workers found that there are 10,441 families in Wisconsin which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-size farms of their own.

While it has been necessary to confine loans to certain counties because of the limited funds available, we had made 60 such loans in your State, totaling $468,870, up to the end of the last fiscal year. This year we are expecting to make about 74 Bankhead-Jones loans in your State, totaling approximately $536,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

WILL W. ALEXANDER,
Administrator.

One Hundred and Fourth Anniversary of Founding of New York Law School

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

ADDRESS BY JUSTICE FRANK MURPHY

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an able and significant address delivered by Mr. Justice Frank Murphy, of the Supreme Court of the United States, at a dinner celebrating the one hundred and fourth anniversary of the founding of New York University Law School, New York City, March 2, 1940.

In his address, Mr. Justice Murphy has pointed out some of the dangers threatening the survival of democracy in our country which deserve our thoughtful consideration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three weeks ago we paused in reverence to observe the one hundred and thirty-first anniversary of the birth of Abraham Lincoln. We paid tribute to a statesman whose life work is a monument to

his unqualified faith and his resolve struggle for the democratic principle that "all men are created equal."

It is three-quarters of a century since that struggle ended in tragic martyrdom. In the interim nations have perished and been born. The boundaries of States have been altered and altered again. Governments have come and gone. The economic life of most of the human race has undergone an amazing transformation and the greater part of the population of the earth has been convulsed by war.

Yet today the elementary principle for which Lincoln labored and died is still the focus of a vast, world-wide struggle. The great, eternal question that stirred the heart of the somber emancipator, that inspired the founding fathers to heroic deeds, and that has led men on a hundred battlefields to go cheerfully to their deaths remains a source of civil and international contention. It is the everlasting question of whether man shall live in freedom and equality under just and enlightened laws or whether he shall live in constant obedience to the dictates of those who rule by force.

It seems almost beyond comprehension that in this land, with its background of a century and a half of self-government and civil liberty, there should be doubt as to how that question will here be ultimately answered.

AMERICA NOT IMMUNE

Yet honesty compels us to recognize that such doubt exists today in as great a measure as at any time, perhaps, since the establishment of the Constitution. It exists primarily because for a decade the country has been economically ill, and to the consequences of that sickness America is no more immune, in the last analysis, than other nations where unemployment and its train of unhappiness, insecurity, and discontent have ended in the destruction of democratic governments.

To admit this possibility is not to question the loyalty of the American people to democratic methods and institutions. It is merely to recognize that insecurity, fear, hunger, and the other derivatives of economic depression can become so powerful that even life-long loyalties are temporarily obscured and forgotten. It is to recognize that men plagued to the point of desperation by the uncertainty of their very existence do not ordinarily keep their perspective.

They do not think of history at such times. They do not stop to remember that mankind has been searching for the freedom which we in America now possess ever since the beginnings of history. They do not reflect how painfully and slowly that freedom has been won.

We, gathered peacefully together this night, may remember these things. We may recall the fragment of democracy that came into being in the city-states of ancient Greece. We may remember the birth of Christianity with its ennobling emphasis on the dignity of the individual, the edict of Emperor Conrad II giving crude recognition to the principle of due process; the magic words of Magna Carta; the petition of right; the Declaration of Independence; and the Constitution with its Bills of Rights.

We here in this quiet moment may remember these things and realize the enormity of mankind's loss should America some day turn away from the reign of law and justice. The grave question, however, is not whether we now remember but whether we and our fellow members of the American democracy will continue to remember, regardless of what emergency or crisis may come.

There are those who urge us specifically to cast aside our heritage of liberty and self-government and to search for the solutions of our problems under different political systems. To a degree, there is in such specific counsel potential danger for democratic institutions.

SEES A GREAT DANGER

I am persuaded, however, that a greater danger—greater because it is more subtle, more insidious—lies elsewhere. It is the danger inherent in attitudes and beliefs that in one way or another we ourselves have come to entertain. It is the danger that lies dormant in the belief—so often sincere—that our national troubles are attributable to one group or another of the population. It is the danger born of the tendency to seek a scapegoat in a religious or racial or political or economic group.

Of such tendencies and such beliefs dictatorships are born. On such attitudes demagogs rely for their march to power. In the soil of dissension and mistrust the seeds are sown which blossom into destruction for the reign of law and justice—for all that is fine and enlightened in the relations of man to man.

It is well that a democratic nation be on guard against those who would seize power without popular consent. But the task of preserving a society based on justice and law is far broader than that. It requires, among other things, that each of us take upon himself responsibility for guarding against that mental climate of dissension and mistrust in which the institutions of law and justice sicken and die.

Upon the lawyers, and equally upon those who train men and women to be lawyers, that responsibility rests with particular emphasis.

You who study the law, who practice it, who interpret and administer the law, know as well as any and better than most at what cost a society such as ours has been created, after centuries of heartbreak and struggle. Having studied the growth of the law from distant times when common men knew no law but the word of the ruler, you know how fortunate are they who rule themselves by orderly and peaceful methods and who stand before the bar of justice equal with all others.

That is why, in a world where government by law is constantly threatened, legal practice involves far more than the pursuit of a vocation. Having chosen to serve as a practitioner of the law, the lawyer becomes also a custodian and guardian of the law as an institution of civilized government.

He cannot remain aloof from that responsibility. It is not enough that he conduct his practice with efficiency and integrity. It is not enough that he direct his abilities and his influence toward the correction of defects in the law. The lawyer should himself be alert to see the conditions that endanger the system of law, and he should help the Nation to see them also.

ASKS WHAT WE WANT

Do we want to keep a system of justice in which every man is entitled to a fair trial, to the benefit of legal counsel, to protection against self-incrimination—to every essential of due process?

Do we want to keep a political philosophy under which the individual, no matter how lowly, is free to speak his thoughts, to write as he pleases, to assemble peacefully with his neighbors, and to worship in the manner his conscience dictates?

Do we want to maintain an enlightened society in which even the most impoverished or unpopular member may look with confidence to the courts for protection against injustice?

The lawyer, knowing that at heart the American people do want to keep these imperishable splendors, has a mission to help them see how they can be kept—and, equally, how they can be lost.

It is in times like these, more than any other, that a democratic people need advocates of law and justice to remind them constantly that in a nation divided by suspicion and hatred these blessings cannot endure, but that in a land united by mutual understanding and friendship they will prosper and grow strong.

We need to be reminded that there is no hope in any program or philosophy which levels the finger of blame at a single group and seeks to bring peace and security by purging or suppressing that group.

We need to be reminded what a tragic delusion it is to believe that justice and liberty can be denied to part of a nation and maintained for the rest. In the last analysis, there is no halfway house between democracy and despotism. For persecution is a brutalizing force and, once unleashed, it eventually destroys even those who brought it to life.

We need to be reminded that when a people turn away from the reign of law, and equal justice under law, to a system of discrimination and persecution, it is not as if they merely discard a worn-out garment. They cast away, instead, the dearly won gains of centuries of human struggle and anguish. They set their faces backward and begin the long, tragic march back to those early ages when the individual looked to government not for justice but for life.

There are those who believe that America is the last hope of democracy on earth. This may well be true, but even if it is not, in the great eternal contest between the forces of freedom and the forces of autocracy, no believer in government by law, and certainly no student of the law, can afford to be merely a spectator. We cannot afford to be disinterested.

Our stewardship must be a brave one and an active one. Our faith in the society of free men must be a courageous faith. By the active, zealous, and ungrudging practice of a democracy, we must endeavor to preserve its unmatched blessings for the generation which follows ours. Only by so doing can we creditably discharge our obligation as free and enlightened members of the human race.

Farm Prices

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

LETTER TO THE SECRETARY OF AGRICULTURE AND HIS REPLY

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated March 6, 1940, which I addressed to the Secretary of Agriculture, and the reply thereto by the Secretary, dated March 21, 1940.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MARCH 6, 1940.

The Honorable the SECRETARY OF AGRICULTURE,

Washington, D. C.

DEAR MR. SECRETARY: On Monday night of this week I made a national broadcast with Senator ROBERT A. TAFT, of Ohio, the subject

being the First Seven Years of the New Deal. During the course of Senator TAFT's remarks, he made the following statement:

"Farm prices, which make the farmer's income standard, were in general lower in August 1939 than they were in August 1933 after the first boom, and before any of the New Deal farm-control measures began."

I would appreciate it if you could have a check made in your Department and give to me any comments you care to make in reference to the argument of Senator TAFT which I have quoted.

Yours truly,

LEWIS B. SCHWELLENBACH.

MARCH 21, 1940.

Hon. LEWIS B. SCHWELLENBACH,
United States Senate.

DEAR SENATOR SCHWELLENBACH: This is in reply to your letter referring to your broadcast with Senator ROBERT A. TAFT and requesting comments on the following statement made by Senator TAFT:

"Farm prices, which make the farmer's income standard, were in general lower in August 1939 than they were in August 1933 after the first boom, and before any of the New Deal farm-control measures began."

I wish to point out that there are two serious errors in that assertion.

First, it is not true that the New Deal farm measures had not been placed in operation by August 1933. Adjustment in acreage of the cotton crop of that year had already been made. The sign-up in the winter wheat adjustment program was nearly complete and farmers were preparing to plant their new crop on the basis of the contracts they had signed. Measures to boost the price of tobacco were already being taken. Corn-hog farmers were formulating their adjustment program. An emergency campaign to adjust forward contracts already made by tomato and other vegetable producers with canners was being pushed. At least one milk-marketing agreement and one fruit-marketing agreement were in operation and numerous marketing agreements were in process of formulation.

The rise in the prices of farm products which took place in the spring and early summer of 1933 was due in a large part to the farm program and the expectation that through it the pressure of tremendous surpluses of many kinds of farm products overhanging the market would be relieved.

Senator TAFT evidently remembers that there was a substantial improvement in prices of farm products after the Roosevelt administration came into office in 1933, but apparently he was not sufficiently familiar with the measures that were taken at that time to understand what caused the price rise.

Second, when Senator TAFT says that farm prices "were in general lower in August 1939 than they were in August 1933," he is just as much in error.

According to the Bureau of Agricultural Economics, the index of farm prices, with the period from 1909 to 1914 taken as 100, was 79 in August 1933, whereas in August 1939, the index of farm prices was 88. The higher 1939 price level, moreover, was reflected in higher cash income from farm marketings. It was nearly $200,000,000 greater in August 1939 than in August 1933. It was $419,000,000 in August 1933, and $601,000,000 in August 1939, exclusive of farm-program payments.

I wish to point out further that, in making his comparison, the Senator has carefully selected his months. If he really wants to give a clear picture to the American people, he ought to take prices for February 1933, before the Roosevelt administration took office, and compare them with prices for February 1940. Such a comparison would show that in February 1940 the farm price of wheat was 84.1 cents per bushel, as compared with 32.3 cents in February 1933; that the farm price of cotton was 9.97 cents per pound in 1940, as compared with 5.5 in 1933; that the farm price of corn was 54.7 cents per bushel, as compared with 19.4; that the price of hogs was $4.97 per hundred, as compared with $2.94; that the price of cattle was $6.84 per hundred, as compared with $3.31; and that the price of butterfat was 29.7 cents per pound, as compared with 15.8 cents.

The general index of farm prices was 101 in February 1940, compared with 55 in February 1933.

Farmers of the United States well know that they are far better off now than they were 7 years ago, and they will not be fooled by statements to the contrary. Most city people, on the other hand, have no reason to keep close track of farm prices and farm affairs. The farmers, who strongly support their program and do not want to see it misrepresented, have every right to ask Senator TAFT to correct the wrong impression he has given to those unfamiliar with the real achievements that have been made under the national farm program.

Sincerely,

H. A. WALLACE, *Secretary.*

Merit Rating System

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, March 22 (legislative day of Monday, March 4), 1940

LETTER FROM WILLIAM GREEN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which appeared in the New York Times of this morning, written by Mr. William Green, president of the American Federation of Labor, which is a very exhaustive and very convincing analysis of the opposition of labor to the introduction of the so-called merit rating system into the unemployment-insurance system, which is now being attempted, or at least agitated, in several States, including my own State of New York.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 22, 1940]

LABOR AGAINST MERIT RATING—YOUNG-WADSWORTH BILL INADEQUATE FOR NEEDS, FEDERATION HEAD FINDS

To the EDITOR OF THE NEW YORK TIMES:

The American Federation of Labor opposes all forms of merit or experience rating in unemployment-compensation laws. A statement on the proposed Young-Wadsworth bill released recently by Timothy J. Mahoney, chairman of the New York State Employers Conference, a group dedicated to the promotion of an experience rating system in unemployment-compensation laws, undertakes to state the position of organized labor to show that it has no real objection to such a system. He says:

"Diligent effort has been made to determine the position of organized labor in this State and of the national federation with reference to the proposed system of experience rating, but no real objection to the system has been clearly defined."

While Mr. Mahoney may be authorized to argue on behalf of a few large employers in stable industries who want tax cuts for themselves under experience rating laws, he is in no way competent to speak for organized labor. The fact that he has persistently closed his mind to the objections raised by bona fide labor organizations disqualifies him for the role which he has undertaken as interpreter of labor's interests.

BENEFITS CALLED INADEQUATE

The American Federation of Labor objects to experience rating as proposed by the Young-Wadsworth bill because it is simply a device to reduce the income of the unemployment-compensation fund. If the income were excessive in relation to the need for it, tax reductions could be justified.

The plain fact is that this is not the case. The benefits paid under the New York unemployment-compensation law are pitifully inadequate to provide reasonably for unemployed workers during the usual periods of temporary unemployment. The required waiting period is too long, the duration of benefits too short, and the amount of the benefit check too small for reasonable protection for many workers.

Mr. Altmeyer, Chairman of the Social Security Board, has recommended that waiting periods be reduced to 1 week, that maximum weekly benefits be raised to at least $20, and that the weekly rate be set as 66⅔ percent of full-time earnings in States whose funds are sufficient. New York requires a waiting period of 3 weeks and still retains a $15 maximum and a benefit rate roughly approximating 50 percent of full time weekly wages. Mr. Altmeyer recommended that every State provide for partial unemployment benefits. The New York law lacks this provision. He recommended that the duration of benefits be increased to a uniform period of at least 16 weeks. New York provides for only 13 weeks.

The large percentage of workers who exhaust their benefit rights while they are still unemployed, even in a year of improving business such as 1939, shows clearly the inadequacy of the duration provision of New York's law. The unused reserves which have been increasing, and which Mr. Mahoney believes labor has forgotten, should have been used to pay reasonable benefits. Every dollar so used would have returned promptly to businessmen through the

channel of consumers' demand for goods. That is the channel best able to stimulate business activity and provide more employment and more profits.

HIGHER TAX ADVOCATED

It is no fault of organized labor that the laws have been so miserly and have provided so inadequately the benefits needed to make the unemployment compensation system adequate. From the beginning of the study which led to the enactment of the Social Security Act I pointed out the need for reasonable Federal standards for unemployment compensation benefits. A large minority of the Advisory Committee in 1934 voted for a 5-percent tax in order to insure funds sufficient to establish adequate benefits. The committee tied on the vote for a 4-percent tax. Three percent was adopted simply because it was believed industry should not be asked to assume a larger tax burden.

The benefit scale which it was estimated a 3-percent tax could support was admittedly meager. Now that it is apparent from our experience to date that the income from a 3-percent tax (2.7 percent for New York State) can support a more adequate benefit structure, it is imperative that this needed improvement be made. To propose that the income be reduced, as it would be under the Young-Wadsworth bill, before adequate benefits have been paid, is to waste our opportunity to establish a reasonable unemployment compensation system without adding a cent to the present tax bill.

FOR ADEQUATE BENEFITS

Mr. Mahoney professes to be unable to understand how experience rating would interfere with better benefit standards. It is obvious that if the tax rate is designed only to replace the amount spent each year for benefits, as it would be under the Young-Wadsworth bill, employers would be directly concerned to keep benefit payments at a minimum. They would oppose reasonable improvements in the law. That makes it vital that adequate benefits be established and paid before this incentive becomes operative.

I may quote one State unemployment compensation director's experience with the law: "Experience rating is largely responsible for the protest of employers against the payment of benefits to unemployed workers. These protests often have no actual basis in law. Some employers have adopted the policy of protesting payment of benefits in most every case regardless of merit."

That the New York State employers' conference is interested in tax reductions rather than increasing employment under experience rating is clear from their resistance to a plan of experience rating which would permit lower or higher rates according to the experience of different employers but would produce the same average income that is now being paid into the fund. If they were interested in a sound system of unemployment compensation, they would seek that incentive to increased industry which adequate benefit payments would give and would welcome the establishment of a benefit scale as adequate as the present tax rate would permit rather than attempt to perpetuate the present meager benefits by reducing the income of the fund.

If experience-rating formulae provide any incentive to employers to stabilize employment, that incentive would be even greater if rates for unfavorable experience were increased in equal degree as those for favorable experience were increased.

FAULTS SEEN IN BILL

The Young-Wadsworth bill avoids that greater incentive. It is carefully designed to decrease the income of the unemployment compensation fund before a sound system of benefits is created. If the benefits were adequate, the outgo from the fund would be approximately the same as its current income. Tax reductions would not be possible, although tax increases would be unnecessary, because the present income can pay for better benefits. This explains the anxiety of the advocates of the bill to get experience rating adopted before adequate benefits are written into the law.

Experience rating does not lessen unemployment. Even under the Wisconsin system, in which the individual reserve formula used was designed to place the maximum responsibility for stabilization on each employer, a very small amount of stabilization has been accomplished as a result of the law.

An impartial study by Dr. Charles Myers found fewer than 11 percent of the surveyed firms had achieved any appreciable stabilization because of the act, even including the borderline cases to give the law the benefit of every doubt. These firms were among the larger ones. Although they were fewer than 11 percent in number, they employed nearly 23 percent of all the workers.

And, offsetting the achievement noted in stabilization, Dr. Myers found "the development of a tendency to avoid benefits by devices (particularly extreme spreading of work) which do not stabilize employment, and the fact that stabilization increases somewhat the volume of unemployment."

PRICE CALLED TOO HIGH

That is too great a price to pay for so-called stabilization. The American Federation of Labor still wishes to avoid devices and "policies that crystallize unemployment." Experience rating is such a policy. We are concerned to promote an increase in the number of jobs and to provide security for unemployed workers. It is because experience rating obstructs both those objectives that we oppose it.

Since the experience-rating formula of the Young-Wadsworth bill places so much weight upon the State experience factor rather than on the individual efforts of the employer to stabilize, even that degree of stabilization attained in Wisconsin cannot be expected to result if that bill should be adopted in New York. The incentive to stabilize employment is pared to a minimum both by the way in which the employer's rate is calculated and by the absence of a real penalty for failure to stabilize. There is no possible incentive in the bill to increase employment as distinguished from some statistical evidence of stabilization, which may simply mean work spread too thin.

The bill is a device to cut taxes, to reduce the income of the fund, and to prevent the development of a fair benefit structure which will honestly serve the purpose for which the tax was originally levied—the reasonable protection of the unemployed worker and the stabilization and stimulation of industry by maintaining consumer purchasing power on a more steady basis. That aid to industry is a road to reduction of unemployment. It should not be blocked by the short-sighted policy of experience rating.

WILLIAM GREEN,
President, American Federation of Labor.

WASHINGTON, *March 18, 1940.*

Equal-Rights Amendment

EXTENSION OF REMARKS
OF
HON. WILLIAM H. SMATHERS
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

STATEMENT BY GOVERNOR MOORE OF NEW JERSEY

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a release containing a statement by the distinguished Governor of the State of New Jersey, Hon. A. Harry Moore, on the subject of the equal-rights amendment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Governor Moore of New Jersey announced today his endorsement of the equal-rights amendment now pending in Congress and also in the New Jersey Legislature. In a statement to Miss Mary Philbrook, congressional chairman of the National Woman's Party, the Governor said:

"I approve of the equal-rights amendment.

"I feel that their adoption will be effective in removing discriminatory laws and will clear the way for women to work out their own salvation, especially in the industrial world.

"The doctrine of equal rights, which now operates in the exercise of suffrage, should be so extended that such inequalities as still exist to the detriment of woman's welfare will be wiped out.

"I believe the adoption of the equal-rights amendment will accomplish this."

Governor Moore's statement was in reply to an inquiry by Miss Philbrook as to his position on both amendments declaring men and women shall have equal rights. According to Miss Philbrook, who, in addition to being the congressional chairman of the National Woman's Party, is an active member of the New Jersey Committee to Eliminate Discriminations Against Women, Governor Moore has long been a warm supporter of the movement to obtain equality of rights for women and New Jersey women are very proud that their Governor has taken this splendid stand for the elimination of existing discrimination against women. Women of both parties in New Jersey are supporting the equal-rights amendment both in Congress and in the New Jersey Legislature.

Recently Mrs. NORTON, Congresswoman from New Jersey, and chairman of the Labor Committee of the House, declared that, in view of the wide demand for congressional action on this amendment, she felt the time had come when it should be submitted to the States for vote, and that such action would be in accordance with the democratic principle on which this Government is founded.

Mrs. Harvey W. Wiley, chairman of the National Woman's Party, wired Governor Moore today as follows:

"Congratulations on your advocacy of equal rights for men and women by State and national constitutional amendments. Your public recognition of this plan to wipe out inequalities which exist in law to the detriment of women has advanced a cause vital to

American democracy by many milestones and brings near the time when our fundamental law will enable all American citizens to share equally in the guaranties of our Constitution."

Teaching of South Dakota History

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 22 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS-LEADER

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Daily Argus-Leader of Sioux Falls, S. Dak., of March 19, 1940, entitled "As South Dakota History Is Being Taught."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls (S. Dak.) Daily Argus-Leader of March 19, 1940]

A SOUTH DAKOTA HISTORY IS BEING TAUGHT

The other evening Harold Card, editor of the Webster Reporter and Farmer, was thumbing idly through a textbook his son had brought home from the public schools. Its name was Our State, a history of South Dakota for sixth graders. It was copyrighted in 1937.

Scanning carelessly through the book, Editor Card stumbled upon some statements that caught his rapt attention. Intrigued by what he had found, he continued on, meanwhile wondering whether he was reading a New Deal fantasy or an authentic textbook on history.

Here are a few excerpts that drew his particular interest as he went through the pages of the book:

"At last it was decided that the country might as well have the revenue from the sale of drink, and the eighteenth amendment was repealed in 1934."

"A tax upon property is really not a fair tax."

The book also explains that trees had been cut down and ponds, lakes, and water pockets drained.

"So now," the text recited, "we have to pay for our mistakes with years of poor crops."

In the book also are references to the need for assistance in the drought areas and credit is extended to Tom Berry, former Governor, in a manner that resembles the utterance of a campaign manager.

A paragraph from the book on this subject follows:

"Governor Berry tackled these serious problems with a stout heart. Governor Berry made several trips to Washington to plead our cause and was able to get more help than we would have got otherwise, because he made the President and Congress see that the State needed more aid on account of the drought as well as the depression."

The textbook also affords a glimpse into the future with a particularly new dealish tint. The following excerpt serves as an illustration:

"When the boys and girls who are in school today grow up they will work only 5 or 6 hours a day, 5 days a week."

The book also, Editor Card points out, carries a reproduction of the now notorious picture of the skull of a cow that was used so effectively in The Plow That Broke the Plains. The picture is accompanied by the statement that it was from an animal "that perished in South Dakota from lack of food and drink."

A further reference of interest is the following paragraph from a discussion of the State in business:

"The cement plant which is located at Rapid City is still owned and operated by the State. It has netted a profit sufficiently large to warrant continuing it, but it probably does not yield as great a net income as it would if it were operated by an individual for his net profit."

Along with Editor Card we are surprised and amazed by the contents of a book that is apparently employed generally in the South Dakota schools as a textbook.

The book contains expression of opinion on highly questionable topics.

The statement, for example, that a property tax is not a fair tax is notable in this respect.

And then we have the conclusion that the reason for the drought was the fact that trees had been cut and drainage programs initiated.

The records show that there were droughts in South Dakota long before the white man came to the prairies. It further shows that there are more trees here now than when the pioneers came. The people, in truth, have planted many more trees on the prairies than they have cut.

A choice political statement is that concerning Berry and the relief funds. Its political implications are obvious.

Notable, too, is the assertion that the boys and girls of today will be required to work only 5 or 6 hours a day and 5 days a week when they become adults.

And then there is the discussion of the policies of the cement plant accompanied by the bland assertion that the net income would have been larger if the plant had been privately operated. Perhaps we should be happy to welcome that statement as an indication of the superiority of private over public operation. But it ignores a basic fact—the fact that as a State-owned plant it commands a virtual monopoly of State business. A private owner would not be favored in this fashion.

The writer of a textbook of South Dakota history, it seems, should confine himself to the facts. Let him tell his story as the records and the statistics reveal it. When he seeks to go into the field of opinion, he is trespassing beyond the proper boundary of such a volume.

Editor Card, we feel, should be thanked for bringing this subject into the limelight. We hope the discussion will induce educators everywhere to make a study of the possible implications of textbooks now in use with a view toward outlining a program to avoid the type of material appearing in the sixth-grade history from which the quotations in this editorial have been taken.

Census of 1940

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, March 22 (legislative day of Monday, March 4), 1940

LETTER FROM THE DIRECTOR OF THE CENSUS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have inserted in the Appendix a release by the Director of the Census, the Honorable William L. Austin, on March 20, 1940, which contains a letter written to the Senator from New Hampshire [Mr. TOBEY] by the Director of the Census.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF COMMERCE,
Washington.

William L. Austin, Director of the Census, has sent the following letter to Senator CHARLES W. TOBEY:

MARCH 19, 1940.

Hon. CHARLES W. TOBEY,
United States Senate, Washington, D. C.

MY DEAR SENATOR TOBEY: Now that the little census blitzkrieg which you led so gallantly seems about to have spent its force, and since we are approaching the Easter season when the spirit of charity and forgiveness should prevail, I am writing to ask you to join with me in binding up the wounds.

I am appealing to you to do this in the interest of a good census, and especially in the interest of more than 3,000 progressive cities whose chambers of commerce and leading citizens have organized to cooperate locally to see that the coming census is a good one. For, remember, these cities are about to have photographs taken which must be their official likenesses for the next 10 years, and it is important to them that the likenesses be sharply in focus.

These are the things which you can generously do now which will demonstrate that Americans, although partisans, can really get together for the common good after they have indulged in their political fun:

1. Write a letter, please, to Mrs. J. Warren Burgess, president of the Federation of Women's Clubs of Tulsa, Okla., telling her that you were in error when you announced over the radio that the census schedule of 1940 contained the question, Have you ever been divorced? Explain to her that you were in error in needlessly arousing the ire of many women, resulting in many violent protests to Members of Congress over a question which is not even in the schedule. Kindly explain to her that the question touching on this subject in the 1940 census is the same that has appeared in census schedules since 1890 and requires simply an indication of the marital condition of each person—man and woman—as of April 1, 1940. Each person will be listed as "single," "married," "widowed," or "divorced." If a divorced person is remarried, he or she will simply report "married," and there will be no probing into previous marital history. There will be no question on "how many times divorced," as you stated over the radio.

2. Please admit in your next radio address that when you stated that certain questions on occupation were asked only of men, and

not of women, you were completely in error, as the fact is that all employed persons, both male and female, will be asked to indicate the occupation and industry in which they were employed during the week preceding the census, and unemployed persons, both male and female, will indicate the occupation and industry in which they were last employed. Please be generous enough to admit, therefore, that this question has no relation to mobilization for war, but is intended simply to get basic statistics on the Nation's industrial and occupational skill.

3. Please be generous enough to admit that a large proportion of unemployment involves persons engaged in part-time employment and irregular employment, and that the best measure of the degree of such unemployment is the amount of wage income earned during the year. Be fair enough to explain that the main purpose of this inquiry on wages and salaries is to get a measure of this twilight zone between employment and unemployment; that the question on income involves only persons whose income is $5,000 and less and does not include income from dividends, interest, and other nonwage sources. It would be very helpful, in removing partisanship from the discussion of this question, if you would tell your followers that the congressional act directing the Census Bureau to make inquiries on unemployment was passed by a Congress controlled by your own party in 1929 and signed by a President of your own party.

4. Please be good enough to admit that the inquiry on home-mortgage data is not new in this census; that a Congress and a President (Benjamin Harrison), of your own party, in 1890 directed the Census Bureau to obtain this information and that no survey of housing conditions in the United States could be complete without this essential information.

5. Please be frank enough to state the recognized truth that bath and toilet facilities in any home are, perhaps, the most important characteristics to indicate the kind of abode; that they are vital facts in arriving at or justifying claimed values; and that no housing census would be complete without them. Please explain that municipalities, public utilities, real-estate men, bankers, and health authorities need these statistics to govern extensions of facilities in cities, and that these inquiries are for the public good.

6. Won't you please help to make your followers understand that the Census Bureau, through 150 years, has never violated the law requiring secrecy; that all of its executive staff, except the Director, is civil service; that the present Director, although a Democrat, has spent 40 years in the service, rising from a clerkship to the top; that he received most of his promotions during administrations of your own party; that he became Assistant Director during the administration of President Hoover; that even now our Assistant Director is a Massachusetts Republican, and that our chief statistician for population, who entered the service 30 years ago during the Taft administration, and the man who probably has had more to do in framing the income questions than any other man, is a Maine Republican.

7. Please be fair enough to admit that if there is any justified criticism over the manner of selecting local enumerators, such correction would be a responsibility of Congress, and that all censuses except one since 1870 have been conducted by a field force selected by your own party. I appeal to you in this manner because the quality and completeness of these 10-year surveys are of vital interest to men and women of all parties. They cannot be completely successful without public cooperation and to arouse public resistance through incorrect statements and improper implications is taking a desperate chance with public welfare.

With a sincere desire to have your cooperation rather than your opposition, I appeal to you to join in making the 1940 census successful. I appeal to you without any resentment for what has happened for I realize that to err is human; to forgive divine.

Respectfully yours,

WILLIAM L. AUSTIN, *Director.*

Frances Willard Centennial Total Abstinence Society

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

LETTER FROM ARTHUR CHARLES JACKSON

Mr. SHEPPARD. Mr. President, I ask that there be incorporated in the Appendix of the RECORD a letter to me from Mr. Arthur Charles Jackson, president of the Frances Willard Centennial Total Abstinence Society.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FRANCES WILLARD CENTENNIAL
TOTAL ABSTINENCE SOCIETY,
Washington, March 20, 1940.

MY DEAR SENATOR: Eight years ago I called your attention to the fact that Portland, Maine, is known to a million teachers, and other millions of young and old, as the birthplace of the world's best-loved poet, Longfellow; that it was the birthplace of the Christian Endeavor Society, which now has more than 7,000,0000 members in 80,000 unions in all parts of the world; and this past year the birthplace of the Frances Willard Centennial Total Abstinence Society, observing Frances Willard day in Statuary Hall on the anniversary of her death.

Today, March 20, is the one hundred and thirty-sixth anniversary of the father of prohibition—Gen. Neal Dow—also born in Portland, and regarded by students and well-wishers of humanity everywhere as one of the greatest benefactors of the human race.

The Portland Historical Society and the International Longfellow Society have placed a tablet upon the home where he was born, and hope that in the near future a suitable monument will be provided both for the city of his birth and for the Nation's Capital.

Peace, prosperity, and good will will become more abundantly the common lot of all when the lives of such Christian Endeavorers as Longfellow, Frances Willard, and Neal Dow are emulated by young and old.

Let us believe that every child of God, of whatever age, race, or religion, should have a right to life, liberty, and the pursuit of happiness, unmenaced and unpolluted by the frightful evils of the liquor traffic—a traffic regarded by millions of Christian men and women all around the world as one of, if not the deadliest, enemy of the human race.

Most sincerely,

ARTHUR CHARLES JACKSON,
President.

Shall This America Pass?

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

EDITORIAL FROM WHEELING (W. VA.) INTELLIGENCER

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Wheeling Intelligencer of March 14, 1940, entitled "Shall This America Pass?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wheeling (W. Va.) Intelligencer]

SHALL THIS AMERICA PASS?

On March 11, 1910, the first pay of the Phillips Sheet & Tin Plate Co. was distributed. It totaled $3,200, representing wages for the first 2 weeks of the company's existence.

That was the beginning of Weirton Steel.

When the thirtieth anniversary of this event rolled around the other day, another 2-week Weirton pay was distributed. This pay roll was $2,021,757.

There, in a nutshell, is the story of American industry under the system of free individual enterprise which made this country great.

It is the story of America itself—the land of opportunity; the land where no man wears another man's collar; where a man's achievements are limited only by his will and character and intelligence and energy and industry.

That is, it is the story of the America we have known until now. For the America dramatized by the epic of Weirton is under fire and has been since 1933.

We are told that the E. T. Weirs of this country are in reality its public enemies. They are held up to scorn as "economic royalists." We are told that they have cornered the land's wealth by trampling on the necks of the underprivileged; that, therefore, they must be curbed and restrained and their wealth seized by a benevolent government and divided among the poor. So we have restrictive laws hemming in and harassing business on every hand. We have confiscatory taxation to pay for a swelling army of bureaucrats and a wastefully administered system of public relief. We have governmental control and invasion of more and more fields of private activity. Finally, we have, emanating from the seat of government itself, the doctrine that pump priming is no

longer a temporary expedient for the stimulation of activity; that, as permanent policy, the Government must invest more and more funds in constructive enterprise, and take over the direction of a "planned economy." We are told that the old order is outmoded; that it belongs to the "horse and buggy" age and must be supplanted.

In short, we have taken a long stride toward a collectivist state; toward, to speak bluntly, plain, unvarnished socialism.

Is that what we want?

Let's see:

When E. T. Weir, his late brother, and the handful of associates who launched the Weirton enterprise started, they had nothing to go on but the attributes God had given them, developed in the hard school of personal experience. From these materials they fashioned the present Weirton enterprise.

Now, who has profited from their careers? Let's take E. T. Weir, the guiding genius of Weirton. Mr. Weir can wear only one suit of clothes at a time. He probably eats less food than the average mill hand he employs. He can ride in only one automobile. And our guess is that he works harder than anybody in his company. In other words, he gets relatively little more out of Weirton than do thousands of others. His mode of living doesn't differ greatly from that of the average American citizen.

The point we are trying to make is that the fact that E. T. Weir has accumulated wealth doesn't mean that he consumes that wealth himself. The property he controls, the wealth invested in his name, go to providing a living not alone for the families of the thousands of men employed directly by Weirton Steel but the thousands of others involved in supplying and servicing Weirton—workmen in ore mines, in coal mines, on railroads, on highways, in fabricating plants—in countless other places. In short, the intelligence and energy and vision and executive ability which built Weirton Steel have created a vast amount of wealth which is helping sustain many thousands of people.

The country is richer, the people better off because of E. T. Weir and the economic and political system which made his career possible.

Let's look at the other side of the picture.

Let's suppose that the Government, in the interest of humanity, confiscated the Weirton Steel Co. tomorrow. Let's suppose Mr. Weir's personal wealth were seized and divided up among the poor, and somebody like Tom Corcoran or Harold Ickes put in charge of the mills. How far would this wealth go? How long do you suppose the property would hold together? How long would there be a $2,000,000 pay roll to distribute every 2 weeks? And what would happen to the thousands of families that have been living comfortably from Weirton Steel?

Let's suppose the Government always had controlled the steel industry. Do you believe that industry would have been as far advanced as it is today or that as many people would have profited from it as has been the case?

Weirton Steel is but a single example in the great industrial and business structure of America. What is true of it is true in greater or lesser degree of countless other enterprises. They are the product of free initiative. They are what made this country what it is.

You may believe it an exaggeration to say that all of this is threatened, but the fact is there nevertheless. The New Deal is essentially collectivist. Socialism is the inevitable end of the current governmental trend. It is written in every New Deal act, stamped on every official move. The paralyzing influence of governmental invasion already presses heavily upon the land.

We have but two choices—to go ahead with this program or to turn back.

To go ahead means to keep the present regime in power. To turn back means to clean house in Washington. And 1940 may be the last opportunity we will have to do this job.

Think it over.

Costs of War

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE SUNDAY OREGONIAN

Mr. McNARY. Mr. President, I ask to have printed in the Appendix of the RECORD an article which appeared in the Sunday Oregonian of March 17, 1940, entitled "Unbearable Costs."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sunday Oregonian of March 17, 1940]

UNBEARABLE COSTS

In the concluding chapter of Capt. Lowell M. Limpus' recent book, Twentieth Century Warfare, it is stated that in Caesar's time it cost only 75 cents to kill a man. During the Napoleonic wars, as a result of modern methods, the cost had gone up to $3,000 a man. In the American Civil War it had risen still further, to about $5,000. Then came a still more rapid mechanization, and in the World War the cost was at approximately $21,000—dead, 8,538,315; expense, $180,000,000,000.

Now—even if there should be real fighting on the western front—it is estimated that the cost per death will be in the neighborhood of $50,000. So, as Captain Limpus puts it, it will cost as much to kill a single poilu on the Maginot line as it would have cost Pompey or Marius to dispose of 50,000 foemen.

General Mannerheim, in his radio address to the army after the armistice, fixed the losses at 200,000 for the Russians and 15,000 for the Finns. At $50,000 per man, that would mean the war bill is $10,750,000,000. It probably is lower, but only because of the great lethal efficiency of the Finns and the eagerness of the attackers. Certainly the Russians spent a great deal more than $50,000 for each defender who was slain; and probably in normal war, fought with modern machinery and numbers, the estimate of Captain Limpus will prove to be fairly accurate.

And considering a normal war on a large scale, what do all these figures add up to? What do they total? That should be obvious. They total bankruptcy for mankind. Nothing more—nothing less—exactly that.

Europe was bankrupt after the last war, and was only partially pulled out by the reserve strength of the United States, the overseas empires of Britain and France, the unexploited state of Russian resources, and the general fact that the outside world was less deeply involved than Europe. Today some of these strengths remain, at least in part. But it is possible they cannot hold up the structure again, even so inadequately as last time. So it is quite probable that if the cry of havoc spreads, and the nations really turn loose the dogs of war, there will come economic confusion such as we, still going our quiet ways, cannot now conceive.

Committee on World War Veterans' Legislation

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1940

Mr. RANKIN. Mr. Speaker, on yesterday the Committee on World War Veterans' Legislation reported a bill to compensate widows, orphans, and dependent parents of veterans of the World War.

Already there seems to be a barrage of propaganda and of misrepresentation going the round with reference to this proposed legislation. But I want to assure the House that we did the very best we could. We followed precedents set by the Congress in passing similar legislation with reference to dependents of veterans of the Civil War and of the Spanish-American War.

Newspapermen who are attacking this measure are evidently doing so without knowledge of its contents. I am sure that if they will read it carefully they will find that it contains safeguards against the very dangers of which they complain, since it limits the payment of compensation to widows who have no children by the veteran to the ones who were married to him during the war.

In my humble opinion, this measure will not cost one-third the amounts now being given as estimates, but it will take care of many needy dependents of deceased veterans.

One thing this proposed legislation has done—it has rediscovered Raymond Moley. Remember Raymond? He used to be what Westbrook Pegler calls a literary sharecropper here around Washington. That is, he wrote on the halves.

He is now a tenant at sufferance on the pay roll of News Week, one of these sawed-off magazines that are now crowding the parking space at the newsstands. In it he recently attacked me personally for having introduced certain bills at the request of the various veterans' organizations.

After having read his attacks on President Roosevelt, of course, I would not be surprised at anything he would say about anybody else. I am reminded of a little nursery rhyme which goes something like this:

The Saviour had his Judas Iscariot,
Who posed as meek and lowly;
But Washington had his Benedict Arnold,
And Roosevelt had his Moley.

Mr. Speaker, I want to assure the House that the members of the committee and the veterans' organizations have worked diligently on this matter in their conscientious efforts to do justice to all concerned. This measure does not go as far as many of us would like to go, but taking all factors into consideration, it was the very best we could do. Of course, it is subject to amendment.

Under permission granted me to extend my remarks in the RECORD, I here insert a copy of the bill, which reads as follows:

A bill (H. R. 9000) to provide more adequate compensation for certain dependents of World War veterans, and for other purposes

Be it enacted, etc., That part III of Veterans Regulation No. 1 (a), as amended, is hereby amended, by adding a new paragraph, IV, thereto to read as follows:

"IV. (a) Subject to the income limitation of part III, paragraph II hereof, as amended, the surviving dependent widow as hereinafter defined, child, or children, and/or dependent mother or father of any deceased person who served in the active military or naval service during the World War, and whose service therein was as defined by part III, paragraph I hereof, as amended, shall be entitled to receive compensation at the monthly rates specified next below:

"Widow but no child, $20; widow and one child, $28; widow and two children, $34 (with $4 for each additional child); now widow but one child, $12; no widow but two children, $18 (equally divided); no widow but three children, $24 (equally divided) (with $3 for each additional child; total amount to be equally divided); dependent mother or father, $20; or both, $15 (each).

"(b) As to the widow, child, or children, the total compensation payable under this paragraph shall not exceed $56. Where such benefits would otherwise exceed $56, the amount of $56 may be apportioned as the Administrator of Veterans' Affairs may prescribe."

SEC. 2. For the purpose of payment of compensation under the provisions of this act, the term "widow" shall mean a woman who was married prior to July 3, 1921, to the person who served; or who was married prior to May 13, 1938, to the person who served, provided a child was born of such marriage: *Provided*, That the provisions of section 3 of the act of May 13, 1938 (Public, No. 514, 75th Cong.), insofar as they are not inconsistent with the provisions of this act, shall govern the determination of eligibility of a widow for benefits under this act.

Foreign Silver Purchases

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS OF MARCH 21, 1940

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Daily News of March 21, 1940, paying a well-deserved tribute to the Senator from Delaware [Mr. TOWNSEND] for his effort in having presented to the Senate certain silver legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of March 21, 1940]

SILVER TAKES A LICKING

"Silver," according to ex-Senator Gore, "has all the attributes of money—except value."

The Senate Banking and Currency Committee seems to have come around to Mr. Gore's view. Yesterday it voted, 14 to 4, to endorse Senator TOWNSEND's bill ending our purchases of foreign silver. And high time, say we.

The Treasury has been shoveling out good American dollars in return for all the world's silver—new silver out of the ground, old silver out of strongboxes and jewel cases, and rainy-day hoards. And it has been paying much more than the metal is worth.

Why? We don't need it. All Mr. Morgenthau does with this foreign metal is bury it. He could never sell it, in a free market, for anything like what it cost him.

True, this Santa Claus policy of ours is "good for foreign trade." It would also be good for foreign trade if at intervals we simply gave away a billion dollars abroad, first come first served.

To stop our foreign silver purchases will be to step on some toes. Mexico's, for instance. Mexico is the world's biggest producer of silver. Under the law now facing repeal we subsidized Mexico by buying the output of its mines. And what does the "good neighbor" get in return? A kick in the pants.

Chairman Eccles, of the Federal Reserve System, who comes from an important silver State, Utah, said a year ago that "When you buy the world's silver you tend to destroy the use of silver elsewhere in the world." That is just what has happened.

Mr. Eccles added, "The only use we have for silver is to make more excess reserves, which are already excessive, and more bank deposits, which also are already excessive."

In other words, the silver policy is a carrier for the germ of inflation.

It looks now as if Senator TOWNSEND's one-man crusade for repeal is going to be a winner. We hope so.

The Government's Obligation to the Farmer

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by me over the Columbia Broadcasting System on March 19, 1940, on the subject The Government's Obligation to the Farmer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends in the radio audience, some 10 days ago three well-known Americans went on the air and told the American farmers of the friendship of the present administration for the American farmer.

The three men were President Franklin D. Roosevelt, Secretary of Agriculture Henry A. Wallace, and Postmaster General James A. Farley. Mr. Farley also is chairman of the Democratic National Committee. The country was assured that the broadcast was nonpolitical in nature.

The record does not exactly bear out that assertion, but I suppose that in a campaign even a President, a Secretary of Agriculture, and a Democratic national chairman may be excused for taking advantage of a more or less imaginary anniversary to spread some political propaganda.

This week the Senate is debating and will pass a bill appropriating approximately $1,000,000,000 for the relief of the American farmer.

I say that when it is necessary for the Federal Treasury to contribute a billion dollars annually to the farmers of America, that is a pretty certain sign that the American farmer is not prosperous.

And when we consider also that the Secretary of Agriculture himself says that the American farmers' income for the past 10 years has averaged $2,000,000,000 a year less than his services to the consumers of the country entitled him to receive, I say that is another sign that the American farmer is not prosperous.

The American Farm Bureau has issued a statement that instead of appropriating $200,000,000 for parity payments, as voted by the House of Representatives, the Congress ought to appropriate $700,000,000 to take care of the producers of five farm crops alone—cotton, wheat, corn, tobacco, and rice.

The New Deal has had 7 years to work on the farm problem—and the best it can produce is the fact that subsidies from the Federal Treasury running close to a billion dollars still leave the American farmer underpaid at least a billion dollars a year.

I say that a farm program which calls for a billion dollars a year from the Federal Treasury to partly make good the American farmer's annual deficit of $2,000,000,000 a year as his share of the national income is nothing to hold an anniversary celebration about.

When the Senate gets through with the agriculture appropriation bill, it will take up a proposal to extend the Reciprocal Trade Agreements Act for another 3 years.

Between the agriculture supply bill and the proposed extension of the Reciprocal Trade Agreements Act, we have an illuminating picture of what the New Deal has done for the American farmer.

Now, I am not criticizing the good intentions of President Roosevelt, nor of Secretary Wallace. I have a high regard for the intentions of both of them. I have a great liking also, personally, for genial Jim Farley, but I must say I don't know exactly where he gets a ticket as either a farm expert or as the farmer's friend. But I suppose they felt it was necessary to bring the Democratic Party into the 1940 picture some way. The President wanted to talk to the farmers as President rather than as a possible Democratic candidate for reelection, and Henry Wallace didn't want to make a partisan speech. So Jim Farley was brought in to remind the farmers that President Roosevelt and Henry Wallace, and their deeds, are hooked up some way with the Democratic campaign in this year 1940.

I say I give both President Roosevelt and Secretary Wallace credit for good intentions—the kind of good intentions that have paved the road to a place where the American farmer operates at an annual loss, according to Secretary Wallace himself, an annual loss of some $2,000,000,000 a year; to a place where 26 big insurance

companies own more than one-half billion dollars worth of farm lands, all acquired by foreclosure; where the farmer is getting only 40 cents of the dollar the consumer pays for food, whereas he used to get 53 cents of that dollar; to a place where he has to depend upon subsidies from the Federal Treasury to keep himself and his family alive and on the farm.

My friends, much as I admire and like and respect the very fine qualities of mind and character that are Henry Wallace's, I must say to you, regretfully and sadly, that the New Deal has failed to solve the farm problem.

I do not say it has not helped some farmers. The things done in the past 7 years have done more than that. The benefit payments, the conservation payments, the parity payments, the commodity loans, the subsidization of exports of surpluses and purchases of surpluses for relief distribution, lower interest rates—these have saved thousands of farmers from being foreclosed off their farms and from going on relief rolls.

But while I am glad that farmers have been helped, the fact remains that the farm problem has not been solved, and cannot be solved, by such methods.

The New Deal was going to restore parity prices for major farm products in the United States. Even after paying out $500,000,000 in soil-conservation payments; after spending $200,000,000 a year to dispose of surpluses at home and abroad; after expending $150,000,000 through the Farm Security Administration; after lending hundreds of millions in commodity loans—after all these expenditures from the Public Treasury, almost three-quarters of a billion dollars more annually would be required to bring parity income to American farmers, we are told by the American Farm Bureau.

My friends, I ask you in all seriousness, Is that a result which justifies an anniversary celebration at which the genial Democratic national chairman appears as the bearer of gifts to the American farmer?

I am reminded of an old saying—

"Beware of the Greeks bearing gifts."

As I remember the story, at the seige of Troy the Greeks made a gift to the Trojans of a huge wooden horse. Why the Trojans accepted the gift horse I never have quite understood. But they did, and gave it a place of honor in the public square. And after dark, Greek soldiers came out of the body of the wooden horse, and opened the gates of Troy to the enemy outside.

My friends, we might take a lesson from ancient history—

"Beware of the Greeks bearing gifts."

Gifts from the Federal Treasury, I say to you, are not the answer to the farm problem.

It is true that until we find the answer, the subsidies from the Treasury will continue. We cannot afford to ruin agriculture entirely.

The reason I am supporting these payments from the Treasury is this: Because the national farm program is a failure; the Treasury of the United States has to be drawn upon, or our entire economic structure will collapse.

The New Deal was going to restore the foreign market for American farm commodities through the reciprocal-trade agreements. The American farmer also was promised that these agreements would not take away his American market.

Now, what has been the result?

Well, I will tell you in a few brief sentences, stating facts from the record, and allow you to draw your own conclusions.

The Trade Agreements Act has been in effect 5 full years and a few months over.

I am going to give you the figures for those 5 years, compared with the 5 years immediately preceding the 5 years of the trade agreements.

These figures are taken from the record, my friends—from the record as reported by the Bureau of Agricultural Economics of the Department of Agriculture. I have presented these figures in the American forum of the air, where a panel of Congressmen supporting the trade agreements had every opportunity to dispute them, and did not dispute them. I have presented these figures to the Senate of the United States, and they have not been disputed. They cannot be disputed. They are the official record, part of the record on which the New Deal must justify itself to the farmers of America in the coming campaign.

Now the Bureau of Agricultural Economics in the Department of Agriculture, in its records of exports and imports of farm products, makes a division between imports that are competitive, and those that are noncompetitive with the commodities produced on American farms.

Noncompetitive products are those such as rubber, coffee, bananas, and other things that are not produced in marketable quantities—or not produced at all—in the United States. Competitive products are those which can be supplied the American market by the American farmers. This division is made by the experts in the Department of Agriculture, not by me. These figures are from the reports of the Department of Agriculture—I did not make them up; I did not compile them. I just pass them on to you for whatever they may be worth.

But I will say that they are highly significant.

The reports of the Bureau of Agricultural Economics show that during the 5 years preceding the trade agreements—ending June 30, 1934—the average annual imports of competitive farm products was $495,395,000. Keep that figure in mind—$495,395,000.

For the first 5 years of the trade agreements the average annual imports of competitive farm products into the United States was $616,149,000. I repeat the figure—$616,149,000.

During the 5 years of the trade agreements imports into the United States of competitive farm commodities have averaged, annually, $120,754,000 more than in the 5 years before we had the trade agreements.

That is an increase of 25 percent.

Yes, the trade agreements have helped farmers to the tune of $120,754,000 a year, but the help has gone to farmers of foreign lands, not to the farmers of America.

How about the imports into the United States of noncompetitive farm commodities? These have decreased from an average of $574,143,000 annually during the 5 non-trade-agreement years to $536,933,000. This is a decrease of $37,210,000 annually, or 7 percent.

How about exports of American farm commodities out of the United States to foreign lands?

Well, in the 5 non-trade-agreement years—and these include 1931, 1932, and 1933—the exports of American farm commodities averaged $982,593,000.

For the 5 trade-agreement years the average annual exports from the United States of American farm commodities amounted to $784,244,000.

Exports of American farm products averaged $184,389,000 a year less under the trade agreements. This is a decrease of approximately 20 percent.

Here, in a nutshell, is the result so far of the trade agreements so far as the American farmer is concerned.

Under the trade agreements, imports of competitive farm commodities increased 25 percent, imports of noncompetitive farm products decreased 7 percent.

Under the trade agreements, exports of American farm commodities decreased 20 percent.

In other words, farmers of foreign lands increased their sales in the American market 25 percent; at the same time the American farmers lost 20 percent of their foreign markets.

Yes; the New Deal trade agreements have helped the farmers—trouble is they have helped the foreign farmers, not the American farmers.

Another thing. In dealing with the farm problem contradictory programs have been in effect.

On the one hand we have Secretary Wallace subsidizing American farmers to reduce production on American farms. On the other hand, we have Secretary of State Hull subsidizing foreign farmers to produce more on foreign farms for the American market.

I say those two programs, working against each other, just do not make sense.

Now, I always have been opposed to making a political football of the farm problem. I have not played partisan politics on the farm question. My record shows that plainly enough. I have supported farm legislation that was opposed by a Republican President; I have supported loyally farm legislation sponsored by a Democratic President. I have voted always for whatever legislation came before the Senate for the purpose of helping agriculture, without regard to whether it was proposed by Republicans or Democrats, when I was convinced it would help the farmers.

But I must say that President Roosevelt, in my judgment, did not help the situation any a week ago Friday when he placed the blame for the farmer's ills on the policies of the 10 years preceding his New Deal administration. A comparison of those 10 years with the 7 years of the New Deal, since he has invited that comparison, does not indicate that the New Deal has been successful so far as agriculture is concerned. I am not going outside the field of agriculture in my discussion tonight.

Again I must go to the record. Summarized, here is the record:

In the 10 Republican years to which he referred, cash farm income averaged $9,392,000,000 a year, for the 7 New Deal years the average has been $7,247,000,000, or $2,000,000,000 a year less.

Average annual income per farm in the decade before the New Deal was $1,483; for the New Deal years it has been only $1,062. If those 10 years were bad for the American farmer, what word can I use to describe his plight under the New Deal?

As I have said before, I am not criticizing nor impugning the intent and objectives of the New Deal attempts to help agriculture. I am not saying that Secretary Wallace has not devoted himself untiringly, unselfishly to trying to help the American farmer.

But I do say that, measured by its announced objectives, the New Deal farm efforts have failed.

One objective was to rid us of the problem of burdensome surpluses. Now there is more surplus wheat, more surplus cotton, more surplus corn in the United States today than when the New Deal started its many programs.

Another objective was to restore parity prices—only beef cattle have been selling at parity prices, and the New Deal program left the cattle industry outside its sphere of helpfulness. The outbreak of the European war was followed by some rise in farm prices. But at the time the war broke wheat was selling at 51 percent below parity, cotton was 44 percent below parity, corn was 43 percent below parity, and so on through the list of farm commodities.

In line with this was the objective of restoring parity income to agriculture. Secretary Wallace himself, in published statements and before congressional committees, has admitted repeatedly that farm income is $2,000,000,000 under parity.

Now, suppose we take a look at this matter of parity prices and parity income. What parity means, under the definition made by Congress in writing the Agricultural Adjustment Act, is that the purchasing power of farm commodities, in terms of commodities farmers buy, will be the same as it was during the base period 1910–14.

This 1910–14 yardstick was selected by Congress on the assumption that farm and city income were relatively in balance during

that period; that in those years farm commodities flowed freely to the cities and city goods flowed freely to the farms.

What is the situation today? Secretary Wallace himself told the Senate Finance Committee, of which I am a member, when he appeared before us a few days ago. Prices the farmer receives are so low, compared to prices he has to pay, that his purchasing power is about three-fourths what it was in that base period, 1910–14.

Let me illustrate what I mean. There is a mail-order house that issues catalogs. We folks in the Farm Belt get those catalogs. The prices listed in them tell the story as well as it can be told and in language which I believe anyone can understand. We just compare those prices paid with prices received by farmers for their products. Here are some facts:

In January of 1913 a farmer could buy 100 pounds of eightpenny nails with what he received for 31 pounds of hog. In January this year it took 70 pounds of hog to buy 100 pounds of eightpenny nails—more than twice as many pounds of hog. If he tried to pay with cotton instead of hogs, it took 36 pounds instead of 17—again more than twice as much. In terms of beef, the 100 pounds of eightpenny nails cost 53 pounds instead of 39; in terms of wheat, 3.3 bushels instead of 2.4 bushels.

Suppose the farmer buys a 2-row check corn planter. In 1913 he could have bought it with 258 pounds of cotton, in 1940 it took 653 pounds; with 168 pounds of wool in 1913, 235 pounds in 1940; 579 pounds of beef in 1913, 956 pounds in 1940; 460 pounds of pork in 1913, but 1,268 pounds of hogs in 1940; for 63 bushels of corn in 1913, but 124 bushels in 1940; 40 bushels of wheat in 1913, but 78 bushels in 1940.

In 1913, 5.8 pounds of cotton would buy a pair of overalls; the same overalls this year would take 9.6 pounds of cotton. It took 10.3 pounds of hog in 1913 to buy this same pair of overalls; today, 18.7 pounds. The wheat grower could buy these overalls in 1913 with the proceeds from the sale of nine-tenths of a bushel of wheat; this year it would take 1.15 bushels of wheat. The corn grower could buy the overalls in 1913 with 1.4 bushels of corn; 1.8 bushels in 1940. Even the cattleman, better off today than most of his farm neighbors, would have to give 14.1 pounds of beef to buy a pair of overalls that he could have got in 1913 for 13 pounds of beef. How can the farmer succeed when what he buys costs twice as much as what he sells?

My friends, I believe I can tell you why the New Deal farm program has failed, just as its attempts to solve the unemployment problem have failed.

What is needed is cooperation of Government, finance, industry, business, agriculture, labor. What we have got is the separation of finance, industry, business, agriculture, and labor into pressure groups fighting each other.

I am more and more convinced that the farm problem, the unemployment problem, and the business problem of the United States cannot be solved by attacking each separately. Certainly not by these groups fighting each other. United we stand, divided we fall.

And I am certain that we cannot attain national prosperity by reducing the production of our farms, by reducing the production of industry and thereby of labor, and through doing less business.

In other words, the program of scarcity will not work. It cannot work. We ought not to try to make programs of scarcity our objective.

What we must have is more abundant production.

But, and I say this with full comprehension, that it justifies, from a short-range viewpoint, the attempts of the New Deal to formulate a national farm program.

I say also that business and industry and finance and labor cannot expect to have the farmer produce in abundance while they are producing in scarcity. Temporarily the other elements in our national economy may appear to have the advantage of the farmer when they can hold down the production of the things the farmer must buy and thereby increase the prices they receive for what they have to sell, while the farmer's surplus production forces down the prices on the foodstuffs and other commodities these groups get from the farmer. In the long run they will suffer, as they are suffering today, from the destruction of the farmer's purchasing power.

We are not going to solve the farm problem, nor the unemployment problem, nor the problem of business by short-cut methods. I think that is a fundamental fallacy in the attempts to date. The farm program, the relief rolls, and the efforts to prime business have attempted to short-cut the answer by dealing with effects instead of causes.

I do not claim everything done by the New Dealers is wrong; but, no matter how good their intentions, the results to a great extent are failure, doubt, and confusion throughout the Nation.

The farmers are in a terribly confused situation, and there isn't any easy way out. It means that we will all have to join hands and each do his part all along the line. We will all have to be more efficient producers and more economical producers.

If we can find a way to put the unemployed back to work—and I believe that job can be done—confidence will be restored. If confidence is restored, I am sure jobs would be forthcoming for everybody who wanted to work and who could work, and they could find jobs. That would make a big market at home, which we do not have now, for our surplus raw material and manufactured products—a much bigger market than we are going to be able to find abroad. Now, I am not narrow enough to believe that we have not got to broaden our foreign trade as well. We want all the foreign trade we can get, but I am not in favor of making the farmers pay the bill.

As I see it, the answer will be obtained by simpler, but more difficult, methods. The easy way out is for Congress to appropriate some money or to pass another law giving some group a special advantage. The hard way is the one we are going to have to adopt, unless we want to face a still harder way.

I think we have reached the place where we must choose between cooperation or regimentation.

There still is time for government, finance, business, industry, agriculture, and labor to get together on a give-and-take business and work toward a system of free exchange of goods and service in the United States; for the lowering of trade barriers between the United States and other nations and among the other nations.

We are going to have to tackle these various group problems as parts of one national problem. If groups involved do not cooperate, I can see the time coming when we in the United States will get the other alternative—regimentation, with strict Government control and regulation of every business and every person.

As for me, I prefer cooperation to regimentation. And that is the position of the Republican Party today, as anyone can discover by a careful reading and analysis of the Glenn Frank report.

Now, getting back to the farm problem specifically:

I do not favor trying to undo, nor to cease doing, all the things that have been done in the past 7 years.

The soil-conservation program is basically sound, but the machinery of operation is unwieldy, costly, and too much centralized as to control. It must be kept, and simplified, and improved as conditions warrant.

As long as business and industry, through tariff protection and other price-raising devices; as long as labor, through bargaining contracts and other wage-lifting devices, compel farmers to buy on high-price levels while selling on low-price levels—just that long we will face parity payments, commodity loans to raise price levels, subsidization of sales of surplus commodities at home and abroad. All these are attempted short cuts to equalize advantages that organized industry and organized labor, both measurably controlled as to quantity production, have obtained over an agriculture that is unorganized and uncontrolled as to quantity production.

I say again we face a choice—cooperation or regimentation.

Purchase of Foreign Silver

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE WASHINGTON POST OF MARCH 22, 1940

Mr. McNARY. Mr. President, I ask to have printed in the RECORD an article from the Washington Post of March 22, 1940, entitled "Mexico Won't Like It."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 22, 1940]

MEXICO WON'T LIKE IT

Senator TOWNSEND'S energetic campaign to put a stop to Government buying of foreign silver has borne fruit. By a vote of 14 to 4 the Senate Banking and Currency Committee has reported favorably on his resolution to that effect, despite Secretary Morgenthau's reported opposition to discontinuance of the buying program at this time. Because of the emphatic character of the committee's endorsement, chances of passage of the Townsend bill seem decidedly improved.

The economic arguments in favor of abandonment of the purchase of foreign silver at artificially high prices are too well known to require repetition. Our acceptance of silver on highly favorable terms for the seller certainly supplies other countries with dollar exchange and thereby enables us to export goods that otherwise might not be bought. Nevertheless it is a very poor exchange from our viewpoint to give up valuable goods in return for an overvalued metal of which we already have a superfluity.

It is also true that withdrawal of the market support for silver afforded by Treasury purchases would mean a drop in the world price of silver, with consequent shrinkage in the estimated value of our silver hoard. But such price declines will come whenever we suspend purchases, and the longer we delay the greater the losses to be expected.

The chief sufferer from cessation of foreign-silver buying would be Mexico, the world's largest silver producer. Last year our purchases of Mexican silver amounted to $31,597,000. Recently we have been buying between $2,000,000 and $3,000,000 of Mexican silver monthly. These are very substantial sums which Mexico will undoubtedly miss if the Townsend bill should pass.

If the Mexican Government showed any disposition to grant return favors, or even to accord reasonably fair treatment to Americans with interests in the country, there would be regret over the incidental injury to this neighbor resulting from stoppage of silver

buying. But in view of Mexico's confiscation of American-owned railroad, oil, agrarian, and other properties, estimated to be worth over $1,000,000,000, our sympathies are dulled.

Perhaps loss of the benefits resulting from our silver buying might even cause Mexico to consider the advisability of making a few concessions in return for bounties received, and in the hope of more to come.

Slandering Kentucky

EXTENSION OF REMARKS

OF

HON. A. B. CHANDLER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, March 22 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE JACKSON (MISS.) DAILY NEWS OF MARCH 20, 1940

Mr. CHANDLER. Mr. President, I ask unanimous consent to have inserted in the RECORD an article appearing in the Jackson (Miss.) Daily News under date of Wednesday, March 20, 1940, entitled "Slandering Kentucky."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Jackson (Miss.) Daily News of March 20, 1940]

SLANDERING KENTUCKY

Well, here's a fellow who is just a gol-darned chump even if he is president of an organization with a highfalutin name.

A. L. Brandon, president of the National Association of Golf Course Superintendents, says that Minnesota bluegrass is better than Kentucky bluegrass for golf fairways; that it is sturdier, grows better, and stays green longer.

We don't believe a word of it, and right here is where we rush to the rescue and defy a slanderer of the fair name of the State of our forebears.

There is no bluegrass better than Kentucky bluegrass.

There are no women more beautiful than Kentucky women.

There are no horses faster than Kentucky horses.

There is no whisky better than Kentucky whisky.

There are no colonels more militant than Kentucky colonels.

There are no hams more luscious than Kentucky hams cured in the curling smoke of a slow hickory-wood fire.

There are no mint beds more luxuriant than the mint beds of Kentucky.

There is no tobacco better than the tobacco of Kentucky.

And all that goes, no matter who may doubt or dispute. We are ready at any moment to fight a duel on the subject.

John Nance Garner

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. MORRIS SHEPPARD, OF TEXAS, MARCH 23, 1940, AT WASHINGTON, D. C., ON JOHN NANCE GARNER

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by my able colleague Mr. SHEPPARD, delivered over the radio on March 23, 1940, on the subject John Nance Garner.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thirty-seven years ago, on March 4, 1903, a young Texan took his seat in the Congress of the United States. He was a young man in whom I was more than casually interested. Not only was he a fellow Texan, but he had been born in the congressional district which I represented in Washington, and had grown to maturity in that district before moving westward in search of broader opportunity. He found it in the far-flung land of promise along the Rio Grande in southwest Texas at Uvalde. After serving as county judge and then as a member of the Texas Legislature, he came to the Congress of the United States, and began a career of such distinction that it is unsurpassed by that of any other living American statesman.

I refer to JOHN NANCE GARNER, Vice President of the United States, and a candidate for the Democratic nomination for President.

The story of JOHN GARNER and his forebears is a saga of pioneer America. Nearly 100 years ago, while Texas was yet an independent republic, his grandmother, Rebecca Walpole Garner, having been left a widow with six children came from Tennessee and built her humble home on Blossom Prairie in Red River County, Tex. She had bundled her three sons and three daughters into a covered wagon, and with her own firm hands holding the reins, she had driven 700 miles toward the western horizon, until the broad expanse of Blossom Prairie in Texas opened before her eyes.

With the help of kinsfolk who had preceded her, she built her cabin, put in a crop, and reared her children. Her youngest son married the daughter of another pioneer family, and of that union JOHN NANCE GARNER was born in 1869. He grew up on the farm and was a good hand at all kinds of farm work. He studied at night and began to prepare himself for a public career. With little money but with an abundance of enthusiasm he left home when he was 19 to make his own way in the world. He studied law and was admitted to the bar in Clarksville, the county seat, and about 2 years later located in Uvalde.

When JOHN GARNER came to Washington a few years later he was already equipped with experience in both county and State governments in Texas, and his energy and ambition gave promise of the enviable reputation he was to acquire in the years to come. His native intelligence, his remarkable grasp of the fundamentals of government, and his rare comprehension of human nature and human needs caused him to become within a very few years one of the leaders in the Congress.

As his colleague in the House for 10 years, and later from my place in the Senate, I saw him advance through various stages of prominence in Congress until he became minority leader of the House and then Speaker of that body. During those 30 years—years of war and of peace, years of prosperity and of depression, years of hope and of despair—JOHN GARNER wrote into the political history of our country a record of public service which signalized him as Presidential material. His courage, his patriotism, his common sense were bulwarks of support for every sound and liberal principle of government through all these years. His leadership of the Democratic minority both in strategy and in debate in the Republican House elected in 1929 was one of the chief factors in the election of a Democratic House in 1931, the House of which he became Speaker.

When the Democratic National Convention was held in 1932, GARNER was strongly urged for the Presidency, a tribute to his achievements in the public interest. When a deadlock seemed imminent, he released his supporters in order to make possible the nomination of Franklin D. Roosevelt, an evidence of his ability to work unselfishly with his colleagues and associates.

During his service of 7 years as Vice President he has lifted that position from a place of virtual insignificance to one of influence and power second only to the Presidency. Probably never before in our Nation's history have the duties and responsibilities imposed upon American statesmanship been more exacting and more arduous than during the past 7 years. I do not believe it overstates the fact to say that GARNER has handled with consummate efficiency the biggest task that ever confronted a Vice President of the United States. It has been a task to test the stuff of which great leaders are made, and GARNER'S wisdom, patience, and political genius have marked him a leader among leaders. There is not a member of the Senate today, regardless of party, who does not respect him for the dignified conduct of his office, his unfailing courtesy, and his abiding sense of justice.

No Member of Congress has a record more liberal than that of JOHN GARNER. In 1905, toward the end of his first term in Congress, he introduced a graduated-income-tax bill in the House which was one of the first tax bills based on ability to pay. In 1913, as a member of the House Ways and Means Committee, he strongly advocated and was one of those responsible for writing into the Underwood tariff bill the first graduated income-tax provision to be enacted, and that was the beginning of our present income-tax system. He was the author of one of the first bills for a public-works program as a method of overcoming the depression. These and other liberal measures he introduced and stubbornly defended against the attacks of conservatives.

The distinctive feature of GARNER'S liberalism is that it is of the practical kind. His bill for public-works projects included the taxes to pay for those projects, because he has always believed that a government should live within its means. His efforts to promote the security and well-being of the workingman demonstrate a genuine sympathy with the masses. He opposed the sit-down strikes of a few years ago, because he believed that the interest of both labor and capital can best be promoted within the framework of the Constitution and with proper regard for law.

It is a significant fact that GARNER'S greatest usefulness to the American Government has derived from situations and circumstances which are not generally known to the people. Many do not know that few American statesmen possess the experience in international affairs which he has acquired in times of war and peace. Not only was a third of his 30 years in Congress devoted to service on the Foreign Affairs Committee of the National House of Representatives, but during the World War President Wilson often went to him as confidential adviser on matters pertaining to the enactment of war legislation. His keen insight into political problems, coupled with his modest yet frank and unassuming demeanor, have often caused him to be sought for confidential duties of the utmost importance—duties which he performed with fidelity and success, but without general public knowledge.

It seems that JOHN GARNER's whole political life has been devoted to quiet and unselfish service. Especially has that been true during the past 7 years, during which time, as Vice President of the United States, he has presided over the Senate. Publicly, he has been a Presiding Officer, casting few votes and participating in no debates. But privately, he has been the Democratic administration's able second in command, engineering much vital legislation through Congress, and holding liberal lines intact against every effort to frustrate the progressive program.

As a supporter of New Deal policies I desire to pay tribute to Vice President GARNER, whose ability and loyalty aided tremendously in translating those policies into realities.

Those of us in the ranks of Congress who have striven to enact the liberal program know how much the wise counsel and courageous leadership of JOHN NANCE GARNER has been responsible for the success achieved.

There have been times, of course, when GARNER's influence was that of restraint, but his occasional advice to make haste slowly was the result of his devotion to progressive aims and of his desire to avoid any error that might imperil them. His long experience and his calm, unerring judgment were a tower of strength during the years when a liberal philosophy of government was struggling for a foothold in the American system. To incorporate that liberal philosophy into the American system, without disturbing its basic fabric, has been a task to which the practical liberalism of JOHN NANCE GARNER has substantially contributed.

It should be obvious that the work of this administration ought to be perpetuated and that remaining liberal objectives should be attained. Clearly, then, the people should devote the most careful thought to the problem of choosing the one best qualified to succeed our present great President. What can be said to constitute such qualification? To my mind, the next President should be one who has been closely identified with the liberal program of the past few years, and who at the same time has had that length of experience in governmental affairs which alone can provide the perspective needed to orient that program into the basic ideals of American democracy.

If these are the qualifications that our next President should have, then those qualifications are possessed in a preeminent degree by JOHN NANCE GARNER. Elected on the same ticket with Franklin D. Roosevelt in 1932 and again in 1936, he has been a leader in the administration's program since its beginning. He has been loyal to its purposes and has contributed his skill and energy to their fulfillment.

I think it is frequently the case in political campaigns that the public mind is diverted from the fundamental issue, namely, the fitness of the man for the job. GARNER's whole career has been a training school to equip him for high governmental responsibilities.

Considering his long experience, his intimate knowledge of our Government, its legislative processes and its fiscal affairs, I doubt if there is another citizen of our great country better qualified for the Presidency than JOHN NANCE GARNER. Without question, from the standpoint of experience, as well as from the standpoint of his loyalty to the liberal program of this administration, JOHN NANCE GARNER is the ideal successor to the Presidency in 1940.

With his inborn straightforwardness and fearless candor, he has announced his candidacy without reference to the course anyone else may pursue or which may be pursued for anyone else. A candidacy of any other kind would be absolutely foreign to JOHN GARNER.

GARNER has run up his own flag, and under that flag he stands, a genuine and an individualistic American. Liberal in his political philosophy, conscientious and capable in his devotion to the public good, strong and alert in mind and body, temperate in all things, a man of unquestioned integrity and of unusual strength of intellect and character, JOHN NANCE GARNER looms today on the threshold of his greatest service to America.

Timber Resources of Vermont

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

LETTER FROM MR. R. M. EVANS, OF THE UNITED STATES DEPARTMENT OF AGRICULTURE, FOREST SERVICE

Mr. AUSTIN. Mr. President, farm wood lots and other privately owned commercial timberlands cover about 57 percent of the area of Vermont. They therefore constitute a subject of public importance. I requested detailed information from the regional forester, Mr. R. M. Evans, of the United States Department of Agriculture, Forest Service. I have obtained that information in a letter dated March 23, 1940, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D. C., March 23, 1940.

Hon. WARREN R. AUSTIN,
United States Senate.

DEAR SENATOR AUSTIN: It is a pleasure to enclose a copy of the annual report of the late Chief Forester, F. A. Silcox.

Vermont, as you know, has a real stake in forestry. Farm wood lots and other privately owned commercial timberlands cover about 57 percent of its area. The forest problem, involving the best management of these lands and the resources produced from them, is of direct interest to the owners. In addition, hundreds of industries, trades, and carriers, who use or handle wood and water in one form or another, are affected by the extent and profit with which supplies of forest raw materials are produced in the State.

Vermont's forest lands play an important part in the maintenance of income and of supplies of raw materials for forest-dependent communities, the protection of domestic water, the control of unseasonable stream flow through the State, the reduction of soil erosion, the maintenance or increase in productive capacity of land, and the alleviation of tax delinquency through good land-use planning.

Although Vermont timberland owners have made some advance in the adoption of sound forest practices, further safeguards are still needed if the State's economy is to continue to be favorably affected by her forests. Moreover, conditions in other States form a cumulative problem of national scope. In his last report Mr. Silcox points out that we have taken our forests for granted too long and are faced with a crisis that requires joint private and public action if we are to insure adequate resources to meet local and national social and economic needs. I believe you will be interested in the solutions he suggests through State and National aids in this problem which seems so great and fraught with so much national public interest that private effort alone may not secure the desired results.

In reviewing this report you will probably want to recall some of the cooperative work being done in Vermont by the United States Forest Service, such as the technical and financial aid available each year to your State forester for fire prevention and the production of forest planting stock. Also working with him, help is given private timberland owners in developing management practices designed to put their resources on a permanent and profitable basis. An outstanding example of such cooperation was the basic inventory of resources in Essex County, Vt., and Coos County, N. H., a prerequisite to management of the Forest Products Association, Inc., a cooperative of farm woodlot owners in these counties. In the interest of general forest improvement the Service cooperates in the supervision of the activities of eight C. C. C. camps engaged in forestry work in the State. It is also heading up the emergency timber salvage and fire hazard reduction work in the State.

The Green Mountain National Forest in Vermont comprises 160,494 acres of acquired land on which the resources are developed and managed under sustained-yield practices to permanently secure their benefits to local income and industry. On this area the Federal Government assumes full administrative and financial responsibility for forest-fire protection, relieving the State to that extent.

The Forest Service maintains and operates the Northeastern Forest Experiment Station, with headquarters at New Haven, Conn. This organization cooperates with State agencies in forest research. It operates a number of plots in Vermont, where studies in spruce, fir, and northern hardwoods are conducted to determine sound management practices suitable for New England. The station is also heading up water-control studies in New York and New England under the Flood Control Act of 1936. A detailed study to determine what measures are necessary for run-off and water-flow retardation and soil-erosion prevention is now under way on the Connecticut River and its sources.

If I can give you any further or more detailed information on the annual report or on the work of the United States Forest Service in your State, please call on me. I shall be very glad to do so.

Sincerely,

R. M. EVANS,
Regional Forester.

Agricultural Situation

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY FRED BRENCKMAN, WASHINGTON REPRESENTATIVE, THE NATIONAL GRANGE, WASHINGTON, D. C., MARCH 16, 1940

Mr. CAPPER. Mr. President, on March 16, 1940, Mr. Fred Brenckman, Washington representative of the National

Grange, delivered over the National Broadcasting System a very interesting radio speech on the agricultural situation. Since Mr. Brenckman speaks for one of the outstanding farm organizations in the Nation, and because of his known grasp of the problems of agriculture, I am sure that the Senate and the people of the country as a whole will be interested in his views as expressed in his speech. I therefore send a copy of the speech to the desk, and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In his syndicated column, which appeals daily in certain newspapers of the country, Gen. Hugh Johnson, first Administrator of the N. R. A., remarked some months ago that the farm problem had not been solved but that it had simply been postponed and intensified. Disagreeable as the facts in the case may be, we may as well face the situation realistically and admit that General Johnson spoke the truth.

While the effort has been to give agriculture price parity with the other groups in our national life, during the past 2 years the exchange value of farm products, compared with industrial commodities that farmers must buy, has been only about 75 percent of the level obtaining during the base period 1909–14. No industry could be expected to function very long under such a tremendous handicap and remain solvent. Instead of pursuing policies intended to reduce the spread or disparity to which I have alluded, the Government has deliberately followed the opposite course.

DECLINE IN FARM INCOME

In any event, notwithstanding all the efforts that have been made by the Federal Government during the past 7 years to improve agricultural conditions and notwithstanding the billions of dollars that have been appropriated by Congress for farm equalization payments or subsidies, the fact remains the cash income from farm marketings during the past 5 years was much lower than it was 10 years ago. During the 5-year period from 1925 to 1929, both inclusive, the cash income of agriculture averaged $10,220,000,000 annually. During the 5 years from 1935 to 1939 average cash receipts from farm marketings totaled $7,447,000,000 per year. From this it will be seen that with Government benefit payments excluded the farmer's cash income during the past 5 years fell $2,773,000,000 a year below the 1925–29 figure.

In making this comparison, it is important to keep in mind the fact that the population of the United States today is approximately 10,000,000 more than it was in 1929. If farm income had kept pace with the growth in population, the farmer's receipts from marketings would have been proportionately higher than they were 10 years ago.

It is true that the agricultural situation today is much better than it was in 1932, but it is scarcely necessary to say that 1932, when we were at the depths of a world depression of unexampled severity, was not a normal year.

In considering ways and means of restoring agricultural prosperity, it would be perfectly futile to place our reliance on political magic. Political magic has been tried on a colossal scale for 7 years and it has failed, just as it always does. It should also be recognized that since the farm problem is full of complexities, and since it constitutes a whole bundle of problems wrapped together, it cannot be cured simply by enacting a single piece of legislation. We must place our reliance on sound principles and we must exercise common sense.

The National Grange is very strongly of the opinion that one of the remedies that would work would be to give the American farmer the American market to the limit of his ability to supply it.

We are not impressed by the arguments that are being advanced by those who advocate the extension of the Trade Agreements Act for another period of 3 years. In considering the workings of the trade-agreements program from the standpoint of the farmer, it is proper to recall that in 1932, President Roosevelt gave assurances that tariff rates on agricultural commodities would not be reduced. In one of his addresses he said:

"I know of no effective excessively high-tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

However, the tariff has been reduced on approximately 200 items coming under the agricultural schedule. As we are all aware, the surplus problem has been the most difficult with which American agriculture has been faced since the close of the World War. It stands to reason that this problem cannot be solved, but it will be aggravated by importing foreign surpluses of competitive farm commodities and piling them on top of the American surplus.

The proponents of the trade-agreements program keep continually reminding us that if we want to sell to other nations, we must buy from them, and that trade is a matter of give and take. Nobody disputes the soundness of that proposition. But we must not lose sight of the fact that the United States has the biggest free list of any nation in the world. During the calendar years of 1938 and 1939, 61 percent of all our imports entered the country duty free. In view of this fact, it would seem that with the exercise of a little ingenuity and Yankee trading skill, we should be able to find an outlet abroad for some of our own surpluses without pursuing a policy which results in flooding our markets with commodities of which we already have more than enough. What advantage can there be in securing an export market if it is necessary to give up the American market in order to get it?

Persistent efforts have been made by the supporters of the reciprocal tariff program to convince the farmers of the country that they were being benefited by it and that our imports of agricultural products are so trifling as to render them inconsequential.

VAST ACREAGE DISPLACED BY IMPORTS

Nothing could be further from the truth. For the fiscal years of 1937 and 1938 our imports of competitive farm products averaged $537,198,000 annually. According to the Bureau of Agricultural Economics, the average acreage under cultivation in the United States during the years named was 341,475,000 acres; the average value of crops grown per acre was $16.02; and the acreage displaced by the competitive farm imports for the period under consideration was 33,533,000 acres per year. Does that seem like a small matter?

The value of all the crops grown in the great State of Texas during 1938 was only $302,957,000. For the State of Iowa the figure was $310,166,000. During 1938 the total value of all the crops grown in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and Virginia was only $533,014,000. It should be understood that these figures refer only to crops grown in the States named. Livestock products are not included.

The land on American farms that has been displaced by competitive imports is larger than the reduction in acreage that has been brought about since 1933 in connection with the corn- and cotton-control program. So it will be seen that while the Government, under the guise of soil conservation, is paying the farmers of the country approximately $500,000,000 a year to reduce acreage and production, under the trade-agreements program it is not only permitting but actually encouraging competitive imports of farm products valued at the same amount.

Moreover, we must not lose sight of the fact that our imports are priced on the basis of foreign costs. The import figures do not include the cost of transportation, insurance, and customs duties. If these were added, the total figures would be much higher.

It is also important to remember that competitive imports are always offered at a lower price than that which prevails at home. These imports place a ceiling, so to speak, on our price level, rendering it virtually impossible for domestic producers to secure prices commensurate with our higher cost of production and the American standard of living. In view of all these facts, it should be agreed that agricultural conditions would greatly improve if the American market were given more largely to the American farmer.

OUR ARMY OF UNEMPLOYED

One of the prime reasons for the depressed condition in agriculture during recent years has been our tremendous army of unemployed. It must not be forgotten that it takes purchasing power in the hands of the consumer to make and sustain farm prices. Those who are subsisting upon made work and those who are on relief are not as good customers of the farmers as would otherwise be the case. There is an interdependence between agriculture and industry that is fundamental and inescapable. They both go up or they go down together.

If the Government were to cultivate a more reasonable attitude toward our system of private enterprise, unshackling business and removing unnecessary restrictions, our army of unemployed would soon be reduced to small proportions and the better conditions that would ensue would be shared by agriculture in common with every other group.

Much of the legislation on our statute books is unseasoned and has had unsettling effects. For example, the Wagner Labor Relations Act, which was supposed to promote peace and understanding between labor and industry, has had the opposite effect. The supporters of the act blame this on bad administration.

Be that as it may, in 1937, the year of the sit-down strikes, there were 4,470 strikes called in the United States. The number of workers involved was 1,860,000, and the number of man-days of labor lost was 28,424,000, the highest on record. It is unnecessary to say that the losses and dislocations caused by these strikes were shared by agriculture and the Nation as a whole.

THE SCOURGE OF BUREAUCRACY

With further reference to the Wagner Act, a special House committee, headed by Congressman HOWARD W. SMITH, of Virginia, has been investigating the National Labor Relations Board, which administers this act. The testimony given at hearings shows that the Board has grossly abused the powers with which it has been vested. Its methods have been high-handed, arbitrary, and unfair. As an illustration, in questioning J. Warren Madden, chairman of the Board, the investigating committee learned that some time ago the Board made a ruling requiring a certain employer to hire two men and pay them back wages when these men had never been in the service of the employer before. This was done on the theory that the men had been refused employment by reason of their membership in a labor union. The back pay dated from the time when the men applied to the time when the Board made its ruling.

Under the act, if the men in question had been dismissed for union activity, it would have been legal for the Board to order their reinstatement, and the men would have been entitled to back pay if the Board had so ruled.

If any better way could be conceived to destroy our system of private enterprise than the ruling of the National Labor Relations Board in this connection, it is difficult to imagine what it might be.

The enactment of the Logan-Walter bill, which is intended to promote the more expeditious settlement of disputes between the Government and the citizen, and to put a check on the unbridled use of power by arbitrary bureaucrats, would have a sobering effect on such agencies as the National Labor Relations Board. The passage of this bill would provide a powerful stimulus to economic recovery and would go a long way toward reestablishing respect for the Government among the rank and file of the people of the United States. Those who hold public office must be given to understand that they are the servants of the people and not their masters.

THE BURDEN OF TAXATION

Excessive taxation is another factor that in large measure is responsible for many of our national ills, including unemployment. More than one-fifth of our total national income is required to pay the ever-mounting burden of taxation. In 1903 the per capita taxation, the theoretical amount which every man, woman, and child pays toward the support of government, was about $17. In 1922 the figure was $22.66. In 1938, the last year for which reliable figures are available, the per capita of taxation, including social-security taxes, was $107.51. At this rate the tax bill of an average family of four would be $430 per year. Is it any wonder that our system of private enterprise shows signs of bogging down when it is compelled to carry such an unreasonable load of taxation as this?

Nothing could be of greater importance than the correction of the economic maladjustments that are responsible for the present depressed condition of agriculture. There can be no such thing as genuine prosperity for the United States until we deal justly and fairly with those who produce the Nation's food supply.

Power Trust Declares War—In Oklahoma

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1940

Mr. RANKIN. Mr. Speaker, the Power Trust has now declared war against the United States.

I note Members on the Republican side applaud that statement vociferously. Perhaps some of them have enlisted for the duration of the conflict. So have I; but I am on the other side. I expect to continue this battle as long as I am in public life, or until we get electric energy to the people in every State at reasonable rates—rates they can afford to pay, rates based upon the cost of generation, transmission, and distribution.

Cicero once said of Cataline that he achieved his greatest victory over him when he succeeded in driving him from secret treachery to open warfare. We win our greatest victory over these monopolies, these selfish interests, when we unmask them and drive them to open rebellion. One of our greatest weapons is the blessed sunlight of pitiless publicity which we have been turning on their evil practices, their watered stocks, their inflated valuations, their waste, their extravagance, and the exorbitant overcharges they impose upon the helpless consumers of electric light and power.

One of the greatest weapons that I have yet been able to place in the hands of Members of Congress, and incidentally in the hands of the American people, is this new National Electric Rate Book, which I am now having published as a House document and which will be ready for distribution through the document room at an early date. It is the deadly parallel, showing the rates charged for electricity for all purposes in practically every community in America. Anyone can take that book and compare the rates in his own town or his own community with the rates in Tacoma or Seattle, Wash., Tupelo, Miss., Chattanooga, Tenn., Florence, Ala., or any other point in the Tennessee Valley area, or with Los Angeles, Calif., or elsewhere, and see just how much he and his neighbors are being overcharged for their electric energy. Or he can turn to cities like Cleveland or Columbus, Ohio; Jamestown, N. Y.; Jacksonville, Fla.; Springfield, Ill.; Danville, Va.; Richmond, Ind., or any other up-to-date community that has a municipally owned light and power system, investigate, and find out what profits they are making for the taxpayers of the community, and he will find that electricity could be supplied to any community in America at the Tacoma rates, the Ontario rates, or the T. V. A. rates without loss to legitimate investors.

As I said, this book will be one of the greatest weapons ever placed in the hands of the friends of electric light and power consumers in every State in this Union.

The battle is on; and I want to serve notice now that we are not going to be on the defensive; we are going to continue the offensive and fight the battle within the enemy's lines.

This utilities war against the United States has been openly declared in the State of Oklahoma, where the opposition is using Governor Phillips of that State as its commander in chief, a modern Don Quixote, who now seems to be marching up and down the banks of Grand River, with wooden sword and paper crown, trying to block the construction of a project to control floods, improve navigation, and develop hydroelectric power for the benefit of the people of that State.

Bleeding Oklahoma! How long will these utilities, these monopolies, these selfish interests, continue to control her State government and to rob her children of the benefit of the great natural resources with which Oklahoma has been so richly endowed?

Nature, with her lavish hand, never created a domain more bountifully blest from every standpoint than the State of Oklahoma. There is "balm in her climate, sublimity in her scenery, fascination in her waters, and wealth in her soil." She has practically everything necessary for the happiness and prosperity of mankind. Yet her people are comparatively poor, with a few shining exceptions; her farmers are discouraged and overburdened with taxes, and her unemployed are clamoring for work with which to earn their daily bread. Yet at the same time her coal and mineral resources are being gobbled up; her oil is being drained out largely for the benefit of foreign capital; enough gas is going to waste to generate electricity for a half-dozen such States; her own Governor is using, or misusing, the powers of his position to block the development of her hydroelectric power; the navigation of her streams and the control of floods, while the people of that State are paying in overcharges for electric lights and power the enormous sum of $11,000,000 a year, and the average farmer is denied the use of any electricity at all.

They know that if this dam is completed, and a yardstick provided enabling the people of that area to secure electricity at reasonable rates, it will crash these overcharges and ultimately lift this burden of more than $11,000,000 a year from the shoulders of the struggling electric light and power consumers of Oklahoma.

It will also increase the consumption of electricity to where the people of Oklahoma can begin to enjoy the real blessings of this electric age. The record shows that the residential consumers of Oklahoma last year used on an average of less than 60 kilowatt-hours a month. The record also shows that during the month of January 1940, the residential consumers of Tupelo, Miss., my home town, used an average of 227 kilowatt-hours each. Cheap rates bring increased consumption, and increased consumption of electricity means brighter homes and better living conditions.

Those people have to look to the Federal Government for relief from this Egyptian bondage in which the utilities are now holding them. They cannot get help from the Governor, who has not only joined the opposition, or has been with them all the time, but who is actually waging war against the United States to prevent the development of a project for their relief. They cannot expect to get relief through the State legislature as long as a large number of the influential members of that body, who occupy key positions, are on the pay rolls of the oil interests, the coal interests, or the power interests, either as attorneys, agents, directors, or stockholders. And I might say in passing that the Legislature of Oklahoma is no exception in that respect. The same conditions prevail in the legislatures, or, at least, in one house of the legislatures of a large number of other States.

We might as well strip our gloves off now, because this is going to be a fight to the finish. The Power Trust is now running Wendell L. Willkie, president of the Commonwealth & Southern, which is one of the worst offenders of all

these power monopolies, for President of the United States. He is out prating about democracy and talking about dictatorships, when he knows that these utility monopolies to which he belongs constitute the most ruthless Fascisti, the most consummate dictatorship ever organized and operated to control governments and to wring the lifeblood from the unprotected consumers of electric light and power.

There are 214,000 residential consumers of electricity in Oklahoma, and every single one of them is overcharged more than 100 percent every month that rolls around.

I have before me the report showing the residential rates charged in every town in Oklahoma on January 1, 1940. I am giving them here, together with a comparison of the rates charged at Tupelo, Miss.; Tacoma, Wash.; and in Ontario, Canada.

Oklahoma rates compared—Residential

Community	25 kilowatt-hours	40 kilowatt-hours	100 kilowatt-hours	250 kilowatt-hours	500 kilowatt-hours
Tupelo, Miss. (T. V. A. rates)	$0.75	$1.00	$2.25	$4.25	$6.15
Tacoma, Wash.	.95	1.10	1.70	3.20	5.30
Ontario, Canada	.75	1.02	1.74	2.70	3.92

Anyone who reads this list and compares the rates charged in these cities, towns, and communities in Oklahoma, with the rates charged in Tacoma, Wash., or Ontario, Canada, or Tupelo, Miss., or any other place that enjoys the T. V. A. yardstick rates—or any other place where the people get electricity at rates based upon the cost of generation, transmission, and distribution—anyone who makes these comparisons is bound to realize that Governor Phillips is now rendering the overburdened power consumers of Oklahoma the greatest injury of which he is capable.

Mr. BENDER. Is Governor Phillips a Republican?

Mr. RANKIN. Yes; Governor Phillips is an ex-Republican. He is an ex-Republican who was nominated in a Democratic primary.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

ADDRESS BY R. W. BLACKBURN, SECRETARY, AMERICAN FARM BUREAU FEDERATION, BEFORE ILLINOIS LEAGUE OF WOMEN VOTERS, CHICAGO, ILL., MARCH 19, 1940

Mr. LUCAS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address by Hon. R. W. Blackburn, secretary of the American Farm Bureau Federation, delivered on March 19, 1940, before the Illinois League of Women Voters, wherein he favors the continuation of the Reciprocal Trade Agreements Act.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In considering reciprocal-trade agreements you good women are studying a most controversial issue, doubly controversial this year because of the party partisanship that has been injected into congressional discussions on the extension of the Reciprocal Trade Agreements Act for another 3-year period.

It is now generally conceded that the act will be extended, and if it is extended the action will mark a notable recession from the high-tariff policies which prevailed for so long in this country.

All of you are well acquainted with the extent that the high-protective-tariff philosophy had permeated the thinking of the American people up to and including 1930, when the Hawley-Smoot Tariff Act was passed. During the years when industry was booming in this country, the high protective tariff was generally considered the keystone in the arch of American prosperity.

The passage of the first Reciprocal Trade Agreements Act in 1934 did not mean that the people of this country had changed their minds about tariffs; they were in the mood to try anything that offered even a faint chance of improving our economic condition. But the change that has come about in national thinking on this question since that time is truly amazing.

I do not mean to say that the American people have become free traders. Far from that. But I do believe that fundamentally the folks that make up the backbone of this country have become convinced that in previous periods of our history we carried the principle of tariff protection to an extreme that could not be justified, either in theory or in practical results. Of all the newspaper comment on this question that comes to our office—and we see a great deal of it—I believe that at least 75 percent of it is favorable to the principle of reciprocal trading between nations.

It seems to me that the shift in public opinion on this question in recent years amounts simply to recognition of a basic principle which this Nation studiously avoided when the Hawley-Smoot Act was being considered. That principle is simply that trade is a two-way affair; you cannot sell unless you are willing to buy something in return. We tried to promote foreign buying during the 20's by lending money to other nations. That policy proved to be unsound, for we ended up by losing both the money we had loaned, and also the goods that we had shipped out.

It is gradually beginning to dawn on many people that the best policy in tariff making, as in most other things, is to follow the principle of moderation. Many principles are sound enough when utilized in moderation, but when carried to extreme are likely to create repercussions which become destructive. For example, no one will argue against the principle that high wages are conducive to national prosperity. But I think most people will agree also that it is dangerous to try to raise wages too rapidly, or to have wage scales so inflexible that they cannot be adjusted to meet changing conditions. We have in this country craft unions which all but priced their members out of the labor market during the worst days of the depression. It was another instance of carrying a good thing too far. And so it was with the tariff, as I see it, and as I believe the public generally has recognized.

This great change in opinion could not have come about unless the reciprocal-trade agreements so far consummated had worked fairly well in practice. As a matter of fact, they have not been in operation long enough to warrant the drawing of any hard and fast conclusions regarding their effects on this country. In my opinion, the years in which they have been in operation have not been years which have been particularly favorable to the development of foreign trade. These years have been years of intense development of nationalistic tendencies by foreign nations. Panic-

stricken by threats of war, many nations have subordinated everything else to follow policies designed to make them self-sufficient in the event of hostilities. World-wide depression has militated against increased trade between nations. The record shows that our exports, as well as our imports, have been larger when prosperity has been general throughout the world. In such times all nations produce more, hence have more to trade with other nations. With higher prices, it becomes possible for goods to come in over tariff walls.

From our own angle, we must remember that we have experienced two of the worst droughts in history during the past 6 years, reducing our own production of farm commodities to the point at which we actually needed supplies from abroad. Following the record drought of 1936, our imports of farm commodities increased by more than 50 percent. The figures for that year are used by the opponents of trade treaties to prove that the effect on our own agriculture has been bad. As a matter of fact, our shortage of corn was so great that it was in our farmers' interest to have large supplies of Argentine corn come in over the tariff wall. If we had not had these imports, the price of corn would have risen to prohibitive levels, to the great disadvantage of our livestock producers.

But in spite of the unusual situation due to drought, the record of all the years since trade agreements have been in force does not indicate that American agriculture has been harmed by undue increases of competitive products.

The American Farm Bureau Federation last year sponsored a disinterested and entirely objective study of the effects of reciprocal trade on our agriculture by the department of economics of Iowa State College. At the conclusion of that study the men who made it reported as follows. I quote:

"In an over-all way the trade agreements are 'working' for agriculture and for industry; that is, for our economy as a whole. This conclusion is not based upon any notion of spectacular accomplishments. It is based upon three separate conclusions that seem solidly grounded: (1) There have been positive gains from the trade-agreements program in expanded business, both at home and abroad. Though possibly less substantial than many had hoped for, the gains have been real and in the right direction. (2) There have been important less tangible gains in that the United States has contributed to checking restrictionism in international trade which, both at home and abroad, had been hurting the farmer and which still was in full process of development when the trade-agreements program went into effect. (3) The trade agreements have proved to be an effective procedure for negotiating trade treaties. The past history of tariff making in Congress makes any student extremely pessimistic of that procedure as a means of lowering barriers to foreign trade."

To me, the most significant results revealed by that study are the figures for over-all increase or decrease in trade. The study covered trade agreements which embraced 88 percent of our reciprocal trade. Some few were left out because of not having been in force long enough to warrant definite conclusions or for other good reasons. For 1937 and 1938, as compared with 1934 and 1935, the record shows that our exports to trade-agreement countries increased 61.2 percent; and to non-trade-agreement countries, only 37.9 percent. Imports from trade-agreement countries increased 35.2 percent; and from non-trade-agreement countries, 37 percent. This comparison does not count the British trade agreement, because much of our tin and rubber, which are noncompetitive, come from British colonies. To me, it seems perfectly plain that any trade policy which has increased our exports very greatly, and increased our imports by only an insignificant amount, must be based on sound principles.

This occurred during a period, as I said before, which was not favorable to expanding trade between nations. I firmly believe that if this program could have been tried out during a period such as 1924 to 1929, when we were producing manufactured goods at a tremendous rate, and when surpluses were piling up, the results would have been simply astonishing, and might have done much to lessen the shock of depression in the years that followed. Instead of following that policy, however, we raised our tariff duties in 1930 to the highest level in history, effectively shutting out the possibility of relief through expanding trade with other nations.

The most vociferous of the opponents of trade agreements have a phrase which they use as their battle cry. It is, "the American market for the American farmer." That phrase sounds well and it has a broad appeal to many people. It sounds patriotic, but let us examine the facts. Maybe we have the equivalent of more than the American market. Maybe we must have more than the American market to attain prosperity. To take the most obvious example of the need for export outlets, consider cotton. Nearly half of our farm population lives in the cotton States, and throughout history we have shipped approximately one-half of our cotton to foreign markets. What will happen to the farm families which depend on cotton for their cash income if we suddenly decide to adopt a 100-percent nationalistic policy? We well know that if we place an embargo on all competitive imports it will be impossible for our former customers to create exchange to buy our own surpluses.

Instead of considering one commodity, suppose we look at the record for all of our principal agricultural exports and imports and reduce the figures to acreage equivalents—that is, the acreage required to produce our farm exports and the acreage required to produce our farm imports.

During the fiscal year 1937–38, the last year for which we have complete official records, the farm products we imported could have been produced on 7,564,000 acres of land. But our farm exports in that year required 36,367,000 acres of land, or nearly 5 times as much as were required to produce the products we imported. In other words, American farmers have much more than the American market now, and if we were to cut off both our imports and our exports we would have to shrink our productive plant by at least 28,000,000 acres. To me that is the complete answer to those who make a fetish of "the American market for the American farmer."

Everybody recognizes that the tariff has been the basis of the disparity which has developed between industry and agriculture. Industry, secure behind tariff walls and able to restrict its production to the amount that can be sold at a price which includes the amount of the tariff, has lived under one sort of economy, while agriculture, its markets the world, and itself unable to secure tariff advantages, as a rule, because we produce most farm products in surplus quantities, has lived under a different kind of economy. The result has been that the farmer has bought on protected price levels and sold on the free and open market with respect to most of its products.

The American Farm Bureau Federation has been organized for 20 years, and during most of that time it has been doing its utmost to secure legislation which would give agriculture the equivalent of tariff protection. We secured tariff increases on corn and wheat, only to find that a tariff is worthless in protecting the domestic price when we produce exportable surpluses.

We fought for 8 years for the McNary-Haugen bill, which was designed to segregate the surplus and keep it off the domestic market, so as to permit domestic prices to rise to an American level. Its purpose, in other words, was to make the tariff effective for agriculture. We supported tariff increases provided in the Fordney-McCumber Act of 1922. We apparently, along with nearly everybody else at the time, failed to realize that the change of this country from a debtor status to that of creditor called for a new foreign policy. We just didn't appreciate the significance of this change, and apparently some people don't appreciate it even now.

We worked for reduced freight rates to seaboard to permit us to get our surpluses into ocean commerce. We worked for an enlarged merchant marine and for deep waterways to help us to get our surpluses out of the country at low cost. The bulk of our activities during those years touched foreign trade in some respect.

In 1929, when a special session of Congress was called for the specific purpose of enacting farm legislation and for bringing about a limited revision of the tariff to help agriculture, we witnessed an orgy of tariff increases. For every increase agriculture got, industry got several times as many. The result, after a year of old-fashioned logrolling, was the Hawley-Smoot Act, representing the ultimate extreme in high-tariff protection in all our history. The fallacy of the tariff as applied to agriculture was forcibly driven home to farmers in the succeeding years when several farm products actually sold in our own markets for less than the amount of the tariff. Prices went through the tariff level as water goes through a sieve.

These experiences shook the faith of farmers in the tariff as it never had been shaken before, and made them receptive to new approaches to the problem of foreign trade. I would not have you infer from what I say that all of agriculture has discarded the tariff philosophy or that all of agriculture is in sympathy with the present reciprocal trade agreements policy. Some of the segments of American agriculture, notably the beef cattle and dairy interests, at least as indicated by the leaders of these segments, are violently opposed to reciprocal trade. There are State units of the American Farm Bureau Federation which do not subscribe fully to the official stand of our national organization, which is in full accord with the principles of reciprocal trade, but in favor of further safeguarding the negotiating of agreements by requiring the approval of the Secretaries of State, Commerce, and Agriculture before consummation of any agreement.

Nevertheless, and in spite of what I consider minor differences of opinion as to the method of negotiating agreements, and in spite of the open opposition of the farm interests that I have mentioned, I say again that there has been a far-reaching shift in sentiment in this country on the entire question of tariffs and foreign trade—one of the most significant changes that I have witnessed during my years in the farm bureau movement.

In addition to their own experiences with tariff matters, two other factors have contributed greatly to bringing about this change in public opinion. First, we in this country have been horrified onlookers while European nations have been driving headlong into war, largely through short-sighted policies of nationalism and self-containment. Second, they have become aware, to some extent, of the monopolistic practices and price fixing that have been carried on in this country behind protecting tariff walls.

Reports of the Temporary National Economic Committee show that some of our industries, through legally sanctioned corporate power, buttressed by tariff laws and other Government devices, have made trade agreements of their own against the public interest in the form of national and international cartels. Through these controls they have become immensely powerful, and the result has been that agriculture has had to pay managed prices for most of its equipment and supplies, while it has had to sell its production at prices which were subject to natural economic law. This is the source of much of the disparity between industry and agriculture.

Farmers are beginning to realize that one of the most effective ways of breaking up monopoly practices and monopoly prices may be through letting in some imports which are competitive with the products of our most highly protected industries.

The importance of concessions made by this country on manufactured goods has been grossly exaggerated. A few years ago we signed a reciprocal-trade agreement with what was then Czechoslovakia. Under the terms of this pact, we agreed to permit the Czechs to ship 5,000,000 pairs of shoes into this country annually. Now, 5,000,000 pairs of shoes looked like a lot of shoes, but when you analyze the situation you find that 5,000,000 pairs is only 1¼ percent of our total domestic output. It is hard to believe that imports of that volume could be a very great menace to our own shoe producers.

As a matter of fact, the size of our own country in comparison with the size of many of the small nations with which we have signed trade agreements is the factor which gives us a very great advantage. I mean that in the case of Czechoslovakia the 5,000,000 pairs of shoes that we permitted to come in were a trifling matter to us but were a matter of very great concern to the Czechs. If the Czechs had not been swallowed up by Germany, I believe this pact would have opened up trade which would have proved very profitable to this country. The same situation exists in Cuba. Because of small concessions on sugar by the United States, we have been able to sell a large quantity of lard to Cuba. In 1932, Cuban imports from the United States were only 53.6 percent of their total imports; in 1938 this figure had risen to 72.1 percent, almost entirely as a result of the trade agreement signed in 1934.

In negotiating all trade agreements, the United States guards against the flooding of our domestic market by imposing quota restrictions. Those restrictions are based on estimates of the volume of specific goods or commodities which can be absorbed without adverse effect.

I firmly believe that this country, in order to achieve lasting prosperity, must have national policies which will result in establishing an economic balance between groups which will assure security for labor, stability for industry, and parity for agriculture. And because I believe that the application of the principles of reciprocal trade between nations will contribute to that result, as well as contribute immeasurably toward improved world conditions, I am enthusiastic in supporting those principles.

It all comes down to a question of what is the best method of tariff making. We have the tariff and no one wants to get rid of it so suddenly as to upset the present national economy, but we want the tariff to be modified so as to work for us rather than against our own interests. We want to be able to adjust it up or down, according to the interests of the entire Nation.

I hold a deep conviction that the Nation can be prosperous only to the extent that all of our various groups are given fair opportunity to attain prosperity. I believe too that the only way that a nation can increase its income is through greater production, exchange, and use of goods. All artificial devices which are in any sense restrictive to the attainment of this objective should be examined most critically, and should be modified or discarded as experience seems to warrant. It will require a lot of cooperation by a lot of groups to attain the goal that everybody desires; and it will require that a lot of people plow under their prejudices in order to discern what really is best for the Nation in the long run. We are making progress. I believe that this country has a glorious destiny, if only the people have the wisdom to embrace the opportunity that is so manifestly theirs to translate the matchless resources of the Nation into homes and comforts and good living for all who are willing to make a modest effort to acquire them.

Hospitals for Rural Areas

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

LETTER FROM BERNARD M. BARUCH

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the full text of a letter addressed to me by Mr. Bernard M. Baruch, one of America's foremost public-spirited citizens, strongly endorsing the legislation sponsored by the Senator from Georgia [Mr. GEORGE] and myself to authorize the appropriation of $10,000,000 next year for the construction of needed small hospitals in rural and economically depressed areas.

This letter expresses the general consensus of informed opinion among consumer and professional groups, as disclosed at the hearings just concluded. It is of interest that Mr. Baruch's father, who began his career as a country doctor and became one of America's outstanding medical authorities, pioneered in bringing better medical care to the medically needy. The experimental, carefully safeguarded program embodied in this proposed legislation is a vital, imperatively needed step in our progress toward better health security for all the American people. I am confident that a perfected bill will be reported and enacted into law at this session of Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 20, 1940.

Hon. ROBERT F. WAGNER,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I hope the plan for establishing small hospitals in rural districts will proceed and that the enabling legislation will be passed this session.

Owing to my close relations with southern rural communities, I know the real need for small hospitals. Even with the desire for economy, I advise most strongly this expenditure.

I understand that a hospital will be established only where the need for one is already demonstrated and where the community itself shows that it can support it.

My father was a country doctor and told me how some simple treatment might prevent disease and often disability. I have seen the good effects of rendering first aid and providing simple remedies to incipient cases in the few hospitals already established in the rural South.

May I say one word in regard to another subject—unemployment? It seems to me inhuman that people should be laid off from relief work when other jobs are not available for them. I have not seen anything done to relieve the situation—that is, to provide jobs—and I think it is a simple matter.

Sincerely yours,

BERNARD M. BARUCH.

Nation-wide Support for Silver Repeal Bill

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

EXCERPTS FROM EDITORIALS IN SUPPORT OF SILVER REPEAL BILL

Mr. TOWNSEND. Mr. President, I send to the desk a series of brief excerpts from editorials which have appeared in all parts of the country in support of my efforts to bring to an end Treasury purchases of unneeded foreign silver. I ask consent that these excerpts be printed in the CONGRESSIONAL RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

NATION-WIDE SUPPORT FOR TOWNSEND'S SILVER REPEAL BILL—NORTH, SOUTH, EAST, AND WEST ASKING END TO FOREIGN SILVER BUYING

The following excerpts are typical of hundreds of editorials which have appeared to support Senator TOWNSEND'S efforts to end Treasury purchases of foreign silver.

ALABAMA

Birmingham Post: "Let's stop swapping dollars—which means swapping American airplanes and automobiles and typewriters and oil—for more foreign silver to inter at West Point. If we must buy to hoard, let's buy cheaper, more useful materials that might come in handy in a crisis."

Gadsden Times: "During these 5 years the Nation has purchased 2,000,000,000 ounces of silver for which it has no use—an amount that is some 80 times greater than the annual production in the United States at the time the Treasury raids began. Much of this silver has been bought from Mexico at prices far above the market and thus that country has been kept 'on the dole' by this country while it seized American properties."

Montgomery Advertiser: "There is a bill before Congress aimed at stopping this international charity. The foreign subsidy can, and should be stopped."

ARIZONA

Tucson Star: "Coincident with the announcement of the good-neighbor policy the government of President Cardenas revived with evident determination the policy of expropriation not only of lands but of industries. The expropriation has amounted to confiscation, because not a peso has been paid for what has been taken. Yet while Mexico has thus avoided payment, President Roosevelt has directed the Treasury to continue to buy $6,000,000 worth of Mexican silver each month."

ARKANSAS

Helena World: "The debates did not furnish any reason why the taxpayers of the United States should maintain any kind of camouflaged foreign relief for the neighboring country beyond the Rio Grande or any foreign nation."

CALIFORNIA

Anaheim Bulletin: "Congressional action canceling the program of purchase of foreign silver probably will be helpful in the end. * * *

"This may be helpful in starting a campaign to bring nations to their senses. We have been looked upon as the world's Simple Simon gone modern—the type who always has a penny. We cannot go on always in this role, and it is proper that Congress give the President an example."

Eureka, Humboldt Times: "This country should abandon its blundering silver policy because it is wholly uneconomic and tremendously costly to the American taxpayer."

Bakersfield Californian: "So far as the American people are concerned they never could see a valid reason for the purchase of foreign silver at an inflated price, and they cannot understand it even after years of wasteful expenditure in that direction. Any excuse that has been offered from governmental sources is absurd and it seems strange that the Senate should delay taking a definite stand against the continuation of the policy that now finds favor."

San Francisco Daily News: "It seems to us that it is time for Congress to pay heed to Senator TOWNSEND'S one-man crusade against this foolishness."

COLORADO

Durango Herald-Democrat: "Mexico produces 40 percent of the world's output of silver and the United States Government is its chief customer; or, in reality, the United States is carrying Mexico on 'relief.' Mexico makes the silver sales that swelled foreign silver purchases to over 84 percent during the past year. Mexico's silver sales are the backbone of its socialistic form of government. The profits from silver sales are used to promote trade with Germany and Japan."

Denver Rocky Mountain News: "Some argue that the silver policy provides purchasing power abroad with which to buy American goods. Well, so did our war and post-war loans to Europe. So did those Latin-American bonds."

CONNECTICUT

Norwich Bulletin: "In view of what the Senate subcommittee has voted, what some of the Government officials have said, and what seems a most logical course, it will be interesting to see what the decision of the State and Treasury Departments is after they have had the proposition submitted to them. Whatever it is, it is hoped that it will be answered promptly and not put aside to accumulate dust."

Bridgeport Post: "The purchase of silver by our Government is financing the unfriendly Government of Mexico at the expense of the taxpayers of the United States. It is hard to imagine a more absurd spectacle than Uncle Sam buying at a price well above the world market price all the silver that is offered for sale here by foreign countries.

"Including a considerable quantity of silver from Japan. Since Japan has no source of its own for such silver the implication is clear that it was stolen from the Chinese in the brutal war now being waged by Japan in China. Thus we become a receiver of stolen goods and what is worse, we pay the thief far more for the goods than they were worth in the first place and help him to continue his unlawful tactics."

DELAWARE

Wilmington News: "Turning to the argument that Mexico may treat American interests even more harshly if the silver subsidies are stopped, this is, as Senator TOWNSEND declares, merely 'yielding to blackmail.' That is the poorest kind of excuse for continuing a policy which has no other perceptible justification of any kind."

DISTRICT OF COLUMBIA

Times-Herald: "Thus, we're still tied to silver as some alleged kind of money and the piling up of the silver hoard at West Point is to go right on. This silver will be bought for more than it is worth; and the betting is good that it will do something drastic, if not destructive, to our money system some day."

Daily News: "It seems to us that it is time for Congress to pay heed to Senator TOWNSEND'S one-man crusade against this foolishness."

FLORIDA

St. Petersburg Independent: "In 1939 the silver production of the entire world was around 265,000,000 ounces. During the same period the United States purchased 340,000,000 ounces—five times the American production and 28 percent more than the entire world production. Worse still, we paid more for this silver than it was worth—about twice the market value for American silver, and above the market for foreign silver. If we had to sell any of it, the bottom would fall out of the market, and we would be able to get only a fraction of the price we paid."

Sentinel: "Inasmuch as the unlimited purchase of foreign silver at a high price was begun without any reason, it would seem to be unnecessary to look for any reason to stop it."

GEORGIA

Americus News: "So long as we donate $6,000,000 a year in the form of silver purchases, Mexico will pay our nationals $1,000,000 a year on their land-grab debt. * * * The New Deal silver policy has been growing increasingly unpopular for some time."

IDAHO

Blackfoot Bulletin: "And the sum total of our efforts to make silver a monetary unit again has been to destroy, perhaps forever, its monetary character in every country where 6 years ago it was part of the currency."

ILLINOIS

Peoria Morning Journal Transcript: "This system is excellent for Mexico. That country continues to get our money for low-grade ore on the theory that we are thus saving our own silver-mining industry. Ultimately our goal is to have one-third the silver we now have gold. But we also keep on buying gold, so that the end is nowhere in sight. Then after we get the silver—at an artificial price—the Mexican Government turns around and gives us some of our money back while selling oil from the expropriated properties to Fascist Italy for military and aviation purposes."

Moline Dispatch: "United States taxpayers in general are bearing the burdens of the silver-buying mania."

Greenfield Argus: "A good-neighbor policy is expensive to Uncle Sam, but rich gravy to Mexico. * * * Good Neighbor Uncle Sam loses money on his silver and loses money on his wheat to Bad Neighbor Mexico, whose present government plays this old-fashioned game of 'heads I win and tails you lose.'"

INDIANA

Evansville Press: "Sponsors of the Silver Purchase Act predicted that it would be a boon to China, and to our trade with China. What happened? Our silver policy made a mess of that country's finances, forcing it off the silver standard. And today we are probably buying less silver from China than from Japan—to finance Japanese purchases of our oil and scrap iron with which to Japanize all Asia."

Muncie Post-Democrat: "Mexico is being built up on silver purchases. Meanwhile she is using American oils that she confiscated last March in bartering with Germany; she is playing fast and loose in commerce and political sympathies with Communists and Nazis, and cultivating trade and friendly relations with Japan."

Indianapolis Press: "The Treasury is farther than ever from the statutory goal of 1 dollar's worth of silver for every 3 of gold. (That's because it has also been buying all the gold in sight.)"

IOWA

Mason Globe-Gazette: "New Deal shrewdness: Selling wheat to Mexico below cost for useless Mexican silver at twice the market price."

Centerville Iowegian Citizen: "A cartoonist pictures the United States of America passing out good money to Russia in payment for gold bought at a fictitious price that nets Russia millions, and doing the same for Mexico's silver. This despite the fact that Russia is trying to undermine us with socialism and Mexico seizes and holds properties of our citizens without paying for them."

Davenport Times: "It is an old story—investigation, a sound finding, and then, just in time to effect delay, mysterious talk about foreign policy. 'Shush,' Senator BARKLEY whispers about 'we should not do anything like this without consulting the State and Treasury Departments.' Right, Senator BARKLEY, and, meanwhile it might be well to inquire also concerning public opinion on the administration's senseless, costly, and in some respects, dangerous silver policy."

KANSAS

Lawrence Journal-World: "As the (Mexican) expropriation began 20 years ago, some of the owners will have waited 30 years for their money if the agreement is kept. Contrasted with that slow pay is the silver-purchase policy of the United States Government under which the Government is using the money of the American taxpayer to purchase Mexican silver at an arbitrary and artificially high price."

KENTUCKY

Covington Post: "The odd part is all this silver and gold we've been buying 'doesn't cost anything.' It works this way: The Treasury buys a million ounces of foreign silver, pays $350,000 in cash for it, then prints up $350,000 in new silver certificates, and is right back where it started; not a penny is added to the national debt. But, say the economists, wait until we try to sell some of that silver and then the cost will show up because we'll sell at less than we paid."

Louisville Courier-Journal: "The United States has borne with patience the openly antagonistic practices of its neighboring Republic. In buying Mexican silver and a considerable percentage of Mexican exports, it has returned good for evil."

LOUISIANA

Shreveport Times: "Mr. Cardenas and his radical friends will have to get along as best they can without a silver subsidy from Uncle Sam. In our opinion, that is good news, and will be welcomed as such by an overwhelming number of Americans."

MAINE

Biddeford Daily Journal: "It is bad enough for the money of taxpayers to be used in the accumulation of a metal of which this country has no need * * * and there is great curiosity as to how much longer the Mexican Government's communistic force * * * will be supported by American taxpayers."

Bangor News: "The opportunity is an excellent one for abandoning the anomalous position this country now holds of lending money to the Chinese Government to fight the Japanese and giving gold to the Japanese in exchange for the silver they seize in China. The Tientsin silver is worth nothing to anybody except Uncle Sam, who at the same time refuses to buy it might also cease to subsidize the Mexican Government with monthly gold payments for silver to fill the West Point storage vaults."

MARYLAND

Cumberland News: "Little sympathy can be wasted on the Mexican business and industrial men who are bemoaning the vote of the United States Senate to stop foreign-silver purchases."

Baltimore Morning Sun: "The extent to which the world has been supported by mushroom props is strikingly underscored by the reaction in Mexico to the Senate vote to terminate the American program for the purchase of foreign silver. Our silver purchases have formed one of the main supports of our trade with Mexico, as they have with other countries."

MASSACHUSETTS

Springfield Union: "The really culpable thing about silver purchases has been the hocus-pocus by which silver bought down to 35 cents an ounce is legally held to have a monetary value of $1.29 an ounce."

Boston, Christian Science Monitor: "When Chairman Eccles, of the Federal Reserve Board, declared that the 'foreign silver-purchase program does more to ultimately destroy the domestic-silver industry than anything else I know,' he said no more than critics of the silver buying warned in 1934."

Boston Post: "Last week Mr. Morgenthau quite readily testified before a Senate committee regarding our purchases of silver from Mexico at prices well above fair market value. He said these purchases helped Mexico to buy our goods. But, as a matter of fact, over the last 10 years the official Department of Commerce figures show that Mexico bought more goods from us in the years before the New Deal silver-buying program was initiated than she has since."

New Bedford Standard Times: "There is no advantage to this country in buying foreign silver at any price."

Springfield Morning Union: "Some Congressmen would shed crocodile tears over the plight of Mexico if our Treasury were no longer permitted to purchase Mexican silver at an exorbitant price."

New Bedford Standard-Times: "In other words, Mexico wants us to go on buying her silver and gold so that she can weather the financial crisis resulting from her seizure, without compensation, of American-owned oil properties, which is stretching the good-neighbor principle pretty far."

Boston Transcript: "At the first safe opportunity the United States should toss overboard some of the inflationary TNT she has planted under her entire economy. Senator JOHN W. TOWNSEND, Jr., is providing us with such an opportunity with his bill to halt the purchase of foreign silver."

MICHIGAN

Detroit Free Press: "The purchase of this foreign silver is thus seen in its true light, as a subsidy or bribe to other countries to buy American goods, which people thought Secretary Hull's trade agreements were going to induce them to buy, without other attraction."

Lansing State Journal: "Again, why should the United States continue a subsidy to Mexico?"

Detroit Free Press: "In the circumstances, subsidizing Mexico's silver industry to keep her from expropriating it is just like paying blackmail. No veneer of respectability will hide this fact."

MINNESOTA

Red Wing Eagle: "Obviously Mexico is whipping the devil about the bush in using the profits obtained from silver purchases by the American Government to pay owners of farm lands. The Mexican Government says it has no money. If that is over a half truth, the only way settlement ever can be made for several hundred million dollars' worth of American, British, and Dutch oil properties seized by Mexico would be by compelling Mexico to return the properties to their lawful owners."

Minneapolis Morning Tribune: "Mr. TOWNSEND advanced the best possible argument for his bill, which is the complete futility of the program which it seeks to end."

Red Wing Eagle: "The record of the United States Treasury was introduced into the final silver debate to show that foreign silver purchased by the United States in recent years has amounted to more than $1,078,568,000, and the same statistics showed the political deceit of claims that all Latin America has benefited from these purchases, because Mexico made 98 percent of all the sales of silver from Latin America."

MISSOURI

Brookfield Daily Argus: "The Townsend bill to cease foreign purchases of the white metal seems a good place to start toward writing off the silver folly."

Joplin News-Herald: "A good many economists are worried about our amazing program for purchase of monetary gold and silver."

MONTANA

Butte Montana Standard: "The good-neighbor policy of the administration has been trotted out as a reason why Congress should not interfere with the Government's program for the purchase of foreign silver. In other words, the administration at Washington wants to keep right on pouring American tax money into foreign countries. That program means that every income-tax payer, every payer of internal-revenue taxes is contributing something to the Government of Mexico; to other pan-American governments; and, until recently, to the Government of China."

NEW HAMPSHIRE

Manchester Union: "It is hoped that the Senate Banking and Currency Committee will sustain the recommendation of its subcommittee asking approval of the Townsend resolution calling for repeal of the present authority of the Treasury to buy foreign silver."

Manchester Leader: "In view of this treatment, there is not the shadow of an excuse for continuing the purchase of Mexican silver which we do not want."

NEW JERSEY

Plainsfield Courier-News: "Although the public has little interest in international metal market, people can understand they are buying too much of something they don't need and paying more than it is worth. Why not stop that waste?"

Camden Courier: "The Treasury ought to stop buying silver for the same reason that it ought to stop buying gold—because it is absurd to barter American commodities for a substance which may some day be valuable chiefly as watch charms."

Newark, The Star-Eagle: "Uncle Sap * * * the New Deal's whole silver policy has proved faulty."

Bridgeton, Bridgeton News: "The taxpayers' money has been invested to the extent of perhaps a billion dollars in sustaining the purchase of silver."

Asbury Park Press: "Some idea of the difference which will be noticeable is that every time in the last few years the Treasury has bought an ounce of United States mined silver at fancy prices it has also bought 6 ounces of foreign silver at fancy prices. The mines of the United States cannot possibly produce as much silver per annum as we have been buying abroad. Therefore the silver nut program adopted by the Senate would mean actually economy."

NEW MEXICO

Albuquerque, Albuquerque Tribune: "Senator TOWNSEND has a bill to stop buying of foreign silver which was endorsed this week by the 12 bankers of the advisory council of the Federal Reserve Board.

"The council pointed out that these silver purchases are increasing 'the already excessively large bank reserves.' In other words, they are a potential source of runaway credit and of inflation."

NEW YORK

New York Journal of Commerce: "The proper course of procedure for this country should be to halt silver purchases abroad as futile and wasteful, regardless of other considerations. If, however, considerations of foreign policy are to affect the decision with regard to foreign silver buying, then there is all the more reason to halt silver purchases abroad, in view of Mexico's flagrant disregard of the property rights of American citizens and corporations, whose holdings there have been appropriated in cynical disregard of the elementary tenets of international law."

New York Times: "It would be difficult to think of a worse argument than that for continuing our purchases of foreign silver, unless it is the argument sometimes attributed to Treasury officials, that we must continue to buy silver that we do not need at wholly artificial prices in order to supply the countries from which we buy it with the purchasing power to take our goods in return. Such an argument is fantastic. We could accomplish the same result by buying sand from Mexico or Canada or elsewhere at $10 an ounce. If a jeweler stood outside of his store and handed $20 bills to passers-by in the hope that they would use them to buy his watches, he would hardly be doing anything more ridiculous in principle."

New York Herald Tribune: "It is unfortunate that the Senate Banking Committee did not sustain the report of its subcommittee and call for the outright repeal of foreign silver purchases."

New York Evening Post: "We should not have to buy all the world's silver. We should be able to get out of that."

New York Daily Mirror: "America is in the peculiar position of subsidizing the Mexican Government by buying silver from Mexico at artificially high prices."

Troy Morning Record: "If anything further were needed to prove the idiocy of the United States Government's silver-buying policy, it is provided by the frank admission from Mexican sources that Washington's silver-purchase plan has kept really hard times from knocking down Mexico's door and also, of all things, enabling the Mexican Government to go on expropriating American oil company property."

NEVADA

Reno Gazette: "Foreign silver folly."

NORTH CAROLINA

Asheville Citizen: "The futility—in fact, the danger—of the Treasury's foreign silver-buying program becomes more apparent with every passing day. Our silver stocks are increasing constantly, yet they are still far from the goal set by the Silver Purchase Act of 1934. With each fresh purchase the excess of bank reserves swells, bringing closer the threat of inflation. * * * Abandonment of foreign silver purchases should be the first step in a concerted drive to reorient the basis of our national economy."

NORTH DAKOTA

Fargo Evening Forum: "The silver-buying program has been a farce and a costly one."

Fargo Morning Forum: "Mexico is being aided in doing these things through the misguided silver-purchase policy of the United States."

OHIO

Massillon Independent: "We have the silver but not the prosperity. "The United States buys silver that is offered by foreign countries. It pays for it in American dollars. Like the gold that it has been purchasing, the vast hoard of silver is absolutely no use to the country. Both are burdens. But almost every day that burden upon the American people is increased on the grounds that we are playing the part of a good neighbor and saving the financial structure of the world from collapse. If the country does not collapse before it saves the world it will be lucky."

Columbus State Journal: "The sooner it is repealed the quicker the Nation will be headed back toward saner monetary policies."

Akron Beacon-Journal: "Americanism: Helplessly wailing when Mexico steals the property of our citizens; keeping Mexico from ruin by buying her silver at double its value."

The Cleveland Press: "We have been studying up on silver again, and our head aches."

OREGON

The Milwaukie Review: "Meanwhile Good Neighbor Uncle Sam continues to support the Mexican Government by purchasing Mexican silver at a special high price on the theory that this generosity creates a friendly feeling there for American trade."

PENNSYLVANIA

Philadelphia Inquirer: "Squandering millions of dollars every month for foreign silver to stick in the ground is not far short of lunacy. It's time to stop it."

Philadelphia News: "So far as we can see, our generosity in buying silver at prices above the world market has induced all silver-standard countries to send us all the silver they can and go on a managed-money basis themselves. * * * Where is the whole program leading us? What is it all about, and why? We think someone should let the public know these things, since it is a matter of vital public interest."

Philadelphia Bulletin: "We buy silver abroad now, chiefly from Mexico and China, ostensibly that they may pay for some of our goods. What we are doing is to buy from them an article we neither want nor need in order to give them a chance to draw something from us which is valuable. The council of the Reserve System doesn't think we can afford this any longer."

Philadelphia Record: "The Treasury ought to stop buying silver for the same reason that it ought to stop buying gold—because it is absurd to barter American commodities for a substance which may some day be valuable chiefly as watch charms."

Pittsburgh Press: "It seems to us that it is time to pay heed to Senator TOWNSEND's one-man crusade against this foolishness."

RHODE ISLAND

Newport News: "This silver policy seems to have few friends today, and unless Washington reports are wrong the limit of public and congressional patience concerning it seems to have been reached."

SOUTH CAROLINA

Charleston News and Courier: "Not the Americans, but foreigners, derive the benefits."

Manning Times: "Mexico produces 40 percent of the world's output of silver and the United States Government is its chief customer; or in reality, the United States is carrying Mexico on 'relief.' * * * Mexico's silver sales are the backbone of its socialistic form of government. The profits from silver sales are used to promote trade with Germany and Japan, and to continue the unlawful possession and operation of hundreds of millions of dollars' worth of foreign-owned oil properties which are held under confiscation by Mexico."

TENNESSEE

The Memphis Press-Scimitar: "Some argue that the silver policy provides purchasing power abroad with which to buy American goods. Well, so did our war and post-war loans to Europe. So did those Latin American bonds."

The Knoxville News-Sentinel: "Senator PITTMAN, the leading silverite in Congress, proclaimed that we wouldn't need to buy more than a billion ounces of silver to raise the world price to $1.29.

"The Treasury has bought more than 2,000,000,000 ounces of silver, yet the price on the London market is around 33 cents. Economists say it would skid much lower if the United States Treasury were not offering 35 cents for foreign silver."

TEXAS

Houston Post: "If the Government of the United States is to continue buying silver at a premium over world prices for the metal, ordinary common sense suggests that it limit its purchases to silver produced in this country. There can be no point in buying up silver produced in other countries at a premium and piling it up in the United States."

Austin American: "Loss of markets as well as investments in Mexico—a shabby return indeed for American economic help given Mexico in the form of pegged prices for silver."

The Fort Worth Press: "It is apparently useless to attack this domestic subsidy. But let's stop swapping dollars—which means swapping American airplanes and automobiles and typewriters and oil—for more foreign silver to inter at West Point. If we must buy to hoard, let's buy cheaper, more useful materials that might come in handy in a crisis."

VIRGINIA

Cape Charles Times: "Nor would we in any way want to throw cold water on this rosy Mexican dream because it is not as fantastic as the practice of the United States Government's continued generosity in buying Mexican silver—for which it has no earthly use—at a phony price."

WEST VIRGINIA

Point Pleasant, The Gazette: "Millions of dollars have been poured into Mexico as a result of our lifting the price of silver far above the price on the world market when we started that mad adventure to 'do something for silver.' "

WISCONSIN

Oshkosh Northwestern: "It seems of little use to try to make head or tail out of this Government's present relations with Mexico. * * * The regime responsible * * * depends heavily upon certain American governmental policies to keep its power. Chief of these policies is our idiotic silver-buying program."

Labor Relations in the Automobile Industry

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

REPORT BY PROF. WILLIAM H. McPHERSON ON LABOR RELATIONS IN THE AUTOMOBILE INDUSTRY

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a press release on a forthcoming report on labor relations in the automobile industry, prepared by Prof. William H. McPherson, of Oberlin College, published by Brookings Institution.

The report discloses the improvement in working conditions through development of collective bargaining in the industry in recent years, under the protection of the National Labor Relations Act.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WASHINGTON.—Labor relations in the automobile industry on the whole appear to be gradually improving, as experience in collective bargaining is gained, according to the report of a study that has been completed at the Brookings Institution. The study was made by Prof. William H. McPherson, on leave from Oberlin College, where he is assistant professor of economics.

The report is based on extensive field work, which included many conferences with union officials, officers of employers' associations, and personnel managers. The study covers makers of parts, bodies, and tools and dies, as well as the actual manufacturers of motor vehicles. Among the subjects discussed are collective agreements, hours, grievance procedure, strikes and boycotts, wage rates, profit sharing, wage differentials, productivity, and others of importance in employer-employee relations.

The group of companies which have accorded whole-hearted acceptance to the union, though small, is increasing, the report says. While most managers are reluctant to grant new concessions to the union, nearly all are apparently making a very sincere effort to assure successful functioning of the agreements they have signed. At the same time, the union is growing more responsible and is making a greater effort to assure observance of agreements, the author states.

Working hours have been noticeably shortened since the advent of unionism, but the author points out that this change would have taken place anyway as a result of Federal legislation. The

wage structure has been considerably altered. Extra pay for overtime and for night shifts has been introduced, and the use of piece rates has been sharply curtailed.

Hourly earnings have been greatly increased, but the author finds it impossible to determine how much of this rise has been due to the influence of the union, inasmuch as the trend of wages in this industry has been steadily upward, interrupted only by the depression. The apparent fact that wage differentials between organized and unorganized plants are now much greater than the contrasts between the same plants in preunion times indicates, however, that the union has probably been responsible for some of the increase in the general level, the author says.

The union generally has been more successful in forcing up wages in the large cities than in the small ones, and this tends to accentuate the trend toward decentralization and industrial migration from high-wage areas, which as yet has not been extensive. The migration consists less of plants leaving large cities than of an increasing share of available business being obtained by open-shop plants in small communities; in these the seasonal peak in parts manufacture dovetails fairly well with the farm peak, and a lower wage rate is therefore accepted.

The report states, however, that automobile centers of Michigan can apparently stand an appreciable wage differential in favor of most other places because of the availability of more suitable labor, lower transportation costs, high managerial efficiency, and other advantages. Further, it is noted that wage differentials are not always determined by the size of a city, as in the case of Chicago, whose wage rates are lower than those in some smaller cities of the Middle West.

The necessity, from the union standpoint, of organizing lower-wage areas and forcing wages to a point where there will be no competitive advantage over other areas has been increased by the union's success in establishing seniority systems in organized plants. Although seniority protects the average worker's position in any given plant, the system makes it harder for a worker to obtain a new position if his company goes out of business.

It is the aim of the union to standardize not only wage rates and labor conditions among competing plants, but also their labor productivity. The union contends that work has been speeded up so as to be detrimental to the health of the workers, and definitely seeks a slower rate of operations.

Managers say that since the advent of the union they have had more difficulty in inducing exceptional employes to produce a correspondingly exceptional quality of product, and the author states that it is probably the tacit, if not official, policy of many local union executives to discourage above-standard output.

Profit sharing, says the author, is favored neither by union officials nor by most companies. Although it was listed as one of the 10 major objectives of the original U. A. W., in 1936, by its president, other officials of the union never really desired it. They say that profit sharing indicates that wage rates could and should have been higher. They look on it as a type of incentive even less desirable than the piece-rate system, and say that the workers are inclined to regard it as a gift and therefore to become more subservient to management.

Managers say they often must take steps which have immediate adverse effects upon profits, such as scrapping equipment which is not entirely obsolete or fully depreciated. They fear employees would judge the wisdom of such steps on the basis of short-run results. In addition, they believe this industry is particularly unsuited to profit sharing because its profits fluctuate so sharply.

Establishment of an annual wage seems more remote than a year ago. Some managers appear ready to give serious consideration to such proposals provided the union would relax its limitations on overtime work, thus reducing the need of additional workers at peak periods, but limitations of the Wage and Hour Act have raised new difficulties.

Senate Bill 785 and Domestic Silver

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

TEXT OF LETTER SENT TO CHAIRMAN OF SENATE COMMITTEE ON BANKING AND CURRENCY

Mr. TOWNSEND. Mr. President, I ask consent that there be printed in the Appendix of the CONGRESSIONAL RECORD the text of a letter which I have today sent to the chairman of the Senate Committee on Banking and Currency, in which I point out that the language of Senate bill 785, as it has been reported out by that committee, in no way affects the Treasury's authority and obligation to acquire domestic newly mined silver under the provisions of the act of July 6, 1939. I send a copy of my letter to the desk.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *March 25, 1940.*

Hon. ROBERT F. WAGNER,
Chairman, Senate Committee on Banking and Currency,
Washington, D. C.

DEAR SENATOR WAGNER: In going over the galley proof of the hearings on March 19 on my bill, S. 785, I noticed that the very last item consists of a letter of March 20, 1940, from the secretary of the American Mining Congress, in which there is cited a portion of the opening section of the original version of my bill, S. 785, reading as follows:

"That the Silver Purchase Act of 1934, is hereby repealed, and all power and authority of the President and the Secretary of the Treasury with respect to the acquisition of silver, the changing of the weight or content of the standard silver dollar, or the monetary value of silver, or the issuance of silver certificates, under any act of Congress, shall cease and terminate on the date of enactment of this act."

Evidently when the secretary of the American Mining Congress sent the above letter he was unaware of the fact that the text of S. 785 as reported by the subcommittee to the full committee had been changed and that the language quoted in the American Mining Congress letter is no longer contained in the bill.

I think the erroneous impression on the part of the American Mining Congress should be corrected and I therefore request that this letter be printed in the hearings immediately following the letter from the American Mining Congress.

Walter-Logan Bill

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE NATIONAL GRANGE MONTHLY

Mr. BRIDGES. Mr. President, one of the most outstanding and meritorious measures now pending before Congress is the bill sponsored by Representative WALTER and the late Senator Logan.

The National Grange Monthly has recently published an article entitled "This Measure Long Needed to Curb Power of the Government; Otherwise a People's Liberty in Danger." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MEASURE LONG NEEDED TO CURB POWER OF THE GOVERMENT; OTHERWISE A PEOPLE'S LIBERTY IN DANGER

One of the most meritorious measures now pending in Congress and which is scheduled to come up on a final passage in the near future is a bill placing definite checks and limitations upon the powers of the many administrative agencies of the Federal Government. This bill was sponsored by Representative FRANCIS E. WALTER, Democrat, Pennsylvania, and the late Senator Marvel M. Logan, also a Democrat, of Kentucky.

The bill provides that administrative rules implementing Federal legislation must be issued within 1 year after the enactment of the statute upon which they are based, that they may be issued only after public notice and hearings; that affected parties may obtain hearings upon requests for reconsideration of any rule; and that the Federal Court of Appeals for the District of Columbia shall have authority to determine whether any rule conflicts with the Constitution or violates the statute under which it was issued.

SUPPLIES LONG-FELT WANT

That there has been a crying need for legislation of this sort, particularly during recent years, cannot be doubted. There is entirely too much department-made law in this country. In clarifying this statement it should be said that in many instances, when an act is passed, the agency which is to administer it is given authority to make rules and regulations for its enforcement. These rules and regulations have the force and effect of law. Often there

is no appeal to the courts from the decisions of these administrative agencies.

How these powers are sometimes abused was well illustrated recently in connection with hearings being conducted by the Special House Committee Investigating the National Labor Relations Board. In questioning J. Warren Madden, Chairman of the Board, the committee learned that the Board made a ruling requiring a certain company to pay back wages to two men who had never been employed by the company before, on the ground that the men had been refused employment by reason of their membership in a labor union. The company was ordered to give the men jobs and also to pay them wages for the interval of time that had elapsed between the time the men applied and the time the Board made its ruling.

Under the Wagner Labor Relations Act, if the men in question had been dismissed for union activity it would have been legal for the Board to order their reinstatement, and the men would have been entitled to back pay if the Board had so ruled.

If any better way to destroy private enterprise could be conceived than the ruling of the National Labor Relations Board in this connection, it is difficult to imagine what it might be.

This is only one of many instances that might be cited to illustrate the wholly unreasonable lengths to which administrative officials of the Government sometimes go in making rulings and decisions in carrying out legislation enacted by Congress.

GOVERNORS MUST BE GOVERNED

In recommending the passage of the Walter-Logan bill, the House Judiciary Committee declares that the law must provide that the governors shall be governed and that the regulators shall be regulated if our present form of government is to endure. Continuing, the report of the committee declares:

"The phenomenon of the administrative officers and employees, the so-called bureaucracy, attempting to control all processes of government for their selfish ends is not new, either in this country or in the history of the world.

"The modern-day problems of government are entirely too technical to be performed in many cases by the untrained, and hence it is not possible to emulate the practice in the comparatively simple ways of President Jackson, in discharging all employees in responsible administrative positions and turning the machinery of law administration over to a newly appointed group of officials freshly drawn from the people.

"In order to secure and retain the services of competent people to man the administrative agencies of government, we have been compelled to establish a "career service" under civil service, but there is no gainsaying the fact that with competency and long tenure of office we also secure employees who tend in some cases to become contemptuous of both Congress and the courts, disregardful of the rights of the governed, and for lack of sufficient legal control over them, a few develop messiah complexes. They honestly and fervently believe that their mission in life is to at least reform the United States, regardless of the terms of the statutes, the Constitution, or anything else."

There can be no doubt whatever that the enactment of the Logan-Walter bill would provide a powerful stimulus to economic recovery and would go a long way toward reestablishing respect for government among the rank and file of the people of the United States. Those who hold public office must be given to understand that they are the servants of the people and not their masters.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

EDITORIALS FROM BALTIMORE SUN AND WASHINGTON DAILY NEWS

Mr. BILBO. Mr. President, I ask leave to have printed in the Appendix of the RECORD an editorial from the Baltimore Sun of today, and an editorial from the Washington Daily News of today, on the subject of the reciprocal-trade agreements.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of March 25, 1940]

COTTON AND CATTLE PRICES IN THE DEBATE ON THE HULL PLAN

A spokesman of a cattle breeders' association was one of the most vigorous witnesses against extension of the Trade Agreements Act before the Senate Finance Committee. Oddly enough, he opened his attack with a plea for Senate ratification of trade agreements on the grounds that the present method of negotiating agreements is unconstitutional. He went on from that, however, to attack the program for the harm done the cattle industry in 1936 and likely, he thought, to be done again if the Agreements Act was extended.

A witness, in brief, who was against the trade-agreements program on economic grounds was eager to protect it against claims of unconstitutionality—claims, be it noted, which have less than nothing to stand on. It appears to be a highly paradoxical position. But the position seems less paradoxical when it is recalled that, from President McKinley's time to the present, the requirement of congressional approval in any form has given the lobbyists one last chance to kill reciprocal-trade agreements.

The cattle industry figures as a whole, indeed, exhibit the hollowness of the statistical and economic attack upon the trade program. For, though some cattlemen are at the head of the opposition, the fact is that the cattle industry is much the most prosperous branch of American agriculture. The goal of all the Government's farm programs has been to restore to farmers a purchasing power equal to that which they had in 1909–14. But the Government itself does not expect a hundred percent of these parity prices to be achieved at once. Even the parity program voted by a run-away Senate the other day aimed only at 75 percent parity.

Ever since 1936, however, the cattle industry has been in a highly prosperous condition. That prosperity is indicated by the prices received by cattlemen for their product in the last 12 months. On February 15, 1939, beef cattle prices were not only at parity, but beyond it, the figure being 105 percent of parity. On March 15 a year ago the figure was up to 107; it was a point higher for the next 2 months, was down to an even 100 in August, was 103 in November and December, 104 in January, and 104 last February 15.

All this is despite the fact that concessions on beef cattle were made in both of the Canadian trade agreements; though the limited extent of the concessions is suggested by the fact that in the current agreement quotas are imposed on Canadian imports in the most important category restricting such imports to 1⅛ percent of the average slaughter of cattle and calves in the United States for 1928–32.

Such attacks on the trade program are set in final perspective by a comparison of the cotton-parity figures with those for cattle. Cotton is, of course, an export crop, dependent heavily on foreign markets for whatever return to relative prosperity its producers may yet manage. That means that the extension of world trade at which the trade-agreements program aims is imperative for cotton. Yet, even under the trade-agreements program, cotton prices were at only 53 percent of parity a year ago, reaching 58 percent on September 15 and standing at 63 percent of parity last February 15. One of the farm groups most active against the trade agreements on the ground that they hurt agriculture, in a word, enjoys prices almost twice those of the farm group most dependent on the program.

The Senate may well take account of these price differentials in the debate on extension of the Trade Agreements Act scheduled to begin today.

[From the Washington Daily News of March 25, 1940]

TO TRADE OR NOT TO TRADE

Today the Senate begins debate on the bill to prolong the Hull-Roosevelt program of reciprocal-trade agreements. The House has already passed it.

The arguments have all been made, in the House and elsewhere, but they will be made again—and with the Senate's lavish disregard for brevity.

It seems to us that all the issues save one may be set aside as immaterial. The one that remains, after the chaff of oratory from the logrollers and protectionists is winnowed out, is this:

Does the United States want to trade, or does it not?

If it does not, then let the Hull program slide. The "easy" way to do that is to require Senate ratification of each trade agreement. This is the kiss of death that is proffered by the traditionalists, the tariff politicians, including even the chairman of the Senate Foreign Relations Committee, Silver KEY PITTMAN.

If we wish to continue as a merchant power, and to expand our foreign trade, and to be ready when peace comes with a tested formula for combatting the guerrilla economics that helped bring on this present war, then the Hull program must be voted new life.

The basic axiom of international economy is this: If you would sell, you must buy. The Hull program is a recognition of this simple truth. The opposition to the Hull program, despite all the fancy arguments and phony statistics, can be boiled down to this: "We want to eat our cake and have it. We want to sell, but not to buy. We want high tariffs to subsidize our particular constituents. We are not interested in promoting the only foreign trade that is possible in the long run—a two-way trade from which our whole economy would gain, and without which it must wither, as the Lord knows it withered after the Smoot-Hawley Act of 1930."

The magazine Fortune, out today, reports the result of one of its round tables, this time on the matter of foreign trade. The

17 participants included industrial, economic, educational, manufacturing, banking, farm, and labor leaders. Three of them advanced criticisms against the Trade Agreements Act. But the great majority favored renewal of the act, because:

"First, it constitutes an instrument by which the State Department can quickly negotiate a settlement of difficulties arising out of war trade.

"Second, we know of no satisfactory alternative to the Hull trade program.

"Third, the renewal of the Trade Agreements Act will serve notice on the world that the United States clings to the idea of free enterprise and will, when the proper time comes, lend its great influence to a plan for world reconstruction aimed at the revival of private enterprise.

"To abandon or emasculate this program, we fear, might strengthen the world-wide forces of totalitarianism."

A Tangled Skein

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1940

Mr. SPRINGER. Mr. Speaker, the people of this Nation are greatly concerned over the silence of the President on the third-term issue. Many men who occupy high positions in our Government are greatly concerned over this question, because every President from the days of George Washington down to the present occupant of the White House had the fortitude and the deep consideration for the people of our Nation to state publicly that they would not become a candidate for a third term. The precedent has been established by all who have occupied this exalted position that no one should ask for a third term. That precedent and established tradition should remain inviolate.

This question should be promptly answered by the President in fairness to the people and to those who aspire to seek the nomination for President on the Democratic ticket.

Our beloved and highly respected Speaker of the House of Representatives would welcome the assurance from the lips of the President that he would not seek to break this well-established precedent and tradition in this great Nation. Vice President GARNER eagerly awaits the final determination of the President on this highly important subject. Postmaster General Farley would also enjoy knowing what the President is going to do—yet that makes but little difference to the Postmaster General, because he is a candidate for the Presidency in his own right regardless of the determination of the President.

Mr. Speaker, I am confident the people recall that statesmanlike and memorable statement of Calvin Coolidge, "I do not choose to run for President in 1928."

We read and reflect on those unforgettable words spoken by George Washington in his Farewell Address when he announced in unmistakable language his declination to run for a third term. All Americans worship at the shrine of his great statesmanship.

Yet, Mr. Speaker, the President of this great Nation—one who occupies the highest office within the gift of any people—declines to say whether he proposes to run for a third term and thereby attempt to break another American tradition. The President was elected by the people, and by that same token he should be entirely frank and fair with the people. He should speak upon that subject; he should tell the people what he proposes to do; the people are entitled to know; the people are the rulers in this great Nation.

Therefore, Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and to include therein a very interesting editorial entitled "A Tangled Skein," which appeared in the Washington Evening Star, of Washington, D. C., on Thursday, March 21, 1940, which follows:

A TANGLED SKEIN

The silence of President Roosevelt—on the third term—is winding a more and more tangled skein. Apparently it has brought almost to the parting of the ways the principals in the old Roosevelt-Farley combination. The Postmaster General has announced that he will be a candidate "without reservation" and his name will be so presented to the Democratic National Convention.

If this means anything it is that he will be a candidate against Mr. Roosevelt if the latter seeks a third-term nomination. Seemingly it puts Mr. Farley in opposition to his chief if the latter wishes to run. But no one knows whether the President wishes to run or will run. He has just issued a denial of a story that he told a Member of Congress he did not wish to run, that he favored Secretary of State Cordell Hull for the Presidential nomination, and that Mr. Farley would not do for a place on the Democratic national ticket because of his membership in the Catholic Church. The President was denying primarily his reported attitude against Mr. Farley, but at the same time his denial gave the lie to the whole story.

It is easy to believe that the supporters of Vice President GARNER for the Presidential nomination will hail Mr. Farley's "without reservation" entry into the race. Up to the present time, Mr. GARNER has been going it alone against the third-term bandwagon. Of the whole field of Democratic candidates, only he has been willing to say that he would contest the President if his name were presented to the Democratic National Convention. There have been many rumors that the Garner-ites were seeking an alliance with Mr. Farley, who has been supposed to be antithird term on principle, but the Postmaster General denied he was planning to team up with any other candidate.

In the light of Mr. Farley's "without reservation" statement, any move to displace him from his present Cabinet office would be regarded as clear proof that the President will run again. The silence of Mr. Roosevelt, if it is to be preserved, seems to preclude any activity on the part of the administration against Mr. Farley.

The way in which third-term advocates grasp at straws was demonstrated again yesterday when Secretary of the Navy Charles Edison announced his candidacy for the Democratic nomination for Governor of New Jersey. It was immediately argued that Mr. Edison was taking this step to help his chief carry New Jersey, a battle ground in the coming elections. It was argued, too, that Mr. Edison, had he not been reasonably assured that the President would head the ticket, would not have entered the gubernatorial race.

Nothing, however, is certain except that the third-term fog still continues thick enough to cut with a knife.

Cromwell Goes to War in Canada

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE, MARCH 21, 1940

Mr. KEEFE. Mr. Speaker, the recent speech of James Cromwell, American Minister to Canada, has aroused the entire Nation to the necessity of constant vigilance if we are to stay out of the European war. Such utterances violate every semblance of our neutrality and can only lead to stirring up international hatreds, with the obvious purpose of driving this country into another European controversy.

A valued constituent and a veteran of the Spanish-American War, Mr. Charles F. Potratz, of Oshkosh, Wis., has very vigorously called this matter to my attention and expresses the sentiments of thousands of people in Wisconsin who are vigorously opposed to any propaganda being disseminated that may lead this country into European wars. He forwarded to me a very challenging editorial published in the Chicago Tribune under date of Thursday, March 21, which I am pleased to incorporate in these remarks.

CROMWELL GOES TO WAR IN CANADA

Young James Cromwell, the husband of Doris Duke, has twice confirmed the White House folly which made him American Minister to Canada. He offered one proof of it in some remarks at Val d'Or, Quebec, and clinched the case beyond argument in Toronto when he spoke at a joint meeting of the Canadian and Empire Clubs. Young Mr. Cromwell apparently decided that no American diplomatic representative should ever have the privilege of exceeding him in indiscretions, irresponsibility, and disregard of duty, of his country's interests, and of official proprieties.

As American minister Mr. Cromwell told his Canadian auditors that he was at a loss to understand how any intelligent citizen of any of the world's neutral democracies could say with conviction that he had no interest in the outcome of the war or that there were

no issues at stake which could affect him. For himself, said the American Minister, it was only too apparent that the life, liberty, and livelihood of neutral citizens might be dependent on the outcome of the present war. The future of coming generations was, he said, in all probability now at stake.

Along this line Mr. Cromwell discussed the character of the belligerents, their war aims, and the consequences of victory as it might fall to one combination or the other, drawing the conclusion that an enslaved world awaited the success of Hitler and a free world depended upon the triumph of Chamberlain.

Such talk from American citizens whose loyalties are transferred across the water builds up the legend which had its birth in the other World War, that Britain and France are fighting America's fight. It recreates the assumption that the United States must intervene again in Europe not only because humanity demands it but because the future of the American people will be determined on European battlefields. Thus Americans of foreign sympathy and expatriate feelings prepare the ground for the British and French propagandists to reproach this country for evasion of duty, for shuffling off responsibilities, and for placing them on the shoulders of people fighting to preserve the American stake in the world which, to be tolerable, must be free.

When Congress, at Mr. Roosevelt's insistence, removed the embargo on arms and permitted the British and French to obtain military supplies, it was apparent to people who had any recollection of the other war that this was but the first step in a proposed intervention and exposed the American people to the charge that they recognized the issues involved, would try to square themselves by selling goods at a profit, but would shirk their full duty, which was to send their soldiers in the wake of their war material. Every time an American whose words will be widely quoted makes such statements he gives arguments to the conspirators and intriguers, here and abroad, who seek to make the American people again a party to these recurrent conflicts of European rivals who emerge from one war only to prepare for another.

From such a future the United States is trying to divorce itself. Young Mr. Cromwell said, in his Toronto speech, that his remarks might result in the use of the headman's ax on him. If he is not recalled, it will be assumed that Mr. Roosevelt is not displeased by the indiscretions and misconduct of the man he appointed to the post of Minister in Canada. Mr. Cromwell has done his country an injury in Canadian opinion and in the world at large.

It may not be generally understood that he is an erratic young man of eccentric economic ideas and of an extravagant social life, familiar with American circles who see in the court life of England glories of a promised land for the fortunate who are able to win its favors. If Mr. Roosevelt does not immediately recall his glib appointee, it must be accepted as true that these remarks in no way offended him and were not out of harmony with the opinions and purposes of the White House, but indeed revealed what Mr. Roosevelt would like to present to the people of Canada and the Governments of Great Britain and France as well as to the people of the United States.

Cromwell spoke as American Minister at a formal gathering and in his official character. He couldn't divest himself of that if he chose, and although the comments of the young man would have been without significance if he were in private life, they came as the utterances of an American representative of the State Department. They are charged with meaning until they are disavowed and he is rebuked by removal from office. In private life he will become again just a young man who married an heiress and wanted to use graves of American soldiers for a dizzier social climb.

Cotton and Parity Prices

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. BOLLES. Mr. Speaker, I am placing in the RECORD a statement by Frederick Moore, textile cost specialist, as appearing in the Textile Bulletin, which analyzes the parity-payment question. I am using only extracts from that statement, but in its principles laid down they cover all the phases of parity. Mr. Moore says:

The hope of America lies in maintaining its enthusiasm for research and in preserving free opportunity in seeking the rewards of activity. It cannot fix a tax on the products of activity of one group of individuals to compensate for some lack of activity or improvement in another group without destroying enthusiasm and forfeiting its guaranty of equal opportunity to all groups.

Variation in the nature and, therefore, in the cost of raw materials and commodities is so great, the results accomplished by different individuals and groups are so wide apart, the causes of such variations are so deep-seated and so built into the constitution of things, that any attempt by government to create a parity in price structure is not only doomed to utter failure but has possibilities of disrupting the entire economic structure of the American system of free enterprise.

The Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

STATEMENT OF ALBERT S. GOSS, FORMER FEDERAL LAND BANK COMMISSIONER, FARM CREDIT ADMINISTRATION, BEFORE THE HOUSE COMMITTEE ON AGRICULTURE

Mr. KLEBERG. Mr. Speaker, Mr. Goss, whose statement follows, has had 23 years of experience in agricultural credit. The Farm Credit Administration has been ably served by Mr. Goss as land bank commissioner, and the farmers of our country have learned of his ability, service, and friendship. It is with sincere regret that I acknowledge his resignation. His views on the proposed bill, H. R. 8748, are worthy of attention and study.

The statement is as follows:

I appreciate the invitation to discuss this bill, for in its published form I believe it would largely destroy the cooperative credit system we have worked so hard to build these past 23 years. I realize the real issue is not whether a cooperative system would be destroyed, but rather whether farmers would be adequately served. After having been more or less intimately connected with the system over the greater part of its existence, it is my honest belief that the farmer's credit needs can best be met by a truly cooperative system, and I welcome the opportunity to point out certain weaknesses which make me believe the present bill will not be in the best interests of agriculture.

Unfortunately I find myself in a rather awkward position. Owing to the situation which prevailed because of my resignation as land bank commissioner, I have been unable to attend any of the hearings on the bill and have seen no transcript of testimony. On the other hand, I had not expected to appear before you until I received your invitation on last Friday evening, the date my resignation became effective, so have had no access to the statistical data, legal opinions, or other facilities which would otherwise be available, and the time has been too short to attempt to propose any suggested changes either in the proposed bill or in the present law. I regret that my comments may not be as complete and constructive as might be possible under other circumstances.

There are certain inherent features of strength and service in a cooperative credit system which this bill sacrifices, and in order to make clear what I mean I wish to review the conditions which led to its creation.

The system is really an outgrowth of the 1907 panic, when banks learned that they had to make fewer long-term and more short-term loans if they were to keep open. Through a large part of America mortgages had been hard to get and became harder. Rates were high and terms were short; 8 percent, 10 percent, and 12 percent money was not uncommon in many areas with loans usually running from 3 to 5 years with renewal charges at maturity. Lenders claimed that losses were so heavy that high rates were necessary, and short maturities were also necessary so they could take frequent looks at the security to assure safety. Responsible farmers began to realize that they were being penalized because of losses arising from loans made to irresponsible operators. Farmers and farm organizations took a hand and many plans were proposed to meet the situation. The most promising efforts were made along small cooperative lines. This was particularly true in areas where many of the farm leaders had had experience with cooperative credit in Europe.

FARMERS TAKE A HAND

The general plan was for a group of farmers needing land-mortgage credit to join in forming a cooperative credit society in which they jointly guaranteed the loans of their members, each member being responsible for his own loan and liable for a like amount as a joint guarantor. They reasoned that if they admitted to membership none but those whose notes they were willing to endorse, the losses would be few, that if misfortune overtook a member, the others would pitch in and help out; that if foreclosure became necessary they themselves, would take over the farm and

operate it until it could be sold, and that with such guaranties the lenders would have the maximum protection against loss, and could afford to lend at low rates and on longer terms. However, the idea was too new in America, and lenders were not attracted, though the plan was thoroughly sound.

Finally in 1912 President Taft appointed a commission to go to Europe to study the farm-credit institutions, some of which had operated successfully for nearly a century. The studies were long and exhaustive, and Congress had the aid of the commission and executives of European cooperative credit banks in drafting the Farm Loan Act of 1916. This act followed the basic principles of the cooperative credit societies the farmers had proposed, but united the societies through one financing agency, the land banks, which would pool the credit resources of all the societies, or national farm-loan associations, issue bonds upon the mortgages, and create a market for those bonds in the money centers of the Nation. Note carefully these four important points which were preserved in the act, for they are the very heart of any successful cooperative credit institution: First, individual responsibility; second, joint responsibility; third, selection of members, or risks; and fourth, sharing of any profits or losses which resulted from their mutual efforts. Thus each member became individually and financially interested in the success of the other members, resulting in a careful selection of risks, and carefully watching the loans when made.

I do not maintain that it has always been as pretty a picture as I have painted, for many mistakes were made. I will touch on that later when I point out how these mistakes have gradually been corrected and how the system is rapidly getting back to these cooperative principles which are thoroughly sound. First, however, I want to digress a moment to point out that there may be many different ideas as to what constitutes a true cooperative, but I believe everyone agrees on one basic principle, that being that the members share the profits or the losses in proportion to their patronage. In other words they share the profits or losses in proportion to the part they have played in creating those profits or losses. Another principle which is almost as universally agreed on is that the members jointly furnish the facilities for carrying on their activities.

A farm mortgage cooperative differs from most cooperatives in that there are usually not more than one or two major transactions with the association in the lifetime of most of the members. The framers of the Farm Loan Act met this difficulty in a very practical manner by providing a membership interest of 5 percent in stock, and providing for stock dividends. Since the stock is issued on a patronage basis, the dividends are tantamount to patronage dividends. Note carefully that the four essential points were preserved, individual responsibility, joint responsibility, selection of risk by those whose interests were at stake, and mutual sharing of profits or losses.

OPERATIONS STARTED

Now let us come down to date rather rapidly. The system started during the days of the greatest land inflation in our history, and ran down through the period of the deepest and what is proving to be our most extended depression. Thousands upon thousands of other financial institutions failed and possibly a majority of those which survived had to have more help than was given this cooperative farm-loan system. I venture the assertion that if the cooperative principles which had been written into the act had been faithfully followed throughout the system from the start, no Government aid would have been needed. Unfortunately, however, many of the banks attempted to operate as an old-fashioned centralized mortgage company and used the associations only as business getters. Little effort was made to have the members take part; the recommendations of the boards were largely ignored; the banks began to do business directly with the borrowers instead of through the associations, and the strongest safety factors in the system, individual and joint responsibility with careful selection of risks and careful servicing of loans, were pretty much abandoned.

I think it is inevitable that there should have been unusual losses due to the inflationary period when so many loans were made and the extreme depression which followed. Just as a reminder, farm income dropped from $18,500,000,000 to less than $4,500,000,000 dollars during this period. The remarkable thing is that the system stood at all, and it is worthy of particular note that those banks and those associations which clung to the cooperative principles came through with very little loss.

With this record of an embryo cooperative pulling through such a storm in creditable shape, it was but natural that Congress should turn to it in the emergency the Nation faced in 1933 and place upon it the responsibility for meeting the impending foreclosure disaster which confronted a million farmers. There were two main reasons: First, the machinery was in place and ready to do the job. Second, it would not put any strain on Government finances. You will recall that three basic steps were taken in the Emergency Farm Mortgage Act. Title I provided means for the land banks to carry on, for commission loans, for 5-year extensions and deferments, and for a temporary reduction in interest rates. Title II set up the Agricultural Adjustment Administration for the purpose of working out a farm program designed to bring prices back to normal. Title III provided for monetary adjustments to meet a world financial crisis. The three titles were complementary devices for restoring normal conditions. One of the most significant features of the Emergency Farm Mortgage Act was the principle of lending on normal values. I mention it especially because I believe the pending bill practically destroys this sound lending principle.

NORMAL VALUES

The normal-value lending concept recognizes that during the life of the loan there will be ups and downs in farm income, and it attempts to adjust the loan to the average income which is normally expected to prevail during the period when the loan will be repaid. With a 50-percent loan a borrower presumably has 50-percent equity in his property and can span a considerable period of below-normal income out of his own resources. With a 25-percent loan he cannot carry on so long without help. Congress recognized this and provided funds for the banks to use in making extensions and deferments to carry on until normal and above-normal income would return. The banks are equipped to render such aid and are constantly doing so.

It has been frequently said that stepping into a thoroughly demoralized real-estate market and making a billion dollars in loans based on normal values was the one thing that broke the back of depression. I doubt if a quarter billion dollars ever circulated faster in our national history than the first quarter billion loaned by the Federal land banks on the basis of normal values. Certainly nothing ever occurred which had a more stabilizing effect on farm values or started the wheels of progress turning faster. This could not have been accomplished except for lending on normal values, for there was no present income to lend on otherwise. Not only because of its proved worth but because of its inherent soundness, I feel you should move very cautiously before abandoning or weakening this principle of normal-value credit.

NATIONAL FARM LOAN ASSOCIATION

When the big lending rush was well in hand, the next move was to rebuild and rejuvenate the national farm-loan associations. Those which had followed a true cooperative course clearly pointed the way to successful reconstruction. Many had collapsed completely. Others were badly impaired, while others were slightly impaired, and many had met all their losses and had built substantial reserves. There were many problems to be solved, and the task could not be completed overnight.

I will mention but three of these problems:

First, the associations had little or no income, since none of the banks were paying dividends.

Second, many associations could not accept new business or retire stock because of impairment in capital.

Third, overlapping territory and ruinous competition between associations prevented a come-back.

Through a system of allowances for services rendered, the first problem has been met, and eventually the associations will have dividend income once more.

By striking a line between impaired stock and the stock of new borrowers and giving each a chance to work out, the second problem has been met.

By a thousand consolidations and grouping of offices the third problem has been met in 95 percent of the territory and with increasing satisfaction which gives promise of 100-percent performance before long.

Through these steps costs have been lowered, delinquencies reduced, earnings increased, and the system is repairing the inroads of the depression at the rate of a million dollars a month.

RESULTS SUMMARIZED

Now, what has this all totaled up to?

First. While it has served directly less than 40 percent of the farm-mortgage borrowers in America it has acted as a yardstick which has reduced interest rates for all farmer borrowers from 25 percent to possibly 50 percent.

Second. Where formerly loans were usually made for 3 or 5 years, and many never paid off, it has made common the use of the amortized loan.

Third. Where loans were largely made on sales value, it has led the way, and others have followed, in making loans at the normal agricultural value of the land.

Fourth. Where delinquency, unless promptly cured, usually led to foreclosure, it has led the way in a practical and humane collection policy which has largely been followed by most large institutional leaders.

Fifth. It has a record of delinquency fairly comparable to most institutional lenders and a record of foreclosure of approximately one-half that of other farm-mortgage lenders.

Sixth. It has 650,000 stockholder-members, with 3,700 farm-loan associations officered by approximately 24,000 directors and officers working to make this cooperative-credit system a success.

Constructed after 4 years of study and research, perfected during 23 years of operations, having successfully weathered the dangers of both great inflation and deflation, I feel great caution should be used before the essential framework of this structure should be drastically changed or tampered with.

THE BILL DISCUSSED

Now I propose to discuss some of the features of the pending bill to show why I have serious misgivings lest this do violence to the principles which have made for progress in the past.

First is the title. On reading the title, I get quite a different impression as to the purpose of the bill from what I got when I

studied the bill carefully. I merely want to suggest that the title be carefully reviewed.

I have no comment with reference to section 1.

Section 2 provides that the Governor shall establish an interest rate quarterly sufficient to provide a 1-percent spread for administration costs and losses. As I shall point out later in the bill, there are a number of features which I believe will materially increase both the costs of operation and the losses, and I feel quite confident that neither the land banks nor the Federal Corporation can operate on a 1-percent spread under the provisions of the bill. This would mean, of course, that the assets of the banks would be used up and the Government would have to make up the loss because of its guaranty on the bonds. During our 23 years of operation the banks have had the following experience:

Expense of operation, fifty-four one hundredths of 1 percent.

Losses, twenty-seven one hundredths of 1 percent.

Estimated losses and reserves for losses, twenty-eight one hundredths of 1 percent.

Total, 1.09 percent.

This has been practically the exact amount of the spread we have operated on during the past 23 years. Through the days of the deepest depression our expenses and losses were heavier than the figures indicated, but gradually, as we have been able to develop the farm-loan associations so that the boards of directors were taking an active part in servicing the loans, our costs have declined. It is my opinion that the land banks will eventually be able to operate within the 1-percent spread if we continue to develop membership interest and pursue thoroughly sound lending practices, but it will be some time before this is entirely accomplished. If, however, unsound collection policies are pursued and delinquencies are increased, our losses are going up. If my memory serves me correctly, it costs from 7 to 12 times as much to carry a delinquent loan as a current loan.

SPREAD ON COMMISSIONER LOANS

It is yet too early to say just what the effect of the second-mortgage loans will have upon the first-mortgage land-bank loans, but there is no question about the fact that the 75-percent loans will run into much more delinquency and difficulty than the 50-percent loans, and naturally the commissioner's loan carries a good deal of grief over into the land-bank field.

It is too early to say what spread will be necessary to support the Federal Farm Mortgage Corporation with its second-mortgage loans. Delinquencies are heavier than on 50-percent loans, resulting in increased costs. Losses are heavier, and in the case of second-mortgage commissioner loans it frequently develops that by the time we have carried the borrower for 4 or 5 years, piling up interest and taxes on the first-mortgage loan, there is no equity worth protecting. In such cases a foreclosure results in a 100-percent loss to the Corporation. Our experience so far shows that it will cost considerably in excess of 2-percent spread to carry these 75-percent loans.

The higher the loan, the higher is the servicing overhead. This is but natural, and I think some of the governmental agencies have found that the overhead cost of servicing 100-percent loans is 15 or 20 times as great as servicing 50-percent loans. I am very sure, therefore, that the provisions of paragraph (a), section 2, will result in a permanent subsidy on the part of the Government, both to enable the land banks and the Corporation to meet their bond obligations.

Section 2 (b) provides that interest on delinquent items shall be charged at the same rate as on the loan. Section 12 of the Farm Loan Act provides for 8-percent interest, but the banks are not required to collect 8 percent, and for some years have been collecting a much lower rate of interest. Our experience shows, however, that if the rate of interest is set at the same as the mortgage, many borrowers ride the banks as long as they can, paying every other obligation first, because they are getting the cheapest interest from the land banks. This is not universal by any means, but the volume is so serious as to have a material effect on the delinquencies and thereby increase the cost of operation.

Experience shows that many people require some sort of penalty to prevent their deliberately allowing delinquencies to run, and I think it would be a serious mistake to make it mandatory to charge the same rate of interest on delinquencies as upon the original loans. I appreciate the fact that a borrower in deep distress can least afford to pay interest, but the experience of the banks clearly indicates that there must be left with the administrators discretion to prevent abuse. I suggest that this matter can be handled much better by regulation, to fit the individual merits of the various types of cases which arise.

INTEREST SUBSIDIES

Section 2 (c) provides a means of enabling the banks to pay the flat 3-percent interest which is provided in section 2 (a) by requiring the Government, if bonds are not sold at 2 percent or less, to make up the difference between the 2 percent and the rate the bonds bring. First, I wish to call your attention to the fact that section 2 (a) reduces the rate of interest on all outstanding loans to 3 percent. This rate is to prevail throughout the life of the loan, which might average, for example, 25 years. Section 2 (c) provides for a Government subsidy until July 1, 1946. But if the system had to pay more than 2-percent interest after July 1, 1946, the banks would have to stand this additional loss which might run into hundreds of millions of dollars. Obviously, this would be thrown back on the Government, because it would have to guarantee the payments of the bonds, but I submit that it is short-sighted financing to leave any such possibility, and it is altogether undesirable to put the banks in a position where their assets and working capital will be lost and they will have to depend upon the Government for taking care of their bond obligations permanently. I also raise the question as to whether the Congress can constitutionally require the banks to reduce interest without reimbursing them for the ensuing losses.

LOSSES TO GOVERNMENT

This section also raises a possibility which should be carefully considered. Section 3 takes away from the banks the right to determine the amount and terms of the bonds they will issue and places this right solely in the Governor and the Secretary of the Treasury. It is altogether conceivable that some time in the future the Governor and the Secretary of the Treasury might desire to court the good will of the farmers and issue a number of series of 1-year bonds, getting the money possibly at less than 1 percent and making loans at less than 2 percent. If this is done and a business recovery would create a demand for money, we would find the banks loaded with very low-rate mortgages and faced with the necessity of marketing bonds which would provide no spread at all and might possibly carry a rate higher than the mortgages. The bill is wide open in this respect. And, again, the losses might run into hundreds of millions of dollars.

I think great care should be exercised in studying the long-term bond trends before any program is approved which would permit any substantial amount of borrowing on the short terms in order to make loans of 30 or 40 years. I feel that no condition can exist that would justify granting farmers of today unusually low rates of interest which possibly will have to be repaid by the farmers of tomorrow. If the farmers of today require this low rate of interest, let it be recognized as a straight subsidy which is met by Congress from year to year, or for some definite period, but do not enter into any program which will wreck the system for the future in order to meet a temporary need.

While we are discussing costs I would like to include a few figures in the record. Last week I asked our finance and research division how much of a job it would be to work out the fiscal effects of this bill if it had been in operation in 1939. I was told that a statement had already been prepared for the Governor and the figures were therefore available. I think the Governor has already presented them, but there is one feature I wish to add and comment on, so I trust you will pardon a repetition. In developing these figures the assumption was made that it would be possible to borrow money at the average rate the United States Government was paying for money on December 31, 1939, or 2.598 percent. The figures are as follows:

Under the provisions of this bill:

1. Interest subsidy would have been:	
(a) Federal land banks	$17,100,000
(b) Federal Farm Mortgage Corporation	12,600,000
Total	29,700,000
2. Interest subsidies actually paid during the year:	
(a) Federal land banks	29,000,000
(b) Federal Farm Mortgage Corporation	7,000,000
Total	36,000,000
3. Savings to Treasury in interest reduction	6,300,000
4. Loss of income (gross) to:	
(a) Federal land banks on loans	39,000,000
(b) Federal land banks on borrowers' stock investment	5,600,000
(c) Federal Farm Mortgage Corporation on loans	14,000,000
Total	58,600,000
5. Loss of income (4 above)	58,600,000
Less interest subsidy (1 above)	29,700,000
Net total loss of income	28,900,000
6. Profit last year, Federal land banks	12,000,000
Loss last year, Federal Farm Mortgage Corporation	6,700,000
Combined profit	5,900,000
7. Net loss of income (5 above)	28,900,000
Less combined profit (6 above)	5,900,000
Net combined loss	23,000,000
8. Under the proposed bill the net losses last year would have been, for:	
(a) Federal land banks	5,000,000
(b) Federal Farm Mortgage Corporation	18,000,000
Total	23,000,000

9. Comparative costs to the U. S. Government:

	Actual	Under the bill
Interest subsidies	$36,000,000	$29,700,000
Loss, Federal Farm Mortgage Corporation	6,700,000	18,000,000
Federal land banks		5,000,000
Total	42,700,000	52,700,000

These are the figures which I understand the Governor presented, showing a net combined loss of $23,000,000, or an increased loss above present costs after having absorbed all profits of $10,000,000. The figures which I wanted to add to it are these:

As you know, the President recently demanded a return from the Farm Credit Administration Act of capital funds amounting to $385,000,000. I understand that this amount has not been definitely determined upon, but the tentative allocation to the land banks was $200,000,000. If the land banks are deprived of these working funds, there will be an additional loss of $5,200,000, which would make the net annual loss to the banks and Corporation of $28,200,000. I think the annual loss of these funds should be considered very carefully in determining whether this new bill is worth this annual cost.

CENTRALIZED CONTROL

Section 3, as I have pointed out, provides for a centralization of authority which is very significant. Heretofore the boards of directors of the Federal land banks have been responsible for their fiscal policies as provided in Twelfth United States Code No. 884. This takes away from them the responsibility for their determining the amount and terms of bonds issued, and centralizes the responsibility of financing in the Governor and Secretary of the Treasury. I believe decentralizing responsibility and authority is the way to develop men and institutions and think that depriving the boards of their responsibilities and centralizing power in Washington is ill-advised.

This section also provides for the Government guaranty of the bonds and by inference repeals the sections of the law which require that bonds be secured by endorsed first mortgages, Government bonds, or cash. I refer specifically to lines 4 and 5 of page 5 which state that "No such bonds shall be issued in excess of the assets of the Federal land banks."

GOVERNMENT GUARANTIES

At this point I would like to raise the whole question of the advisability of the Government guaranteeing the bonds. If it is possible for the banks to operate as an independent system, under their own steam, I think it is far better than involving the Government in any guaranties, particularly where there are so many opportunities for enormous losses under unwise administration, as I have pointed out. It seems to me there may be two purposes of getting the Government guaranty of the bonds. The first would be to make up losses which would ensue from unsound lending or collection policies. I repeat again that I do not believe it wise to write into the law any unsound policies which will result in unnecessary losses. If aid is needed temporarily, it should be given in the way of a direct subsidy and not hidden away in forms which will cost the Government in the future untold millions of dollars.

As to the second purpose in securing low interest rates, I wish to present the following figures: When the system was first started it was natural that investors did not have the same confidence in farm-loan bonds as in Government bonds, and there was a substantial difference in yield of 2 percent or more. Gradually this difference narrowed. The figures I have cover the last few years, since they reflect the degree of confidence of the investing public in the policies pursued under the Farm Credit Administration. They show the difference in yield between Government bonds of like term and maturity and farm-loan bonds. The dates used are the nearest dates to January 1 and July 1 for which data are available:

	Percent
July 1, 1934	1.10
Jan. 1, 1935	.94
July 1, 1935	.49
Jan. 1, 1936	.46
July 1, 1936	.45
Jan. 1, 1937	.23
July 1, 1937	.25
Jan. 1, 1938	.21
July 1, 1938	.49
Jan. 1, 1939	.50
July 1, 1939	.36

From November 1 on I have the figures on a weekly basis, as follows:

	Percent
Nov. 1	0.22
Nov. 8	.22
Nov. 15	.30
Nov. 22	.21
Nov. 29	.22
Dec. 6	.21
Dec. 13	.18
Dec. 20	.20
Dec. 27	0.30
Jan. 3	.36
Jan. 10	.35
Jan. 17	.47
Jan. 24	.46
Jan. 31	.48
Feb. 7	.52
Feb. 14	.43
Feb. 21	.48
Feb. 28	.48
Mar. 6	.50

It will be noted that the difference in 1934 was 1.1 percent, that as we progressed in developing the cooperative features of the system and it became apparent that it was being operated on a sound basis and was building adequate reserves to meet losses, public confidence increased, and the difference in yield decreased until in December of last year it reached a low point of less than one-fourth of 1 percent. This difference is now widening and is now approximately one-half of 1 percent. It is my honest judgment that if the Farm Credit Administration continues to be operated on sound business principles eventually farm-loan bonds, secured by endorsed first mortgages, Government bonds, and cash, will sell at approximately the same yield as Government bonds, and no material advantage would be gained by requiring the Government guaranty. This may take some time, but I believe it very much worth while for this cooperative system to be able to stand on its own feet without Government aid.

It should not be necessary to remind you that there have been times in recent years when Congress was not as sympathetic to agriculture as you men are, and when agriculture could not get any form of assistance in meeting their problems. No doubt those times will come again, and I think it is a heavy responsibility to assume to destroy an independent organization and make it dependent upon the Government for funds or subsidies.

I wish to make one more point in connection with section 3. I am inclined to think the wording of the bill would result in guaranteeing the bonds of the joint-stock land banks, and I trust this is not the purpose of your committee.

I have no comment on section 4 if the general purpose of Government guaranteeing bonds is to be followed.

I suggest that the title of section 5 might be clarified if it read "Stock subscription abolished."

ABOLISHING FARMER OWNERSHIP

To me this section is the most dangerous one of the whole bill, because it removes the farmer's financial interest in his farm-loan association and, in my judgment, would destroy that active participation in the association's affairs which experience has proved to be so successful in maintaining the system on a sound basis and providing the right type of credit service to deserving borrowers. Without any stock subscription, I fail to find any provision in the bill whereby borrowers would share in the gains or losses of the system, and, in my judgment, this utterly destroys its cooperative features. It has been a principle well recognized in cooperative endeavors that the members should have a financial interest in their own organization. I believe a survey of the operations of cooperatives generally will show that the success of those in which the members had no financial stake has been so rare as to be almost nonexistent. To destroy deliberately this well-grounded cooperative principle seems to carry very grave danger.

It may be possible that a majority of our borrowers would favor it, because they would receive cash in these distressed times to the extent of 5 percent of their loan, and the jingle of cash would deafen them to the dangers which would ensue from killing off the cooperative institution. Until the case is carefully analyzed, it would have a strong appeal to many borrowers. That is the reason I have felt justified in dwelling on this phase of our organization at such length. This provision has been characterized as "the most attractive bait ever held out to destroy a cooperative," and the history of cooperatives is strewn with wrecks of otherwise successful cooperative institutions which have been destroyed by giving the stockholders cash for their interests, particularly where a little profit is added.

STOCK SETTLEMENTS

I appreciate the complexities of stock ownership of national farm-loan associations resulting from the disastrous times through which we have passed. But we are gradually emerging from those times, and the stock complications are rapidly getting straightened out. It seems to me that destroying the borrowers' participation in the earnings or losses of his institution is wiping out at one stroke all the progress made during the past 23 years of operation.

I would like to point out two questions which come to my mind in connection with section 6 (b). This provides that the capital stock of the Federal land banks should be paid off at par. A number of the banks through sound operation have accumulated substantial surplus accounts which I believe rightfully belong to the stockholders. Under the terms of the act, the annual losses would soon absorb all the surplus accounts and reserves and the borrowers who through sound management have accumulated these surpluses would be deprived of any interest in them. I do not think this is fair.

The second point has to do with deducting the losses "resulting from the defaults after June 16, 1933." This is somewhat ambiguous for I believe it would be quite difficult to determine

whether the losses occurring after June 16, 1933, arose by reason of defaults which existed before June 16, 1933, or after that date.

I find in section 6 (d) a sentence which appears somewhat ambiguous: "Each Federal land bank shall pay to the national farm-loan associations within its district an amount equal to the amounts required to be paid by such associations under this section." I believe there is some confusion over the operation of the indemnity accounts and just what funds would be available for retiring the stock of former borrowers, whose stock had been withheld by reason of impairment.

CENTRALIZING CONTROL OF ASSOCIATIONS

Section 8 (a) provides that the Governor shall determine the extent to which farmer participation in the Federal land-bank system can be increased, the general idea being to give to national farm-loan associations more duties to perform than they are presently handling. I fear this would result in a centralizing of authority and administration by regulation where individual treatment is preferable. A number of the banks have already given to farm-loan associations every responsibility they are able to handle. The practice followed by these banks is to study the operations of the associations carefully and pass over the responsibilities to them just as fast as they are able to carry them. No particular regulation issuing from Washington is necessary to accomplish this result, because the banks have every incentive to speed up this decentralization as rapidly as it can be handled. Any regulation would tend toward treating all cases alike, and I think you gentlemen can readily understand that the administration of some associations is such that they cannot be given full responsibility to handle collections, foreclosures, land sales, etc., until they have developed a sound business procedure. This is one point where it is essential that each case be handled on its individual merits.

This same section provides that the Governor may authorize such associations to retain one-fourth of 1 percent of the unpaid principal of outstanding loans as reimbursement for its services. Again, this seems to me to be usurping the functions of the banks and centralizing authority in Washington, where the Governor is is no position to know which associations are earning this compensation. I do not believe it practical to compensate all associations alike. The value of their services varies greatly and paying one-fourth of 1 percent to an association which is not doing its work properly is a tax upon the system which it should not be called upon to pay.

DESTRUCTION OF ASSOCIATION AUTONOMY

There is one more point I wish to make with reference to section 7 (a). The section provides that "where such associations cannot perform such functions," the Governor is authorized to turn over the functions of the farm-loan associations to the county committees appointed by the Governor. In other words, if the association is not operating in a manner which satisfies the Governor, he can deprive them of all their responsibilities and turn their affairs over to a committee of his own choosing. In my judgment this permits the complete domination of the whole farm-loan system by one man located in Washington, and I think it a most dangerous grant of authority.

Section 7 (b) provides that the Governor shall determine who can be conveniently included as a member of a farm-loan association. I believe this violates one of the fundamental principles of cooperative credit, in which the determination is left with the members, and again, that this centralizes the control and authority in Washington.

DEBT ADJUSTMENT

I have not had time to give careful study to the sections relating to farm debt adjustment committees, so my comments will touch but a few points which have occurred to me on first reading.

In section 8 (a) it will be noted that the Governor appoints the debt-adjustment committees, again centralizing authority in Washington.

Section 8 (b) and (c) provides for payment of per diem and expenses, but it is not clear who pays.

Section 8 (d) provides that a farm-loan association may act in lieu of a debt-adjustment committee, but I raise the question as to whether an association which is not interested in any earnings or losses would have any particular interest in the adjustment of debts other than to endeavor to get their neighbors' debts reduced to as low a figure as possible. This observation might apply equally to some debt-adjustment committees.

I have no comment to make with reference to section 9. I have three comments to make with reference to section 10 (a). This section provides that farmers who establish to the satisfaction of the Governor that their indebtedness is in excess of the productive value of the farm are entitled to refinance their land bank or corporation mortgages. If anyone borrows money from a land bank or from the Government and is able to pay it back, I think he should not be given any right to have his debt adjusted just because he has borrowed too much. Under this section, thousands of borrowers who are amply able to pay would get their debts scaled down at the expense of the Government. I think this is indefensible. Under a sound program of lending on normal values both borrower and lender should be prepared to carry on through periods of subnormal incomes. If borrowers are permitted to ask for a readjustment of their debts in every period of depression, the whole theory of normal lending is destroyed. There are individual cases where debt adjustment is warranted and advisable. The banks are making adjustments, but experience has shown that in most areas these cases are few and that the other means provided are adequate to carry the borrower over the period of subnormal income. To write into the law a right of debt adjustment when income declines will mean to invite thousands of borrowers to attempt to get debt adjustment, encourage delinquency, and increase the expense of operation. Again I feel that this is a question which must be decided on the individual merits of every case, and feel that it would be a serious mistake to extend any right of adjustment to all borowers when confronted with a period of subnormal income.

PRUDENT INVESTMENT LOANS

A few years ago Congress provided for making prudent investment loans. These loans were designed to meet a situation where the income from the farm was not sufficient to support the operator, but where outside income was available. Under the provisions of this section every holder of a prudent investment loan could have his loan scaled down to the productive value of the farm regardless of its location or the improvements thereon. This section would make it impossible to make any more prudent investment loans.

Section 11 (a) requires the Governor to refinance loans which qualify under the provisions of section 8 (a), which I have questioned. I repeat that this should not be a responsibility of the Governor but of the banks, and that no mandatory provision should exist, but each case should be handled on its individual merits.

MORE CENTRALIZED CONTROL

Section 11 (c) takes the handling of distressed land-bank loans out of the jurisdiction of the bank and places them in the hands of the Governor. It is true that the section provides that the bank shall be reimbursed at a figure agreed upon between the bank and the Governor, but it also provides that if, under the administration of the Governor, there are further losses, the bank shall share in those losses, although it has nothing to do with regard to the administration of the case. I believe this is eminently unfair. No such attempt is made to charge other lenders with losses or gains under the Governor's administration, because they are specifically exempt in the next paragraph, section 11 (d).

I have no comment on section 12 (a) other than to point out that everything is handled under the administration of the Governor, although the banks are required to share in any loss which may ensue. The banks are now operating along the general lines outlined in this section with reference to the sale of real estate, but it is done entirely on a cash basis and is handled under the jurisdiction of the banks.

Under section 12 (b) the Governor is required to deed the property to the option holder on the basis of "its productive value or the amount of the indebtedness whichever shall be less." The banks have thousands of cases where the recovery value is far in excess of the productive value. As an illustration of what I mean, let us assume that oil is located on a farm whose productive value is $3,000, but the original indebtedness is $8,000. Under the terms of this section, the borrower would be entitled to purchase the farm, oil well and all, for $3,000, when he was amply able to pay the $8,000 he borrowed. The injustice of this is readily apparent. There are many cases where the same principle prevails, although in a less striking degree.

INVITING LOSS TO GOVERNMENT

Section 12 (c) (6) provides that the Governor may rescind the conveyance in the case of delinquency. And it provides further "in event of any such recession, the corporation shall refund to the purchaser from the corporation all principal payments theretofore made by him, less the amount of any damages to the property occasioned by his fault." Under this provision any contract purchaser who became tired of his contract could cease paying, remain on the property for as long a time as he could wangle out of the Governor, and when he finally had to leave, the corporation would pay back to him all the money he had paid in on principal on the farm. He would be out his interest only, and would probably gain a year or two free rent.

Section 12 (d) exempts from the provisions of the Frazier-Lemke Act any contract holders. I am not arguing the merits of the Frazier-Lemke Act, but I raise the question as to whether contract holders are not as much entitled to the benefits of this act as are other debtors.

I have no comment with reference to section 13 other than to say that the banks are now following approximately this same policy, except that they administer it themselves rather than having the administration of their farm sales centralized in Washington.

I have no comment with regard to section 14, except to say that the banks are now operating on practically this same program, except that they administer it themselves rather than have the administration centralized in Washington. I believe there is a real danger in having the Governor administer real estate and the loans of the banks instead of entrusting this to the proper officers and the boards of directors. The whole bill seems to me designed to centralize complete control of the system from the farm-loan associations up in the hands of the Governor.

I have no comment with reference to section 15, except to point out that the banks are now effecting reamortization as provided in this section, except that they administer the loan themselves rather than transferring the administration to the Governor.

ABOLISHING PERSONAL RESPONSIBILITY

Section 16 has the effect of abolishing all personal responsibility. Whenever a borrower wants to quit paying, he can give a deed to his farm and walk off without any further responsibility. Under normal conditions, there are always many cases where the borrower concludes that the farm is worth less to him than the debt against it and even though he has borrowed the money and is able to pay it back, this section would give him the right to throw his loss upon the bank or the Government. As an example of what the banks contend with, let me cite a case which came to my desk recently. The case involved a large loan. The borrower happened to be a banker, who found himself hard pressed for cash and succeeded in getting extensions and advances for taxes for a period of several years. Probably his condition entitled him to this aid under the terms of the Emergency Farm Mortgage Act. He finally decided to abandon the farm, and first by promises which were not kept and later by legal means managed to retain possession long enough to remove three crops without paying a cent. His financial condition straightened out until he was amply able to pay. The bank foreclosed, but in this particular State was required to bring additional suit to establish deficiency judgment. The banker resisted this suit by every possible means, including appeals to both Senators and his Congressman. The deficiency was approximately $15,000. With a salary of $15,000 per year and ample free assets, there was no honorable reason why he should throw this loss either upon the farm-loan association or the bank. If this bill becomes law, that type of borrower can evade his just debts and throw the losses directly upon the Federal land bank and evntually the Federal Government, and, gentlemen, I think it is about time that someone began to think about the finances of the Government.

I believe this illustrates clearly why it is impossible to legislate equitably on matters of this kind, and why it is necessary that each case be handled on its individual merits. The banks take very few deficiency judgments. In some States a deficiency is automatically granted in foreclosure proceedings, but they are released except in cases where they are merited. Deficiencies are practically confined to cases of bad faith or cases where a borrower is trying to evade his just debts. For a long time complaints received upon this score have been so few as to be practically nonexistent, and I do not believe any such provision is warranted. If the bill should be amended to restore its cooperative features so that the members would be individually and jointly responsible, it is obvious that this section would make such restoration unworkable.

I feel that if there were time to study the bill carefully in the light of the experience of the administrative officers in the field, many more defects would be brought to light. I regret that there has been no such opportunity.

SOME COMPARISONS

In conclusion I would like to draw some comparisons to indicate the relative importance of the effect the bill seeks to attain when compared to the whole farm situation.

According to the latest figures available, there are approximately 6,800,000 farms in the United States. Let us write down—

	Percent
6,800,000 farmers	100
Unmortgaged farms	67
Mortgaged farms	33
Farms mortgaged to F. C. A.	13
Delinquent F. C. A. borrowers	3
Headed for foreclosure	0.6

Apparently the essential purpose of the bill is to prevent foreclosures. Two-thirds of those headed for foreclosure could not be helped by any system. They consist largely of cases involving bad faith or some physical problem, such as old age. When a farmer is no longer able to operate his farm and has no reserves, the case ceases to be a credit problem and becomes a social problem. Two points I want to make in connection with this: First, I urge that you take time to examine carefully into the causes of the foreclosures which have been so much discussed to see if the remedies suggested are justified or would be effective; second, I think you should study the whole problem very intensively before taking steps which may vitally affect all our farming population, in order to try to do something for less than one-half of 1 percent of the 6,800,000 farmers who are benefiting from the system. We have not lost sight of them, but there are other remedies available.

I wish to make another comparison to illustrate the relative importance of a 1-percent reduction in farm-loan interest. To the average wheat grower it is less than 1½ cents per bushel. To the average cotton grower it is less than 15 cents per hundredweight of cotton. Gentlemen, the problem of the American farmer is not 1-percent interest reduction, it is farm price. We cannot solve the farm problem by tampering with our credit structure. The only solution lies in compensatory prices.

You can spend weeks in working out a program of changing a cooperative system to a subsidized Government lending institution, and overnight wheat can drop 1½ cents per bushel and wipe out all you have done so far as benefiting the farmer is concerned. Do not misunderstand me. I am not opposing interest reduction, but I earnestly believe the price paid under the proposed plan is too much, and if the same amount of time and energy were devoted to aiding the marketing of our crops, it would probably result in bettering conditions in an amount far greater than the interest subsidies proposed.

CONCLUSION

At last let me suggest that if the misgivings I have expressed are only half true, or quarter true, the consequences are so vital and so far reaching that I believe your committee should call in those who are most familiar with the operation of the systems and those who are most directly concerned, because they are the operators, the borrowers, and owners. You probably know who drew the bill; but, so far as I have been able to learn, no one with any extended experience in the problems of operation ever saw the bill until the day before the hearings began, and most of the officers in the field have never seen it yet. I would strongly urge that before any such drastic step is taken you call in the presidents of the land banks who have struggled with these problems for years. Call in some of the members of the boards of directors of land banks who have had years of experience. I would like to hear the judgment of a man like Judge Lindsey, who was on the President's commission to Europe, helped draw the original act, and who has sat on the board of directors of one of our most successful banks for over 23 years. I think time should be given for the National Farm Loan Association to find out what it is all about and express their desires. The changes are too drastic and too profound to rush into them without the most careful and full study and investigation. I say this with all the earnestness I can command.

A United America—Part 9

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. THORKELSON. Mr. Speaker, in part 8 of A United America I began a discussion on the Bill of Rights, which I shall now continue by repeating in part what I have discussed before.

The Constitution and the Bill of Rights were drafted by the founders of this Republic to protect themselves and us against those who are now and who may in the future engage in usurpation of the liberties and rights that we reserved to the state and to ourselves in the Constitution. The fullest measure of protection for the people of this Nation may be found in the Constitution, for it protects the people not only against usurpation of rights and liberties by their own Government but also against insidious destruction by political parties and others who are now engaged in radical conversion and destruction of the Government of this Republic of the United States.

The greatest instrument of evil that confronts the world today is gold and the control of money as it now exists in nearly all nations. Gold and money is a public property which is earned by the people, and for that reason belongs to them. It was never intended to be set aside for the purpose for which it is now used—namely, as a power to destroy. This should be clearly evident when we recognize that both political parties are not only controlled by the power of money but they are also controlled or dominated by the same group of people. It therefore matters little which of the candidates may be elected to office, so long as he is tied to the apron strings of the international financiers.

What we need in America today is a political party composed of all Americans from both parties—people who believe in the fundamental principles of this Government and in the rights of the people to own and share in the wealth they have earned over a period of years. In such organization we will leave those who object to the fundamental principles of this Republic in a party of their own, which may be dominated, as it has been before, by the internationalist and the international financiers. The issue in the election will then be clear, for it will be either for America or against America, and I have no doubt where the choice will fall.

The Bill of Rights was never intended to sanction freedom of speech, freedom of the press, freedom of assembly, and the

freedom of the Communists and their dupes to petition the Congress of the United States for special legislation to protect such minorities or groups as teach or advocate changes, conversion, sabotage of industries, radicalism, communism, and destruction of the Government of the United States.

The Bill of Rights does not give the radical, the syndicalist, the Communist, and other Fabian groups the right to organize as political parties or the right to members thereof to run for office in the Government of this Republic of the United States. These groups and their members convict themselves when they advocate sabotage of industry and destruction of the Government, and must, because of such doctrines, be considered enemies of the United States. The only protection which the Constitution grants to the revolutionist, to the radicals, and to other enemies of the United States is housing in the Nation's penal institutions, where they may engage in such speech and assembly which the rules of the institutions provide for them.

All officials in the National, State, and local Governments have subscribed to an obligation "to preserve, to protect, and to defend the Constitution of the United States against all enemies." This means enemies from within as well as enemies from without. It is, therefore, the solemn obligated duty of all public officials to protect law-abiding citizens by arresting those who are engaged in dissemination of revolutionary doctrines which are in conflict with the Nation's constitutional laws. These radical minorities, being enemies of the United States, should not be permitted the right of assembly or the freedom of revolutionary speech, in assembly or over the radio. Neither should the communistic internationalist, who now owns and controls the Nation's picture industry, be allowed to portray or display pictures which are indecent or in conflict with the ideals of patriotic American people. A book or a moving picture is no more than a reflection of the mind and the mental state of the authors, and should be given no greater value than that which the author and his racial philosophies deserve. If these philosophies are foreign, the picture will also be foreign, and of little value to us, whose ideals are based upon a Christian civilization.

When public officials in National, State, and local governments fail in their obligated duty, the people of our Nation will themselves rebel against such public betrayal and, in sheer desperation, organize for their own protection against all enemies, including public officials who betray their trust. The many groups and individuals who are now denouncing the internationalist, the Communist, and the goyim dupes who fawn at the foot of Mammon are, in reality, the advance guards of an indignant and loyal American people. The tolerant majority, being accustomed to place their faith in officers elected to respect and uphold the law, are now awakening to the fact that they are being betrayed and persecuted by such officers.

This is evidenced in the persecution of Messrs. Ford, Edmondson, the young men who were arrested in Philadelphia, the Christian Front, the Christian Mobilizers, and the Reverend Winrod, who is without doubt a loyal and patriotic American citizen and, as such, suitable to fill any office in the Government. This persecution of many individuals, such as General Mosely, Father Coughlin, Mr. Deatherage, Messrs. True and Pelley, is purely an expression of intolerance by those who are instrumental in their persecution. None of them is guilty of any other crime than that of exposing the international Communists, his goyim dupes, and other enemies engaged in subversion and destruction of the Government of the United States.

Further evidence of Government persecution of patriotic citizens may be found in the frequent arrests of those who congregate in peaceful assembly to discuss the Communists and the failure of public officials to protect the majority rights and the Nation against sabotage and destruction by the Communists, who openly challenge the law by stating that they intend to destroy our institutions and the Government of the United States.

It is not within the scope of these remarks to enumerate the many, many instances in which the Federal Government transcends the law in its interference with free speech and peaceful patriotic assembly of law-abiding citizens, and around the corner violates and debases the law by giving aid and comfort to the communistic enemies of the United States who are engaged in seditious speech and revolutionary assembly. It is about time the people awaken when the Post Office and other departments are filled with a type of employee who, under the watchful eye of the enemies of the United States, photostat private mail and pass information to the Justice Department for investigation and persecution of innocent people. When the enemies of the United States attain the power where they can place their own people in informative and intelligence departments for the purpose of watching and reporting all information to their real employers our rights and liberties hang in the balance.

It is high time that Congress investigates those who issue orders to tap telephone wires, and who order investigations of such Members of Congress and private citizens as are opposed to seditious activities in the Government. Congress should engage in a most extensive investigation of those who have the power and are using such power to retard Department of Justice investigations of those who are engaged in dissemination of revolutionary doctrines, such as communism, for they are not only engaged in sedition but are, in fact, relentless enemies of the United States.

We, the people, must remember that we were bamboozled in 1913 into adoption of the seventeenth amendment, for no other purpose except to destroy the fundamental principles of this Republic. All could have been corrected by recalling those Senators who engaged in fraud and corruption. The same situation is opening up today, in Federal investigation and insinuation of corruption in the House of Representatives. The purpose, no doubt, is as it was in 1913, to bamboozle the people so that they will abolish Congress. The first step was taken in 1913, and if the people can be fooled again, it will be the final and last step, for when Congress is abolished we will then have a despot sitting in the chair of the President of the United States.

I think it is well for us now to recall the advice of Washington, 145 years ago:

> The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual, and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purpose of his own elevation on the ruins of public liberty.

Let us look facts squarely in the face. Our Nation is threatened from without by the communistic internationalist, who employs the Communist and the syndicalist to undermine and destroy our industries and the Government of the United States. The same group of internationalists are even reaching into our educational system, so much so that they are able to substitute communistic teachings for the sound fundamental principles upon which this country was established. This is a most insidious attack, because it begins in the minds of the younger generation and develops as a national principle when it is instead foreign, communistic, and destructive.

Let no public official be deceived, however, for light is dawning upon the American people. The fact that certain communistic minorities which are in control of money can through such power dominate the press, the cinema, the radio, and other avenues of communication, should in no sense be accepted by those who betray public trust as being sufficiently powerful to protect them against public wrath.

It is the duty of the Department of Justice and all other intelligence departments in the United States to step in, rigidly enforce the law, and so protect the people of this Nation. The orders for this must come from the President of the United States, and it is quite evident that he has not given such orders to the departments. We must therefore assume that he does not realize the seriousness of the

situation, for if he does realize it, he is as guilty as the Communist himself.

It is now up to the President to give orders to proceed. We may ask, what is he going to do about it? Will he take care, as he obligated himself to do, that the law be faithfully obeyed? Will he preserve, protect, and defend the fundamental principles of this Government, as set forth in the Constitution of the United States? If the President give orders that the Constitution be faithfully obeyed, this Nation will be saved and the people well protected. The American people are waiting for his answer.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

LETTERS IN SUPPORT OF THE APPROPRIATION FOR THE NATIONAL YOUTH ADMINISTRATION

Mr. McCORMACK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letters received by me in support of an increase in the appropriation for the National Youth Administration in the Labor-Federal Security appropriation bill:

MASSACHUSETTS STATE FEDERATION OF LABOR,
Boston, Mass., March 22, 1940.

Hon. JOHN W. McCORMACK,
Member, House of Representatives,
Congressional Office Building, Washington, D. C.

DEAR CONGRESSMAN McCORMACK: I sincerely hope you will give serious and favorable consideration to that portion of the Budget allotted to the National Youth Administration. I am confident you recognize, as I do, that the problem of caring for and giving attention to our youth is acute and very serious.

Although there is more that should be done, such as affording opportunity to work and take their places in our community life, it seems to me the Federal Government should not curtail its contribution to the encouragement of our youth. A continuance of the National Youth Administration activities seems to me to be very important.

I hope you may see fit to favor at least the amount contained in the President's original budget.

Thanking you, and with kind regards,

Respectfully yours,

KENNETH I. TAYLOR,
Secretary-Treasurer, Legislative Agent.

THE AMERICAN LEGION,
DEPARTMENT OF WISCONSIN,
Milwaukee, March 22, 1940.

Hon. JOHN McCORMACK,
Member of Congress,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: In the general appropriations bill which will soon be considered by the Congress the appropriation for the next fiscal year will be considered for the National Youth Administration. In my opinion, this is one of the finest activities that the present administration has sponsored. I have had an opportunity of observing very closely some of the benefits derived from the program, and I might state that my secretary, who I have had now for 3 years, is a former N. Y. A. employee. I have also here in my office another girl who started originally under the N. Y. A. program, and I cannot speak too highly of both of them.

I know that efforts are being made to confuse the National Youth Administration with the American Youth Congress, but here in Wisconsin, I want to tell you emphatically, that there is absolutely no connection whatsoever between the two. The National Youth Administration here is a credit to the program itself, and we in the American Legion have been supporting it 100 percent.

I certainly hope that you will lend your support to the appropriation when it is being considered by the House, and I can assure you that we will be deeply grateful to you also for any support you can secure from other Members of Congress in order that the fine work of this organization will not be in any way curtailed.

Very sincerely yours,

G. H. STORDOCK,
Department Adjutant.

BOSTON CITY COUNCIL,
City Hall, March 20, 1940.

Congressman JOHN W. McCORMACK,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN McCORMACK: I take the liberty of urging your support of the full appropriation for N. Y. A. activities in the Commonwealth of Massachusetts.

By reason of a curtailed appropriation drastic cuts are being made in the personnel of N. Y. A. in Boston, with resultant hardships upon families really in need of assistance.

Many cases have been brought to my attention where youths have been assigned under N. Y. A. for a short time and they enjoyed a pleasant outlook on life and the feeling of being one of the supporting pillars of the family. To disillusion these youngsters is a cruel blow to their hopes and spirit of independence, and I earnestly urge your full support of an allotment of money which will be sufficient to carry a full complement of workers under N. Y. A.

Very truly yours,

WM. J. GALVIN, *President.*

THE COMMONWEALTH OF MASSACHUSETTS,
Boston, March 15, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: It is my understanding that the National Youth Administration appropriation bill will be considered shortly.

The work of the National Youth Administration in this State has been very helpful to young people, and it is my earnest wish and request, representing the largest senatorial district in population in the State of Massachusetts, that you give favorable consideration to the National Youth Administration appropriation.

Very truly yours,

JOSEPH L. MURPHY,
Senator, Wards 13, 15, 16, Dorchester.

THE COMMONWEALTH OF MASSACHUSETTS,
Boston, March 16, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: Last year I was appointed to serve as chairman of a commission to study the problem of youth unemployment in Massachusetts. During the course of hearings I was able to study very closely the workings of the different agencies that appeared before my commission. I can truthfully say that of all these agencies the National Youth Administration appeared to be the most beneficial to the aid of youth employment. I sincerely believe it deserves and merits the cooperation of Congress in helping it to continue its fine work.

I trust that you will find it possible to vote the National Youth Administration the same appropriation that it received last year.

With every good wish, I am,

Sincerely yours,

DAVID M. BRACKMAN.

MAYORS' CLUB OF MASSACHUSETTS,
March 16, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

Honorable SIR: The Mayors' Club of Massachusetts are extremely anxious and desirous that all possible moneys be made available for use by the National Youth Administration for the remainder of the fiscal year.

Please use every effort to see that this is done.

Very truly yours,

EDWARD J. VOKE,
President, Mayors' Club of Massachusetts.

N. V. NELSON & CO.,
Boston, Mass., March 16, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: As chairman of the National Youth Administration State-wide Advisory Committee, I am writing you requesting your favorable consideration of the bill, which I understand will be reported into the House shortly, for the appropriation of N. Y. A. funds for the next fiscal year.

As a businessman and as one who has been interested in young people for many years, I have been very close to the problem of youth unemployment in Massachusetts. Since being elected chairman of the State-wide committee composed of business people, social service, religious, and other persons interested in youth, I have closely observed the great benefits of the program in Massachusetts for these young people. Not enough of money can be appropriated to alleviate their situation and lack of opportunity.

I sincerely hope that you will make every effort to help these young people by voting for the National Youth Administration appropriation.

Sincerely yours,

NELS V. NELSON,
Chairman, N. Y. A. State-wide Advisory Committee.

America a Republic—Not a Democracy

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

A PAPER BY FRANK S. BOYERS, OF FORT WAYNE, IND.

Mr. GILLIE. Mr. Speaker, during recent weeks I have been in correspondence with an old friend of mine, Mr. Frank S. Boyers, of Fort Wayne, Ind.

Mr. Boyers, a retired businessman, on several occasions has expressed real concern over the fact that too many Americans are laboring under the impression that this great Republic of ours is a democracy.

Mr. Boyers asserted that something should be done to correct this delusion, and I agreed with him. When I suggested that he was well qualified to undertake this worthy service, he at first demurred. Finally, however, he agreed to accept the assignment.

The results of his illuminating study are presented herewith in the form of an able and interesting paper which he prepared with the assistance of his good wife, Mrs. Ida M. Boyers:

AMERICA A REPUBLIC—NOT A DEMOCRACY

(By Frank S. Boyers)

What is a democracy? Fundamentally, a democracy is that form of popular government wherein sovereignty or power to govern is both retained by the people and exercised by them direct.

Such a government is practicable for only very small countries.

What is a republic? A republic is a representative form of government wherein sovereignty, though retained by the people, is not exercised by them direct but through representatives elected by them at stated intervals.

Representatives, National and State: In this country our national representatives hold office at Washington, D. C., and consist of the House of Congress, the Senate, and the President. Our State representatives hold office at the various State capitals and consist of the State representatives, senators and the Governors.

America's first republic: The old Colony of Virginia was the first, at least the first of which we have any authentic record. On page 49 of Barnes' Brief History of the United States, used in the Illinois public schools, copyrighted in 1871 and later years, I find the following: "Governor Yeardly believed the colonists should have 'a hand in governing themselves'; and, July 30, 1619, called together 'the first legislative body that ever assembled in America.'"

Representatives, called burgesses, were chosen from the various plantations that made up the colony. Under this form of government the people prospered greatly, and the history goes on to say: "Virginia became almost an independent republic;" a republic, mind you, not a democracy; and almost independent.

All the Colonies republics: In all attempts at self-government that I find any record of, each of the Colonies, whenever it began to govern itself, set up a representative government. Certain it is that by the time of signing the Declaration of Independence all were republics, because in all their assemblies they acted through representatives.

Guaranteed Republics: Did you ever read the Constitution of the United States? Well, anyway, if you will look at the sixth section of the fourth article, you will see that it says, "The United States shall guarantee to every State in this Union a republican form of government."

"We are all Republicans!" An educated Democrat said that; yes, none other than Thomas Jefferson, a Federalist of "ye olden days," the third President of the United States and present-day idol of the Democratic Party, and now called by them a Democrat.

How times do change! I shall refer to this quotation further on, in my collection of quotations from the inaugural addresses of presidents and other great men from the time of George Washington to that of Theodore Roosevelt.

The why of a republic: A republic operates through representatives elected by the people at stated intervals, the only form of government of the people, for the people, and by the people that is practical for a large country.

Ten years ago, according to the 1930 census of this old United States of America, we then had fairly close to 123,000,000 people in this country, and there are a lot more of us today.

Reason a little: Supposing we all left our homes, our factories, our farms and went to Washington, D. C., each year to do the work our Representatives in General Congress now do for us. Where in the city of Washington or even in the whole District of Columbia could they put us up?

And supposing they could put us all up down there, and we began passing legislative bills, discussing and voting on this bill, that bill and the other bill, what a Babel that would be! Our unbalanced, topheavy tower would fall with a crash that could be heard around the world! And, rejoicing Europe wouldn't even need the radio to hear it.

Democracies necessarily small: Immutable, natural, physical laws inexorably make it impossible for a fundamental democracy ever to become a great nation. Our wise forefathers planned for a great nation; and, planning well, they made it a republic.

Why a great republic? Why not just an ununited lot of small ones? Because in union there is strength and permanence. So they formed our smaller republics, the States, into one great republic. That is why they gave us the United States of America, a powerful government, powerful enough to resist invasion, protect the lives of our people, resist un-Americanisms, and do many other things necessary for the continued prosperity of any government designed to live over a long period of time.

Great through the ages: To secure for themselves and retain for their descendants the inalienable rights of life, liberty, and the pursuit of happiness through the ages, our early fathers, with rarely equaled wisdom, builded a government they believed would live through the ages. And so they made it the Republic, a republic of republics; and just as long as we continue to elect representatives to carry on the processes of government for us, both in the States, individually, and in the United States, generally, just so long shall we be, as always have been, the Republic—a great republic.

QUOTATIONS OF PRESIDENTS

Following are the exact quotations of several of our Presidents, from Washington on down, in which reference is made to our republican form of government:

George Washington: "The destiny of our republican model of government."

John Adams: "A government in which the executive authority" (meaning the President) "as well as that of all the branches of the legislature, are executed by citizens selected at regular periods by their neighbors to make and execute laws for the general good." That, if you please, is representative government; and representative government constitutes a republic.

Thomas Jefferson, the able scholar, who certainly knew the meaning of words and how to select the right word at any given time, in his first inaugural address, said: "We are all republicans." And again, in the same address, Jefferson said: "Let us, then, with courage and confidence, pursue our own federal and republican principles, our attachment to union and representative government."

President Madison spoke of "our own republican institutions," * * * "this rising Republic," etc.

John Quincy Adams, spoken of as a man of unusual learning, talked of "our happy condition under a Constitution founded upon the Republican principle of equal rights."

Andrew Jackson, yes, even Old Hickory, said, "The eyes of all nations are fixed on our Republic."

Van Buren talked of "the earliest and firmest pillars of the Republic," * * * "the power and influence of the Republic."

President Harrison spoke merely of "a simple representative democracy or Republic," showing that he recognized the truth that as soon as a democracy becomes representative, it becomes a Republic.

James K. Polk spoke of "the infancy of the Republic," * * * "the ends for which our Republican Government was instituted."

Zachary Taylor said he had been called to be the "Chief Magistrate of a Republic," * * * and referred to "our own widespread Republic."

The great orator and statesman, Daniel Webster, speaking of the death of President Taylor in office, said: "The Chief Magistrate of a great Republic died suddenly," * * * "and those grand and imposing rites which the Republic confers on the most distinguished of her sons."

Franklin Pierce said: "I have been called, for a limited period, to preside over the destinies of the Republic." Please note he said for a limited period, and didn't expect a third term.

James Buchanan, speaking of the necessity for honesty in our Government, said: "Public virtue is the vital spirit of republics."

Abraham Lincoln: Probably no American, living or dead, has possessed greater love for the United States of America than Abraham Lincoln; and, I believe, none ever had greater love for humanity. He gave his life that men might be free. In Lincoln's speeches made in debate with Stephen A. Douglas, I find such expressions as these: "The principles of true Republicanism," * * * "the sheet-anchor of American Republicanism," * * * "the Fathers of the Republic," * * * "the history of the Republic."

President Grant's words were "our own great Republic, * * * under our Republic."

James A. Garfield said "the new Republic was beset with danger on every hand; * * * our own little children will soon control the destinies of the Republic."

Grover Cleveland spoke of our "Constitution launched by the founders of the Republic; * * * the inspiration of our faith in the Republic; * * * the prosperity of the Republic; * * * prudential economies which are best suited to the operation of a republican form of government."

Benjamin Harrison referred to "equipping the young Republic for the defense of its independence."

William McKinley referred to "our full duty as citizens of the great Republic * * *; spoke of the fact that in a republic the people must not be illiterate, because illiteracy is "a grave peril to the Republic"; and "the trust imposed upon the Chief Executive of the Republic; * * * the builders of the Republic; * * * the Republic has marched on and on."

A name retrieved: And now I shall mention but one more, and then the name Roosevelt shall have been, at least in a measure, dragged from the mire into which he who raved against "nine old men" had caused it to flounder.

Theodore Roosevelt, affectionately referred to as "Teddy," something that can never happen to the man who ostentatiously parades three long names—Teddy of the Rough Riders appreciated "the tasks set before our fathers who founded and preserved the Republic," and "a lofty ideal which made great the men who founded this Republic in the days of Washington, which made great the men who preserved the Republic in the days of Abraham Lincoln."

When language reaches the sublime, it cannot do more.

Flood Control in the Lower Mississippi Valley

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

SPEECH DELIVERED BEFORE RIVERS AND HARBORS CONGRESS, MARCH 15, 1940, AND BROADCAST ON COAST-TO-COAST HOOK-UP OVER N. B. C.

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following:

Mr. Chairman, ladies, and gentlemen, the Mississippi River is the greatest river in the entire world. It, with its tributaries, drains more territory than any other river in any continent. Its tributaries, such as the Missouri, the Ohio, and the Red Rivers, are in their own right truly great rivers of the world. The Mississippi River Valley is the richest valley in all the history of all ages. Can we expect to have such a great boon without some attendant disadvantages?

Of course, the great problem of such a river system is the recurring floods which descend upon the rich and alluvial valleys periodically and inundate them. This gives us in the lower Mississippi Valley our No. 1 river problem—flood control. For 150 years the white man in this valley has been combating this great problem, trying to conquer it. First, the counties and the parishes set up their own levee boards to build protection from the ravishing waters. Then, the problem became a State one and, finally, a national problem. During the last 10 years, the Federal Government has expended upward of $650,000,000 for flood control in the United States; and still our work must go on.

One of the earliest recollections of my childhood was of the great ominous levees built on each side of the river by man. One of the first school recollections which I have was of the call for volunteers to man the levees when the flood lapped over the top of them, threatening at any minute to break through the dikes. One of my first great frights which sent a chill to the very marrow of the bone, was the cry of terror rising from the lips of the working and watching men as word came down the line, "The levee is gone. It's coming through. Run for your lives." Mr. Chairman, I know what flood damage is.

I believe in economy in government; and certainly the time has come in this land to put the brakes on expenditures but I believe in wise and prudent economy. And it is unwise to economize on flood control. We are by false economy often penny-wise and pound-foolish. I do not ask you to take my statement on this, but I quote from the Bible wherein we may be likened to the foolish man who, for economy reasons, according to St. Mathew, built his house upon the sand:

"And the rains descended and the flood came and the wind blew, and beat upon that house; and it fell; and great was the fall of it."

We must, as a Nation, be like the wise man who built his house upon a rock and "when the flood came it fell not," for it was built upon a rock.

This Nation must build its flood-control economy upon a rock. It must build well, provide adequate flood control regardless of the necessity of economy.

Ballots—Not Bullets

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

EDITORIAL FROM THE RANDOLPH REVIEW, ELKINS, W. VA.

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid editorial from the March 21 issue of the Randolph Review, weekly newspaper published by James W. Weir, in my home town of Elkins, W. Va.:

BALLOTS—NOT BULLETS

The whole conception of the founders of our Government was that public officials should be chosen by ballots and not bullets, and that whatever Constitution of the United States, should be made through the agency of the ballot and not by force. This is the difference between the United States and the nations in which dictators rule; the difference between slavery and freedom; the difference between government from the top downward and government from the bottom upward, for which purpose, of course, governments were instituted among men.

Keeping that thought in mind, if this Government is to be continued as a representative form of government it is incumbent upon every citizen, of whatever sex or color, to cast his ballot in every election unless the people who constitute this country, and who are themselves the Government, do exercise their right of suffrage, government loses its representative nature. Sometimes we think that people do not appreciate their right of suffrage or all the blood which was shed to insure them such a right. Perhaps they would appreciate it more if they had lived in other lands where that right is denied except at the point of the bayonet or under the eyes of spies.

There are some citizens of the United States who profess great admiration for Adolph Hiter and for Stalin, and who believe that this country would be better off under a Hitler or Stalin. While, of course, they perhaps have a right to such views, we believe that where they do feel that way about it and look upon the Government of the United States as a failure or as not meeting their ideas of what a government should be, they should relinquish their citizenship and go to live under the Hitlers and the Stalins.

We much prefer this country, where there are no black shirts, brown shirts, or bloody shirts, and where each man or woman has an equal voice at the polls and an equal voice in government; and where, in fact, issues are not settled by bullets, but by ballots; and where purges and pogroms are foreign to our form of government.

A Rotten Custom

EXTENSION OF REMARKS

EDITORIAL FROM THE WICHITA EAGLE OF MARCH 20, 1940

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wichita Eagle of March 20, 1940, relative to the proposed limitation on campaign contributions, and hereby go on record as being 100 percent in favor of the Senate-approved bill and hoping it will be passed by the House without delay. The editorial follows:

A ROTTEN CUSTOM

Should the Hatch bill, as amended and containing the $5,000 campaign contribution provision, pass it would be a grand, good thing. National politics long has been most rotten in one respect—committee slush funds. That practice has been terrible. Only a comparatively few rich people will whack up money for a campaign, and the way the politicians bleed those few is perfectly scandalous. The worst thing about the practice is that the need of cam-

paign funds constantly seems to grow. Money used in politics is like opium—the heavier the dose one season, the heavier the next season of doses must be.

Now, the Hatch bill as amended in the Senate this month limits a campaign contribution to $5,000 a year from an individual. That provision was proposed by the bill's opponents in order to cripple the measure. It is one of the best things in it. The House should keep it in the bill. Of course, such a law will not be strictly enforced. Some of the rich contributors will bootleg their money to the committees in excess of the $5,000, but at that it will be worth something to America to write down in the law books that the public realizes how rotten the campaign contribution custom can get to be.

A Partial Answer to the Farm Problem

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

HOW ONE GROUP OF FARMERS AT HAMILTON, ALLEGAN COUNTY, MICH., SOLVED THE FARM PROBLEM

Mr. HOFFMAN. Mr. Speaker, rugged individualists all, self-reliant, industrious, and thrifty, a few farmers in Allegan County, Mich., without Government aid and in spite of restrictive influences made possible by Government sanction, have demonstrated that the door of opportunity has not yet closed here in America.

Doubtless, a statement by me, pointing out how many others using the same methods in varied agricultural and manufacturing interests might profit, would be biased and overenthusiastic. Hence, an impartial and very brief summary of what has been accomplished is taken from the April issue of Nation's Agriculture, published by the American Farm Bureau.

FARM CO-OP FACES NEW PROBLEM

For 20 years the Hamilton (Mich.) Farm Bureau has supplied valuable business services to the farmers of the community around the village of Hamilton. In the beginning, it functioned as a purchasing agency for mixed livestock feeds and coal, and it provided feed-grinding service for members.

From a small beginning, the business has grown to relatively mammoth proportions, for last year gross business turn-over approached the million-dollar mark. Instead of buying mixed feed and fertilizer for members, the organization manufactures its own. It distributes high-quality seeds, operates a hardware store and elevator, and even a garage. It supplies members with petroleum products, coal, and tile; and it markets for its members eggs, poultry, livestock, and cream. Because celery is a big crop in the community, the Farm Bureau supplies the material for the crates in which it is packed for market, and Farm Bureau trucks carry it to market in Chicago. In short, the Farm Bureau supplies most of the business services that members need in connection with production and marketing of their products.

SUCCESS

The institution is tremendously successful. It has done things that people said simply could not be done. The cooperative marketing of poultry and eggs has always been considered a hazardous venture, and most farm cooperatives carefully avoid it. Here, however, under the prudent management of A. G. Lohman, who came off the farm to assume charge of the business, this phase of the marketing has been carried on, safely and profitably, for many years. It is that phase of the business that concerns us in this story.

No business enterprise, corporate, partnership, or cooperative can succeed without high-class management. Lohman has supplied it for this institution. When he started out, he had had two or three winter business-college courses. He had had no business experience but he had something far more essential, namely a good supply of common sense. Members are quick to give him full credit for what has been accomplished.

During December of last year, no less than 12 carloads of eggs went through the Farm Bureau packing plant and were sold in various markets. That's a lot of eggs, and those eggs made money for the producers because they were sold right. The selling doesn't start in the packing house, however. Successful selling of eggs must start back in the farm.

There was a time when the Farm Bureau handled the eggs just as wheat might be handled. Whatever eggs the farmers brought in were shipped to central markets and sold for what they would bring. This went on for a number of years. The producers were not satisfied with prices, but then eggs were just a farm byproduct anyway, so why worry much about them?

Up to about 1931, it apparently never occurred to any of the producers that the consumer might not be satisfied, either. But one day something happened which set Lohman back on his heels. A Chicago commission merchant called him and told him that he had sent him a telegram, telling him that he wanted no more eggs from Hamilton. He said that after sending the telegram he decided that he didn't want to wait for the wire to reach Hamilton. He used the telephone to make it more positive. He didn't want any more eggs from Hamilton.

Lohman did some pretty sober thinking for a few days, and then he told his board of directors about it. In the meantime he had been doing some investigating. He found that eggs were left around the warehouse in 90° temperatures sometimes for a long time before being shipped. No precautions were taken to keep the eggs cool on the long trip to market, and the result was that consumers probably got many eggs from Hamilton which were unfit to eat.

Lohman told the board that he was in favor of either quitting the business of marketing eggs entirely, or of putting a product on the market that they could be proud of. He told them further that the members had been working together for a long time, and that he thought they would be willing to cooperate in producing eggs of superior quality. He fully appreciated the difficulties in the way of getting 500 farmers to working together on a thing so delicate and unstable as quality in eggs; but then, these same farmers had done other things which had been hard to do, and he had faith in them.

LAUNCH CAMPAIGN

The board believed likewise, and so the poultry-improvement campaign was launched. The latest and best information available was got together, and given to the producers, who were encouraged to bring their production troubles to headquarters for personal assistance. Disease and parasites were attacked in a concerted drive; feeding problems were studied continuously; housing was improved. In the marketing process, eggs were candled to insure quality, and were kept at low temperatures from the time received at the grading plant until delivered. Those who did the candling and grading were trained to expertness, and soon they became licensed graders under Government supervision. It was not long until buyers were clamoring for more eggs. More than 70 percent of the eggs handled grade as U. S. Extras, which gives the producers a very nice premium for their extra effort.

Producers found the premium so attractive that they have increased the size of their flocks. Average flock now numbers close to 500. Gross sales from eggs from one flock of 1,100 last year amounted to more than $3,300. The increase in poultry flocks since the campaign was started, together with some increase in dairy cattle, has changed the county from a grain-exporting county to a grain-importing county.

The farms in the community are relatively small. Milk, eggs, and poultry, some cattle and hogs, and celery are the principal products. The agriculture is well diversified.

In the early days, the best egg market was in New York, but in recent years it has been discovered that people in Detroit and Chicago will pay a premium if you give them a quality product. Because of the shorter haul, there has been more money in supplying the better trade in Chicago and Detroit.

Up to recent times, the farmers who produce the eggs had the idea that this business was largely a matter between the producer, dealer, and consumer, with the Government supervising the grading.

Lately, however, they have found that union labor in Chicago is "muscling in" to try to dictate to the farmers as to how they shall run their business. First, the truckers' union objected to nonunion truckers from Hamilton driving Farm Bureau trucks into Chicago. That has been settled, temporarily, but the Farm Bureau has not had its final say on the matter.

More serious, and still unsettled, is the matter of candling and grading. The Chicago Egg Candlers' Union has decreed that cases of eggs, packed by Government graders in Hamilton today and offered for sale in Chicago tomorrow, must be torn down in Chicago and regraded by candlers and graders who are members of the Chicago union. Their excuse was that they have a contract with the egg jobbers specifying that all eggs handled by the jobbers must be graded by union labor. The Hamilton producers think that if the United States Government stamps a case of eggs "U. S. Extras," that ought to be good enough for anybody, but the union says "No." That sounds pretty silly to farmers, some of whom have daughters working in the Hamilton packing plant who will hold their own against graders anywhere when it comes to skill in grading.

Mr. Lohman reflected the sentiments of the members in the following statement:

"The laboring man undoubtedly has many complaints and grievances. No farmer will object to their organizing to better their own condition, but he does resent, after having already paid more money for equipment and necessities of life through higher wages and shorter hours for city workers, to have some labor organization demand that agencies merchandising and handling his products pay tribute to their organizations.

WHY?

"Why should egg jobbers in Chicago be compelled to sign contracts that all eggs they handle, including Government graded and

inspected eggs, be recandled by union labor? The Government graded eggs were candled, graded, and packed by the sons and daughters of the producers in their own organization. Recandling of these eggs would mean lowering of the grade, some breakage, and an additional expense which would have to be borne by the producer. Production and marketing of quality eggs will never be accomplished by candling and grading at some distant point. To be accomplished it will have to be done at the point of production.

"The farmers also are experiencing trouble with fruit and vegetables. Why should a farmers' cooperative organization which employs the sons and daughters of its own members be compelled to pay memberships and monthly dues to labor unions for its drivers and workers before they are permitted to unload their celery and produce in the Chicago market?

"A $50 membership and $5 a month dues are excessive and unfair. Some labor leaders are always sounding off about everybody being unfair to labor. Haven't they been much more unfair to the farmer and the consumer?

"For economic preservation, farmers may be forced to consider manufacturing some of their own necessities of life. * * *

PUBLIC REACTION

"Farmers' organizations should carefully observe the public's reaction toward labor organizations whose leaders and policies have been opposed to the welfare of the general public. The result is that an intense reaction in the mind of the general public is being generated toward all labor-union activities. All organizations, whether farmer or labor, must keep in mind that the power of their organizations is a matter of public trust and carries with it an element of responsibility to the public generally as well as to the immediate welfare of their own organizations. Violations of this trust will ultimately bring about a demand from the public for control and restriction of the powers which these self-centered selfish organizations have arbitrarily seized.

"It is high time that the Government, industry, labor, consumer, and the farmers get together and cooperate for the benefit of all and put forth their best efforts to make our American democracy safe for Americans."

The Visit of His Excellency, Dr. Rafael A. Calderon Guardia, President-Elect of Costa Rica

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial which appeared in this morning's issue of the Washington Post, about the visit to the United States of Dr. Rafael A. Calderon Guardia, President-elect of Costa Rica. I feel that this editorial is most timely and accurately reflects the feeling and sentiment of the American people.

[From the Washington Post of March 25, 1940]

In contrast with the state of affairs prevailing on other continents, the situation which obtains in the New World is particularly happy.

In the first place, the nations of North and South America are completely at peace with one another. And this fortunate state is not negative in character. It is much more than a mere absence of war. It is also a reflection of the growing friendship and steadily improved understanding which now characterizes inter-American relations. Peace in this hemisphere is not merely the goal of international aspirations, but the foundation stone on which a great structure of cooperation is being reared.

Contributing to better understanding among the governments and peoples of the New World are the exchanges of visits being made from time to time by statesmen of this hemisphere. An increasing number of distinguished Latin American leaders have, during recent years, found their way to Washington to confer with the President, the Secretary of State, and other high officials of the Government on matters of common concern to their nation and ours.

The latest of these welcome visitors is Dr. Rafael A. Calderon Guardia, President-elect of Costa Rica, who arrives in Washington this afternoon and will be a guest at the White House tonight. The nation whose Chief Executive he is about to become is a small one. But it is one of the most democratic and progressive in Latin America and one bound to the United States by many ties of friendship.

A Real Farm Problem

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. MURRAY. Mr. Speaker, I maintain that the real farm problem is for the farm people of America to get a decent price for what they produce.

If this problem is not solved, we will be continually making tenants out of landlords. To indicate the exact conditions in the district which I have the honor to represent, I insert the following table from information obtained from the Farm Credit Administration:

The picture

County	Number of loans	Amount of loans	Percent delinquent	Number of farms owned or held subject to redemption	Percent of investment recovered when sold
Adams	188	$371,900	56.0	13	54.7
Green Lake	211	782,900	35.7	1	97.0
Langlade	616	1,259,800	45.9	46	53.6
Marathon	2,446	5,953,600	49.9	251	70.3
Marquette	156	376,900	47.9	2	
Portage	719	1,579,500	53.7	132	64.4
Shawano	1,316	3,134,200	51.6	100	59.5
Waupaca	1,078	2,950,100	51.6	50	48.3
Waushara	448	969,400	49.7	30	51.7
Wood	911	2,136,900	49.3	86	61.4
Total district	8,089	19,515,200	50.2	711	61.9

This table shows that in the Seventh Congressional District of Wisconsin we have a total of 8,089 Federal loans, including Federal land-bank and commissioner loans, which represent an investment of $19,515,200, and it shows that 4,060, or 50.2 percent, of these are delinquent, that the Farm Credit Administration has on hand 711 farms, that when they have been sold 61.9 cents on the dollar has been recovered.

The question is, How to meet this problem? My opinion is, first, to give the American farmer the first chance at the American market to the extent to which he has the ability to supply it; second, to stop subsidizing new farmers all over the United States with millions of dollars from the Treasury to increase our domestic production; third, a reduction in taxes by eliminating wasteful practices; and, fourth, by encouraging business through a program of confidence which will put the millions of dollars and millions of people back to work for the welfare of the people of this Nation.

The Third-Term Issue

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN
